Dizzy: The Map

IT'S SURPRISING THE TYPE OF PEOPLE MAKING THE HEADLINES THESE DAYS.

STOP PRESS

"Stop Press!" puts you right at the heart of the Desktop Publishing Revolution. Utilising dynamic WHATEVER! (What You See Is What You Get) technology, "Stop Press!" makes it simple to create professional newsletters, leaflets, flyers, forms or in fact anything where text and graphics are required.

"Stop Press!" is the ideal publishing software solution for Home enthusiasts, schools, societies and small businesses.

READ ALL ABOUT IT

Documents may be prepared using any of the superb selection of typefaces (12 or more), supplied or alternatively a typeface of your own design.

Text can be entered from within "Stop Press!" or imported from your preferred wordprocessor with fully automatic screen-based formatting as the file loads.

Centering, ragged right, and serial justification are all available. There also a full pixel resolution justification, character size and spacing.

GRAPHIC DESIGN

As well as the ability to import digitised images there are outstanding facilities for drawing, spraypainting and painting using either the patterns supplied or your own pattern designs, enabling you to produce graphs, charts, diagrams and pictures.

These can then be pasted, cropped or re-sized to fit any layout, and for those finishing touches a fantastic zoom facility.

HOT OFF THE PRESSES

At anytime your pages can be repositioned before being output in a wide range of Epson or compatible dot matrix printers.

AMX MOUSE

"Stop Press!" can be used with a joystick or keyboard but the Amx Mouse gives you the control and flexibility which you would expect from the most accurate pointing device available. Produced in Switzerland the Amx Mouse has a unique patented design which includes high resolution movement (D.P.I.) and superior ball technology to ensure that contact between the mouse and surface is constant at all times.

EXTRAS! EXTRAS!

Complementing "Stop Press!", Extra! Extra! is a superb collection of ready made clip art and new typefaces covering a wide variety of subjects and styles.

STOP PRESS! IS AVAILABLE FOR	SOFTIMAGE	AMX IMAGE	EXTRA! EXTRA!
Macintosh - B&W	£199.95	£199.95	£199.95
Macintosh B&W/Colour	£249.95	£249.95	—

Help celebrate Amstrads 20th anniversary at the 10th Annual Computer Show - the biggest event of its kind ever held. This is the beginners and experienced users can find their questions. A Computerised information kiosk will give visitors an instant guide to products they want to use. An Expert Advice area will be staffed by some of Britain's top computer experts. And Demonstration Areas will show how the latest software is in action.

Answers to all the last

The **MTW Edwards Palace** is at the heart of a vast leisure complex, with a magnificently landscaped view over the capital. While most of the sites in the area of the hotel can enter the walled park, the heating lines, the swimming pools, restaurants and bars, and the park's own private areas, *El Palacio Real* stands outside the hotel grounds, including a large, fully-furnished restaurant, bars and music areas, and the tropical *Palm Court* leisure area with its water tower and fountains. There's a separate entrance, too, and it's open 24 hours.

CPC NEWS UPDATE

Big boost for CPC games

A MULDOH new software house has been launched with a budget of £1 million to provide exclusive games for discriminating Amstrad CPC users.

To be known as Mandarin, it will combine the marketing muscle of the Europlay Group in a series of joint ventures with the UK's top programming teams.

The first link up is with award-winning authors and designers Level 8, Britain's best known adventure game creators.

"We believe that our programming ability combined with Mandarin's knowledge of the marketplace and understanding of the need to get products out on time will be an unbeatable combination," said Paul Austin of Level 8.

Mandarin's involvement with the adventure games house is the first of a series of joint ventures.

"We find ourselves in the position that, unlike many other publishers, we don't have to push our titles to maintain cash flow," said Chris Payne, spokesman for the new venture.

"Mandarin couldn't be more sound financially - we have £1 million in the kitty - so we are in a superb position to pick and choose not only our partners, but also just what products we decide to release and when."

"It is our aim that our label will become synonymous with quality, providing the Rolls Royce of software games. And what better way to start than with Level 8?"

Sugar socks it to 'em again

ALAN Sugar has again taken everyone by surprise in announcing record sales and profits for the last half of 1983. Six-month sales were £351 million - compared to £272 million the previous year - and profits were £30 million, or nearly £20 million.

City analysts are now predicting Amstrad profits for the full year at £155

million - a £20 million increase over last year. The Indian Games also helped boost Amstrad's share price.

As usual, Sugar would not be specific about product development, other than to mention "expansion of facilities and new products due to come on stream within the next few months".

...and sets his sights on Europe

A NEW wholly owned Amstrad subsidiary to serve the German, Austrian and Swiss markets has been formed.

The move was expected following the company's recent decision to end its partnership with its West German distributor Schneider, and is the latest step in a major European expansion programme.

There are already Amstrad subsidiaries in France, Spain and Italy, and Alan Sugar has said he will also form comp-

Alan Sugar, chairman of Amstrad in Germany

panies in Belgium and Holland this year.

Annealing the new subsidiary - Amstrad GmbH, based in Frankfurt - Sugar said: "We expect the German company to be the largest contributor to the group's European sales within the next few years".

IT'S THE LEAN MACHINE

AMSTRAD easily leads the *Financial Times* business index - a new measure of the performance of Britain's top companies. A scintillating look at how British industry is doing rate, it rates 250 major firms on factors including profit margin and return on assets.

Amstrad was the star performer on two of the measures and placed first overall. "This reflects Amstrad's lean management team and well-motivated work force", said *The Sunday Times*.

All go on the games front

LATEST arcade adventure from Goldkings 101-403 (0886) requires the player to help save humanity from a giant asteroid hurtling toward planet Earth.

But first, amateur scientist Albert Systray must be located, persuaded to assist, and provided with the tools he needs for the job.

Tomato features tortuous puzzle spiced with humour, and a choice of five quite different characters to control. Price £14.95 on cassette, £13.95 on disc.

* * *

CULT board game Eye - described by *The Times* as "more challenging than chess" - is now a colourful CPC program.

Released by Endurance Games 101-804 (01981) it costs £9.95 on cassette and £14.95 on disc.

* * *

CDP-CP Quattro Karting is the latest arcade conversion for the CPC from Electric Dreams 101-403 (0886).

There are nine hostile levels full of angry drivers, deadly obstacles and other nasties on the trail of the lost treasure of Babylon. Price £14.95 on cassette, £14.99 on disc.

* * *

GRANADA Television's Superchallenge The Rating Factor can now be tackled from the comfort of your armchair thanks to TV Games 101-807 (0823).

Up to four players can take part, testing their mental and physical abilities in a variety of tests. Price £7.95.

BrunWord

BrunWord offers considerable flexibility... excellent
spelling checker... very easy to use disaster - CMX.
BrunWord is a very sophisticated programme - AMIX
Real value for money... user friendly and fast - Amstrad Action

- **BASIC WORD PROCESSOR PROGRAM** - includes full menu driven word processor, full page headers.
- **LIGHTNING SPEED SPELL CHECK PROGRAM** - checked from programme
- **10,000 word English dictionary**
- Checks 2400 words per minute (CPC3000)
 - **ADDITIONAL FEATURES**
 - **PROGRAMMING**
 - **INTEGRATION**
 - **EXPRESSIVE WORD PROCESSING**
 - **20 fonts with colour highlighting**
- All three programmes together on the same CPC3000
For CPC3000, CPC6000 or CPC4000 - Run when machine
starts up (or the boot screen)

Programme
BrunWord is a complete word processing programme. It is a superb addition to any Amstrad CPC system. It provides a comprehensive range of features and facilities designed to make writing easier and more efficient. Features include a built-in spell checker, a wide variety of fonts, a powerful word processor, a sophisticated graphics package, and a range of other useful tools. The programme is highly flexible and can be used for a wide range of applications, from simple letter writing to complex document preparation. It is also suitable for use in business, education, and personal computing environments.

Documentation
BrunWord is the most advanced word processing programme. It is a comprehensive guide to using the programme effectively. It includes detailed instructions on how to use all the features of the programme, including the spell checker, the word processor, and the graphics package. It also provides information on how to use the programme in a business environment, and how to use it for personal computing. The documentation is clear and concise, making it easy to understand and use.

Support
BrunWord is a complete word processing programme and is a very popular product. Support is available through the Amstrad support network, which includes technical support, software updates, and training courses. Support is provided by experienced technicians who are dedicated to ensuring that you get the most out of your investment in BrunWord.

New Brunswick Software
We are pleased to announce the introduction of our latest software product, the Brunswick Software. This software is designed to provide users with a powerful and efficient way to manage their data. It features a range of powerful tools, including a database manager, a spreadsheet, and a graphical interface. The software is designed to be easy to use, yet powerful enough to handle complex data management tasks. The main feature of the software is its ability to integrate data from multiple sources, making it ideal for businesses that need to manage large amounts of data. Brunswick Software is a valuable addition to the Amstrad CPC range of products.

Our free trial is a great success! Ring us now to 'Top' and we will send you BrunWord 3.0 or 4.0 for 2 days free trial.

- Format Disk - tools for data format changing
- Edit Options - Text options, Formulas, CTR, BTR, PWD, PWK
- Advanced Disk - Run when CPC3000, CPC6000, CPC4000 starts up
- Copy Disk - Format disk to CPC3000, CPC6000, CPC4000
- Copy Disk to CPC - 10 without losing BrunWord
- CPC - 1000 or 6200 if ordered on BrunWord disk

Telephone (0245) 252854 (24 Hours)

A RECORD has set for the last Amstrad Computer Show at Alexandra Palace has established it as the number one event for Amstrad-specific exhibitors worldwide.

