## DISCOLOGY<sup>NEW</sup>

This is the ultimate in disc utilities. Discology consists of 7 programs, a disc editor, a disc expander and a disc copier.

### The Copier

- In the time of going to press Discology really is the most powerful utility ever written for your Amstrad.
- Makes full use of all DDDs on a 5025.
- Highly intelligent, compresses data allowing whole discs to be copied in just 60.
- Full file copies, copy multiple files in one go. Full copies with files of any length.
- Copies files from disc to tape.

### The Editor

- Edit any sector, including binary formatted sectors.
- Display in 256 character, basic listing, hex, ASCII, binary, word & decimal.
- Search disc for a given string.
- Copy, paste & print.
- Built in full floating point calculator, hex to decimal conversion etc.
- Exceptionally easy to use.

### The Expander

- A new concept in disc utilities.
- Completely stage discs and files.
- Shows those many sectors on each track and displays on which sectors files are stored.
- Displays full sector information and file information.

Discology makes comprehensive use of just seven sectors and is a superb addition to any disc cleanup software collection. Discology makes extensive use of all DDDs, on a 5025 and on 5045, on a 404. This 100% readable code program offers everything you could dream of from discs.

Discology on disc only £24.99 CPC404/504/512

Upgrade: Master Disc copies, master your Masterdisc to us, and we will get Discology onto side 8 of your Masterdisc. Upgrade price is just £9.99 plus your Master Disc.

## DISCOVERY PLUS

The ultimate tape to disc transfer program.

"Discovery Plus must be the most advanced and probably most efficient tape to disc disc transfer utility to date" *Amstrad Action*, December 1985. This program will transfer more games to disc than any other transfer program. The first person who can prove otherwise will receive twice his money back!

Discovery Plus consists of 5 easy to use programs that together will transfer an extremely high proportion of your software onto disc. Also includes details on how to transfer over 100 games. *Amstrad Newsletter Award Special* January 1987.

Discovery Plus now incorporates Spinlock Trans II

Discovery Plus only £14.99 on disc for the 404/504/512

## PRINT MASTER

PRINTMASTER is probably the most useful program that any printer user can buy. JUST LOOK AT ITS COMPRESSION RATE LIST BELOW

- Comes complete with 26 fonts (optional)
- Prints any ASCII file from Teraword/Print in a variety of fonts, sizes & styles
- Adds NLQ (Near letter quality) printing to any printer
- Easy proportional spacing available
- Fine large printer
- Font designer allows you to create your own fonts
- Dump screens to your printer in 16 shades of grey
- Very easy to use, full instructions and demo's included.
- No printer should be without this program!

On disc, only £24.99 CPC404/504/512

## CHERRY PAINT<sup>NEW</sup>

Another new addition to our range, CHERRY PAINT is a superb ready 2 and 4 package. CHERRY PAINT now lists, pulls down screens and windows to provide an easy to use drawing package for your Amstrad.

- Uses 544 + 400 pixels in Mode 2
- Full range of brushes and options
- Dump designs to your printer in 2 sizes
- Compatible with keyboard, joystick or AMX mouse
- Supports screens in Amstrad 3.0 mode

Unrivalled value at only £9.99 on disc CPC404/504/512

## TAPE UTILITY

4M BYTES, LOADED IN YOUR SOFTWARE AT UP TO 4 TIMES THE NORMAL SPEED

Tape Utility will allow you to make back up copies of your tape based software that will load at up to 4 times the normal speed.

- So easy to use, simple one key operation.
- Handles up to 40K (approx) in one go
- Will copy normal, headless, speedlock & Backloaders
- Tests have shown that it will backup about 90% of all Amstrad software
- Choice of ten speeds up to 4000 baud
- Removes protection from basic and speedlock programs
- Simply the best, the tape to tape back up copies to best of tape to tape back up copies! AMSTRAD
- Written specifically for the 4M, this is not a Spectrum conversion.

TAPE UTILITY ON TAPE ONLY £4.99. AMSTRAD CPC404 ONLY.

## SOUNDBLASTER<sup>NEW</sup>

The SOUNDBLASTER is our first move into hardware. This device allows you to enjoy your games with superb STEREO SOUND. The SOUNDBLASTER is a small stereo amplifier that comes complete with TWO 20 WATT 3 WATT SPEAKERS.

- Small compact size
- Powerful 20 Watt 3 watt speakers
- Speakers contain a 1" woofer, a 2" mid range and a tweeter
- Volume and balance can easily be adjusted
- Headphone socket for private listening

FOR A LIMITED PERIOD, COMES COMPLETE WITH STEREO HEADPHONES, ORDER 90491

Available now at only £29.99 (+£2.00 for postage) CPC404/504/512

## SPLOCK TRANS II<sup>NEW</sup>

Many programs are now protected by the new version of the Speedlock Protection System. Until now, it was virtually impossible to transfer these games to disc. Now SPLOCK TRANS II performs the impossible.

- Fully automatic, very easy to use
- Uses only the absolute minimum disc space
- Saves programs in full including loading screens
- Programs loaded quickly including loading screens with colours on colour
- Will transfer easily to disc

Available now on cassette at £9.99 CPC404/504/512

## Show releases unveiled

FOUR new Eurocom joystick models are among a number of CPC product launches just announced for the Amstrad Computer Show at G-Mex, Manchester.

Micro Handball is an analogue/digital unit featuring an autofire facility with LED indicators and speed control. Price £24.95.

Two versions of the Professional 2 joystick will be released - one with autofire facility at £19.95, and the other without a top fire button for £16.95.

Most advanced of the quartet is the Attack joystick featuring a micro-switch top fire button, trigger, straps for leg or arm use, and new ergonomic base. Price £18.95.

Eurocom, which has reduced prices on its existing joystick range at the show, is also launching the advanced Jim Wit Disc which games with a lifetime guarantee and costs £24.95 for 10.

Legatron is releasing the CPC version of its best-selling maze game Xor, price £14.95 on disc and £9.95 on cassette.

Electronic Research is launching a device to interface the CPC with the Yamaha DX27 voice editor.

Kempston Data is releasing a new desktop publishing package, software only for £24.95, with a mouse £66.95.

# Multi-million dollar CPC games launch

A GAMES bonanza for CPC users has been promised following the launch of a UK subsidiary by America's biggest entertainment software house Electronic Arts.

The US parent company, based in California, accounts for 29 per cent of America's software sales in the games sector.

With over 200 titles to choose from, its Berkshire-based subsidiary says new games for the CPC should start flooding into the shops shortly.

Many of the titles have

already been bestsellers on other computers, and conversion to the Amstrad CPC is going ahead at full speed.

The multi-million dollar project is being launched with three titles for immediate release. They are graphic adventure The Bard's Tale, hydrofoil simulation Pegasus and shoot-'em-up tank simulation Arctic Fox.

To cater for the expected demand from CPC users, Electronic Arts (0753-40443) has taken new premises in Langley,

Berkshire with over 10,000 sq ft of offices and warehousing space.

The UK operation currently employs 22 people, a total which is expected to rise to 40 by the end of 1987.

Over 300 UK retailers have signed up to sell Electronic Arts products and affiliated labels from GSI, and Nexus. Mike Smith, Tandy and Mensies have already taken on its products. All the games will retail for £9.95 on cassette and £14.95 on disc.

## Lost for words?

AMSTRAD CPC users can now use their computer and telephone to access to what is claimed to be the biggest - and most up-to-date - multi-lingual dictionary in the world.

It is all part of a new service being offered by Mosaic, the UK's fastest growing electronic mail service. Accessed in an EEC-sponsored multi-language

computer in Luxembourg, the electronic dictionary is the result of a massive collaboration between language experts throughout the Community.

The Great European Dictionary consists of more than 300,000 words and phrases in English, German, Danish, Dutch, French, Italian, Portuguese and Spanish.

## Hot-shot releases

TWO new budget priced games for the CPC have been announced by Bug Byte.

Peter Shilton's Handball Maxwells is based on the so-called Hand of God incident that knocked England out of last year's World Cup.

The user takes the role of goalkeeper Shilton who is faced by hot-shot players in a practice session. There are also league matches and multi-player games to contend with.

Other features include various skill levels, 3D graphics and a total of 11 different movements of the goalkeeper.

Also from Bug Byte 01-420 0480 comes Defcon, a Strategic Defense Initiative shoot-'em-up featuring an Eagle class E751 fighter plane fired with a laser beam.

Object of the game is to regain control of the Earth's satellite system which has fallen into the hands of an unknown alien force. The games are £9.95 each on cassette.

## SPLIT-SECOND ACTION

A RACE down the world's fastest Olympic bobsleigh runs faces players of the latest CPC release from Digital Integration 0378 682888.

Bobsleigh provides a

driver's 3D view of six famous tracks from St Moritz to Calgary, each demanding split second reactions every foot of the way. Price £9.95 on cassette, £14.95 on disc.

# Making business easier

A NEW business software package for the CPC664 and 6128 has been released by SD Microsystems.

The CPC Small Traders Pack includes simple accounting, with sales and purchase ledgers which

can produce a wide range of information on debitors, creditors, journal listings and VAT.

Stock control is also possible with up to 500 items per file of stock and reorder listings.

Mail list management

enables up to 200 names, addresses and phone numbers to be stored and labels to be printed.

There is also a telephone directory, routine to Imperial calculator, on-screen calculator and a disc utility. Price £24.95.

## Micro politics

BASED on the popular television series, *The Prime Minister* has been released for the CPC by Mosaic Publishing (0435 53377).

The player takes the role of fictional Prime Minister Jim Hacker during five days in which policy decisions can lead to popularity in the polls or political disaster.

The game is set in the Prime Minister's office which is equipped with telephones, intercom, teletypewriter and an ideas box. Popularity of the Prime Minister is reflected instantly on a poll chart as decisions are made.

Various scenarios can be followed, from the troubles in Northern Ireland to the possibility of nuclear

war. Price (£14.95 on cassette and £19.95 on disc).

And with the American presidential election on the horizon, Addictive Software has announced its latest game for the CPC - *President*.

The game puts you in the role of the President of the United States with all of the decision-making problems the job entails.

A delicate balance has to be struck between policy decisions and personal standing in the polls.

The economy, legal and international relations all have to be treated carefully in order to win re-election at the end of your term of office.

Price (£9.99 from Addictive 071-894 8100).

## Gnome on the range

LATEST release for the CPC from Level 9 (0344 887887) is *Gnome Ranger*, a three-part re-creation of an epic journey by the gnomish legend Button-Low, complete with multi-player puzzles and what the authors call "masses of amusing text".

Characters, who all have their own lives, can be organised and ordered about by the player and there's a 48-page journal to help. Price £9.95.

## On your bike

YOU can don the yellow jersey for a new cycling road race simulation for the CPC from Greenline (021-356 3077) called *Tour De Force*.

Action takes place in five different countries, each with its own individual terrain and scenery.

Competition is stiff, with the player having to get more points than the

champion in order to progress to the next stage of the race.

Different techniques are required for each of the five stages. Obstacles like potholes, broken bottles, piles of hay and nasty competitors who try to kick you off the bike have to be contended with.

Price (£9.99 on cassette and £14.99 on disc).

**S**ET in the 21st century, this game of strategy takes on a familiar theme. As Supreme Commander of the United Nations Nuclear Response Force, it's your task to prevent the ultimate catastrophe - nuclear war. This is clearly not going to be easy, there are 16 superpowers all vying for supremacy. The situation is tense - only clear thinking and good judgement will maintain the status quo.

Consequently, your position of diplomacy are tested to the full. Not only must you develop good relations between yourself and each nation, but you must also foster between the nations themselves.

The game is run driven with five principal icons leading to further options. These allow you to deploy satellites at various strategic points across the globe either for defence purposes or reconnaissance.

One icon gives information about where UN forces have been deployed, while another allows you to tune into the world's wireless and intercept vital information.

Communication from the nuclear nations is virtually continuous and it is also possible to pass messages out. For example, you might want to increase a nation's general reputation another for acts of aggression.

Your role is increased at various intervals with ratings such as disastrous, poor and average. If war does break out

between two countries this is depicted on the map (which takes up a large part of the screen) by missiles flowing back and forth between the warring nations.

Movement is fully aided - only war (strategically thought) slows things up. The graphics are neat rather than spectacular, but this does not detract from the gameplay. To keep track of your decisions, the game comes with a colourful world map and two sheets of reusable flags.

Though it might prove a little frustrating for any full-blooded strategists out there, The Armageddon Man is a stimulating and addictive game.

**Tom Hargan**

**Presentation 85%**

A simple icon-driven system enabling swift action.

**Graphics 75%**

Clear and effective, but don't expect an optical extravaganza.

**Sound 10%**

Only a nondescript tune to tell you the game is loaded.

**Playability 87%**

Easy to get into and simple to play, but read the Obsolete thoroughly.

**Addictive qualities 90%**

This one will certainly grab you.

**Value for money 75%**

Picky, but worth it.

**Overall 85%**

A game that should provide hours of endless fun - unless it comes true.

**U.S. Gold**  
**£9.95 (tape).**  
**£14.95 (disc).**  
**Joystick or**  
**keys.**

**C**ONTAINING life forms culminated from over 1,000 worlds, a ship orbits like a galaxy 300 above a long-dorm planet. There it, however, one creature awoke and is not content to live as a specimen. Determined to ensure the survival of his race he sets out to defeat 18 built each into incubators around the ship - you are that alien.

The term alien is quite an

impressive character - as well as the usual floating blobs there are dozens of different creatures parading the various levels.

The first level involves locating the ship's support in which you are first dematerialised and then played around the system.

The first few levels you enjoy the game you are learning - this is when you identify the aliens which will rob you of the most energy, an which level the basic tank powers and when the first few incubators are located.

Graphically Survivor is excellent. Unfortunately the gameplay isn't the same degree of pain.

**James Robson**

obsolete description of the character you control - 188 systems, with an extensible jaw and a disgusting habit of spitting acid moustaches.

You have only one life - its length determined by the state of your energy reserves. Starting out with 80,000 units (energy) seems a touch on the generous side, it's not in every little unit but unless the ship is out to relieve you of it.

Energy can be acquired in two ways: by successfully attacking a built god in an incubator, or by catching and eating the ship's engines.

The second method doesn't earn you much energy, but it's great fun. The engineers aren't cheap in what you seek who equity about the ship, and they do they equate when you catch them! Your only mode of defence is your supply of acid - 100% accuracy! This will temporarily paralyse any alien.

A great deal of time has been spent designing some very

**Presentation 86%**

A choice of controls and clear instructions.

**Graphics 91%**

A wide selection of beautifully drawn alien life forms.

**Sound 80%**

Time here plus a few sound effects.

**Playability 63%**

Initially boring, but gets better with a little perseverance.

**Addictive qualities 86%**

A game which gives an 80%.

**Value for money 76%**

Just a touch on the high side.

**Overall 76%**

The gameplay isn't quite match up to the graphics.

## CHAMPIONSHIP WATER-SKIING

**Infogrames**  
**£9.95 (tape),**  
**£14.95 (disc).**  
**Joystick or**  
**keys.**

**A**FTER Garry Thompson, Nick Fatio, Roger Marnett and Diego Manzanera, the latest sporter to embrace a computer game is Patrice Martin. Nicknamed the Sea Prince, he's a very serious water skier from France, and he's competing in the World Championships which take place this year in London.

This is your opportunity to enter into the spirit of things, so shed your water wings, grab the nearest plank and get out onto the water. You might think it's almost impossible to control this speed in the straight, but they have designed this multi-player game very well.

Up to three water mammals can take part in the championship which consists of Le Jump, Le Freestyle (turns, stops, hops - and some results for all I know!) or Le Station - or a mix of all three.

The graphics are very good, with the main playing areas being framed with triple lines, receding girls and so on. Character animation is smooth and nearly divine - especially the fall when you fall off the skis! This will happen frequently and you get the hang of balancing and manoeuvring at speed.

You will need to learn how to combine various skills to compete successfully and fight your way to the points table to

the medals. During the Jump and Station events balance, speed and tension on the rope are essential, while in the Freestyle you need fast reactions and all your agility to create your own movements.

An interesting and unusual feature is that each event is seen from a different angle. The Jump features you in profile, the Freestyle views your performance from the safety of the boat, and the Station is seen from behind. This is the most successful of the three perspectives and gives a real impression of speed and water.

Championship Water-Skiing is really addictive, but I have no doubts about the long-term enjoyment of falling into the water every couple of minutes.

**Tony Bridge**

### **Presentation 28%**

The cover leaves something to be desired, and the instructions are skimpy.

