QuickShot™ IX

THE DAWNING OF A NEW ERA

SVI brings you the most innovative video entertainment product since Pong. The Joyball. A new breed of game controller, a hybrid resulting from the cross between a joystick and a trackball.

Combining the precision of a joystick with the fatigue-free operation of a trackball, the Joyball sets a new standard for performance.

With the Joyball, the player is controlled by pivoting the spherical controller in the desired direction, not by spinning the ball or twisting the wrist. In this way, wrist

fatigue is eliminated, yet control is enhanced.

The firing mechanism, too, has undergone a number of evolutionary advances. First, fire buttons have been enlarged for fast, accurate firing. Second, both buttons have rapid firing capabilities. Finally, for instant feedback, LED indicators, displaying the status of each button, have been added.

The Joyball. Accurate control. Touch-sensitive firing. The dawning of a new era in home entertainment.

QuickShot™ IX

1 SPHERICAL CONTROLLER

Directs the motion of the player on the screen. Movement is initiated by pivoting the controller in the desired direction.

2 LED INDICATORS

Display the status of the fire button. Each shot is indicated by a flash on the corresponding LED.

3 ENLARGED FIRE BUTTONS

Actuate firing mechanism.

4 AUTO-FIRE SWITCH

Toggles the auto-fire option. In auto-fire mode, the Joyball fires continuously as long as the fire button is compressed.

5 SUCTION CUPS

Secure the Joyball to a table or desk top for stability.

6 LEFT/RIGHT SELECTOR

Toggles between right- and left-hand operating modes.

7 5-FOOT SLEEVE CABLE

Connects the Joyball with the computer.