Crowds totalling 10,280 attended the new venue in the Great Hall over the three days, with Friday day on the Saturday drawing a staggering 8,500 people. The record

attendance figure means the Amstrad Computer Show now arguably boasts a visiting power in terms of any comparable event anywhere in the world.

"We had anticipated a high turnout but we were staggered by the reality," said Michael Maukin, head of Database Exhibitions.

"It was, by any standards, fantastic. The only

event that seems certain to be bigger and better is the next Amstrad Computer Show which is to be held at Alexandra Palace from May 26 to 28."

Among the team from competing with the Amstrad CPC during the last show was former Popular Computing Weekly editor Christine Eakin.

This is what she found.

The CPC range of machines may be most popular for games and leisure use, but the Amstrad Show at Alexandra Palace showed that a significant number of firms make their business products available right across the Amstrad range.

With some of these, the CPC version will be a CP/M Plus implementation, and thus geared towards the CPC128 but for the serious users of all CPC models there was plenty of powerful utility software on show.

Rombo Digitiser

Graphics packages were much in evidence with Rombo's Vid-O-PC making a particularly impressive display.

With Vid-O-PC and a video recorder or camera you can either digitise still pictures, or "grab" single frames from action shots. The digitiser operates in the CPC's Mode 1 or Mode 2, plus Mode 0 for still pictures.

The pictures produced on screen are, not surprisingly, in black and white, so the choice of modes depends not on the colour of the image, but the screen resolution you require and the number of grey shades.

Should you wish to edit the pictures, they can be saved to tape or disc, and cleaned up in conjunction with an art package such as Rainbow's Art Studio. Vid-O-PC is also compatible with AMIGA's Shop Press.

Power for CPC goes on show

DTP programs.

Vid-O-PC is available at £999.95 with software on tape or disc from Rombo Productions, 100 Pasture Ridge, Livingston, West Lothian, EH50 2NE.

If you want to draw your own masterpieces, Matronix has produced Eastari and Eastide (both £16.95) for just this purpose.

Eastari is available on tape or disc, and is an icon-driven program which can use the CPC's full spectrum of colours.

Eastide is only available for the CPC128/604 and is a single-colour technical drawing package rather than an art program. Further details from Matronix at 60 South View, Matlock, Derbyshire DE4 4QH, 0332-298 2491.

Closely related to graphics packages are those which enable you to combine pictures with text to design posters or newsletters, the home version of desktop publishing.

Also in Matronix's East-range is Eastipub, again for the CPC128 and CPC128/604 units. This will mix text and graphics on a page, and is compatible with both Eastari and Eastide.

Show faithful AMIGA had its full range on display, which includes AMIGA Art, now with the latest Mouse Mk III, and Shop Press, in

which you can mix your graphics with text in up to 16 different typefaces.

Siens Software was demonstrating Micro Design, a page design program which is compatible with AMIGA mouse.

Micro Design is geared more diagrammatical rather than pretty pictures, but is particularly flexible in its handling of text on the page. You can print your words upside-down, slide on to the page, in wavy lines, back to front or in white on a black background.

Mainly aimed at CPC128 owners — it requires 128K and a disc drive — Micro Design costs £29.95 from Siens at 24 Oxford Road, Manchester M11 5QA, 061-228 1831.

Serious side

Anyone who visited the show in the hope of seeing the newest games would have been disappointed. This was largely a show for the serious minded CPC user, although there were some excellent bargains to be had from some of the retailers' stands on older titles.

However there were a couple of interesting new programs on display which sit somewhere outside the conventional games, utility and pro-

gramming categories.

PER, from Insoft, stands for Personal Excellence Package, and aims to help you assess your mental and social powers, and improve them.

The program includes IQ tests, a personality assessment module, co-ordination skills tests — and a test measure how much they deteriorate under the influence of alcohol or stimulants — and memory tests.

The documentation points out that you could use the program professionally to assess, say, job candidates, as well as having some fun with it at home (and perhaps learning some home truths). At £24.95, it's CPC128 only, I'm afraid — it runs under CP/M Plus. Insoft is at 41 North Road, London NW1, 01-637 5865.

Sharemarket, from Merchant Between, is for pestilential Bingers everywhere. It enables you to record details of your shareholdings, unit trusts, and will plot their performance in graph format or on a linear scale.

You can, of course, also enter and keep track of share prices and markets, or practice, to test your own business "hunch" before diving into the market for real.

Again it's for disc-based CPCs, and priced at £39.95. Contact Merchant at 28 Balcombe Road, London SW8, 01-580 7017 for further information.

NEWS...NE

More power, speed for MicroLink

MAJOR improvements to MicroLink have been announced, following the successful outcome of prolonged negotiations with Telecom Guild.

The enhancements are based on speeding up connect time on the systems, with the aim of bringing down the cost to subscribers.

"With the vast increases in tele traffic in particular over

Costs will be cut

the last few months, one of our top priorities has been to simplify the sending of messages", said the head of MicroLink, Derek Meakin.

"Our programmers have achieved a significant breakthrough which we are now

implementing. We are also completing the switch to our new Prime 9800 computer which provides more than four times more power than has been available to MicroLink subscribers so far.

The other big development is the opening of 2400 baud access to the MicroLink computer - regulating the speed at which users can transmit and receive data".

Now disabled study at home

Penitentiary disabled people in London are being helped toward employment with the aid of MicroLink.

Over the next three years 60 household residents of the Borough of Greenwich

will be given the chance to study computing and information technology in their own homes.

One of the scheme, funded by the Urban Aid Programme and Greenwich Council, is to

enable business to eventually either gain employment as motivators for businesses or to become self-employed in computer related activities such as programming, word processing or desktop publishing.

Each trainee is being provided with a computer, monitor and printer. A tutor will regularly visit each business to sort out any problems and to check on their progress.

"But there will also be a constant 24 hours a day computer link to the base at Greenwich ITeC through MicroLink", said tutor Marion McPherson.

"This free demo service illustrates that MicroLink has lots to offer our new clients from hospitals to business executives", said head of MicroLink, Derek Meakin.

Wanted – a disaster

If anyone out there has recovery, round disaster survival kit in mind, there could be a silver lining to their troubles.

A company on MicroLink specialising in providing disaster kits for drivers and photographers is asking other drivers for help.

"We've got a whole lot of jobs", says spokesman Keith Gossman.

"Our brief is to find a location for a photo or illustrate an advert for a smoke detector.

"We need a recently burnt-out detached house whose roof timbers are charred and standing out against the sky - we'll dispense any part of the country would do.

"We're offering a small reward to any MicroLink user who finds the building we eventually use".

Laying it on the line

Washington D C Mayor William F. Buckley is shown, but MicroLink subscriber Keith Channing is looking for people who like to take their clothes off.

Not that there's anything naughty going on, Keith is membership secretary of CDRU - standing for Clothes Optional Recreation and Leisure - which is a beach, camping, and general outdoor naturist group.

"At present he is trying to bring together all those MicroLink subscribers who are naturists so that they can chat about their pastime via electronic mail.

DIAL FOR A DEMO

COMPUTER users who haven't yet seen the massive range of facilities MicroLink has to offer can now logon directly to a free interactive demonstration - and all from the comfort of their own home or office.

All they need is a 1200/75 baud modem and telephone connection to 01-883 1275.

Once online, at the >P4D prompt simply key CALL 72 then Return. When asked to sign on, key ID MAG111 then

Return. The password DATA-BASE, followed by Return, will bring up the menu.

There are four sections to choose through - communication, information, services and leisure - each describing a different aspect of the system.

This free demo vividly illustrates that MicroLink has lots to offer everybody from hospitals to business executives", said head of MicroLink, Derek Meakin.

HAVEN you ever been in the infuriating position of knowing that somewhere in your disc collection is a vital file or program, and then catalogued a dozen discs before you found it? Disc Library will put an end to that by using the disc directories to produce a catalogue of filenames in alphabetical order.

Since you can look up a file name and find out the date, size, and user group it actually is stored. You can even print out the catalogue and keep it handy for quick reference.

Typing in the program and weed out poor typing mistakes with the help of the checksum utility from the June 1982 issue. Although Disc Library isn't a big program it uses most of the free memory in your machine for storing data, and overall it's a very tight fit. If you have some extra memory you may find you have to switch them off for the program to run properly. In most cases Disc Library will warn you if there isn't enough room, but if you suffer from odd crashes, try turning off all console escape number seven - the disc rom.

When you run the program you will see a menu, and the nine options are summarised in Table I. To avoid confusion IT refers to the physical disc

- 1 Load catalogue from disc.
 - 2 Add disc directory to catalogue.
 - 3 Print catalogue on the screen.
 - 4 Send catalogue to printer.
 - 5 Save catalogue to disc.
 - 6 Erase one disc and free catalogue.
 - 7 Erase or pick out one file type from catalogue.
 - 8 Load catalogue from memory.
 - 9 Look for named file.

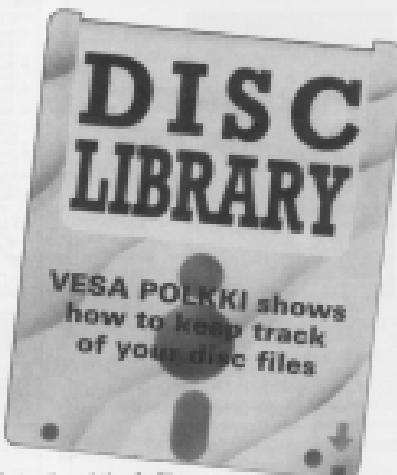

Table 2. Major results

directory as a directory, and the file of running produced by this program as the catalogue.