### **Graphics 87%**

All too realistic.

### **Sound 84%**

Very similar to other Infogrames programs.

**Playability 74%**  
 Controls can be confusing.

### **Additive qualities 80%**

Gripping in the short term.

### **Value for money 70%**

Three games for the price of one.

**Overall 70%**  
 Bound to make a splash.

## HYBRID

**Starlight/**  
**Ariolasoft**  
**£8.95 (tape),**  
**£14.99 (disc).**  
**Joystick or**  
**keys.**

**C**ENTURES ago four alien beings were exterminated and abandoned in a heavily defended secure complex. Mysteriously their avatars' powers have grown and they now represent a threat to the empire. Their immediate termination is imperative!

No single robot has the

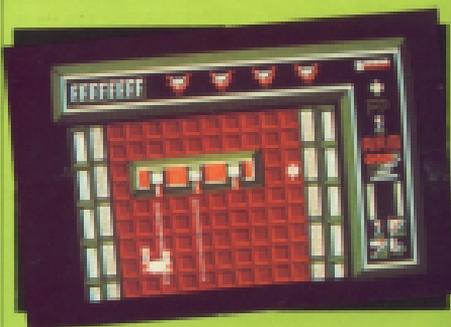

variety of secondary abilities, nor the environment to flourish in.

A good starting point is to send the Robot (unstable though the more to eliminate the majority of the gun emplacements). The real test is how to break into a new sector as you are limited in your movements by physical barriers.

Each robot has five energy cells, and as the last one is drained you lose control of the robot which effectively puts an end to the game.

Hybrid stimulates the memory, reflexes, and grip meter - are you up to such a challenge?

**Max Arth**

capabilities to perform the task: this is a job for the Hybrid - a team of three robots each with its own forte.

The first is known as the Robot. A combination of heavy duty armour and awesome fire power make it ideal for immobilising the empire's defences.

The second is the Brain. Poor armour, fire power and mobility make this robot easy meat for the system's defence shields. The Brain's one valuable feature is its ability to use the teleport key.

Next, the third and final fraction of the Hybrid is the most flexible of the three, its moderate fire power, armour and mobility are more than compensated for by its ability to bridge electrified areas and use specific teleports.

The main-line complex is heavily defended and gun emplacements, mines, and a

## 6 PAK VOLUME 2

**Elite Systems**  
**£9.95 (tape).**  
**£14.95 (disc).**  
**Joystick or**  
**keys.**

**H**O HUM, I thought... yet another mediocre bunch that never sold first time around. Well I was wrong — this is one of the most impressive compilations I've seen to date.

Into the Eagles Nest is an epic 300000 adventure based on details of World War II history. Three of your comrades are being held captive in a mountain fortress, but before the third was discovered he managed to plant explosives at key points around the castle. Your mission is to free your friends, recover lost air treasures and detonate the explosives on all four floors.

Eagles Nest is a graphical delight. Viewed from above, the castle is laid out in maze fashion and large 3D air sprites patrol the beautifully drawn corridors as you shoot your way from room to room.

In game play, Lightforce, alien forces have invaded against our colonies in the Republic sector. Such a show of aggression is not to be tolerated and it has been decided to send a single lightforce fighter to deal with the alien battle fleet. They won't know what hit 'em!

How fly over a vertically scrolling background, manipulating every swiftness, highly detailed sprite the alien air monster. On the most preliminary stages you will reach space stations — knock

out the control centres for bonus lives.

Lightforce is an out-and-out repeat-master, a game to eat the public rating and put colours on your trigger finger.

The next offering is a flight simulator — no boring junior jets through this is an all action jet fighter under your control.

The ACE fighter is a dream to fly — the controls are reduced to a minimum leaving you free to concentrate on getting the enemy into your sights.

An extensive selection of

game options is available: Dogfights against enemy fighters, static ground installations, or play havoc with their naval forces. Refuelling and rearming may be performed at any of the three allied bases — ensuring you are fed.

A training mode is supplied for beginners which lets you fly combat missions against an enemy that has forgotten to load its guns!

The ACE is described as 'the ultimate combat jet simulator' — I don't know about 'ultimate', but if you want a flight simulator where the emphasis is on fighting, this one fits the bill perfectly.

It's Breakout time! The classic classic is reincarnated here under the name of Betty.

This 1987 version is being up-to-date, incorporating all the

Betty

mod coins found in any of the recent spate of similar games.

Special feature bricks drop capsules when hit, which may enlarge the ball, slow the movement of the ball, give an extra life, or even transport you to the next level. Another original touch is the space invader which hovers behind the wall, dropping bombs.

Betty is a first class game — so simple, yet so addictive and has a gripping two player versus the computer mode.

International Karate is a good martial arts combat game. On your way to becoming a black belt you will face numerous opponents of increasing ability. By extensive use of the 16 moves available you can progress through the ranks.

Well, that's the theory but you're more likely to get the being daylight beaten out of you by some thug dressed in pyjamas.

Each round is the best of three bouts. The judge decides whether to award a full or half point for any blow landed — two points and the bout is over. In between rounds you may earn bonus points by smashing stacks of tin.

The international aspect refers to the backgrounds — such as the Sydney opera house or Egyptian pyramids — in front of which the game is played. This menu supplies a second version which has different back-grounds.

The final offering is Shockway Rider — one of the more original games to grace the Amiga's screen.

In the not too distant future our critics will be called by

multi-lane moving walkways — the shockwaves. It is the height of insanity to go full throttle — complete one lap of the city. This involves passing through a dozen different obstacles, each under the control of a different gang.

The shockway lanes move at different speeds, and travelling in the fastest warns you the most points. Thugs can easily be dealt with by a skillfully lobbed bottle or brick, or if that doesn't work, an opponent is just as effective. Failure, by whatever means, is a steady affair — a stall of credits and your disappointed head waits graciously from the screen.

6 Pak must be the first ever compilation to contain six first rate games — buy it today!

David Bowler

Lightforce

## SOLOMON'S KEY

**US Gold**  
**£9.95 (tape).**  
**£14.95 (disc).**  
**Joystick or**  
**keys.**

If you like infatigating, enjoyable and addictive games, you'll love this one - a mixture of platform, strategy and shoot 'em up.

You're on the trail of King Solomon's treasure and to get at it you have to work your way through a network of rooms. In each you must collect a key and reach the exit - far from easy. Of course there are plenty of enemies on patrol - whose would the software industry be without the little demons?

To collect your key or any other goodies you need to enter square boundaries which are as big as you see. If there isn't a handle handy, simply press the fire button and one will miraculously appear in the direction you are facing - you can also make them disappear by the same method.

The talent is indistinguishable when dealing with what can only be described as spears from a computer flute. These wander around certain levels - which of course are near to where you need to go - but you can drive them by carefully laying a path of boundaries.

Some objects on your travels will give you higher scores and also a quantity of special ammunition. When fired this ammo changes adversaries into useful items to increase your score.

Watch out for the imprisoned forms. As the copy did not have any instructions I'm still unsure

what you can do.

Though hard, this game is also very addictive - you always want to come back to see if you can succeed to another level. As to how many levels there are - well, I'm still playing.

On the negative side it seems more time has been spent on the title screens and scrolling between levels, than on actual gameplay which feels very familiar. I also found myself responsive a little on the sluggish side, sometimes with fatal consequences.

Despite this, Solomon's Key is a smashing game and one that will keep you going for quite a while.

**Paul Sheppard**

### **Presentation 85%**

Pretty to look at and easy to use.

### **Graphics 85%**

Lots to see but nothing spectacular.

### **Sound 80%**

Good music and good FX. However, it would be nice to be able to turn the music off.

### **Playability 95%**

You need to work out what to do on every screen and the best path to take.

### **Addictive qualities 95%**

Let me have just one more game...

### **Value for money 80%**

Yes.

### **Overall 90%**

I liked it! However, concerning its lasting appeal...

## DEATH WISH 3

**Gremlin**  
**Graphics**  
**£9.99 (tape).**  
**£14.99 (disc).**  
**Joystick or**  
**keys.**

It's tough on the streets, especially when you're in New York. The police are powerless to prevent gangs of thugs and hoodlums from roving the lot. Now is the time for you, in the role of an old vigilante, to

map to locate gang leaders and ammunition. A time machine keeps you updated on the occurrence of riots, which can be quelled by rushing to the correct district, finding the gang leader and terminating him.

Once you've cleared a building of hooligans you can try your hand at a little striping. Walk to a window and press W - a view of the street is displayed and superimposed on this is a gunlight.

You can have only one life, the length of which is determined by the state of your bulletproof vest. As a gradually

teach these punks some manners.

The New York streets are alive with a multitude of characters - hoodlums, police, medics, little old ladies and hookers.

Spotting the hoodly element is not difficult, they're the ones carrying clubs and machetes.

Just to even the odds up a little, you have a small arsenal. Carrying a 475 magazine, a shotgun, a machine gun and a rocket launcher isn't a wonder you can still walk if you get out in search of battles.

The problems occur when you want to shoot them, as there are just too many good guys around. You are penalised for shooting the wrong people. Penalties 3,000 points and becoming a target for police marksmen.

When the weapon in use is out of ammo it is automatically replaced by one of the others. If they are all empty you keep your hands in your pockets and just stand when the fire button is pressed. Cashes of ammo are to be found inside buildings so take every opportunity to kick down a door and take a look.

You can use the on-screen

Map to help, the chances of scoring a first hit increase.

Death Wish 3 is a light-hearted game of modern-day cops and robbers.

**Steve Brock**

### **Presentation 85%**

A wide variety of well laid out controls.

### **Graphics 85%**

Reasonable graphics with some humorous touches.

## MISSION GENOCIDE

**Firebird Silver  
£1.99 (tape).  
Joystick or  
keys.**

**Y**OU don't know how hard a retired's life is, having to plough through some really awful games to give them a fair chance. Busy now and again though, it's all made worthwhile when one like this comes along.

On the principle that attack is the best form of defence and knowing the Red Star empire is about to launch an offensive against your home planet, there's only one thing for it — go get 'em!

Each planet sends beneath your fighter as you bomb the ground installations and laser bases after waves of defenders.

Planet one is an outpost and you soon notice that when you bomb sites, goodies appear for collection — missiles, lasers, computers, shields and astro-logs. Astro-logs! Yes, the aliens also keep some black holes in some sites and contact with one will send the glass from your craft reeling, your weapons drag off — painful!

Second planet is a farming world, and after that it's a mining planet followed by a space port and one labelled 'I don't think they like me...'. You bet they don't, I just asked them 'me'!

After that is Inspirations End and I don't know what comes next, but I'll keep trying until I've covered the lot of 'em!

What hits you is the amazingly smooth scrolling, it looks like a hardware scroll, but there's a panel at the bottom showing the current state of

play — score, weapon status and so on.

The thing I like about this game — apart from being dirt cheap and totally addictive — is that it looks like a refuser from a real arcade machine. You'd never mistake most Amstrad games for the genuine article, but this one's different.

The sprites are simple and at times the choice of colours is pretty revealing. Even if terrestrial players and I gets some minor frame rots, the super smooth scrolling, the big, bold graphics and riveting game play all add up to Mission Genocide being a real gem.

I've just wasted the last few days doing nothing but play this game. If you're trigger happy and have two-quid to spare for a Light Phaser clone, buy it, it's a bargain.

**Ian Sharpe**

### **Presentation 95%**

Nice auto-fire feature but nothing fancy, not even definable keys.

### **Graphics 85%**

Blobs (about, but) smooth and clear.

### **Sound 65%**

Next spot FX, alien death with a satisfying splat.

### **Additive qualities 95%**

Should carry a light warning. Why aren't they all like this?

### **Playability 95%**

Never a dull moment.

### **Value for money 95%**

Definitely.

### **Overall 88%**

A gem!

## DESPOTIK DESIGN

**Era/ Infogrames  
£9.95 (tape).  
£14.95 (disc).  
Joystick or  
keys.**

**D**EEP beneath the Earth's surface an unscrupulous adventurer has pirated programs for the reproduction of living cells.

You aren't going to believe this gang, but the world's fate is

at stake, but it can also be an epic tale. If the mushroom bumps into you when the key is engaged, or not in your possession, you die.

There's the usual mazy maze of badies which get in the way and sap your energy, running out of energy being another way to see the cute death sequence. Piling the bad bomb seeds: it starting round the playing area like a pack on ice until it kills something or you intercept it.

3D isometric games have to be very special to cut any ice these days. If you like them, this

in your hands and you've got to destroy the badies and neutralise the programs.

It's a 3D isometric arcade adventure — a theme that's been done to death, and then some — in each room of the underground complex is a gate through which enters a steady stream of creation modules (robot). Lying around are blocks and on the surface of each is an arrow.

When the module hits a block, it doesn't rebound according to the laws of physics but goes in the direction of the arrow. The blocks are arranged so the creation module exits through a red gate — the gate of evil. On each screen you must rearrange the blocks so the module leaves through the green gate — the gate of life.

You can only move a block by engaging the magnetic key and this is where the killer multi-revues come into play. Every now and again one wenders in and if you touch it when the magnetic key is not in action, it eats the key and vanishes.

You Best have to hand for it through the complex. Sometimes it's only a screen

is an entertaining combination of arcade action and logic, but it's about time Era did something different.

**Ian Sharpe**

### **Presentation 80%**

Few options, needs a save game feature.

### **Graphics 90%**

As you'd expect from Era, smooth, colourful and pretty.

### **Sound 55%**

Reasonable FX but nothing out of the ordinary.

### **Additive qualities 80%**

Map it, solve a couple of screens and you'll be hooked.

### **Playability 80%**

Could have been more if the game continued after death.

### **Value for money 80%**

It'll provide hours of entertainment.

### **Overall 75%**

Not bad but a tired theme.

## MYSTERY OF THE NILE

**Firebird  
£7.95 (tape).  
£12.95 (disc).  
Joystick or  
keys.**

**T**HE Jewel of Luxor has been stolen by the evil Abu-Sabir and within 24 hours it will be in the hands of the even nastier Baron von Bookfist.

The first of this grisliest Egyptian mummy world filled archeologist land all round named Nevada Smith. He and his two companions, Janet Deight and Al-Hazan, must battle their way through 80 screens of devious puzzles and split second action if they are to foil Abu-Sabir.

Loading complete, you are given an indication of the thought that has gone into the programming. Not only can you choose between joystick, cursor keys, or user-defined keys, but you can also modify the game for use with either a colour or

green screen monitor - a feature too rarely seen these days.

The screen design is very good - a couple of lines at the bottom are reserved for information regarding ammunition and lives remaining, the rest is devoted to action - and what a lot of it there is!

Graphics and facilities are all drawn in a detailed and quite humorous, cartoon characters - a black outline being used to good effect. The backdrops are less detailed, but come complete with foreground objects to walk in front of and behind.

You have control of one of the three heroes - the currently selected character can be changed at the touch of a button. Each person carries a different type of weapon: Nevada has his trusty Smith and Wesson, Janet has a supply of grenades cunningly stashed about her person and Al-Hazan carries a fearsome sword.

You begin in the city of Luxor. Janet is perched high on the balcony of her hotel room, with

Abu-Sabir's henchmen scurrying below. Leaping athletically across two more balconies she reaches a cache of grenades - now the fun begins! Dropping to the street you start blasting. Four men later you are ready to exit to screen two.

As soon as you enter, cut towards the right and prepare to throw four grenades in rapid succession at the emerging villains. While doing this keep an eye on the fifth chap, peeping from the window above - he's got a thing about dynamite.

This is a perfect example of the degree of realism achieved. Don't panic if a stick of dynamite is heading your way - there is a delay of about five seconds between it landing and the explosion. If you're really cool you can stand on the dynamite for four seconds, then step back and let a boddy run on to it.

Not until you reach screen three do you meet up with Al-Hazan - leaping dramatically from a roof top he remains close by your side.

Keeping control of Janet you split the three boddies who emerge from the building on the right. This done, it's back to the left, climb the ladder, and grab the mail on the balcony.

Occasionally this fast pace decides to lurch up the proceedings by showing everyone will grenades - it's at this point that Al-Hazan's presence can become a problem. Not only must you keep clear of the falling explosives, but Al-Hazan too. If either character is struck, he/she loses a life and you start the screen again.

Don't overreact the dynamic bar mask screen four. Don't be distracted by the man on the roof, the main attack will come from the corner gun. Watch closely for heads bobbing up and down behind the fence, then blast them before they appear!