Option one allows you to load a previously saved catalogue and will prompt you for a filename. The first time you run the program you won't have a catalogue on disc, so to begin building one - or add to the one in memory - select option two and insert the disc to be read.

You will have to choose a class name up to eight characters long. There you'll be asked which side is being read - A or B. Finally, you can opt to read user 0 only, or 0-15 inclusive.

The disc directories will then appear on screen and the program will copy them into its database. As the CPC64 doesn't have a COPYFROM command there's some machine code which does the job. Based on the CPC16

and I don't see the writing facility

Dear Library don't send \$25.00 fine, but you can edit the catalogue file more gradually in a sound programme. Remember too that the last row must be an empty control consisting of 24 spaces.

When adding a director, the old names on the same disc side are first erased from the catalogue. In this way you can easily perform an update after changing the contents of a disc. If you have given two files on different discs the same name don't worry, they'll both appear. Don't forget to save the updated catalogue with option File before you exit from the software.

After the filenames have been added to the database you will be returned to the menu. Select option three to see the names in alphabetical order on the screen. In the list you will see the filename, disc name, disc side and user number.

The fourth item on the menu screen the catalogue is printed are options for questionnaires or single sheet stationery. The variable *Q* in line 1000 should be set to 0 for single sheet or left as 1 for questionnaires. The records are printed either three items across

the page using shift, or the Home/End keys.

The sixth option allows you to browse from the catalogue the libraries on one disc tape. This can be user 0-empty or users 0-16. If you have a large number of files you are working with, it is recommended to use the

item 1-1a, the option is very nice.

Every item in the catalogue is 20 characters long. Between 800 to 1000 entries can be stored, and the program will not allow you to read in another directory if there isn't room for a full card side of new entries.

If you run out of room you'll have to walk with maps that one file, but most people won't find this necessary. We used Disk Library to produce a catalogue of our master disk containing all the programs published in the last three years and that took

From the Editors

• From Page 1

How can both the parties agree?

Should multiple files be necessary, option eight allows you to start the current catalogue from memory to enable you to start off a second one. This has the same effect as piping out a subsequent file type, but is a lot quicker.

Finally, option nine will bring you through the catalogue for a specific library. Type in the first part of the name and the extension separately. If

You miss out the extension by pressing Return/Enter, the routine will try to find a match with as many characters you have given it. In this way you can look for all filenames starting with particular characters or set of characters. Note that ? and * wildcards are not supported.

The original version of the program used a string array for the filename, one element for each. This works perfectly on the CPC6128 but causes problems on the CPC664. When I tried various different file names

accessed the micro kernel itself in huge amounts of garbage collection, causing the program to pause for long periods.

To make Disc Library compatible with all models it was decided to go for a ram file system. Each record is copied directly into memory with an **RSX1 WRITERFC**, and read out again with **1READREC**. Another benefit is that **1RSXCOPY** — copies one record into another — is much faster than the original C64/128 version.

ROBIN NIXON visits two software houses about to slug it out in the budget sector

CODE Masters is renowned for producing good quality games at a low price, and its software consistently makes it into the top 20.

To gain an insight into how this is achieved I visited two of Code Masters' top programmers – the Oliver twins – at a recent press launch for Jet Bike Simulator.

When I arrived they were demonstrating Pro Sti Simulator (which had just hit the number one spot in the chart) to a reporter from a cycling magazine.

This is typical of Code Masters' approach. It specialises in endeavouring to get publicity wherever it can, including television where the Darlings – directors of Code Masters – made an appearance on the children's programme, Number 23.

According to marketing manager Bruce Eversis, this is how they keep the price of the software so low. And this approach works. At the time of writing Pro Sti Simulator is still number one, Grand Prix Simulator is number two, City is in fifth place, BMX Simulator is ninth, Super Robin

then the Twins' output has been phenomenal.

The games are written with the company-based Maxxon assembler, which they

Code Masters? Apart from continuing to support the Amstrad, they intend to branch out into 16-bit budget software writing at around £15 and also hope to set up distribution channels in Europe and America to take the battle of the budgets further afield.

Two programmers working together work three or four times faster than one; three programmers do nothing.

– Bruce Eversis

describe as brilliant because it's so fast and takes up virtually no ram.

Code Masters has an in-house graphics manager and a team of about 100 freelance programmers. Occasionally the Darlings come up with an idea they want programmed and get some people to work on it, but more often programmers come up with the ideas themselves.

Once they've got the idea they'll storyboard it and then get the programmers to start coding. The graphics are created separately on an in-house art package, and are then linked into the program.

Having done that they create a title screen, and then sub-contract someone to write the music. Finally the games go through a rigorous screening process by David and Richard Darling, their 28-year old friends and, very importantly, their six-year-old brother.

So what does the future hold for

Philip and Andrew Oliver

SOFTS isn't known for budget games, but husband and wife team Davina Tim and Cheri Langford intend to change that in a big way.

Softs considers the titles released under its label The Edge to be what they call "high quality games that make you think".

Following on from its latest full-priced releases under that label – Inside Out (now reviewed in our February issue), and Garfield (reviewed this month) – Softs is to start a budget label, The Micro Selection.

That may not sound particularly snappy, but according to software manager Denise Cahill, it is their

Hood in seventh, and Transmuter is just in the top 20 at number 20. Some fast!

I asked Philip and Andrew Oliver how they became involved with this company. At school they had a BBC Micro, and with it they taught themselves to program.

As soon as the CPC6128 appeared they bought one and started writing games almost straight away. When the Darlings saw Philip and Andrew's work, they snapped them up. Since

GET BATTLE

intention to take the label right to the top.

They fully researched the market before embarking on the launch. Suppliers, distributors, and resellers were asked what they wanted in terms of price, packaging, and advertising and The Micro Selection was born from the answers received.

Preliminary trials across Mastertronic's and Codemasters' lines of releases of some basic catalogue material from Cascade Games and Aegis.

The first three titles to be given a new lease of life are Thai Boxing, Gladiator, Jump Jet and Asterix, each of which will be released on tape for £1.99.

There will also be other releases on re-labels called The Micro Selection Plus and Limited Edition. These are Baby Bear (£2.99), Shadow Skimmer (£2.99) and Faeright: The Legend (£2.99).

I asked Denise why Aegis is

entering a market in which other companies have failed, and what the main differences are between budget and full-priced software. She said that the

• The Micro Selection represents budget at its best

— Denise Cahill

for this type of game — especially if the quality is as high as The Micro Selection is intended to be.

As well as budget titles, Aegis has moved into code-on-contract contracts which it believes will continue to be one of the main sources of inspiration for a good while yet through a new label — Ace.

The first titles to be released around

Garfield: Previews the issue

difference is not only price, but it's like that between a single and an album.

Many people buy a single or two each week, but save up for albums, which have more in them. Although both are equally good products, albums — representing greater value — cost more.

She believes there is a gap in the budget software side at the moment, and that there will always be a market

Easter, are Soldier of Light, Dallas, and Alien Syndrome. According to Tim Langford, the quality of these conversions will be higher than the public may be used to from other companies.

Aegis also intends to release original arcade-style games under the Ace label.

There is also a fourth label, Self-Technica, with a range of business and home productivity software including word processors, graphics packages and database managers. So, with all these areas in the mix, they are well prepared for the future — no matter what it holds.

It will be interesting to see if they are up there competing with the likes of Mastertronic and Codemasters this time next year.

NEXT MONTH:

From the heart of the East End to visit the whizkids software house CRI. Read all about it next month.

The first three Micro Selection releases for the CPC

LUCASFILM GAMES PRESTIGE COLLECTION

Activision £9.99 (tape) £14.99 (disc) Joystick or keys

Four compilations offer more than one or two big titles, but here we have a selection of four of the most popular games of recent times.

Baroness B-57 is difficult to describe. According to legend, the predators used the sleek aircraft on the planet Baroness to test their most powerful weapons.

After days of travelling through uncharted space, your monitoring systems detect the strongest radiation but you've never seen. Could this be the legendary planet?

Leaving your crew service bay, you fly over a vast ocean. Paying in control of the flying aircraft, you board the surface never and begin the descent to the planet's surface.

Your task is to prevent symptoms of ancient technology in the bacterial fields you will find deep in the rifts. They can be taken back to the baycraft where your People should can evaluate their power and efficiency.

Your quest is made more difficult by the guardian serpents which can't get you. Until you reach level 20 and destroy their base, the only choices you have is to either evade them or fight back.

You can end the game at any time by returning to the starting to cash in on all the technology you've picked up, but no can't leave the planet unless you have destroyed the guardian's base.

There is much more to the game than I have space to describe, and it's well worth studying the instructions in

detail before grabbing your joystick.

Battlestar has been described as the fastest and most competitive game in the universe as whizzed to a cockpit, you face your opponent.

The screen is split in two, so you must have your own copy of the game. One flies the hull, and you must try to get in before your opponent does. Use the moving programme, and load the hull through to score.

Fast reactions are essential if you are to win. Fly in turns, with fast enough control, but winning is difficult, especially against the computer.

My only problem is that the instructions are not displayed on-screen, and you have to keep referring to the instruction sheet to remind you of which key does what.

The Predator is a machine that represents the sum of a scientist's research into the biological parents of the human race.

Based in this device with its

power at a peak, you press the trigger at the side of the main operating lever, and the lights fade. When you awake, you find yourself in a strange world inhabited by the dragon.

As you venture through a labyrinth of caves you must gather crystals and capture Redbeard which can be used to observe the dragon's barrier so that you

can move further into the system.

There are several different coloured Redbeards, and watch out for the red ones, which are deadly. This is a game to keep you on your toes.

The final game is **Race on** Freespace in which you and a pilot whose mission is to fly a fighter jet over the surface of the planet Freespace. You fight your way through dogfights to find planes stranded during a recent invasion. Using your instruments and weapons you search for their scattered ships, shoot down your

enemies, and wait for them to crash into the planet. Then you move on to the next level. Levels 1 to 10 take place near the south pole, where the sun never sets, but later stages allow you to practice your night flying skills near the equator.

Please say enough now about **Redbeard**, with high-energy music, nice graphics and exciting action, it's a good game with plenty of action.

The presentation of all four is excellent, with plenty of instructions, background information and playing tips. Especially they offer some of the best graphics to hit the screens of your Amstrad, with sound effects to match. What a compilation.

If you didn't catch them up first time round, now you've got the chance to buy them at a bargain price. By the way, despite the name, I don't know any connection with Lucasfilm.

Steve Lucas

BEDLAM

US Gold
£9.95 (tape)
£14.95 (disc)
Joystick or
keys

BEGLAM is a good old fashioned retinal abuse game. Before you groan and turn the page, it has several novel features which make it worth looking at.

You play a half-nude naked in the Studio Impersonator's gallery, and your final test is the X-12 Fighter simulation, known as Bedlam. In short you control a relationship with the audience for points.

The scenes appear in stages and look like spinning tops, nursery art spinning globes, and bathtubs. They flash on and off the screen in seconds, so you have to be ready for them. Some even move off the layers of the screen and break up behind you.

There is a safe spot for all these formations where you can just sit and blast them, although you may be hampered by obstacles.

I found the ship just a little sluggish in its response to the controls. It's a sort of built-in inertia, and while this may be an intentional part of the game plan, I don't think this has a place in a fast-moving shoot-em-up. Still, you can learn to handle it with a little practice.

One or two players can take part, and a dual option puts both ships on the screen at once. In this mode your ships bounce off each other if they collide, and you can choose to fight the baddies together or compete against each other. Great fun!

There are 18 stages, plus a

bonus one, and after every fourth level a bonus ship appears. You'll get through the first few levels easily enough, but then things start to get tough.

Some of the formations which appear later in the game can only be defeated by cooperating players or dual play mode.

Points appear at various points in the game. These will give you temporary invulnerability or extra lives. If you destroy an entire formation you get bonus points plus temporary invulnerability.

An especially nice feature is the option to start from the last completed stage instead of from the beginning.

Bedlam has no pretensions. It's has been well thought out and designed. Do yourself a favour and snap it up.

Ian Waugh

Presentation 80%

Excellent instructions, attractive levels, bonus, high score table, two-player option.

Graphics 80%

Very attractive game design.

Sound 45%

Just non-speaking zap and death noises.

A little贵, but how much bigger it would be in a budget price.

Overall 80%

Get snapping!

ROLLING THUNDER

US Gold
£9.95 (tape)
£14.95 (disc)
Joystick or
keys

ROLLING THUNDER is the role of Alvaro Trina - whose real name is Bill - and your prime objective is to penetrate and overthrow a secret organisation controlled by the villainous Genta.

Your secondary objective is to infiltrate everything in sight.

There are 10 levels. Challenges include gravity switch, street, park, and stage invasions. You have a pistol and a machine gun, and entering doors marked with a bullet or gun gives you extra firepower.

The instructions say you must recruit Donald Campbell for the game controls. Not being Alvaro myself I settled for trial and error.

A physicist works, as does the keyboard, but this doesn't appear to be a definable key option.

The key choices were awkward. Nor can any start programming at least give us a choice! I really wasn't happy with the joystick controls either; Bill doesn't seem to do what you make him to do when you want him to do it.

You can fire, jump, hide in closets, and leap over obstacles, and it makes a change to see an Advanced game which isn't basically - and quite smoothly, too - instead of blipping from screen to screen.

As soon as the action starts you are pounced on by Genta's henchmen, which look like the Klu-

Klu Klan in purple headgear.

No easy beginnings or traps the player into the game gradually have. Before you can get 10 yards you've got to learn to leap, balance, jump, and shoot.

When you progress you'll notice action becomes faster and the seeming fitness who started the game pool.

After you've defeated the king and captured the command centre you finally get to confront Genta in the throne room.

Rolling Thunder has nothing new to offer. It's interesting to play for a while, but I didn't find it particularly exciting, and I wouldn't like to pay full price for it. We've seen it all before. Fine effort.

Ian Waugh

Presentation 80%

No high score table, and no definable key option.

Graphics 80%

(by characters, not this and sound)

Sound 25%

No loading music and the most terrible background till far ever heard! The 20% is for the Music CD key!

Playability 60%

Controls were far too sluggish to make me think I was giving Bill a fair deal!

Sure, but...
Value 40%
You pay for your money... it's either silver coins.

Overall 50%
My money's on Genta!

TETRIS

Mirrorsoft
£28.95 (tape)
£12.95 (disc)
Joystick or keys

ACCORDING to the industry this is the most remarkable computer game yet, all the way from Russia no less.

After the type preceding its arrival, my first reaction on loading Tetris was amazement - it looks like a bent-up magazine listing. At least, thought I, might as well give it a go before chucking it in the bin ever last.

Half an hour later even CPC in the office had in loaded, and normally proud editorial staff were breaking over the joystick - I'm not exaggerating. This game is one of the most addictive few come across.

The idea, like all the best ones, is simple. The screen shows a rectangular window from the top descended blocks of different shapes and colours. On their way down you can

move them from side to side and rotate them. When the block gets to the bottom it rests there until no more, until more blocks pile on top of it.

The game ends when the pile reaches the top. Every block scores points, and the aim is moving and rotating the shapes so they fit together in the most compact way, thereby clearing as many as possible from the play area.

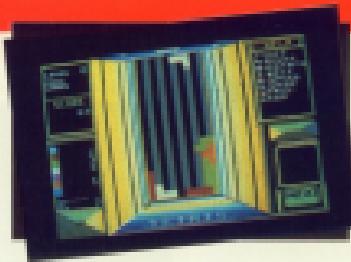

If you can get the blocks to land as in form an undercut line across the window, that now disappears, creating more space at the ones on top of it

drop down to fill the gap.

These are different skill levels which just appear to be faster or slower. An option to drop a block instantly if you think it's heading for the right place helps. The more experienced player, and you can also see which shape is going to appear next.

All that stands between Tetris and an accolade is the price. As a piece of programming there's nothing in it, and I'm fascinated about something this simple being typed so much and costing a price to match.

However, it does have the

entertaining feature of being transcriptive, which is more than I can say for a lot of games.

As an added incentive there's even a competition with a trip to Russia as first prize.

Tiffiny Wood

Presentation 82%

Good range of options.

Graphics 86%

Repeating tile base can tire eyes, but they're OK.

Value 80%

As a program it isn't worth it, as a game - maybe.

Overall 89%

Hours of really addictive entertainment.

GARFIELD/BIG FAT HAIRY DEAL

The Edge
£9.99 (tape)
£14.99 (disc)
Joystick or keys

IAM one of Garfield's greatest fans, so when a press-release copy of his Big Fat Hairy Deal came into the office I allowed my way to the front of the queue at The Edge's desk.

The scenario is that Garfield's girlfriend, Odile, has been

imprisoned in the city prison. In control of Garfield you must rescue her.

This is an adventure with a side-on view of the current location. The ones I saw were inside the house, in the cellar, out of doors, in a shed, and at the shop.

In his novels, Garfield needs frequent rests to avoid becoming worn out (his currents of life closed, and need for rest). It's curious if he isn't. Fortunately, ebony pine and unashed balls are to be found.

As you expect, there are objects which are necessary for progress to be collected. Odile - the world's angriest dog - follows Garfield around, but as far as I can see she just gets in the way most of the time, though I think he could be stood up to if the need arose.

If you want a little light relief, you can give Odile a good kick up the blackside and send her flying.

The graphics are excellent, with all the characters instantly recognisable. In fact, the rather pudgy Odile is more like Odie than is Dale, and definitely keeps me smiling.

The preview copy was still some weeks off completion, so I couldn't check it out in more detail. I had a go with the Commodore version which is more advanced, and that was fairly good. The main criticism was that the pace may be too relaxed for some tastes.

On the whole though, I'd say

it's an above-average arcade adventure with the added attraction of having part of what The Edge calls 'The Garfield Experience'. I can't wait to review with an audience and Garfield friends alike.

Tiffiny Wood

MASTERS OF THE UNIVERSE

Gremlin
£9.99 (tape)
£14.99 (disc)
Joystick or keys

HE-MAN of Masters of the Universe fame, is the cartoon character that inspired a wealth of action-figure merchandise. We've seen him in television programmes, at a toy fair, in a cinema release, and now in the computer game of the title.

As the defender of Eternia, you, as He-Man, are charged with the task of returning the eight swords that will activate the Colossus Key, sending you back to Castle Grayskull for a final meeting with the evil Skeletor.

The swords are distributed around an American town. Many are in the streets and can easily be collected, while others lurk in more forbidding places full of dangers and traps.

Having played many swords in a similar vein, I prepared

myself for another swords-and-sabotage spectacular.

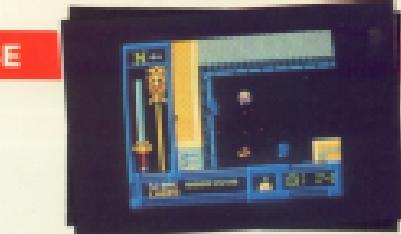

But there is no slashing, cutting, or parrying here. What you get is a 3D representation of streets and buildings, and He-Man is a small character brandishing a high-tech laser pistol.

You spend most of your time wandering round avoiding another blustering Skeletor's henchmen and searching for the swords.