This may sound very unimpressive, but it soon let them get a shot in you're a game. Firebird informs me it is possible to jump over bullets - providing you've

got reactions like Ben Johnson - the speed of the bullets is too realistic for comfort.

Finally, it's the first appearance on screen five - this is the realised screen so far. You have three people to defend and Abu-Sabir's men attacking on both banks!

Once again realism rears its ugly head - with three people

crunched into a small area it is all too easy for a weakened friend, or an indiscriminately lobbed grenade to hit one of your own people. It took me three hours of sweat and frustration to crack it, so who should I tell you the secret - anyhow I'm now stuck on screen six!

Mystery of the Nile is a marvellous blend of cunning and programming, with a degree of realism that's second to none.

Jon Peck

### **Overall 92%**

The best available adventure yet played in a long time.

## MISSION JUPITER

**Code Masters  
£1.99 (tape).  
Joytick or  
keys.**

If Jupiter is one of those few planets you've never been to, now's your chance. Courtesy of Derek Brewster, you take a non-stop, non-stop train through 10 levels of arcade action, zapping a variety of aliens on the way.

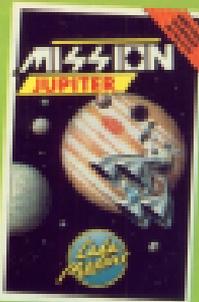

Secure in your spaceship, you can either fly through the air using your thrust pack or travel along the planet's surface. The colourful background scrolls from right to left, displaying both the rural and urban faces of this beautiful world.

As you progress, there are various obstacles over which you must fly, including cannons, fires and spikes. You must also remember to collect leaves and thrust packs lying on the planet's surface.

If that wasn't enough to worry about, the planet defence system has activated an array of forces to bring your trip to an abrupt end. These take the form of humanoids, flying saucers, missiles and meteors, to name but a few. It's just as well you have four lives!

The screen is well laid out — a top of numbers in the upper left indicates the various levels and two bars show levels of thrust and laser power. It's important to watch these carefully.

When you lose a life you die out — temporarily — have to go back to the beginning, only in the level you were on. There's also a save facility for high scores, which means once you've reached the higher levels you don't have to start all

over again.

On the whole, Mission Jupiter is a successful and playable game. The fact that it's not the most exciting nor the most stimulating around is reflected in its price.

**Tony Finagan**

**Presentation 65%**

Two-player option, save facility, good demo mode.

**Graphics 55%**

Colourful but blurry.

**Sound 50%**

Not very attractive at all.

**Playability 75%**

**Additive qualities 55%**

...but it's not additive.

**Value for money 60%**

Reasonable for a budget game.

**Overall 59%**

Unimpaired.

## RENEGADE

**Ocean  
£8.95 (tape).  
£14.95 (disc).  
Keys or  
joytick/keys.**

THIS one will put you off going into town alone for the rest of your life. Renegade has you travelling through seven of Times' Tapes, a rough-cut party to collect your girlfriend, Lucy. Unfortunately, you are not alone — muggers, Hell's Angels, race gangs and not a few others are out to get you.

The object is to kill off the members of each gang (including the boss), the last in the case of level three) will come into action after you have dispatched the majority of his henchmen.

You score by attacking the enemies, the number of points you get depending on the effort this has on each victim. When you have successfully completed all screens bonus points are awarded.

All the stages test your martial art skills to the full. The first is the tube station where a group of muggers are lying in wait for someone just like you to get off the train alone.

You can kick, punch or jump at them using either the keyboard or joystick/joytick. I found whichever combination I chose, control was difficult.

The next part of the journey takes you down to the pier area — the meeting place for the local Hell's Angels. At first they try to cut you over using their blades, then taking that beat you with chains in their attempt to terminate your journey right there.

If you haven't already had enough for one evening, Big Bad Bertha in the backstreets makes you wish you'd never left home. As you move through her area of town you face a tough battle as she repeatedly kicks, cuts and punches you.

On screen four another group of thugs carrying bats are waiting to tie someone apart.

Eventually you arrive at the meeting place. However, the last gang has called someone — means who are waiting to get with their gun-toting leader.

Each level is loaded separately which can get slightly annoying if you finish the cassette version.

**John Butler**

**Presentation 50%**

No options available, no save facilities.

**Graphics 95%**

Some of the best I've seen on the Amstrad.

**Sound 80%**

Each level has a different tune plus the usual special effects.

**Playability 35%**

The keys are awkwardly placed.

**Additive qualities 60%**

There's got to be a way of getting better!

**Value for money 75%**

Worth it to see the blood pouring from the dead bodies.

**Overall 65%**

One of the better martial art's games available.

# Three top tapes for your delight!

WE'VE brought together the best programs from recent issues of Computing with the Amstrad CPC to produce three compilations at a very special price.

Whatever your interests you'll be delighted with their variety, and by studying the programs you will learn so much more about your CPC.

## Ten of the Best

Volume 3

- Wheel Spin** - Drive the city streets avoiding other cars, to collect the 30 flags.
- Big Bang** - Four islands of life at the computers to save the eggs from destruction.
- Guerrilla Plot** - Fight guerrillas in the corridors of the Ministry of Parliament.
- Galactic Invaders** - Defend the Earth from waves after waves of alien invaders.
- Ballfall** - Guide balls through the complex maze and drop them into boxes.
- Fishing** - Use your line and keep a keen eye on the float to catch the fish.
- Eggheads** - Find the seven corners of the egg using the floppy through out.
- Centipede** - Blast away at the mutated bugs which scuttly across the screen.
- Diamond Slapper** - Rejuvenate the slide through the mines, avoiding flying mines.
- Hangar Sweepers** - Guide the Destroyer to safety while eating up the buffers.

## CATCH 23

**Martech**  
**£8.95 (tape).**  
**£13.95 (disc).**  
**Joystick or**  
**keys.**

**I**n Martech's Catch 23 you play a man for reward with a mission. The enemy have designed a new type of aircraft - the CR 23 - far ahead of anything your side possess. It can make excursions into space and re-enter the atmosphere days or weeks later to make devastating surprise attacks.

The development site is on a heavily fortified island and your mission, should you decide to accept it, is to steal the plans for the CR 23 and leave a time bomb in the nuclear reactor.

The raid takes place on a moonless night and you have until sunrise to complete it. At the start of the game you find yourself having just landed on the island by parachute. The exact spot will depend on the wind, but in practice it's one of a small number of locations.

Because there isn't any natural light you are equipped with a night-vision image-behaviour. This gadget displays everything within 100 metres in a wire-frame outline.

There used to be a thriving community here before the military moved in and there are buildings belonging to the island's former inhabitants. When are sealed up, but a few can be entered and the contents

of the room examined. Some are safe houses where you can save or load a game. You can recognise these because when you get inside, the word SAFE is written on the wall.

Other buildings will contain batteries for your mine detector, ammunition, explosives and the computer terminals. The story behind this is that most of the scientists working on the project have been tricked into doing so and some have formed a resistance movement.

In their hide-outs are computer terminals tied into the defence network and if you can deduce the password you can log on and find vital information.

In the instructions are potted descriptions of all but one of the scientists. An object in the hide-out should give you a clue as to who's it is and allow you to work out the password.

New for the last news, after many hours playing and having found new terminals I haven't managed to log on yet. I'm sure that once you've checked out the real will be easier.

And if that isn't enough Martech's graphics is combined with the dangerometer at the bottom of the screen tells you how likely you are to bump into one of these.

Every now and again a guard pops up and you have but a few seconds to plant a slug in his chest before he catches his rifle and inflicts a dose of lead poisoning.

There are also tanks which are more difficult to deal with

Concoids like the duck out of sight, mad dogs and Englishmen jay walk and drop a time bomb in their path.

Movement around the island is on foot or by shuttle. Some of the shuttle routes are shown on the outline map supplied, the rest you have to work out for yourself.

As you move around the scenery is updated. It's not quite fast enough to give smooth animation, but it's quick enough to give a sensation of movement rather than feeling like separate pictures.

Spied relative to the buildings is in keeping with being on foot, but there's a noticeable jump between frames. As well as the buildings you'll see trees, marsh, mountains and land mines as you roam the vast playing area.

If this had been yet another 3D maze game I'd have screamed. But no, it's an attempt at a 3D simulated reality without a maze structure. I thought the graphics could have been quicker and prettier - compare it to Mercenary and you'll see what it could have been like. The overall feel of the graphic design - not the programming - is a little amateurish.

Overall I'm in two minds about this one. It's a huge, sprawling, complex game that will take you weeks, possibly months to solve. It's more of an adventure than anything else

and is only to be undertaken if you're prepared to spend a lot of time and effort unravelling it.

I can see some people being bored with others will be engaged. It's not one for those with a short attention span, but if you want a challenge with a difference I think this merits a top down to your desk.

Ian Shepp

#### Presentation 60%

Good instructions, no options.

#### Graphics 80%

Reasonably well programmed but lacking in visual appeal.

#### Sound 40%

Grating title music and a few simple FX.

#### Playability 75%

Your ability to fire terminates as the guard takes aim - but otherwise OK.

#### Addictive qualities 85%

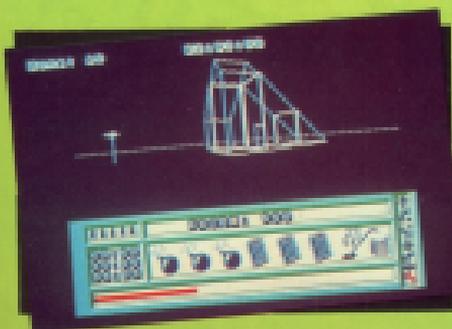

I got to this, but it's one of those games you'll either love or hate.

#### Value for money 75%

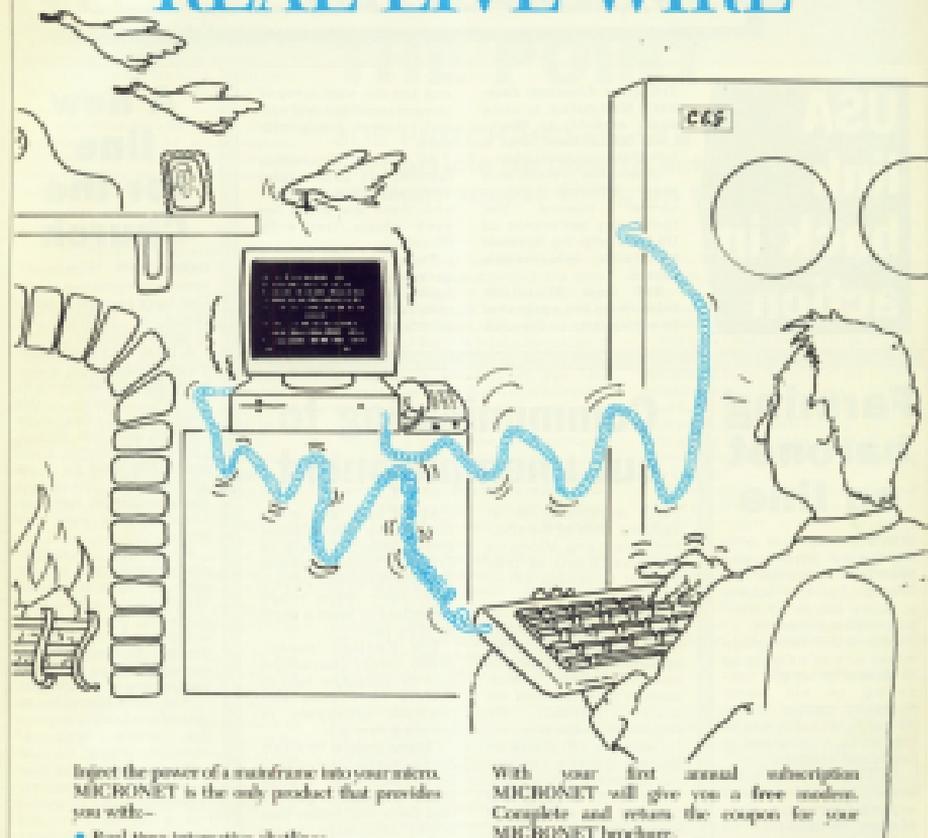

Plenty to get your teeth into.

#### Overall 75%

An interesting and challenging game.

# COME HOME TO A REAL LIVE WIRE

Inject the power of a mainframe into your micro. MICRONET is the only product that provides you with:-

- Real-time interactive chatlines
- Free and discounted telesoftware
- MUGs (one the UK's most popular SHADES™)
- Daily computer news and reviews
- Free PRESTEL™ electronic mail
- Teleshopping - bookies, hotels etc.
- 70,000 PRESTEL users 50,000 Telecom Gold users
- National and International Telex
- Technical Support and Help Desk

**PLUS:** Access to PRESTEL and Telecom Gold, and there's much more - all for one low cost subscription. Modern owners call us now for an on-line demonstration.

With your first annual subscription MICRONET will give you a free modem. Complete and return the coupon for your MICRONET brochure.

## USA link back in action

THE giant American database Minematics is once again available to MicroLink subscribers after a complete reorganisation.

Minematics' switch to a more efficient system carrier ceased the temporary severance of UK links with the dynamic electronic information service.

But now MicroLink subscribers can again see to enthusiasts in the USA

and tap the vast array of computer-related and special interest group services.

All the old Minematics features are back - plus some new departments - and there are plans for even closer ties with MicroLink.

These include a reverse gateway to allow the Americans to make direct calls to MicroLink and see what's on offer over here.

## A new line for the Church

COMPUTER communications systems like MicroLink have become a major focus of interest for Britain's churches.

A joint study of information technology is currently being undertaken by Church House, the Anglican Consultative Council and the British Council of Churches. It will eventually lead to more efficient electronic communication between churches all over the world.

Meanwhile similar assessments on a smaller scale are being conducted in just about every diocese in the UK. Typical of these is the one being done by the Rev Richard Thomas, communications officer for the Diocese of Winchester.

"I'm using MicroLink as part of my brief to explore the whole area of communications", he said.

"I believe electronic mail is going to become very important and I'm sure it has a lot to offer the Church - both nationally and internationally - as a communications medium".

## Farming baronet on line

DOWN on the farm or in the factory, baronet and MicroLink subscriber Sir Charles Legard is equally at home thanks to computer communications.

Information technology makes sure he's always up to date with what's happening on his North Yorkshire estates in the Vale of Pickering as well as the family businesses in Leeds and Bradford.

Sir Charles farms 1,700 acres of arable land around Scarsington Hall, Malton, in addition to running companies involved in engineering and wholesaling electrical components.

Legards has owned land in Yorkshire since the 12th Century, but the micro and modern are now as much a part of the scene at Scarsington Hall as the family portraits.

"Whether I'm at home or in one of my offices, computer communications keep me constantly in touch with what's going on elsewhere", said Sir Charles.

## Communicating to cut unemployment

TWO organisations at opposite ends of the spectrum are using MicroLink communications as they attempt to reduce unemployment.

Camden Jobtrain in North London provides local youngsters with opportunities to learn the specific skills which surveys have revealed are most wanted by employers in the area.

There are 120 places on courses in motor mechanics, carpentry and joinery, office skills, catering, and care for the elderly and young children - all leading to City and Guilds or other qualifications.

At the other end of the scale, the Mid-Career Development Centre in Croydon helps business and professional people who have been made redundant or want a more fulfilling job.

The Centre's experienced career counsellors provide individual help to restore confidence and practical assistance in getting a new job.

"Many people find that being made redundant turned out to be a built break because it galvanised them into action they might otherwise never have taken", says principal Kieran Duignan.

## Your chance to join MicroLink - turn to Page 8

## BR BOOKING EASIER

MICROLINK's convenient British Rail rebooking service has been given a complete update.

It allows subscribers at any hour of the day or night to order train tickets for journeys between London and more than 20 major UK centres from Aberdeen to York.

Subscribers can book their journeys via MicroLink after studying the electronic timetable in the comfort of their own home or office, and charge them to their Access, Barclays American Express or Travel Key account. Tickets are sent by return post.

**O**ne of the major applications for computers is that of storing data. This is especially true if you've got a disc drive.

The CPC uses a system called sequential filing to store information on disc, using Basic's PRINT#, INPUT#, and LINE INPUT# commands.

If you were to attempt to write a simple database to store names, addresses and telephone numbers the following few lines would write a single record to disc:

```
100 PRINT#1,NAME
110 PRINT#1,ADDRESS
120 PRINT#1,PHONE
```

You could write as many of these to the disc as you wanted, restricted only by the disc size. Even so, this is far more than you could fit into the computer's memory at one time, even if you could use the CPC6128's bank switching facilities. In fact, you would be using the disc surface as extra storage memory for your records.

However, there's a snag to this. Figure 1 shows how information is stored on the disc; you can think of it to a train of connected carriages.

If you start at the first carriage and want to get to the restaurant car some distance away, you have to walk through all the carriages between the one you're in and the restaurant car. In doing so each carriage is traversed in sequence: this is a sequential access system.

The same principles apply to the records in your name and address file - to get to the 50th on the disc, you have to read through the first 49.

To avoid loading all the records into memory - which you often have to do to have large programs - each of the first 20 records would have to be read in with INPUT# and discarded immediately before reading in the next.

Not terribly efficient, is it? Sequential access gets very time-consuming, especially if there are a few hundred records on the disc.

In addition you may want to arrange the records in a file so they're in a particular order such as alphabetical surnames. There are two ways of achieving this:

**Sorting:** A complete new file is made on the disc by reading the old one record at a time and writing the information out to the new file in alphabetical order. The new file takes up the same amount of space as the original, so it's not very efficient in these terms.

**Indexing:** You set up a second file - an

# STRAIGHT TO THE POINT

**JOE PRITCHARD** starts a two-part article on how to achieve random access filing on the CPC

index file - that holds a series of integers, each representing the position of a record in the original file. These numbers are arranged so that when the database wishes to access the original file in a particular order, it looks at the index file to see in what sequence it should retrieve the records. The index file is much smaller than the data file, so this method is quite efficient.

Figure 2 shows the two methods. Both are rather useless on a sequential access filing system; in the case of sorting, you have to make many time-consuming passes through the data file to extract the records in the order you require them.

Faster methods of sorting the file would need to access it in some other way than sequentially. And as for indexing, it's not really on; you could generate the index quite happily, but when you came to access the records you would really need to dip randomly into the file to extract the records in the indexed order.

You can do this by repeated passes, one pass per index file entry, but as you can imagine, this brute force approach only works on very small numbers of records.

The time taken to get to a record in a sequential access system is thus dependent upon how far in the file the target record is. So even if you manage to get things sorted alphabetically, extracting all the surnames beginning with S still means processing A to R first. What can you do?

The solution to these problems, and a host of others, is to use a technique called random access. Actually, there's nothing random about it; it means that you can retrieve a single record no matter where it is in the file, without having to go through the records that precede it.

Sorting and indexing is simple, and the solution to the problem of getting

Turn to Page 27 >

Figure 1: How information is stored

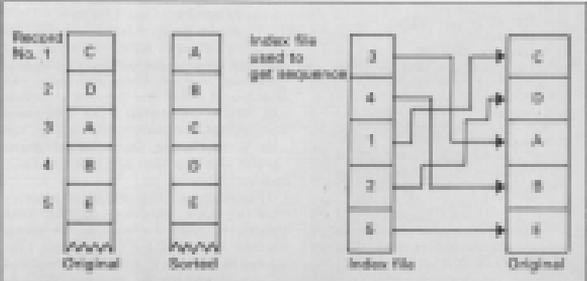

Figure 2: Sorting and indexing

## 4 From Page 27

all the 5 summaries out is very much easier and quicker. The only limitation is that records usually need to be all the same length. However, this isn't a drawback; it's a good idea to have same-length records in a file, even in sequential systems.

In fact, all you need is some means of getting Basic to adopt this system of storing information on disc, and you're laughing! Well, this article isn't going to tell you how to modify Basic, but it will explain how you can produce a simple random access system on the CPC with a couple of short machine code routines.

I'm going to use the basic unit of disc storage—the sector—as the basis for random access filing. Normally you never need to bother about this; Amos and CPM take care of which tracks and sectors are used for which files, and keep a record of such information on the disc.

When you start a program, Amos or splits it into sector-size chunks and transfers them to the disc a sector at a time. The sectors used are then recorded as part of the catalogue entry for the file.

We will be writing directly to the tracks and sectors, but there are three problems connected with this:

- The side of a disc used for this can't be used for anything else. The fact that you've written directly to a track or sector won't be detected by the disc operating system or CPM because you won't be writing catalogue entries. A DIR or CAT command will have no effect.

- Don't try this technique out on any disc with other programs on; you

may accidentally overwrite something valuable.

- You can't access these files with PRINT#0, INPUT#0 or LINE INPUT#0.

Right, having got the bad news out of the way, let's get down to business. The first thing you need to work out is how to read and write single sectors on the disc.

You can format CPC discs in three ways—system, date and IBM. The difference doesn't usually cause too many problems but when you're directly accessing the disc, the firmware routines are very strict about knowing which format you're using.

For this reason, I'll stick to data format, because it offers more room than the others—there are 40 tracks, with nine sectors per track, each holding 512 bytes.

Data format numbers these sectors &C1 to &C9 with the &C indicating the type. Different formats have different track numbers, and if you try reading a disc of one type with a machine code program that's expecting another, you'll get an error. Amos or on the other hand, gets round this by adapting itself to whichever format it is in.

All firmware routines in the CPC are accessed by calling a given address in an area of ram called a jump block which in turn calls the ram routine.

The jumpblock for the sector read and sector write routines we'll be using, only exists in a CPM environment. The routines reside in the extra ram used by the 6128 or 484 plus disc drive, for storing the disc routines—we'll call this the Disc ram.

Using any of its routines involves selecting the Disc ram for use instead of the usual upper ram, calling the desired routine, then re-selecting the upper ram.

Fortunately there are ram routines that allow you to do this with reasonable ease. The CPC allows a number of names to occupy the upper ram address space, and gives each a unique identifying select address—usually seven for the Disc ram.

You can pass this to a firmware routine called &B00F to select and enable the Disc ram, then call the ram routines needed. Their addresses can be found using the firmware routine &C00C for Read Sector and &C00F for Write Sector. Don't forget, these are in the Disc ram and not the Basic ram.

For each call, the set up parameters are the same: HL points to a 512 byte buffer to hold the data to be transferred, B holds D for drive A and I for drive B, C holds the track number and E holds the sector number &C1 to

&C9 for our data format disc.

Finally, you use a further ram call to restore the upper ram. Program 1 picks the machine code into memory which enables you read and write individual sectors.

These routines are rather primitive, but allow you to read and write sectors from the disc. Assuming you've located the machine code at &B000, a sector can be written with:

```
1000 ROM write a sector
1010 POKE &B000,B:IN drive number
1020 POKE &B010,I:IN
1030 POKE &B020,C:IN
1040 CALL &B030
1050 RTN
```

This will write whatever is in the data buffer at address &B001 to the sector specified in lines 1000 and 1020. To test the routine, I suggest you get a data format disc and try Program 1 which reads one sector on the disc and displays its contents on the screen. Don't forget to load the machine code first.

```
10 ROM random 11240 Read Description
20 on data format disc
30 ROM POKE 111240
40 ROM
45 POKE&B000:1111:&B000:sector

180 IF &B000:IN &B000:IN TO
91 &B000:IN:1111:PRINT%
190 ROM 1
200 ROM
```

Program 1

Of course, all these poles in Basic aren't very pretty, and it's not always clear what's happening. This can be improved by turning the machine code programs into BASIC commands.

- I'll provide a listing for this in my next article, when I'll also show you how this technique can be used to good effect in databases and suggest other uses for it. I'll also show you how to write to sectors in safety.

```

# CPC Classifieds

Has upgrading your computer given you hardware you no longer need? Or have changing interests left you with unwanted software? Then **THIS** is the place to advertise your surplus items. Computing with the Amstrad CPC readers are always on the lookout for a bargain and this is the first place they look!

• First printer for CPC DM1 dot matrix for draft or graphics including lead and spare ink cartridges, very reasonable offer. Tel: 003062 548.

• Amstrad 464, colour monitor, twin disc drives, rampack, extra modulator, more vds, mouse, software, books. Excellent order. Value £990 yours for £475. Tel: 0134 61314.

• Amstrad 664 with green monitor, cpm disc, manual complete and working £80. Tel: Allan, Brighton 734472.

• Wanted Amstrad

"Guide to Basic" good price for good condition. Jordan, Fairlands, Coombe Road, Salesters, SP2 8BT. Tel: 0122 333937.

• Amsoft business control system complete suite stock invoice purchase sales nominal ledgers cruised ready to register with Quest cost £148 sell £70. Tel: 0962 460346.

• Amstrad 6128, colour monitor, joystick, many tape and disc games, utilities. Only four months old £400. Also Acorn Electron, leads, games, joystick interface

**Classified advertisements will be accepted under the following conditions:**

- This service is **EXCLUSIVELY** for the use of private readers. No trade ads will be allowed.
- To avoid encouraging software piracy, all ads will be carefully vetted before they are accepted.
- Ads can only be accepted on this form (or a photocopy of it).
- There is no maximum to the number of words you include in your ad. If there is insufficient room on the form, continue on a separate sheet of paper.
- The cost is 20p per word, with a minimum of 10 words.
- We **GUARANTEE** your ad will appear in the January issue (on sale December 18) providing it is received by November 13.

### An added bonus!

Your advert will also be automatically displayed on *MicroLink*, the electronic mail service operated in association with *Telecom Gold*. This means it will be seen by thousands of computer enthusiasts who can send an instant response.

£75 o.n.o. Tel: Mark 0705 266541 evenings.

• CPC 6128 mono 2 months old. Top slow for my needs plus Mini Office, Miniman, Tassign £300 o.n.o. Write: Max M. Orlich, Fort William PH43 6SD.

• For sale: CPC 6128 colour monitor. Price includes word processing software package and some other extras. Price £238 o.n.o. Tel: 0202 600385.

• Amstrad cpc 6128 Rainbow Art Studio £12. Tasswood 6128 £12

complete with manuals both on disc. Tel: Northampton 404267.

• Cholo, Pawn, Bike + many others in original boxes on disc. Also some utilities. Offers Tel: Dave 01 607 3176.

• AMK Mouse plus software, plus utilities, complete package cost £85. Sell for £40. Tel: 04574 66545.

• CPC6128 colour monitor, loads of games and software, disc rack holder, joystick, blank discs, good condition £300 o.n.o. Tel: 061 426 8844.

WIN up to £10!

Send YOUR 10-lines to:  
Competing with the Amateur CPC, 68 Chester  
Road, North Green, Stockport SK7 5BY.

**M**ORE clever programs this month, ranging from games to graphics demonstrations. It's good to see the standard of the better submissions remaining quite high. Remember the self-addressed envelope if you want your submission returned, and please make sure it's big enough!

## Centibug

by Michael Rawick

A BITTY arcade game, this one. All Centibug wants to do is climb, climb, climb that garage wall, and as he does he must dodge the birds and eat the occasional beetle. One point is scored

for every bird avoided and five points for grabbing a bug. Be careful - eating too many will make Centibug die of indigestion. Use Z and J to move left and right.

```

## Biorhythms

by Edward Way

FIND out if you're at your best with this biorhythms calculator. It's based on the assumption that your physical, intellectual and emotional states vary in regular cycles starting at birth. The first half of each cycle is posi-

tive, the second negative. At the transition between the two is a critical period where you're particularly prone to accidents, mistakes and bad luck.

On any particular date the program prints out how many days into each of

the cycles you are, together with the length of the cycle. If you're at the midway point, a warning message is printed. If this happens in more than one cycle, the day's deemed from the start to stop in bed!

```

10 PRINT "Enter your date of birth in British
11 format (DD/MM/YY) using 0000 for year
12 and 00 for month and 00 for day"
13 INPUT "Date of Birth (DD/MM/YY)"; DD,MM,YY
14 DD=VAL(DD)
15 MM=VAL(MM)
16 YY=VAL(YY)
17 PRINT "Date of Birth (DD/MM/YY)"; DD,MM,YY
18 PRINT "Enter your date of birth in British
19 format (DD/MM/YY) using 0000 for year
20 and 00 for month and 00 for day"
    
```

```

21 FOR I=1 TO 12:PRINT I:GOTO 25:NEXT I
22 PRINT "Enter your date of birth in British
23 format (DD/MM/YY) using 0000 for year
24 and 00 for month and 00 for day"
25 INPUT "Date of Birth (DD/MM/YY)"; DD,MM,YY
26 DD=VAL(DD)
27 MM=VAL(MM)
28 YY=VAL(YY)
29 PRINT "Date of Birth (DD/MM/YY)"; DD,MM,YY
30 PRINT "Enter your date of birth in British
31 format (DD/MM/YY) using 0000 for year
32 and 00 for month and 00 for day"
    
```

```

```

## Muzakology

by Alex O'Donovan

ONE theme that hasn't been played upon in these pages before is singled out here. As this little number demonstrates, there's plenty of scope for 10-line proglets.

```

10 GOTO 1:END
20 GOTO 1:END
30 GOTO 1:END
40 GOTO 1:END
50 GOTO 1:END
60 GOTO 1:END
70 GOTO 1:END
80 GOTO 1:END
90 GOTO 1:END
100 GOTO 1:END
110 GOTO 1:END
120 GOTO 1:END
130 GOTO 1:END
140 GOTO 1:END
150 GOTO 1:END
160 GOTO 1:END
170 GOTO 1:END
180 GOTO 1:END
190 GOTO 1:END
200 GOTO 1:END
    
```

## 3D Plot

by Andrew Howsham

FOLLOWING our 3D surface plotter in the April issue, here's a 10-line version. After the equation in line 50:

$$z = 40 * \sin(x) * \sin(y) * \cos(x * y)$$

for different results.

```

10 GOTO 1:END
20 GOTO 1:END
30 GOTO 1:END
40 GOTO 1:END
50 GOTO 1:END
60 GOTO 1:END
70 GOTO 1:END
80 GOTO 1:END
90 GOTO 1:END
100 GOTO 1:END
110 GOTO 1:END
120 GOTO 1:END
130 GOTO 1:END
140 GOTO 1:END
150 GOTO 1:END
160 GOTO 1:END
170 GOTO 1:END
180 GOTO 1:END
190 GOTO 1:END
200 GOTO 1:END
    
```

```

210 GOTO 1:END
220 GOTO 1:END
230 GOTO 1:END
240 GOTO 1:END
250 GOTO 1:END
260 GOTO 1:END
270 GOTO 1:END
280 GOTO 1:END
290 GOTO 1:END
300 GOTO 1:END
310 GOTO 1:END
320 GOTO 1:END
330 GOTO 1:END
340 GOTO 1:END
350 GOTO 1:END
360 GOTO 1:END
370 GOTO 1:END
380 GOTO 1:END
390 GOTO 1:END
400 GOTO 1:END
    
```

**T**HIS month we're going to look at other ways of reading the keyboard and start the theory subject of lists. These are an essential part of Logo and it is important that you appreciate the fundamentals involved in using them.

You'll remember Logo can get a character from the keyboard by using the `rq` command. That's fine if you only want one character but what happens if you want an entire word or sequence of words? There are two more commands to take input from the keyboard, `rl` and `rr` but at first the distinction between the two may not be clear.

We'll get the hang of `rl` first. It's short for read quote and will output a string of characters rather than a single one. Key in this example and run it. When you've typed your name just press Return.

```
to read
  pr [Enter your name!]
  ask name rl
  pr [Enter hello name!]
end
```

As you can see, `rq` works in pretty much the same way as `rr` but takes a sequence of characters terminated by a carriage return. The line that prints the second message may not be clear so I'll explain.

We want to print `hello` and the contents of the variable `name` on the same line but:

```
pr [hello name]
```

will generate an error. Or it will if you do it in a program because `pr` is looking for one object and after it's processed `hello` Logo won't know what to do with the output from `name`. In direct mode you won't get the error because Logo prints anything it can't find a home for on the screen.

We've already seen how a statement like:

```
pr [hello list]
```

will group items together in a list, and a list being one object is acceptable input to `pr`. But if we try:

```
pr [hello name]
```

we'll get a problem we've encountered before. Logo will take `name` as a group of characters rather than an instruction to extract the contents of

# Logo lists

IAN SHARPE's series gets in key

the variable and you'll see `hello name` on the screen.

The primitive `list` converts the objects that follow into, you've guessed it, a list. The brackets are only really necessary if more than two items follow. If you miss them out with three or more objects, only the first two will be taken by `list` and the rest one will cause an "I don't know what to do with ..." error.

I'd like you to try the procedure `askhello` again, this time using `rl` instead of `rq`. You'll find it operates in almost the same way as before; it still waits for you to type in some characters, it still says hello to you but your name is now printed in square brackets.

Try modifying it again but this time change `list` into `set`. Now it seems to work in the same way it did at first with `rq`. Why do `rl` and `rq` operate in almost the same way and what's the difference between `list` and `set`?