Occasionally, one of your comrades will appear with a message or hint on one of the special places in town.

These, like Charla's Electrical Store, feature a different game to the one found in the streets. For instance your task at the store involves controlling a gun sight and shooting baddies as they appear at the shop windows and doors. If you do well enough, you will be granted an extra chord.

All too often the baddies' fire gradually sap your strength, represented by an enormous sword that takes up almost a fifth

of the screen. And it does mean gradually. Because even when you are hit continuously the game seems to last an eternity.

The graphics fall a little short of expectations. He-Man is just a bland, hulking figure looking as muscular and all-powerful as the, if not unimpressive, 11-strong

tributaries. His enemies are small, darkly coloured creatures without much detail.

The sound of a meeting with Skeletor does urge you to play more than once, but the game doesn't really live up to either the film or the cartoon.

Craig Coffield

Presentation 70%

Good instructions, clear presentation.

Graphics 60%

Nothing very special.

Sound 60%

Uninspired, standard effects.

Playability 70%

Easy to control.

Addictiveness 60%

Browsing for the swords does keep you hooked - for a while.

Value 50%

For what you get, it's rather overpriced.

Overall 62%

Typical arcade exploration game with nothing extra.

WARHAWK

Firebird
£1.99 (tape)
Joystick or keys

In this colourful blast-'em you set off in your space fighter, Warhawk, to do the high above the intergalactic. Your mission is to wipe out as many enemy bases as you can.

They can be found on the ground or suspended in skeletal structures floating in space.

The alien forces aren't too happy about this. Some come in droves and are easily destroyed or dodged. Others, usually single units, are more lethal as they move more swiftly and can attack from behind. Other craft decide as well as that what you thought was over enemy bases and the like.

The action is fast from start. Warhawk's thrashing speeds in the screen scrolls seemingly down. The shooting is fully measured so that you have chance to glimpse the enemy before they're upon you.

If you want to analyse the situation at a more leisurely

pace, you can always resort to the pause button.

Being hit does not destroy you outright - that happens when your three shields have been destroyed - so avoiding contact with starfighters will ensure that you get to see subsequent levels.

Avoiding their missiles, however, is easier said than done as they have a built-in locking device.

Warhawk is equipped with two guns which not only gives you increased firepower, but also means you can destroy many craft at once with very

little manoeuvring. A wave of enemy fighters is, therefore, less dangerous than at first appears. In fact the single fighters present a bigger hazard.

Warhawk's meek life (in this case just four) even more difficult. The fact that they are impervious to fire means that they are best avoided altogether.

The game is graphically colourful but sometimes looks dated, particularly in the last stage. Nevertheless, it is the action that makes games like this worthwhile, and there's

plenty of that. Rob Hubbard's tie-in music is simply superb, and there is an impressive range of sound effects.

There's something immensely appealing about aiming at a target and hitting it. In this respect, Warhawk is fun, but don't expect to see anything you haven't seen before.

Tony Planaugen

Presentation 55%

One player game; responsive keys.

Graphics 62%

Colourful but lacking detail in places.

FIVE STAR GAMES III

Beau Jolly
£8.95 (tape)
£14.95 (disc)
**Joystick or
 keys**

This compilation is the third in a series of five game collections from distribution genius Beau Jolly. This time two extra games are included, in addition to free.

Way of the Exploding Fist is one of the best martial arts simulations I have played on the Amstrad. With joystick or keyboard and one or two player options, the program offers a great range of moves, from smashing high kicks to parrying from the waist, to pinning body limbs, maiming and hand traps, and deadly kicks.

With just the one adversary and no objectives other than to win the contest, the game relies on the quality of motion, the range of moves, kicks and defences, and everything generated to keep you amused.

I think most gamers would prefer this to some half baked game packed on to an inferior medium.

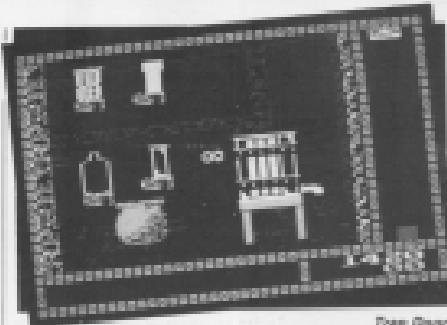

The anti-player mode features a computerised opponent good enough to provide the right degree of challenge. Each combat is timed and each successful action is graded according to its complexity. At the end a Buddha like figure decides the winner.

Trap Door is set up in this standard. On paper, the idea of a large character — Bark — bumbling around various colourful rooms manipulating trap doors, lifts and a variety of other mechanical devices to please his master seemed good. Indeed, for the low life rewards the game looked promising.

The option to play a human host without ghosts and ghouls to bother you is a good idea, as are the large chunky cartoonish characters and objects.

Bark is especially large, colourful and stupid, but I don't think ignorance can be blamed for the poor screen movements, poor response and lethargic action that results.

Suspense, originally from Electronic Games, is a fairly

Page One

faithful version of the old arcade game. For the uninitiated, Tempest places a shape on the screen cut into a number of sectors. Among these travel a varying selection of mechanical creatures, each with its own movement patterns.

You must move round the loops of the segments firing laser bolts in an attempt to prevent the creatures from reaching the outside where they will be held up on destroying rods.

Each level consists of a different shape and a differing selection of creatures. The provision of bonus lives for destroying green spinners greatly aids your progress through the first half dozen levels. I don't know how many bonus there are to this inferior game, but I managed to reach level 13 with a score of over 50,000. If I can do

that, I imagine most people could double it.

Birdie Force Harrier is an interesting simulation of flying a Harrier, admittedly without getting the chance to sample its vertical take-off skills.

Some elements of the theory of flight are avoided or simplified so that you can quickly get to grips with flying the machine and concentrate your efforts on maneuvres, avoiding attacks, and acting decisively when you face nearly a dozen allied or enemy formations.

I was proud of my barrel roll and loop, but my ability to complete a full successful mission is another thing. The game certainly holds the attention for a decent length of time and was one that I enjoyed most.

Tao Celi and Aliens are both

Aliens

interactive arcade adventures, Tao Celi putting more emphasis on problem solving than Aliens. This latter is based on the film sequel to the popular space novel *Childhood's End*. It depicts the six crew members headed by the first film's only survivor, Stephen.

They wander around their craft putting past to any intruder by the means of laser triggers to kill them and take over the ship. You can switch between characters, and the game is graphically effective, though not an inspired piece of programming.

One feature of note is the programmer's attempt at enabling us side Spectrum loading system. Unfortunately, the result also seems to mirror the Spectrum's slowness and lack of reliability.

Five Star Games III is a package definitely worth considering. Certainly, as a collection of some other sort of product, its appeal will last because of the wide variety of games on offer.

Several show their age and require a lot of competition from current versions, while others are budget bargains. However, the inclusion of quality programs such as *Tao Celi* and *Beau Jolly's* masterpiece, *Way of the Exploding Fist*, make this collection perhaps the best in offer at present.

Dave Offord

Presentation 70%

Overall 85%

A worthy addition to your collection.

BUBBLE BOBBLE

Firebird
£8.95 (tape)
£14.95 (disc)
Keyboard only

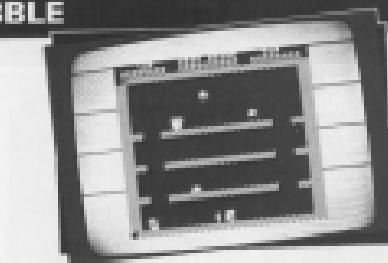

Tall, angular and absurdly art of Bubble Bobble moving at a speed known only to the chosen few. Bob and Bobo, two of the finest seamstresses, are about to face 80 screens of bumbling bubbles.

The game can be played by one or two players, and is a two-player mode you won't see a lot.

Each screen contains all a series of suspended platforms on which the bob girls run. Using the left, right, and jump controls, you move between levels, trudging down each lumpy in turn.

In these days of gory games, it is refreshing to play one where your assailant is disappointed with a dead bubble, just loses a bubble in which to encapsulate him, then pop it before it floats off naked.

A proper bubbly nightmare around the screen and finally fails to reach a barrier object. These can be collected to boost

your score. The first three hours of bonus are awarded for destroying bubbles, or for a speedy clearance of the screen.

The fourth type appears at random, and has an unadmirable magical propensity. From experience I can say that one increases your speed, while another transports you to a point three or four screens further along the game.

On one occasion I was recently released by a giant cube falling from the sky. Once performing this task I was snatched three lives.

Apart from the bubbles that fly at you, others drift up from openings in the floor.

Opening up the symbols displayed on the side, a bubble may contain a variety of things.

The most common on the lower levels is the water bubble. Bursting this sends a current down the screen washing aside anything in its path, including enemies.

When stamping levels that contain a large number of bubbles the computer will begin to release bubbles embedded with letters. Your aim is to spell the word instead.

The longer you take to clear the screen, the better your chance of collecting every letter. However, direction is punished by the appearance of

the firework bubble and bomb!

Despite the simplicity of the graphics, Bubble Bobble is a most addictive and original game.

James Mabell

Presentation 80%

£14.99 (disc)
Joystick or keys

THIS IS a distinct Christmas game about this package, which, with snow, Christmas cards, and Christmas tree ornaments included. A toy-game collection, Compendium includes computer versions of two traditional board games, and their originals as well.

The premise of the essential winter games — Teddy, Maths, Ralph, Snakes, Tiny Tim, and Scatter — is the link between all four games. In each you take on the role of one of these characters, with four players permitted per game.

Other characters, such as Shady Lad, Hattie, Marcus Puddin and Sam Snake, though not participating as such, do their best to get in your way and generally make life difficult.