It all hinges on the concept of the list and the difference between a list and a word. It's not too difficult to understand now you've got a feel for the language.

A word is a string of characters, a list is a collection of objects, some of which may be words. In the case of the `rq`, `name` holds the sequence of characters you type in. If you enter `list` at the request for your name and ask Logo how many elements the contents of the variable `name` is composed of, you'll get the answer three because there are three letters in my name.

Try it for yourself - run the original version of `askhello` and when it's finished type in:

```
count name
```

The new command `count` tells us how many separate parts make up the object to its right. Here we're giving it the contents of `name` to count and it

will answer with the number of characters in it.

Now go to the other version of `askhello`, the one that uses `rl`, and do the same. This time you'll see the answer one. Try both again, this time using your full name as input. If you type in `Fred Bloggs`, the `rq` version will give you 11 elements because there are 11 characters including the space. With `rl` you'll get two.

The difference is that `rq` outputs a word which is just a collection of characters. On the other hand, it outputs a list and each word you type in is a separate item in the list. As you may have guessed, it is short for read list.

That's why the `rl` version shows your input in square brackets - name is supporting a list and lists are usually displayed that way unless you remove the brackets first. This is what `set` does, it works in the same way as `list` but removes the square brackets.

Now it may be confusing that in both cases `name` is holding the same sequence of characters but Logo is treating them differently depending on which form of input statement we use. On one occasion it's thinking in terms of a sequence of distinct characters, on another the smallest element it can see is the individual word.

Perhaps things can be made clearer if we introduce another command, `item`. In the same way a colon before a variable name will extract its contents, `item` in conjunction with a number will extract the specified element from the object to its right.

```
with 3 [transformers]
  ask 3 [transformers and word]
  pr count it
  pr item 1 it
  pr item 2 it
  pr item 3 it
```

In the first line we're putting on

BYFIELD

# CPC space probe

**T**HE comings and goings of spacecraft from Earth, the movement of minuscule particles through the galaxy, and the radiation levels of the cosmos are all part of the daily life of Lawrence Harris and his CPC128.

But this is no game. With some imaginative software, Lawrence is able to receive and decode messages from satellites.

"You can now use the CPC to calculate the times when each satellite is visible from wherever you live and process the data it beams to Earth and watch the changing conditions in space.

"This was absolutely impossible a few years ago unless you could afford to spend thousands of pounds on a computer.

"The large memory of the 5120 now makes it possible to hold space data for processing and believe me it can be a lot more interesting than playing games", he claims.

Computer instructor at Plymouth Information Technology Centre, 40 year-old Lawrence spent 17 years working on satellites with the Science and Engineering Research Council in the Rutherford Appleton Laboratory in Oxfordshire.

Initially he was concerned with the UK 3 satellite and then became a shift leader on UK 8. During his time at the laboratory he was called upon to help the Americans with problems they were having with Landsat.

"When I was working with sats I was using £250,000 worth of equipment. The vast development of computers means that nowadays almost the same sort of thing can be done on a CPC", he said.

He was aware that software had

been written to help BBC Micro users to decode the signals from Sussex University's satellites (UoSATS) but though he built a small radio receiver very cheaply and bought a decoder, he could not find any programs for the CPC.

So he wrote his own. "It proved quite straightforward but took a long time".

His programs allow the user to look at the absolute values of the various systems onboard the UoSATS. The university publishes a list of the conversions required to change the telemetry values on the screen into real numbers and these have been built into his software.

Lawrence explained: "There is only enough memory available to store about one third of a typical UoSAT pass, so you cannot process all the data in one go".

Eventually he plans to improve the software to utilize the second bank of memory for storing data.

UoSATS 1 and 2 are designed to be particularly easy to pick up and decode, so it is these on which he concentrates.

He explained the satellites' operation - part of it is housekeeping, relating to the performance of the equipment. They also collect astronomical information.

His particular interest is in the amount of meteoritic dust in space, statistics which they continuously record. There is also a geiger counter on board which measures the amount of radiation coming at us from the cosmos.

The satellites broadcast within the international convention on formats and their information is transmitted about once every six minutes. A

typical sequence begins with 20 seconds of realtime data. All the satellite's 80 channels have instantaneous readout to ground stations - that is, anyone who can pick up the signals.

There is a Space Bulletin which offers ordinary scrolling text. It arrives far too quickly to be read on screen, so must be stored and processed later. This gives space news - what's happening with satellites and, proposed rocket launches across the world and so on. It takes only a minute or two to transfer this information.

The devices are also being used for the Digital Communications Experiment (DCE), which is confined to special users. Messages can be forwarded, stored and released at some specific point around the world - a sort of special Email.

Koppler elements are broadcast; these are needed for the updating of satellite trajectory information.

Next comes the W3D - Whole Orb: Data - which is astronomical and scientific information gathered and stored during orbit and then rapidly transmitted.

There is also a Charge Couple Detector (CCD) which is a camera taking pictures of the Earth. This is another area which has captured Lawrence's attention.

"I'm working on software for this now, so I can receive these pictures more clearly", he said.

He believes much more should be done in schools and universities to make students aware of how easy and relatively inexpensive it is to find out about space.

"There's a whole universe out there which your CPC is waiting to hear about", he said.

# Home-brewed adventuring

## Gandalf looks into the future

**O**NE of the rewards of writing a column is the pleasure of seeing the emergence of new software houses. Castle of Eagles, one of the games reviewed this month, was originally sent in for my opinion on its marketability. My reply at that time was favourable and the author seems to have formed his own software company to market it.

As I have said before in these pages, it is the smaller software houses and "home brewers" who keep the adventure industry alive, so I am more than pleased to see this and Flash Back, another "home brew", reach the market.

The future of adventuring on the CPC lies very much in the hands of devotees of the genre and it is nice to see some of them releasing their own creations.

While the larger software houses may have the facilities to produce lavishly packaged games, the smaller ones do not, and all too often they are criticised for it. I feel very strongly that it is the responsibility of people like myself to encourage new talent and to bring it to your attention whenever possible.

I have had a letter from Glenda Pickering, recommending the Very Big Cave Adventure, as she considers it to be one of the funniest she's ever seen.

## CAN YOU HELP?

JOHN Stevenson is having trouble with the Green Knight in Lord of the Rings Part 1. He has found some swords at a location just outside Bree but feels they are too far away to be the necessary weapons. Can anyone help him?

The Fantastic Fear is causing problems for Nicholas Marshfield. He has the thing under the tree and has persuaded the Torch to put the pebble under the boulder so the thing can get it and throw it up through the hole back at the boulder. But the thing will only throw it up partly. Can anyone help him out?

She's not entered the review competition but gives details that would in fact make a good review. By not entering, Glenda, you are doing yourself a disservice. Please write in, enclosing your address, so I can get in touch.

Rubin of Sherwood is causing problems for Kirk Coverley. He wants to know how to get into Leaford Grange without being attacked by the guards - you can't, so don't try! And how to get the treasure chest open when Robin is in the castle (after hiding in the cart).

Rescue Marion and tell her to follow you, go to the location south of Leaford Grange, examine Marion, go into the cave and get Seward and, when in the treasure chest location, drop Seward and he will open it for you.

Katy Sheppard would like some help with Bored of the Rings Part 1. To get under the hedge just go down. Do you have to find Aragorn? Yes, he is at the Lovely Marsh Inn? No - he's at the Puffy Pumper.

Two adventures are troubling Rosalynde Warner. In Forest at World's End, I think she has yet to get the key from the Witch's house and the chest from inside the volcano. When taken to the blacksmith, this will yield a sword that will enable her, by touching the rock, to get through the rock wall.

In the second, Game of Stradius, she has given me no information at all about where she is stuck. Please send me further details Rosalynde, preferably enclosing a stamped addressed envelope, and I will try to help.

Full marks this month to Graham Wheeler for redressing an error in the

August solution to Message from Andromeda. I must admit I didn't - "tell the commander with circled" indeed.

It seems a chunk of text went missing during the office file transfer, and of course, what was left would make sense to anyone who didn't know differently. Perhaps, in the true spirit of adventuring, it went off to explore strange new locations down the phone line.

I'll print the corrections next month for those of you in difficulties.

## HALL OF FAME

**Excalibur - A solution by Graham Wheeler.**

GO NE and enter the shack. Open the oven, get the bread and get the jug and lantern. Fill the jug at the well and visit the village. Here you should go South into the forest where you will be given a scroll. Examine it then GHOSTS RETURN to write it into your spell book. Learn the spell and use it at the castle gate to enter.

Learn the Fire spell to light your lantern and visit the dungeon. Open and enter the cell and get the block to reveal a secret passage. In there you'll find a spoon and another spell - so take them. Examine the scroll to find out which spell you have found and write it into your spell book.

In the south hall drop the lantern, then go East into the gallery and get the illuminated portrait. Behind it you will find a niche that contains a black candle and another scroll. Put the

## FEEDBACK

**GRAHAM** Wheeler, Kirk Coverley and Paul Woodhouse have all provided help for J Dismay who is stuck in The Curse of Sherwood.

To get safely across the swamp you have to kill the dragon with the crossbow and take his gold to the old man in the hut. He will give you a map showing the way through the swamp. Kirk writes that the route to do this is: W, N, E, E, E, E, E, E, kill dragon, take money, W, W, W, W, N, N, W, N, give money to old man and take map.

Linda Friend has sent the following hints and a solution to help Simon Druce (August) with his problems in The Vera Cruz Affair.

The game is difficult to play because the instructions are badly translated. Examine each scene carefully (scapes by square), there are a couple of clues that are not easy to spot.

When examining the Carnet, press the Copy key again to get some helpful information.

When using the Examination (E) facility, ask for Autopsy Vera Cruz. There is a Graphological examination but I cannot get it to work. Can anyone else?

Use the message facility (M) to inquire on CRRU LYON about nicknames, the pistol and various people. This will give you other

places to try. When using the State-of-mind (S) option, question everyone you can, including the caretaker and Vera's neighbour.

To get information about the BMW you must ask PRIP LYON. The format is \$115 17 68 (the two 1s are letters you have to find by a process of elimination).

When you have questioned everyone, use Comparison (C). You will find the names of three people to question a second time. If you cannot get different statements you have not completed your investigation. From the new statements you will get a confession and can arrest the guilty party.

### The Scene of the Crime - The Clues

#### On the Table

Matches - Bar de Sympe, 2 Station Square, St. Etienne.  
Cigarettes - Rotmans.

Note - Goodbye! I must end it all Vera.

Activity - Two cigarette ends - one Rotmans and one Carnet with lipstick on.

#### On the Floor:

Pistol - Automatic MAC 50mm - Gienay.

Handbag - Contents: Carnet cigarettes and items marked Vera Cruz.

Carnet - Press Copy to get addresses:  
five Transport cafe in Givors 88.  
Hub. 75226977.

Pasty: Bar of Poplars.

#### Carriage case

(left of armchair) - Iron cables To S P 3-78.

#### Button

(left of handbag in shoebox) - Black button.

#### On the Beddy

Left arm - Pieces of recent needle marks.

Left hand - Black cotton under fingernail.

spell into your spell book.

Proceed to the beach, learn the Nitral spell and tell the turtle to follow you. Make your way to the engine room and learn and use the Ewan spell on the turtle. Tell it to go SE, get the scroll then go NW. It will fetch it for you so thank it.

During the course of the game you will need to eat, drink and sleep. The water can be replenished from the boat, but you only get one loaf of bread so speed is important.

To sleep you should go to the bedroom in the SAN tower where you will experience dreams that give you clues. Each night's dream is different and the dreams are about: A girl who does something to the bedpost, your sacrifice, the adventurer and kill and sleep.

Before you sleep, always learn the Sleep spell and use it on the spell book to protect it against theft and, immediately on waking, learn the Memory spell and use it on yourself.

Once you have slept you will find you have forgotten all except the Quartz spell and will have to relearn any that you want to use.

### Adventure Quest - Part 3 of a solution by Glynn White

CLIMB the web and take the earth-stone which you will lose to an orc before when fighting the spider. Go to

#### ← From Page 21

the stone rooms where you will be able to retrieve it.

Don't join in the feast - you'll find you're on the menu. When crossing the bridge, cut the rope after you to prevent pursuit. Incidentally, you'll also find that you now have no more trouble with arrows.

Back at the cave, drop the sword and head for the beach. Revert to gills and drop the earth-stone down the hole. Go back to the beach and, with the long token and lamp, collect the sword and get the egg from the dragon's lair.

Now comes a tricky bit. Go to the ledge above the crater and drop the lamp. Later you'll have to re-enter and travel in the cave in the dark - unless anyone knows differently. Wait for the flames to go and then move NE, SW and Down.

You now have to travel down an every alternate stone - that is, use LOOK or NW after every move down. You will have to collect the insulation cloak on your journey and can substitute this action for the commands above.

At the bottom of Hall Wall - you can travel normally when the flames stop - find the passage with the hot coals. Throw the cloak over the coals and you will be protected from them (the sword gives protection from the heat of the passage).

Travel to the smelt room and drop the egg into the nest and the phoenix will appear. Return to the crossing. (North of here is another teleportal that will take you to the pinnacle in the desert), and go West and get the cloak.

Go to the altar and take the sun-stone back to the nest. Whoops - where did he come from? Never mind, remember Gandalf and the Balinog and smite the bridge.

Now you have to take care or the eagle will get you. Go straight to the cairn-topped hill and transport the sword and bracer to the base of the hill. Drop the sword and bracer - you will warm up. Take the bracer again, and return to the top of the hill - you'll have to go the long way round - and drop it again.

Take the sun-stone and mist-stone. Enter the tunnel - it has a black dot that will take you to the seaman's cave. Go to the lake and drop the two

stones into the hole. Return via the caves and enter to the hill and take the bracer down to the same stage again. Drop it for warmth.

## BUG HUNTER

AUBREY Sinden has written in with what seems to be a bug in The Neverending Story. Following the solution published in the September issue, he has got Arax and gone PLW, and NW and, instead of Arax dying, the program has crashed. Oozer's reaction to this was to say that not only did he not need to go into the swamp, he doesn't even need Arax.

I can't check this out without a copy of the game. It may be that there are different versions of the game or that certain conditions need to be met before the location can be entered. Can anyone who has completed the game state whether they found any bugs?

## The Mystery of Arkham Manor

### Malbourne House £9.95 (cassette)

**T**his year is 1828. The editor of the London Chronicle has received a very disturbing letter from an eminent contributor, Major Larkin, stating there are strange, mysterious events taking place in his village of Arkham. His star reporter — you — is dispatched to investigate.

This two-part adventure begins with your arrival at the village station.

A visit to the local inn to arrange accommodation for the night should be your first stop, followed by a thorough investigation and examination of the village.

Several locations, you will discover, are not initially open to you. The barrier near the Manor is simply the divide between the two parts of the game, the *clue* is the church should pose little difficulty if you are polite to the vicar, and the cellar in the inn can be visited if you accommodate the landlord by visiting the mill.

To reach a complete solution, you will have to send telegrams to get further information about people and places you encounter during your travels.

Each telegram you send costs money and, as you begin with only a limited amount, you have to spare words by being terse. Selecting the Report option allows you to create your own text from pre-completed word headlines, story and even photographs. You are paid for each story you submit and can also print out the result to any Epson-compatible printer.

Once you have filed the story, you merely have to wait until the following day to find that further funds have been credited to your account at the local bank.

Your status is represented by three factors: the amount of money you have, how much you have learnt and the state of your

sanity. The last is adversely affected by frightening encounters and restored to normal by sleeping.

You will find that unless you have solved the first part of the game, your sanity slips away by the end of the third day and the game ends.

One thing not mentioned in the documentation is the time limit within which you have to complete your investigations. It is important then, to plan an overall strategy. You should spend the first day meeting as many people as possible and examining everything you find. Try to file at least one story and solve as many problems as possible.

If you are impatient of anyone, send a telegram to head office to see if they can give you any further information. You should then sleep the night at the inn.

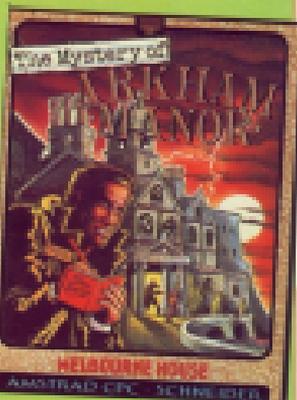

On the second day, collect money from your account at the bank, pick up any telegrams that may be waiting for you then visit every location — changes will have taken place.

Before retiring for the night, you should be in a position to telegraph for the final clue to help you crack this first part of the game.

The screen is divided into several main areas. Most of the top half shows your character and any actions he performs, his location and any other characters and objects present. The remainder displays a menu of available options including Move, Drop, Say, Give, and Read.

You select the one you want using the arrow keys and confirms by pressing the spacebar. When you select an option that entails further action, a subsidiary menu appears. For instance, selecting Drop will bring down a menu showing the objects you possess so you can choose what to drop.

The bottom half of the screen is split into

a variety of sections detailing responses to actions incidents that take place independently of any actions and small representations of any photographs you take using the three reusable photographic plates.

It also shows text input when using the Say option, a calendar and clock to monitor your dependencies on the time, the pages from the notebook available for recording clues or conversations, and telegraph forms you enter text into to obtain further information.

I am impressed with this game. However, it is slow and that can be very frustrating sometimes, but it's the best attempt yet at an annotated adventure.

Add to this the facilities to create and print your own stories and you have a first — an adventure with a built-in word processor and desktop publishing package. The actual game isn't too hard to solve and I suspect many people will be finding it to create their own front pages long after solving it.

Overall, the closest thing yet to an annotated adventure — surely the real thing can't be too far off now!

#### Presentation 85%

Excellent graphics.

#### Atmosphere 81%

I couldn't really tell it was supposed to be 1828.

#### Frustration factor 80%

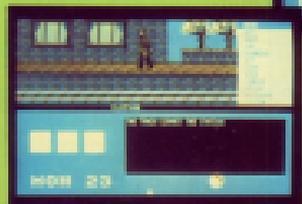

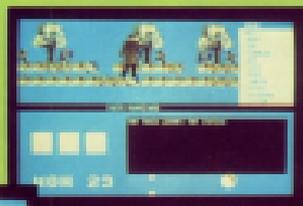

Easy in some parts, baffling in others.

#### Value for money 92%

The desktop publishing aspect is responsible for such a high score.

#### Overall 80%

Probably the best graphical adventure I have seen so far.

## Castle of Eagles

**S&M Software**  
**£4.95 (cassette)**

**T**his is a very creditable first release from a first software company. You play the part of a man parachuted into German territory during the Second World War. Your mission is to penetrate a fortress

and find and copy some secret documents. As the game begins, you are falling towards the ground after jumping from the plane, and getting your parachute open is your first priority. Having done this, you are prompted to "Push C or S to continue".

It's not hard to fulfil the purpose of this command as pressing either key has the same result - you find yourself in the snow-covered mountains next to the dead body of your partner.

You must now gather your equipment, avoid a German motorcycle and a spotter plane that sometimes appears, pacify wild dogs, cross a river and get into the camp.

Having done this, you enter the second part of the game and continue your mission.

I feel that if the graphics and number of similar locations had been reduced and more puzzles put in their place, it would have been more impressive.

Overall, a good first release and I look forward to seeing more from them in the future.

The game can be obtained from PO Box 332, London SE15 2JL.

### **Presentation 72%**

Graphics in every location.

### **Atmosphere 77%**

After floundering around in 42 or so taken locations I was starting to get cold myself!

### **Frustration factor 52%**

The extensive graphics and repetitive locations means the puzzle content and career has suffered.

### **Value for money 58%**

A shade over-priced but will prove good.

### **Overall 65%**

The author has tried to satisfy everyone at once. With more puzzles the mark would have been higher, but it's still a fine adventure.

## Flash Back

**Visual Dimensions**  
**£3.99 (cassette)**

**W**HEN I first read the scenario for this game I was singularly unimpressed. The more I play the game though, the more I like it and the greater my respect for the authors.

You play the part of Major Catastrophe and have 24 hours to raise the necessary funds to repair your forces before the crucial battles are won to demolish it.

In the first section of this three part graphical adventure you have to accomplish two things: find the equipment you need to save the game and a comfortable location so you can fall asleep. One of the latter is that you have to visit the Major's post in the other two sections - you gain access to this dimension by falling asleep.

I'm not going to spoil too much of your fun, but I think it only fair to point out that one of the objects you need is on an alien planet.

Visiting this planet could well be the hardest problem to overcome in Part 1, though obtaining something solid and something that creates a lot of heat were you well on the way.

You'll also need to consider your allies when visiting the planet and two obvious objects should help here. Having assembled your inventory, you should attempt to find the right location to use it in.

You'll be stoned when you do, but you should wot off before taking off or you

might go off, rather than up, with a blast.

The object you find when you get there is not immediately useful, but is necessary if you want to finish the game and will give you a boost when used.

The second part takes you back to the Major's experience in the First World War. You must kill an evil doctor and dispose of a secret weapon so well as collect further objects that may be of use.

In the final part, you return to the Second World War and have to escape from a POW camp and find the whereabouts of a valuable Egyptian relic.

You now return to the first section and, if you have done everything as you should, you are now in a position to make sure the relic reaches someone who can appreciate its value. Succeed, and you have saved your home.

There are several spelling and punctuation mistakes in the game, and its documentation, and the authors do not seem to

have quite mastered the art of vertical scrolling - so don't adjust your set when loading.

A more serious fault is that the game does not seem to have been tested before being released. In Part 1 it crashed on me when I typed in PRESS ROOM by mistake, and again in Part 2 when I entered OPEN DOOR. On both occasions I had to reload from scratch.

Aside from these bugs, I have nothing but praise. The storyline is completely original, the puzzles well constructed, the graphics comprehensive and I found myself totally immersed in the atmosphere that it evoked.

The game can be obtained from 58, Runnymede Lane, York YO2 1AN.

### **Presentation 45%**

The mark would have been a lot higher had it not been for the bugs and spelling mistakes.

### **Atmosphere 87%**

Very good.

### **Frustration factor 82%**

Original enough to make old hands get very frustrated!

### **Value for money 65%**

Could have been a lot higher if the game had been checked first.

### **Overall 70%**

Properly tested it would have been rated much higher. Even so, I can recommend it.

Amstrad CPC 464, 640, 664, 680, 686, 690, 696, 700, 706, 710, 716, 720, 726, 730, 736, 740, 746, 750, 756, 760, 766, 770, 776, 780, 786, 790, 796, 800, 806, 810, 816, 820, 826, 830, 836, 840, 846, 850, 856, 860, 866, 870, 876, 880, 886, 890, 896, 900, 906, 910, 916, 920, 926, 930, 936, 940, 946, 950, 956, 960, 966, 970, 976, 980, 986, 990, 996.

**How to get your Amstrad to talk to a BBC Micro**

*(for a Spectrum or a Commodore or an Atari or an IBM ... or ANY other computer).*

Language problems become a thing of the past when you join MicroLink. Now you can use your Amstrad (plus your telephone) to send messages to any other computer user, with no restriction on make of machine - or even on distance.

Details from 061-456 0360

# Life at C

IAN SHARPE takes the plunge with Amrod's CP/M Plus implementation

Product: Amrod C  
Price: £69.95  
Supplier: Amrod Ltd., Princes House,  
Wainman Rd., Peterborough PE2  
0BU  
Tel: 0535 226011

**I**n the June 1987 issue of *Computing with the Amstrad* we reviewed Amrod's Maxam II, an excellent CP/M Plus machine-code development package. Now Amrod has followed it up with a CP/M Plus C compiler which, they say, is the first full implementation for the CPC6128 and PCWs.

I haven't tested other CP/M compilers such as Astele, Ezo and Mls which might contest the claim, but these are general CP/M compilers, not Amstrad specific.

Amrod C is supplied on one 3in disc together with a ring-bound manual. Included are Apeid, Amrod's superb program editor, the compiler, linker, joiner, function libraries, runtime system, utilities and example programs.

I won't go into detail about Apeid because it was covered in the Maxam II review, and as it's the program mode of Princes it will be familiar to most people, even if only by reputation.

Although it lacks some of the features you'd find in a dedicated C text editor, it's still the nicest I've seen and it'll take a lot of convincing before using anything else.

Before going on to the rest of the package, I'll say a few words about the nature of C in case you missed previous reviews. It's a compiled language developed to write the Unix

operating system and has since become popular in diverse areas of computing.

Your program is written in a text editor and the resulting file passed to the compiler which converts the text into a form which can be run as a program. Often this is straight machine code which is much faster than an interpreted language like Basic.

C is a small language with around 30 reserved words. You'd think this would make it easy to learn, but C isn't a language for beginners. It's harder than Basic, being a lot less forgiving of mistakes and uses concepts that imply some understanding of the fundamentals of your machine.

The standard text on the subject is *The C Programming Language* by the authors of C - Kernighan and Ritchie. When Amrod say that theirs is a full implementation they're referring to the description of the language in this book. As far as I can tell the claim is accurate with the exception of bit fields, which are a common omission and not important.

Most operations are carried out by functions - the equivalent of subroutines - many of which are supplied as standard in libraries.

Functions you would typically expect to find included are those dealing with screen output, disc filing, reading the keyboard, string manipu-

lation and mathematical operations. As you work with C you extend the range of functions with your own thus speeding up development.

Amrod supply approximately 100 functions and include the standard ones found in most C systems. Additionally they have included some useful functions of their own such as special screen handling routines which allow the use of up to eight windows and very fast printing.

The first thing noticeable about Amrod's C is that it doesn't generate a stand-alone machine code file. On the disc and central to the package is a program called *run.com*. It's a runtime system which acts as an environment for the compiler, linker, joiner and your own programs. These are all in something called *Basic Stack Code (BSC for short)* - an intermediate code designed for running C on most computers. It is interpreted by a machine code program which is part of *run.com*.

So you have written a program *fred.c*. The first step in making it something that can be run is to enter the runtime system. This is simply a matter of typing:

run

From either CP/M or Apeid which gives you a screen with a prompt where you can type in various instructions. If

your instruction doesn't match one of the built-in commands, the disc is searched for a file with the appropriate name. If the file is found and is BASIC with the extension .G, it will be loaded and run.

So you type:

```
compile fred
```

and the compiler (which is a .G file) is loaded and passed the name of your program. This generates a link file - fred.l - which is then passed to the linker with:

```
link fred
```

The linker resolves references to functions not defined in your program such as the ones in the libraries, in particular math.l - the library of standard functions. If fred contained references to functions in the maths library, it would be necessary to link to these as well as:

```
link fred math
```

would be required instead.

The same thing applies to libraries you may have written yourself. You compile them into a link file, for instance mylib.l, and use the form:

```
link fred math mylib
```

Now you have an object file fred.a which can be run from DPM3 or Aped with:

```
run fred
```

For simple programs it's possible to pass the filename to run.com when you invoke it, along with instructions to link and run the resulting object code, so it's not as involved as it sounds. There's also a utility to.com to make things even more hygienic in straightforward cases.

One thing lacking in comparison to HiSoft C is a set of functions to access GSA. Of course, not everyone wants GSA but in a GSA package it would have been nice to see it included.

Fortunately there's a function to access the CPC6128's firmware so it was an evening's work with the firmware guide to write a complete graphics library with functions like plot(x,y), draw(x,y), text(x,y,z) and so on.

All I have to do when I require graphics is to put:

```
include graph(12).h
```

at the start of the source file and link the program with the compiled graphics link file.

Of course this makes programs incompatible with anything other than a CPC6128 but it gives you some idea of C's versatility.

A set of floating point mathematical functions is provided which is much more complete than Basic's. Those contemplating scientific and mathematical applications will be pleased to see both inverse and hyperbolic trigonometrical functions amongst many others.

That's the good news. The bad news is that straight floating point arithmetic is slower than Basic's which says a lot for the efficiency of Locomotive's interpreter. Even worse, the mathematical functions are written in C which in comparison to Basic's machine coded versions makes Aroc C very slow in this area.

The manual doesn't attempt to teach C and assumes familiarity with CP/M. I can appreciate the logic behind this. As mentioned earlier, C is not an easy language and if you're trying to provide anything in the way of a tutorial, to be worth doing at all it has to be very extensive and therefore time consuming and expensive to produce.

The Aroc manual only provides reference material that enables you to use their implementation and leaves you to purchase a book if you need one. Having said that, I did feel the information could have been better organised in places and with more explanation on some points. Most of what you need is there but sometimes isn't in the most obvious place.

For example, despite a range of functions to handle the screen I couldn't find one to clear it. It turned out to be a control code tucked away under the entry for getch() - the function to get a character on the screen. But the first place you would look, especially as there isn't an index.

As mentioned in the Maxam II review, the ability to link C with machine code is integral to both systems and enhances them as a serious software development tool.

The runtime system is fine for development and programs you will only use yourself, but they cannot be distributed in this form, if you want to generate stand-alone programs that don't need the runtime system there's a utility on the disc to do just that.

Table 1 lists timings for some simple benchmarks. As a comparison, timings for with Basic and HiSoft C are also shown.

I found Aroc's C easier to work with than HiSoft's but this was mainly because of my familiarity with, and preference for Aped, and the edit/compile/run/edit cycle is slower because of the intervention of the runtime system. Beyond that, the main advantages Aroc has over HiSoft are a fuller implementation, floating point arithmetic and trig functions.

Despite their slowness, they and Aped probably justify the extra cost. On the other hand, at the price of a 160 meg graphics text editor and no floating point HiSoft C offers Amibros graphics and sound, plus CP/M with GSA support for 18 pounds less. As ever, you pay your money and take your choice.

	Basic	Aroc C	HiSoft C
Add 1 to a variable 10000 times, variable and loop counter integers	16	6	2.8
As above, but all floats	30	40	N/A
Fill 80*24 screen, a character at a time	9	3	5
Work out sin(30000) times	15	40	N/A
Do 48-68 10000 times 24 in 100 characters	32	54	108

Table 1: Benchmark tests, approximate timings in seconds

They said it was quite impossible... NOW HERE IT IS!

## NEW MASTERCOMPOSER NEW

will put INSTANT MUSICAL CREATIVITY into your AMSTRAD...

SIMPLY THE MOST INTELLIGENT MUSIC PROGRAM EVER WRITTEN FOR THE CPC MACHINE. Minutes in beautiful free jazz harmony are composed - and played automatically - by MASTERCOMPOSER 1983/84. From this you get a performance of beautiful never heard before...

MASTERCOMPOSER USES EXPERT KNOWLEDGE OF RHYTHM AND HARMONY to compose busy JAZZ, new Jazz FUSION, contemporary MUSIC, moving MAJOR/... in any key, Major and Minor. Composed and developed by Dr Brian James, dedicated musical programmer and musician, over 20,000 HOURS.

You'll never heard compositions like this!

LIGHTNING FAST PERFORMANCE means the musical creativity is instantaneous! Your AMSTRAD will sing on four buffers, with specially designed words with triple tones and rich melodic sequencing.

KEEP UNDER CONTROL BY MENU CONTROL with easy saving and loading of music. Mastercomposer is for ENTERTAINMENT - from novice to expert.

NO EXTRA HARDWARE IS REQUIRED - however, your AMSTRAD has a small stereo output socket and any amplifier will improve the sound.

MASTERCOMPOSER will produce a printout of the melodies, compatible with nearly all printers.

MASTERCOMPOSER is MASTERCOMPOSER extended to the popular 4 SOCKET COMPACTOR. A MASTERCOMPOSER extended to the popular 4 SOCKET COMPACTOR is available in a range of models. If you're looking for a computer you automatically qualify for 10% discount of MASTERCOMPOSER.

MASTERCOMPOSER (std) £10.00  
Printer's instructions (std) £10.00  
REGISTRATION PROGRAM (std) Only £5.00  
Includes Five Cass Tapes for 1000 hours (standard price £10.00)

## WESTHILL MUSIC (CWA)

75 BEECH ROAD, WESTHILL, SKENE,  
ABERDEENSHIRE AB3 6WR

## QUALITAS

QUALITAS is now established as the best print-enhancement system for the Amstrad CPC. Only Qualitas offers all this, and more:

- Superior near letter quality (MLQ), even on many ordinary printers!
- Proportional characters and justification with equal word spaces for that neat professional look.
- Several print modes (normal width, half-width, double width, sub-script, superscript, underline and over-emphasised) using standard Epson codes.
- Double-height mode for headings.
- Five business fonts supplied - many others now available, including foreign and italic styles, plus decorative fonts for letterheads, newsletters and posters.
- Easy-to-use font designer included so you can modify your fonts or have fun designing your own!
- Set Comment - use direct from within Protected or Protected, or on its own.