In the first game, Snakes and Ladders, the screen displays a

small section of the board — exactly which section depends on the number you character is on, when your turn comes round.

It's accompanied by appropriate sound effects, rolls across the screen. After that it's up to you to move your character through the rows.

This computer version differs from the original in a number of respects. Some of the squares will hold you up, according to what they contain.

If you play the part of Scatter, for example, you might find

your progress hindered by the square containing a living goat.

You might be scheduled to move five squares, but find yourself temporarily stuck on the third. Well, dogs will be dogs.

You may also pick up, and later drop, objects which might be useful in obstructing your opponents. For instance, dropping a bone in Scatter's path will certainly delay him.

The minor characters, such as Sam Snake or Shady Lad, will also do their best to slow you down by preventing you

making the full number of moves the die gave you.

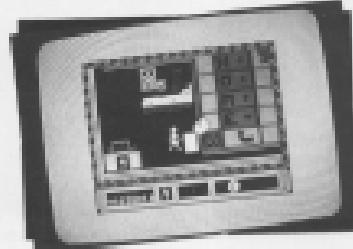

Christmas Lads, like Snakes and Ladders, follows the traditional game but slightly contains minor deviations. Again, only part of the board is seen at any one time.

As in the original game, each of the four players has to guide his counters round the board, being careful to avoid landing on an opponent's counters.

Starting from the bottom of whichever Christmas you choose, you must make your way to Santa. Life is made a little more difficult by the fact that if a Christmas Eve and morning and either Hattie and Marcus are wandering about the house. Should they catch you up when you should be in bed ever go will be brought to an abrupt end.

The third game, Shove-A-Sausage, is something else again. The screen displays a grid marked from 1 to 16 and the object is to push a sausage comprising Tiny Tim so that it lands safely in one of the numbered squares.

Push him hard and Tiny Tim

REFLEX

Players
£2.99 (tape)
Joystick or keys

SIT in the future, Reflex puts you in charge of a Simplex star craft fitted with the very latest plasma cell generating reactor.

Your task is to get through many levels in order to reach the final screen, dock with the waiting mother ship, and so find your way back to the great reward zone.

Despite its science, Reflex bears a resemblance to a number of old favourites, and could have been called Reflexion instead of Simplex.

So clearly does the final screen resemble Breakout that I half expected the game to be just one big screen. Don't be put off though, because after a few minutes play you realise that there's much more on offer.

To complete each level you must destroy all of the coloured blocks on a grid. This is achieved by bashing your orb

off the Moveable Simplex.

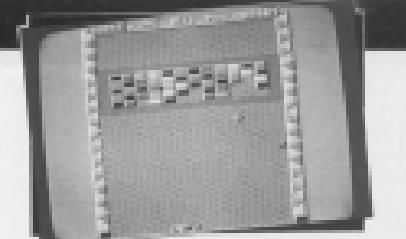

To make things more exciting, a number of blocks contain items which you can collect to give yourself extra powers. Some give greater control or faster response; others release up to four bashing orbs.

The game is easier to master with the keyboard than the joystick. All keys can be defined from the main title page, but defining a joystick can only be achieved by redefining your keys, and not as a separate option.

Having cleared the first screen, things really start to bog us. Breaking through the final layer needs two tries, and once you're through the game gets better still.

If you can make it to the third screen, the game almost impossible. Watching the demo mode should help you to plan your strategy, but I must admit that I did not manage to get past here.

Although the graphics don't stretch the CPC to its limits, the bright colourful blocky sprites do help to lift this above the

average.

This is a game that I just can't stop playing. The packaging really doesn't do it justice. A couple of sentences to set the scene, a few ZX Spectrum shots, and that's about it. In practice, however, this doesn't matter

because full instructions are included within the game itself.

Reflex is challenging and addictive, with good graphics and even better sound effects. What more can you ask of this price?

Steve Lucas

Presentation 89%

Fair range of options.

Graphics 75%

Fairly smooth chunky graphics.

Sound 85%

Good effects.

Playability 95%

Easy to control, hard to master.

Addictiveness 90%

Value 95%

A good game at a budget price!

Overall 90%

Fast-paced with plenty of action.

grid, bashing off the edge of the grid into oblivion.

Each player has three turns per round, and the game ends when one of the players has managed to land the tiddly in each of the numbered squares.

An interesting feature is that the pledges from the first few grids in each round are left on the grid. This means that in the

next turn it is possible to push one tiddly into another, moving it into another square.

The final game is the result of this. This time it's Christmas. Five tiddlies at the top left waiting to go.

Each character takes it in turn to follow Tiddly around the bar as he consumes rather more than he should – six plums in all,

indeed, he's so drunk already that instead of putting his simple glass back on the bar he's not to toss it in the air.

Consequently it's your task to pick up tiddly before they reach the floor. The main problem is that the action is very slow. It seems you can spend a great deal of time following Tiddly around between goals.

All in all, this collection is disappointing. The first two games do not translate well to the computer screen. Besides, Ludo

must rank as one of the most tedious games of all time.

Graphically, none of the set has much to offer. The characters are pale and transparent, the colour combinations rather plain, and overall there is a lack of depth.

To make matters worse, all four games are slow and monotonous. Four for the price of one appears to offer excellent value for money, but frankly it's rather like one good game and three.

Terry Plummer

STRAIGHT SIX

Loricield
£9.99 (tape)
£14.99 (disc)
Joystick or keys

AFTER the appetising feature in the French invasion in the March issue, and having played that Foster 2, I was eager to see what else goes on across the Channel.

Straight Six is a collection of Foster's finest hits to do battle with the likes of Bass, Jolly, Deans, and US Gold.

At first has you leaping up the leaning exhaust pipe of your hovercraft as it hurtles over the surface of an ocean planet, or down a trench or tunnel as the case may be.

The surface rolls beneath you as waves of luminous space-craft play dodgy turns, with potentially terminal results.

You can fire back, and you need to react by blasting the fuel dumps. There are also

rockets to contend with. The ultimate object is to turn the enemy base to fire age. It's all pretty mindless stuff, though fast, furious, and fun. My young cousin got hooked on it.

I hate football – and computer football games – so had been less than impressed into testing Soccer. The secret is that it's not as good as Matchday II, but it's still playable and gets the thumbs-up.

The computer makes the player you control the nearest one to the ball, and if you're not careful you can find yourself unexpectedly charging off in the wrong direction.

New Billy was more my style, an arcade adventure set in sleek downtown Paris in the 1920s, seers, snobs, and allays. The aim is to find four hidden video games.

Various shady characters bar progress, ranging from tems and bakers to thugs and sappers.

To get past them you need to collect the right objects and do some nifty maneuvering. The graphics are atmospheric and

really well done – with the exception of the Kared sprite routine.

Fun, but MDT has been out in this country before. See in the future, it's a 3D maze game in which you drive a biplane through twisted tunnels around a mad crystal palace.

The graphics are superb and

this is the highest quality game in the collection. It's probably worth much of the asking price, and anyone adventurous enough to try it, I know I did.

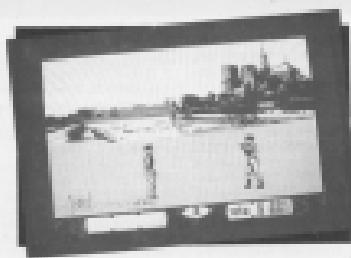

See 2089 is next. At the start you pass out of the rails of your interstellar battle cruiser. Against the moving starry background planets form into stars that prove impossible to land on.

Enemy craft appear and the all-gold armada starts their attack. Of course you can fire back

and fizzle a few alien bobs. Everything's done with a nice 3D effect, but as far as only

BOB WINNER

Loricield
£9.99 (tape)
£14.99 (disc)
Joystick or keys

Bob Winner Loricield has come up with an interesting game featuring stunning 3D graphics and animation. Set in the 1900s, as Bob you travel the world in search of famed treasures.

This has in a simple, and no doubt entry you must fight three opponents to obtain the necessary

key. Each adversary is a specialist in physical violence, making his/her intentions clear.

Seeking out the enemies involves negotiating your way across such scenes, dodging under flying kites, side-stepping bouncing balls, and jumping over quicksand.

Surrounding over a half an octillion barrels, or being hit by a tonne's weight in some great animated acquisitions. Falling into quicksand traps and traps very real and nasty, and in very definitely fatal.

Each screen has a digitised backdrop. When you reach the

far side there is a tiny pause while the next one is loaded from side, and then scrolls in smoothly from the side.

The final adversary is an important bit of debris – French kick boxing – dressed in long Johns and football boots. After a dazzling display of footwork he ignores you, and you can pass with no more than a sneakingly aimed kick at your recipient head.

The way to engage him in combat is to proceed until you find a pair of boots. If you collect them and return, passing the opponent will transform him into a kick boxer.

Now that you're known as a decent competitor in kick it is over diagonal. An orange gauge for each of you appears at the bottom of the screen, and the first player to reduce the upper man's orange to zero wins.

Once incapacitated, the fighter disappears to be replaced by a garden key. The same process applies to the other two human opponents – a boxer and a gun-fighter.

The latter is the most deadly of all, and once within range he will move with remarkable accuracy. No matter how it tried,

I always ended him as a surprised corpse in the middle of a lonely glacial tundra.

Bob Winner left a great impression on me, and recommend it to all, above others though it'll be a pain to play from tape.

Chris Nixon

Presentation 85%
Superb title sequence.

A playground in unusual and weird settings.

average budget standard.

I used about to put it aside when, to my surprise, the game improved, and I landed on a planet, evidently the victim of a meteor - that's it on the screen by the way. At this stage you're in a 3D test maze game where you have to wander around the fortress and find and rescue the planet's inhabitants who have been incarcerated in the offices 200.

Rebel's best power is usually the best weapon, but there doesn't seem to be any of that as it's down to your wits and your trusty standard-issue hand blaster. After getting that far, I revised my opinion upwards a

should clean up with this one, but the ed-powered cold water on the idea.

It's a cockpit on the outside against an array of stars with you floating round on board, in a tank, or in a helicopter hunting the enemy, his bases, and his people.

The view is an aerial semi-3D job, from the author's viewpoint by the looks of it. As you move about it scrolls smoothly to reveal more trouble to be dealt with.

There's a window showing an animated view of what the computer thinks you're doing with the joystick, and plenty of flashing lights.

As with Get Doctor 2, the games have a different look and feel to typical British software, and overall the graphics are pretty and eye-catching.

The games range in quality from something better than budget to what you'd expect at full price. Without exception they've got something going for them, and four I saw as pretty good. At under £1.75 per game perhaps you can't go wrong, and straight like it well worth a try.

in way. You isn't commanding, but it's interesting, and looks good too.

Lastly, we have Flash. It's tempting to go for another sheep, tough and the lambs

ANARCHY

Hewson
£1.99 (tape)
Joystick or keys

Big and large the universe is a terrible place, yet every so often things go wrong and disorder ensues. This time anarchy has broken out on the planet Separated 4, which has been taken over by a group of rebels. You've been given the horrendous task of restoring order.

All that start you see in the planet's security complex where the rebel's weapons and explosives are captured.

Equipped in your Ase MK2 interceptor, it's your job to destroy the enemy's weapons and tanks. At the same time you have to avoid the pursuing rebels.

Each weapon is a colourful snake-like network of snakes reminiscent of Rattman. Solid snakes and weapon containers are easily distinguishable, so it

is clear which weapons have to be destroyed.

The horizontal scrolling is smooth and easy on the eye. Initially, rebels move slowly and are more of a nuisance than a threat. They have no weapons, and appear to move randomly. Their real ability is to slow you down.

Ultimate fire power makes the destruction of containers and rebels fairly easy. Grids are only temporarily disabled, though if this happens at the wrong place they can form a frustrating barrier to progress.

What makes the game really playable is the time restriction imposed on each level. Should you fail to destroy all the containers in ten minutes you lose one of your five lives and, have to start again from the beginning of that stage.

Every fifth level contains nuclear weapons. Here it is not only a matter of avoiding or stopping bombs, but also dealing with a paper shield which can force you through the maze. If he manages to catch up, it's another life up the funnel.

There's a wide range of atmospheric sound effects, and for a budget title the graphics are colourful and detailed. It's little short.

Unfortunately, the review copy contained a couple of irritating bugs which made shooting necessary. Anarchy is an interesting

shoot-'em-up with a nice element of strategy. Ultimately the gameplay is repetition, but this is also true for a lot of games for more expensive than this one.

Tony Flanagan

Presentation 71%

One or two player game; definable levels.

Graphics 81%

Colourful and quite detailed.

Sound 63%

A good range of FX, though the title could do with more.

Playability 81%

Easy to get into.

Addictiveness 79%

A little repetitive, but the time limit adds excitement.

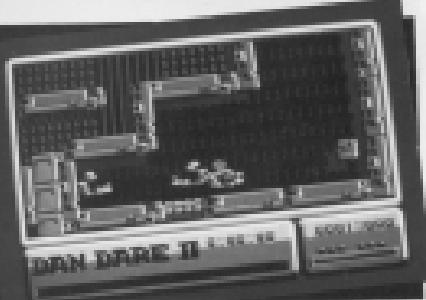

Value 21%

You can't expect much more for a couple of quid.

Overall 80%

A simple but extremely playable game.

DAN DARE II

Virgin
£9.95 (tape)
£14.95 (disc)
Joystick only

DAN Dare was a masterpiece – it was big, colourful, and reached both mental and physical aplenty. Dan Dare II is a different game, but you'll need all your skills from the original, plus a little bit more.

The mission has changed 24 supertramps – who are based in insulation chambers on each of four levels. In his exciting triumphal – and Dan's mission is to destroy them.

The strength is a maze of heat-tight hydrogen corridors and shafts. Having leaped from his first adventure, Dan is no longer on foot – he's now on a jet pack. He has also swapped his trusty companion, Digby, for a squadron of space fleet transports.

Alongside each supertramp is a control console. Placing in tells the associated bren – bren – oh! Unfortunately, the Masters has body-mapped each level, and as soon as the first supertramp is destroyed you have 10 seconds in which to locate and destroy the remaining five brennes.

Because of this insurmountable short time limit you must formulate a plan of action before attempting the mission. This trick is to map out the level and locate all 10 supertramps before killing the first one.

In addition to the supertramps, there are hordes of the standard nasties – trigger-happy little aliens, mindless robots. Laser fire is highly detrimental to your health, each time your plasma meter is reduced to zero you

lose another of your six lives.

On the positive side, Dan has the backing of his space bren allies who will fire upon any bren that enters the room. However, there will be times when you find yourself directly between bren and brennen. This usually results in Dan being cooked evenly on both sides.

In the unlikely event of you becoming so expert that the game becomes boring, you can swap roles and play the bren. Then you have 90 seconds to locate and pin down your beloved supertramps before they kindly trip explosive.

Dan Dare II is an extremely professional sequel. But I really must it be so difficult to play?

James Roddick

Presentation 81%

You can play as Dan or the Masters, but somehow Forget got a high score table.

Graphics 88%

A touch smaller than the original characters, but just as colourful.

Sound 69%

Good effects, but no title tune.

Playability 82%

I would have appreciated more supertramps appearing later on in the first level.

Addictiveness 76%

You'll need a great deal of time to work this one successful.

Value 80%

Far for the course.

Overall 88%

Superb graphics, but a touch too difficult.

There are eight new titles in the chart this month – look out for the budget re-releases from Alternative and Mastertronic. U.S. Gold is keeping a firm hold on the number one position with OutRun. Read the reviews of its new releases, Bedlam and Rolling Thunder, in this issue.

In the August 1987 issue of Computing with the Amstrad I reviewed the Plus PC232 interface and Commater, its built-in communications software. I said that, by leaving Commater undevloped since its introduction in the early days of the CPC, Plus had left the market open for something better.

Comm - the process of communicating with other computers via the telephone network - is here to stay and one company with its eye on this expanding market is Microline. Now, its new comm package, run under CP/M Plus, thus making it suitable for the CPC8128 or modified CPC8400A.

The first job is to use a configuration program to set up Axis for your modem, interface, and the services you want to use. This information is then stored in a file of profiles - one for each service.

A profile may be designated as the default which is then automatically selected - unless you specify another when entering the program. If you have an acoustic modem, Axis will dial the required number and in any case will send your password.

I thought more information could have been given in the manual to ease the beginner's passage through the configuration process. For instance, when setting up a profile for Prestel I had to give details of its protocol. Not the sort of thing I carry round in my head and it's not in the manual either. I ended up going back to Commater to find out the settings.

The Axis kernel

Axis consists of a central program - or kernel - with modules for specific purposes. Modules pursue an active policy of adding new modules and upgrading existing ones.

There are two types of service you

Joining the comms revolution

IAN SHARPE takes a new CPC comms package out for a spin and has a few reservations

might want to access - videotext and ASCII terminal. The difference is that videotext services - such as Prestel - are organised in frames very much like Cedex and Oracle. They have 40-character-wide screens displayed in colour. Services like Microlink, Telecom Gold, and many bulletin boards use Axis. As each line of information is printed the display scrolls upwards. The screen can fit up to 80 characters wide and there's no colour.

From this you can see that a comprehensive comms program needs two parts. Axis caters for both, but as the videotext side differs most from other packages I'll concentrate on that.

The videotext emulation isn't bad, but the presentation isn't as slick as Commater's. The screen update is slower and not as tidy - particularly noticeable when off-line and with dynamic frames - and you can't programme keys with the numbers of regularly used pages. The Delete key isn't implemented and there is no indication of erased lines.

At any stage you can press Con-

trol+R and capture the current frame which is saved as a file of up to 120 on disc. When you go offline the stored frames can be viewed in carousel mode, where they're displayed sequentially at 20-second intervals - it's a pity you can't speed up the process with a keypress, as you can with Commater. The captured frames can also be incorporated in the Axis microbase together with your own creations.

The microbase is like a mini-Prestel where you can wander from frame to frame along routes accessed by the keys 10 and 11, or go straight to a particular place by specifying its name as a number. A basic dialogue editor allows you to set up these routes. Don't confuse this with bulletin board software. The Axis microbase isn't that sophisticated and can only be accessed through your own keyboard, not by the modem.

Frame editor

Your own frames are created with an integral frame editor which caters for videotext, graphics and colour. One of the main problems with designing videotext screens is remembering what keys the graphics characters function. An easy way of selecting them would have been nice.

You can change the screen to the printer editor in 100x100 pixel shaded graphics. The dump looks a while but is a background operation, so after a few seconds you're returned to the

The screenshot shows the Axis software interface. At the top is a menu bar with 'File', 'Edit', 'View', 'Help', and 'Axis'. Below the menu is a large window containing a logo with the letters 'AXIS' and a stylized 'C'. Underneath the logo is a text box with '(C) 5. Edition 1987' and 'Serial No: PC/28128'. At the bottom of the window is a command line with the following options:

- 1 Terminal mode.
- 28128@PC
- 3 Axis Database.
- 4 Create Database
- 5 Exit from AXIS.

To the right of the window, there is a note: 'The front end of the Axis videotext system.'

■ From Page 27

keyboard and you can get on with what you were doing.