Qualitas is invaluable if you have an MLQ printer but with older printers it's an absolute "must" that could save you the expensive MLQ printer! Qualitas 494 disc for the CPC464/64/128/128-832.95. UK post free. Europe add £1, elsewhere add £2 p.p.m. Please state your computer, printer and wordprocessor. Post must come with 14 day "satisfaction or money back" guarantee (statutory rights unaffected). Trade enquiries welcome.

\*Qualitas gives progress to otherwise average printers. It will also progress, with a little help from you, a page to be proud of! - Amstrad station 787.

†If you want to give your printer a new lease of life Qualitas can be recommended - Consulting with the Amstrad CPC 487.

# The light fontastic

**P**RETEXT, Fontdes and Fontprod are a set of utilities which allow you to print in large character sets of your own design, any text files saved in Ascii format from word processors such as *Mind Office 8*, *Textword* and *Protext*.

The files are printed 48-characters to the width of the page and the programs work with Epson-compatible dot matrix printers capable of eight dot graphics mode.

Best results are obtained with fully compatible printers which give 480 dots per line with the *iso-r-k* graphics control code. Those printers not fully compatible which give 640 dots per line in this mode should still work, but will give a printout that doesn't cover the full width of the page.

Program I - *Printext* - prints your text file and to do this it needs a font (or set of character designs) with which to display the text. So before you print a file you need to design a font with Program II - *Fontdes*.

As this can be a time-consuming task, Program III - *Fontprod* - is provided as an optional extra. It simply produces a font based on the *Arndorf's* internal character set and saves it to tape or disc ready for use. The disadvantage of this method is that the font isn't as good as one you've designed yourself, but it's an easy way of getting started.

The font produced by *Fontprod* can be loaded into *Fontdes* and used as the basis for your own efforts. You'll find modifying an existing font a lot easier than designing one from scratch.

If you want to take this option, type in Program III and run it on a test

machine. After a short delay it will save the font as *rom.fun*. The programs must only be run once, and afterwards you will find that some characters such as *q, g, y* and *j* will be altered.

If you need to run it more than once, maybe because you had to correct typing mistakes, save the program, reset the computer and reload it. And when you've finished with *Fontprod*, reset the computer before doing anything else.

Designing your own font with *Fontdes* can produce very impressive results. When you run it you will see a 16 x 12 matrix in which to design characters. You can see the screen in Figure 1. Press *h* to get to the menu, where you will be presented with four options.

You can load a previously-saved font such as *rom.fun* or save the one in memory. Note that fonts are all saved with the extension *.fun*, but whenever you are asked for a filename just use the first part of the name, in this case *rom*.

The third option is to select the character you want to edit - press the appropriate key. Finally you can return to the editing screen.

Although the matrix is displayed as 16 dots high, you can only use the middle 14. This is because the distance from the top of one row to the top of the next is 16 dots (but when printing characters the *Arndorf's* works

best in multiples of seven. So the character on the screen is shown in the context of a full line.

The cursor is moved around the grid with the arrow keys and pixels are plotted or unplotted with *Copy*. Don't forget to save your font before leaving the program! In fact, to be on the safe side it's a good idea to save your font after editing each character.

If you have previously loaded a font, pressing *Return* when asked for the filename will save it under the previous name.

The next step is to print your text file out with *Printext* - Figure 2 gives you an idea of the sort of results you can expect.

The file you are going to print must obey certain rules:

- Lines must be a maximum of 40 characters wide, any extra characters will be lost.
- These mustn't be any control codes other than carriage return or line feed.
- The filename must have the suffix *.txt*, for example *test.txt*.

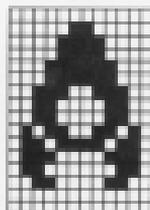

When the program is run you will be prompted for a font name and the name of your file. Remember that you don't type in the extension *.fun* and let just the filename.

If your file is long and runs over more than one page, the program will pause with an appropriate message while you insert another sheet of paper or wind the printer on to the top of the next sheet if you're using continuous stationery.

With these three routines you can now bring your dot matrix printer to life and produce your own distinctive, classy text.

# DISC WIZARD

NOT APPROVED BY APPLE  
For arbitrary reasons

## TAPE TO DISC MADE SIMPLE

STAND ALONE SOFTWARE  
NOW AVAILABLE

If you are planning to purchase a hardware based tape to disc utility that lack no further, **Disc Wizard** is the only product of its type that will allow software to be relocated independently of the hardware. No wonder it is not approved by Apple. Tests conducted by ourselves and independent users have convinced us that **Disc Wizard** offers all these advantages over all other similar products...

- **EASE OF USE**, very simple to operate and using the **Disc Adjuster** to make source connections, etc. is far easier than other methods.
- **EXCELLENT RATE**, as fast as good, probably better than other products in normal mode. (9000-8000% per-sec converted to stand alone i.e. relaxed independent of hardware)
- **PRICE**, a substantial saving over comparable products.
- **QUALITY**, new edition modelled on...
- **WARRANTY**, properly, no fixing fees or obscured parts.

BUY 2 FOR 10% OFF

DISC WIZARD via Disc Adjuster on cassette Only **£29.95**

DISC WIZARD via Disc Adjuster and Stand Alone

Software on 3" disc Only **£24.95**

Stand Alone Software on 3" disc for existing owners Only **£24.95**

## POWER FOR THE CPC

### THE ALL POWERFUL RANDOM ACCESS DATABASE

for the Amstrad CPC 6128/6129/6129D

- Finds records in seconds not minutes!
- Creates, but performs databases faster than you!
- Fits 80 & 40 lines on screen and to the printer
- True Random Access operating with 1100 disc storage
- 6500 records (2070 on 800 or 400)
- 40 fields per record
- Over 120 files in each field
- Extensive Calculations
- Multiple print formats, letters, labels, lists, etc.
- Flexible sorting
- Written in machine code and BASIC for speed & flexibility

**NOW ONLY £29.95**

### INSTANT ACCESS

programming utilities for the Amstrad CPC series.

- Provides random access filing which is lacking in the Amstrad CPC computers
- Programmable logic within your applications
- Power subroutines at your disposal random access database
- Professional style screens
- Better editing and error handling commands
- BASIC enhanced commands include EXEC to evaluate BASIC statements from within your program.

**ONLY £29.95**

# Auf Wiedersehen Monty

(Greenfin)

Cool Ric (alias Ric Lumb from York) has come up with a solution and map for Monty Mont's latest – and last – adventure. The illustrations shown here are all based on the superbly drawn material he sent in.

To complete the game collect everything then use the special objects:

**Football:** Take to Juventus.  
**Plant:** Take to Amsterdam, give to the little man at the bottom of the screen who will then give you a key.  
**Take the trip to Juliet at the Leaning Tower of Pisa.**

**Monty Lisa:** Take to his Deboss and touch the yellow fence.

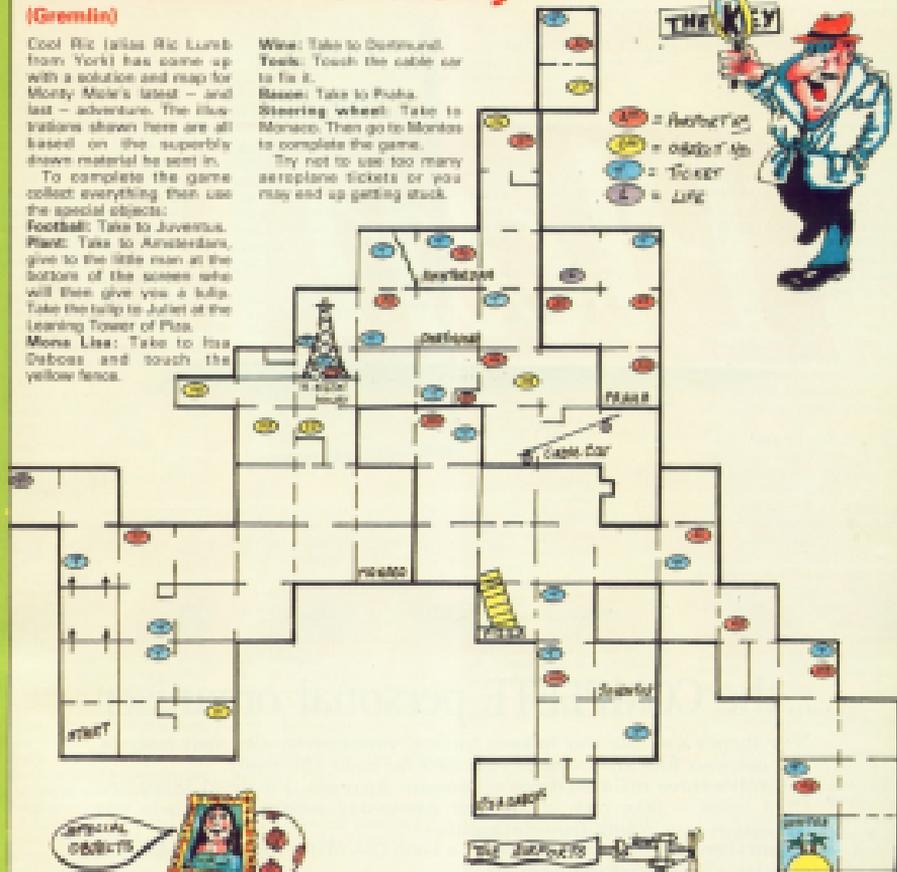

**Wine:** Take to Dortmund.

**Tools:** Touch the cable car to fix it.

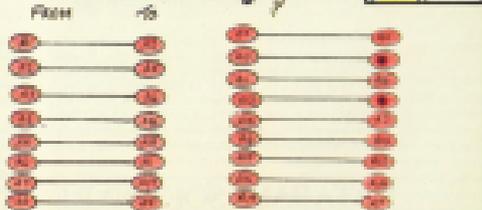

**Bacon:** Take to Praha.  
**Steering wheel:** Take to Monaco. Then go to Monty to complete the game.

Try not to use too many aeroplane tickets or you may end up getting stuck.

-  = Football
-  = Plant
-  = Tools
-  = Wine

-  = FOOTBALL
-  = PLANT
-  = MONTY LISA
-  = WINE
-  = TOOLS
-  = BACON
-  = STEERING WHEEL

 = DON'T GO AROUND BY THIS TOU... (partially obscured)

# Plan It

## ... the COMPLETE personal organiser

Now there's a simple way to keep track of your money, plan your budgets, sort out your files and manage your time far more effectively.

PlanIt's three main modules - Personal Accounts, Financial Diary and Card Index - take care of all your day-to-day activities and help you rationalise your future financial position.

And there are two extra utilities - a Loan Calculator and a Calendar - to complete this remarkable package.

**Personal Accounts** Gives you up-to-the minute facts about your financial position at any time. Keeps separate accounts of your banking, cash transactions, credit card payments. Allows 24 individual accounts, up to nine different credit cards (and warns you when you reach your cash limit) and as many as 400 different transactions a month. Sets up your standing orders. Automatically updates relevant accounts with each transaction.

**Card Index** Create your own address book, phone directory, tape library title list. Use the flexible editor to enter or amend data. Sort and search. Call up detailed reports on contents in any form. Produce mailing labels on your printer.

**Financial Diary** All the features of the best desktop diary - plus much more. Enter up to 10 items per day and have them automatically sorted in time order. Add your expenses and have them totalled in separate categories. Spend search for entries, then mark them for future manipulation or replication.

**DATABASE SOFTWARE**

**TO ORDER, PLEASE USE THE FORM ON PAGE 61**

**END Prize letter****Quickshot in the arm**

HAS anybody else had trouble with the Quickshot joystick? We bought one last Christmas because it looked and felt much better than the Amstrad one but unfortunately the Fire Action died once on switch-on and then no more.

The man at Spacemovies was so surprised as the old could offer no advice, so out came the soldering iron and meter. Well, a Christmas holiday was no joyride!

After probing around I found a couple of nasty capacitors labelled C1 and C2 which appeared to hold the Fire output on. I removed these together with the auto-manual switch (rendering a link into the manual position to prevent accidental switching to auto. Hey presto, it worked!

Eight months later the dog spent a happy hour manipulating the joystick with her teeth. The joystick did not survive, so it was off to the shop again.

This time the only unit available was the Quicksator II which still had the standard problems. Same solution: Wipe out the screws, find C1 and C2, wiggle violently until they come off. Ah. Tack on the auto-fire key and you're doing battles with the aliens again.

I hope this fix helps any frustrated CPC keyboard batters, but remember it will invalidate any warranty. — J.P. Howard, Bletley.

● Entirely at your own risk folks!

**A CPC speaks**

A few months ago I purchased a CPC6128 and have now got the communications bog. Being close to computers I would like clarification on a couple of points.

Firstly, if I buy the

**Win a tenner**

Each month we award £10 prizes for the most interesting letters sent to us.

So now there's room to reason than ever to contribute to our lively letters page.

Get your pens out, start writing and you could be one of the winners.

The address is: Postbox, Computing with the Amstrad, Europa House, Chester Road, Hazel Grove, Stockport SK7 5RY.

Amstrad RS232C interface which incorporates Comstar software can I still use the Mini Office II Communications module?

Secondly, with Comstar, can I use letters created with the Mini Office II Word Processor? — A. Hunter, Cambridge.

● Mini Office II was designed to work with the original Amstrad interface and regrettably will not work with the latest version redesigned by the new supplier, Pace.

Any text file created with Mini Office II can be sent with Comstar provided it is saved in Ascii format.

**Losing money**

HELP! I'm writing a program which reads text from data statements and every time I use a £ sign it disappears. I enter a line such as:

```
100 1000 100 1100
```

and when I list the line, the £ vanishes. Where's it gone? My computer is a CPC6128. — Sid Harvey, Luton.

● This is an undocumented

"feature" of Locomotive Basic: it doesn't like Ascii characters above 127 in data statements because they look like Basic tokens.

The solution is to get quotes round your data and the £ will stay put. Actually, you can get away with a single quote at the start of the line.

Try this: Reset your machine and enter a line of data containing 10 spaces as follows:

```
IF ARE FOLLOWED BY A SPACE
```

Now force a £ sign into the statement by poking it there using:

```
POKE 417,ASC("£")
```

List the line and you'll see Basic has taken the Ascii value of £ as the token for INPUT.

When you enter a line of data, it it doesn't have quotes the Amstrad filters out the £ character. As far as we can see, it's the only one above 127 on the default keyboard and so it's the only one checked for.

If you put any other character above 127 on the keyboard such as in KEY (CHARB264) and put that in an unquoted data line, it isn't checked for and comes out as another Basic keyword, in this case NOT.

**Wrong format?**

AT the risk of appearing stupid I simply must ask you about David Patten's utility in the September issue in format above in 2096.

Can you clear up the confusion which exists in my mind about the part of the article stating that when the machine code has been poked into memory, it will be saved as a binary file, intrinsic?

I cannot see any reference in the program to saving itself as a binary file. The utility is made even worse by the fact that after you have formatted a disc to

2096 you are told to run the initial program from a normal disc.

One other thing, having entered Program 1 correctly I am told data is exhausted in line 70. I cured this by adding an extra line 200 consisting of zeros. You haven't closed a line in the listing have you? — A. Entwistle, Llandaff.

● No, you're not stupid. The original listings were correct but were in Data24 format for unsuccessful experiment to make listings easier to enter, originating in the May issue.

When the proof came through, with your interests at heart we did a quick conversion to the more popular hex loader and missed the bit about saving the binary file.

Also, seeing that the last line of the first program was all zeros somebody decided to save you some typing and removed it. For a change, it wasn't the features editor but somebody who should have known better and shall remain nameless. Oh go on then — it was Sharp's Desk.

For the record, put a line 670 DATA followed by 26 zeros in the format program and in the initialisation program add a line:

```
100 (41)161,8V,2,2096,00
```

While you're at it, the on-line program, list.bas, that loads the initialisation file, ought have MEMORY BEEP as its first statement.

Thanks for bringing it to our attention. We aren't infallible and the sooner somebody lets us know there's a problem the sooner we can do something about it.

Another thing has come to light which may be giving a few people problems. There are differences between disc drive mechanisms which means that some do not format reliably when pushed for extra performance, causing trouble.

Turn to Page 58

## 4 From Page 55

when saving and loading files.

To check you have a healthy disc, use the following program which verifies those formatted to 200K. You don't need 200K format initialised to use it, just run it, put a 200K format disc in drive A, and CALL @200K. Bad sectors will show as bad faces.

If you want to avoid, keep the Escape key depressed for a few seconds. If the disc is faulty, it'll reformatting it as this often affects a copy.

Hazel Grove  
Stockport SK7 5WY

## Advertising boob

I FEEL that I must comment about the advertisements for *Barbarian* that have appeared in your magazine and others. It's not the game I'm objecting to, it's a good hack-'em-up as much as the next man. No, it's the use of italics to sell it that gets me.

Most purchasers of video games, including myself, are misled under 25. The advertisement does not try to sell the software on its merits but uses something only a small step away from soft porn as an incentive.

Palace's advertisement says a lot about them. They treat *their* customers as adolescent covens with no little discretion or intelligence that they will buy software not on the strength of its quality, but because there are photographs of boobs stuck to it. Therefore they do not request us, but see us as cheap men's only function is life is to make them money, no matter if their methods give offence to some people.

As a parent I object to my young son who is ten years old and at an impressionable age being presented with such material in what might be considered family reading. I don't think *palpating* *Adonis* is having an adverse effect on him but the sort of advert could. Did Palace stop to consider this before greed got the better

of them?

I've bought Palace games before and have been very pleased with them. I am understanding a company producing poor software having to resort to these methods but it is not something that Palace needs to do.

Reading your review of *Barbarian* I have no doubt that it is up to their usual standards but I will not be buying it, thinking of the software that I despair at the number of people who are allowing Palace to get away with this attitude. Perhaps they're right after all. — James Langley, Sheffield.

## Seeking the arrow

PLEASE could you tell me how to get the I sign in *Centipede*? It occurs in lines 2250, 2255, 2270 and 2280.

It is worth having a light pen when I haven't got a printer? — Keith Cooping, Walsley.

■ The symbol is the up arrow on the same key as E. To answer your second question, we find light pens lead to a sore wrist and smudged screens. If you really want one but have no printer, the only drawback is that you will only be able to view your masterpieces on-screen.

As a dot matrix printer only gives a crude representation of the original, this may not be much of a disadvantage.

## Catalogue modifications

I WAS delighted with Robin Nixon's disc catalogue utility in the July issue and after running it through the checksum program all was well.

Well, that is until using it to load *Bliville* from the February issue when I got "Program segment in line 2680". I have found similar a problem with *Movast* which runs OK if not loaded from the catalogue program.

The common factor seems to be the *SYNMOD* command. Not having had the CPC4208 for that long or enough experience of Amstrad Basic I'm hoping you can help.

My second query is about the checksum utility. The original instructions were to only load a program to be checked and not run it before generating the checksums.

With Disc Catalogue the only way to get the sums to match is to run it first. — Roy Welling, Wolverhampton.

■ When we tested disc catalogue we ran many programs from it without any problems.

It seems that none of them tried to redefine characters which can cause the symptoms you describe.

Two simple modifications to catalogue will put matters right. Add a new line:

```
41 READ DISKETTE, DTOS, DT
```

and modify line 706 to:

```
500 READ DT,DTOS,DTOS,DTOS,DTOS,DTOS,DTOS,DTOS,DTOS,DTOS
```

As you may remember, we only discovered that you mustn't run a program before checksumming it after the checksum utility was published. Disc Catalogue was introduced before the problem came to light and we must have run it beforehand. As far as we know, this is the only program to slip through the net.

## Circles solved

I REPLY to your reply to Barry Poxon's letter in the June Postbag concerning problems with printing round circles on dot matrix printers, particularly Mini Office II pic charts.

Even an Epson LX80 (now available in an updated form as the LX85) which has a one-to-one plotter mode. This produces true, circular circles. The code is:

HEX:10421190 (1090)

where *H* is the existing circle letter and *I* is the plotter code which replaces it.

*K* is the most common code used in commercial

## Prize letter

clubs programs, including Mini Office II, but it may be necessary to experiment with other Epson code letters before finding the correct one.

To override the Mini Office II dump, place the printer on line, send the code exactly as given above in direct mode. Now run Mini Office II.

I have owned my printer for 18 months and it has had fairly heavy use. I find it to be one of the most versatile and reliable printers available at the price. — J.B. Crabtree, Darrington, Co. Durham.

## Printer dump

I HAVE recently purchased a Commodore MPS 1000 printer which is the same as the Epson L380. I need to do lot screen dumps to the printer on a listing in Amstrad Basic which would be much appreciated.

— Nicholas Golin, Wincleson.  
● We published one in August 1985. You can obtain the back issue using the mail order form on Page 61.

## Which assembler?

I HAVE been programming in Basic for quite some time and recently I decided to learn assembly language. I am at a loss as to what assembler I should buy and which book would be suitable for me.

I would like an easy-to-use assembler which would allow me to enter your machine code programs without too much trouble. — Nicolas McMillan, Banville, France.

● There are several good assemblers on the market. We use Amos's Macro which is particularly easy to use, especially in the rom version. If you're looking for

a cassette-based product Picturepak's Code Machine is also excellent.

As for books, one man's meat is very often another's poison but Amstrad Machine Language for the Absolute Beginner by Joe Pritchard is quite reasonable. It's published by Melbourne House, ISBN 0 88181 1034.

We're often asked for the titles of good books on both machine code and Basic. An experienced programmer it's difficult for us to judge how successful a particular volume is for a beginner. Can anybody recommend books which they've found to be useful?

## Contact corner

I AM a CPC600 owner and I would like to correspond with anybody with the same machine to exchange thoughts and talk about programming. — Adnan Abdallah, 44, PO Box 1248, PC 22938, Salmiya, Kuwait.

PLEASE can you let me up with a pen pal? — Tim Oliver, 7 Wester Field Way, Wyford, Nottingham NG21 3ET.

# SLOBB

Corner

The South Lancashire and Cheshire Bulletin Board

## Talking turkey

Dear Fans,

Thanks for the many letters which have flooded in to Slobb Corner. The most popular question seems to be about how I got started in the computer industry. The answer to that question is that when I left school, all I had was O'levels in maths and art — so I got a job painting computers.

The other letters were mainly complimentary — but in reply to Mr A. S. H. of Bristol: your writing was a little prozac. Did you see if I was a mason or a Stoneman?

New to the technical queries, it would seem from your letters that the majority of you are interested in getting your CPC to talk to another computer. The easiest way round that is to use the Amstrad speech synthesiser. The CPC will then happily talk to any other computer and also to your fridge, microwave oven, television set or any other domestic appliance.

Of course you'll also need some device to allow them to hear what's being said — but we can't have everything can we?

There's been quite a lot of excitement in the office this month as the software side. We've finished the complete works of Shakespeare and the most remarkable part was when we reshaped a local model to help us with Romeo and Juliet. She was a terrible actress, but she certainly knew how to hang over a balcony!

The production program I was writing has been wrapped. The gossip feature letter I'd been working with walked out after I hit him while he was laughing. It was the boss's fault though — he's always telling me to strike a happy medium. I'm glad it's over really, at my age writing software is as much fun as watching the Kinn & Ted Show on a Saturday night.

The Amstrad Show at Holly Holly was quite a success. I went down on the Friday with the rest of the regulars from the Keyboard and Mouse. Having arrived at the Dobbybase Publications stand, we immediately tried to persuade the features editor of this illustrious magazine to buy us a drink.

It would have been easier to milk a goat. The range of excesses ran from "No speaking in English" to "I seem to have lost the key to my wallet".

See ya.

## TWO Accolade winners at a very special price!

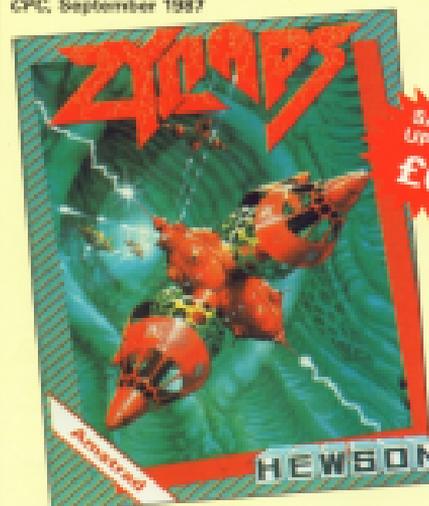

In the role of Vitore, a heavily-armed humanoid, you blast, battle, bound and blunder your way over more than 100 screens in this spectacular space epic. The graphics, sound and playability combine to make it a knockout game which would be a blockbuster in the arcades – but you can play it on your CPC for as little as £4.95!

*'Graphically Exolon is a masterpiece...[the] graphics surpass all that has gone before, yet somehow combine them with faultless animation. Having played Exolon for the past few weeks I hereby vote it my favourite game of 1987 – nothing comes close!'*

– Jan Revis, Computing with the Amstrad CPC, September 1987

Zynaps is one of the most exciting shoot-'em-ups to appear on the Amstrad CPC. It features slick movement and smooth right-to-left scrolling. With 16 levels, nearly 450 screens and a two-player option, there's enough here to keep you busy for many months!

*'Zynaps is certainly a superior shoot-'em-up and one that will provide hours of fun and frustration in equal quantities. If this*

*is the kind of game you like, Zynaps is a must! (Addictive qualities 93%)'*

– Tony Flanagan, Computing with the Amstrad CPC, September 1987

## 2 CLASSIC COMPILATIONS

Now you can obtain some of the all-time classics on the CPC for as little as £1.20 each!

Beas Jolly have brought together 10 top-quality games in two value-for-money packs.

### What you get in Five Star Games

- Zoids
- Equinox
- Spindizzy
- Who Dares Wins II
- Three Weeks in Paradise

### What you get in Five Star Games II

- Dandy
- Frostbyte
- Cacklon II
- Alien Highway
- Doomsday Blues

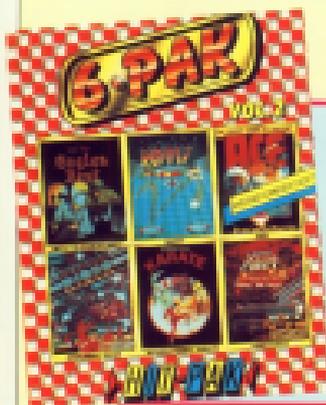

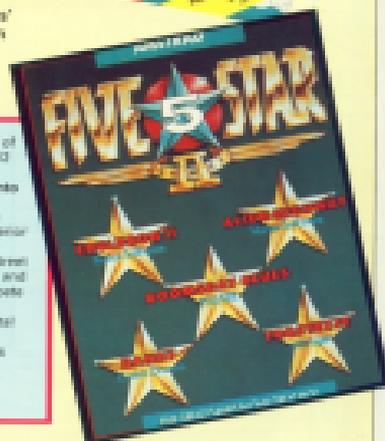

There are no 'stocking fillers' here - every game has been highly commended, and many have been awarded coveted Amiga Accolades.

4-Pak Volume 2 contains some of the very best games of the last 12 months.

There's non-time action with *Into the Eagle's Nest*, the fantastic tactical game *Battix*, the realistic flight simulator *Ace* and the superior shoot-'em-up *Lightforce*.

In *Shockley Rider* you fight alien gangs on the moving walkways, and in *International Karate* you compete against another player or the computer in this top-notch oriental combat game.

This magnificent compilation is only available with a new subscription or a subscription renewal.

Link your Amstrad CPC to the outside world with...

# MicroLink

**Electronic mail** – The cheapest and fastest form of communication possible. It costs the same to send a message to one mailbox as to 500!

**Telex** – Link up with 95,000 telex subscribers in the UK and 1.5 million worldwide. You can even send and receive telexes after office hours or while travelling.

**Telemessages** – Type in your message before 8pm and delivery is guaranteed by first post the next day (except Sunday), anywhere in the UK and USA.

**Telebooking** – Reserve train and theatre tickets, check flight details worldwide, or order from a vast range of products – from flowers to floppy discs.

**Advice** – on a team of professional legal and financial advisors as and when you need them, for both business and personal problems.

**Company** – Obtain facts about any British limited company in seconds, and fully analysed financial information on over 100,000 major companies.

**Translation** – Access the biggest and most up-to-date multi-lingual dictionary in the world, with over 380,000 words.

**News** – Use the powerful search commands to pinpoint vital business information from the world's leading news services, newspapers and periodicals.

**Calculator** – If you also have a pocket calculator you'll be alerted each time an urgent message arrives in your mailbox. Be you're always in touch.

**Gateway** – Get through to New York in just five seconds – or any into the EEC computer in Luxembourg, which links you to 600 databases throughout Europe.

When you join MicroLink you've got the whole business world at your fingertips – 24 hours a day. You'll have immediate access to ALL the facilities offered by Telecom Gold ... and a great deal more besides.

All you need – apart from your Amstrad – is a modem, which plugs into your telephone wall socket, an RS232 interface and suitable communications software.

We have provided a list of possible combinations (left), ranging from the very cheapest to ones which can automatically dial the MicroLink telephone number and connect you directly to the service – all you have to do is type in your personal security password.

Whatever equipment you use, you will be able to call MicroLink, open your mailbox, send to clear any messages waiting for you, and disconnect in as little as two minutes.

#### Typical costs packages

- |   |  |
|---|--|
| A | Cable Access 100 modem + RS232 interface + tape or disc communications software £25.49 |
| B | 1000 Modem 100, 1000 serial/modem + RS232 interface + gamma.com software £25.49        |
| C | Phone Nightingale 100, 1000 modular/modem + RS232 interface + Comstar.com £150         |
| D | Phone Lynx 100, 1000 serial/modem + RS232 interface + Comstar.com £750                 |

More than 90 per cent of subscribers can connect to the MicroLink computer at local call rates.

**TO FIND OUT MORE** fill in the coupon and send it to the address below. You will receive full details of services and costs, together with an application form. Complete this and within three days and your Amstrad will be able to use all the services of MicroLink and Telecom Gold.

# THE NEW AMX MK. III MOUSE. TRAP ONE SOON.

The MK. III AMX Mouse is a product of Swiss precision and the result of a world-wide search to find a worthy successor to the AMX Mouse MK. II. The new Mouse has been specially chosen to be the perfect partner to the ever expanding range of AMX software.

The unique patented design includes high resolution 0.01" and superior ball technology to ensure that contact between the Mouse and the surface is constant at all times. That's a new shape too, that fits comfortably in the hand.

Join the great "Mouse Swap" Plan, exchange your old Mouse for the new MK. III for only £29.95.

## "ART AND CONTROL"

**AMX MOUSE MK. III PLUS ART AND CONTROL,  
1.5" FLANK 2" DISC, £19.95**

Recognised as the most sophisticated yet easy to use paint package available for the Amstrad CPC, it's no wonder over 20,000 have already been sold.

AMX Art features include cut, copy, paste, draw, fill, many more such as: fontsize, spray and zoom facilities. The package also includes AMX control which enables you to create a mouse environment in your own programs. Available for Amstrad CPC 464, 664, 6128. Please state which version is required when ordering.

## "STOP PRESS"

**AMX MOUSE MK. III PLUS STOP PRESS, 2" DISC £29.95**

The most highly acclaimed desktop publishing software available for the Amstrad CPC. Already thousands of users are producing professional documents, newsletters, fly posters etc. In fact anything where text and graphics are required. "Stop Press" comes complete with 18 variable typefaces. Available for Amstrad CPC 4128, CPC 664 (+ 64K min add-on Ram), CPC 654 (+ 64K min add-on Ram + C-64 Street). Please state which version is required when ordering.

**STOP PRESS (8K/11) £19.95**

**EXTRA! EXTRA! 2-3" DISC £24.95**

300K format; slip on and use 25-line fonts.

## "MAX 2" DISC £19.95

MAX provides an easy to use graphics based front end to your computer's file management operations such as: cataloguing, copying, deleting and renaming. Also includes art-disk utilities such as: sector editing, recovering-corrupted files, formatting, verifying and folder marking. You can also run programs from within MAX. Available for Amstrad CPC, 664, 664, 6128. Please state which version is required when ordering.

## "AMX MAGAZINE MAKER 2" DISC £19.95

A combination of Stop Press and the Remko flat-file digitiser. Using any video and digitiser, images from a camera or TV can be converted into a graphics screen with Stop Press to illustrate magazines or newsletters. In fact anything that needs to be printed on A4 size paper. With Stop Press many features a variety of pictures can be composed, the only limit being your imagination.

**AMX-MAGAZINE MAKER 2 £19.95**

There is also a growing list of AMX support software including: AMX 3D Scan 2" Disc £24.95 with Scan you can transform vector data into an screen graphics. Printers and plotters are fully supported. AMX Diskless 2" Disc £19.95 Utility software for the original art program supplied with AMX Mouse. A Mouse and Interface total can be purchased for £24.95 direct from AMX using the order form enclosed with MAX, Stop Press and AMX 3D Scan. These support products are available from all good computer dealers or direct by cheque, Access or Visa. All prices include VAT and post and packaging.