However once again Shireen CP80 owners are left out in the cold as the graphics display will only work with 100 per cent colour cartridges. There should have been an option to cater for this in the configuration.

Fortunately the text-only display performs without difficulty. Fortunately enough, although you can move screens while on line at in the menus, you can't do it in carriage mode. When trying to change a screen with a white background the graphical display had the unfortunate habit of phasing control codes as black blocks and left a corrupted pixel column somewhere on every line.

Mailbox facilities

Axsis has a sophisticated system for the transcription and recognition of mail. This is an important area in any carnet program because if you have to type mailboxe while on line – as you do with Comstar – it's costing you money which mounts up over the months. It's far better to compose them offline without running as a telephone bill and then log on and upload.

Within Axsis's mail module you can set up a directory of names and mailbox numbers. When you go to Prestel's Name 21 to send a mailbox Axsis interrogates. At the point where you would normally enter the mailbox number of the recipient you can type in a name and if it is in the directory Axsis will retrieve the corresponding mailbox number and send it for you.

In normal Prestel mailbox operation you would now type in the text of your message finishing off with a # character. With Axsis you have the option of pressing Control + F which will bring up a prompt asking for the filename of a document. This would have been prepared with a word processor before dialling up and will be transmitted to Prestel as if it was being typed in. If it's longer than a small frame, Axsis will print "Continued..." at the bottom, send the frame, call up a blank one, insert the mailbox number and continue sending the message.

This is excellent and a real money saver, but there are a couple of rough edges which let it down. First, although the line length of the original file does wrap words at columns 40 and right justified the text – in other words puts a space to the right edge is not flagged. With such a narrow screen the number of spaces between words – sometimes three or

four – can be unsightly. If a line contains no spaces the program can't cope and backs up.

I encountered this when sending a Prestel document which has a ruled line at the start. Of course, so you don't want ruler lines in a mailbox, but the program shouldn't back up because of this. I also found Axsis died on me when an asterisk character appeared in the text.

Another problem is that as well as starting a new line after every 40th character, Axsis also adds one carriage return, giving you an extra one at the end of each line in the original text. Obviously it is better to format it to 40 characters in the first place. It takes almost three minutes per frame to upload – far slower than it could be – and there's no way of aborting once you've started sending a sequence of frames.

I think Mailfair should do away with the automatic justification, leaving you to type it in the source file if required. If all single carriage returns were ignored and a new line started for a double return, it would be a better system, I'm fonder. It should also be possible to force a new frame with a # in the same way as a word processor allows you to force a new page.

I mentioned before that Axsis has a frame editor for the creation of standard frames. As far as I can see these are pretty useless in the microbase so you can't transmit graphics, which is disappointing.

On the other side of the coin – receiving mailboxes – when Prestel displays one and you press Control + R to capture the frame it goes into a separate mailbox slot. Axsis keeps a directory of up to 170 stored mailboxes which can be viewed offline, deleted or printed at your leisure, again an excellent feature.

Telesoftware downloader

There is a telesoftware downloader which will automatically download compressed software and leave uncomplicated programs alone. With Comstar you have to run a decompressor – itself downloaded from Prestel – if software is in the squashed format.

As well as the niggles I've mentioned already, some of the graphic characters look a little odd. I also experienced the occasional crash for no apparent reason.

The other side to Axsis is the scrolling Axsis terminal emulator. It offers the standard facilities plus a couple of enhancements. As well as communicating with the remote computer via your keyboard and screen you can

send and receive Ami text files or transfer programmes files with the error-checking Xmodem protocol. There's a timer display with alarm function, and you can catalogue disk and specify the default drive.

I wish longer had been taken over writing this. Apart from the time facilities it isn't up to the standard of a popular public domain Ami carnet program called MEX, short for modem executive. I regularly use it for file transfers from machine to machine at 9600 baud in the office, and for logging on to Marconi.

Friendly system

The Axsis equivalence is friendly at first because it's menu driven whereas MEX uses a command system. Axsis, however, has great difficulty at speeds over 3400 baud and lacks options to set local echo and line feed. The speed problem wouldn't be apparent for the home user because cheap modems operate at lower speeds.

When transferring a file to a PC using Comstar Axsis locked up when a disc fault caused the PC to abort the transfer. I found the need to alter baud rate and so on by creating separate profiles and rebooting. Initiating Comstar does it via a pull-down menu, MEX by typing at MEX mode, where soon is the new rate.

Conclusions

I feel that if Mailfair had delayed the Axsis module until after more extensive field testing and had concentrated on smoothing out the bounces in the interface more everybody would have been better off.

Mailfair has come up with a good videotext system which is refined by a few blunders, probably due to not being tested other than by the programmers. I could live with the faults as Axsis offers advantages over Comstar, particularly when involved in a lot of multicasting. The Axsis emulator is just adequate, but nothing special.

Some of my criticisms will have been rectified by the time you read this and there should be at least one new module to cater for the calculation of telephone charges. In its present state Axsis is useful and I hope Mailfair gets enough support to ensure the continued development & refinement.

Link your Amstrad CPC to the outside world with...

microLink

Electronic mail — The cheapest and fastest form of communication possible. It costs the same to send a message to one mailbox as to 500!

Tele — Link up with 80,000 telecommunications subscribers in the UK and 1.5 million worldwide. You can even send and receive messages after office hours or while travelling.

Telermessages — Type in your message before 8pm and delivery is guaranteed by first post the next day (except Sunday), anywhere in the UK and USA.

Telé-booking — Reserve train and theatre tickets, check flight details worldwide, or order from a vast range of products - from flowers to floppy disks.

Advice — on a team of professional, legal and financial advisors, as and when you need them, for both business and personal problems.

Company Obtain facts about any British quoted company in seconds, and fully analyse financial information on over 150,000 companies.

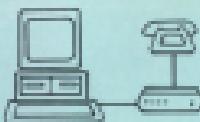

Translaton — Access the biggest and most up-to-date multi-lingual dictionary in the world, with over 200,000 words.

News — Use the powerful search commands to pinpoint vital business information from the world's leading news services, newspapers and periodicals.

Radio paging — If you also have a pocket radio/pager you'll be alerted each time an urgent message arrives in your mailbox. So you're always in touch.

Geneva — Get through to New York in just five seconds - or key into the BBC computer in Luxembourg, which links you to 800 databases throughout Europe.

When you join MicroLink you've got the whole business world at your fingertips — 24 hours a day. You'll have immediate access to ALL the facilities offered by Telecom Gold ... and a great deal more besides.

Typical telecoms packages

- **Other** Acornsoft 128 modem + RS232 interface + tape or disk loading software (£39.40)
- **RS232** Modem PCT, V223 protocol modem + RS232 interface + cassette tape (£19.99)
- **Pilot** Rightline 1273, V223 protocol 8bit modem + RS232 interface + Cassette tape (£7.99)
- **Pilot** Unitek 1273, V223 protocol modem + RS232 interface + Cassette tape (£7.99)

All you need — apart from your Amstrad — is a modem, which plugs into your telephone wall socket, an RS232 interface and suitable communications software.

We have provided a list of possible combinations (left), ranging from the very cheapest to ones which are automatically dialed the MicroLink telephone number and connect you directly to the service — all you have to do is type in your personal security password.

Whatever equipment you use, you will be able to call libraries, open your mailboxes, have in dial any messages waiting for you, and disconnect in as little as two minutes.

More than
90 percent
of subscribers
can connect to
the MicroLink
computer at
local call
rates.

NO FEE BUT MONEY
Fill in the coupon and send it to the address below. You will receive full details of services, and instructions on how to subscribe. Once you have joined, you will be able to use all the services of MicroLink and Telecom Gold.

Please send me full details about MicroLink, and information about the following hardware and software options (please circle):

Bruce Lee

US Gold

Bruce Lee's a bit long in the tooth now, but Christian Reindeer still plays it and has come up with infinite Lee for the tape version. Just pass. Plus another tie.

Bounder
(Bramble)

It's held by Roger Maris at Easter that to obtain the clean smoke in the base ranking type PING 4880-201 before running the game.

Sacred Armour of Antirriad

Anne Henderson of Cambridge tells me that to get through the trees at the edge of the screen and name walls, leave the joystick pushed in the direction you want to go and keep pressing the fire button.

Ollie and Lisa

|Arbhd|

I've had dozens of letters with this one, so I stuck them all in a box, and out came Daniel Williams from

Starquake

I get plenty of letters about this one even though it's been round for some time and was never a big seller. Still gets lots of play from our crew of John Walker.

somewhere I can't read
You'd better write and let
me know. Sincerely,

The eastern branch uses successive prime ideals and \mathfrak{q}_1 . To measure bounded prime ideals and \mathfrak{p} .

I'm getting a steady trickle of letters from disc users about the games printed in these pages. Unfortunately they can't get many of them to work. The fact is that a game written for the home version of a game usually won't work with the disc edition, which would need a specially-written version.

Most of the poker sets in are for poker, and judging from the mail many die-hard owners tend to buy legitimate games because they're cheaper. Another point to bear in mind is that if the poker is for a game on a compilation it may not work with the original stand-alone game, as the functions are often rewritten — and vice versa.

Even if it's not unknown for games to be modified during their production run, simpler because feedback from buyers brings problems to light. In this case a poker written for one version may not work with another, even though there's no obvious difference. As most of the poker aren't being used, it's worth having a go!

Apologies for being down to two pages last month. We had so many new grants in for review - nearly a healthy sign for the CPC - that we decided to concentrate on these as a lot of space is being taken up with this month's map. I'll hold the top 10 over till next month when normal service will be resumed.

Tragedy

Angleball

If ever a game was straight to drive you crazy, this one is. Look for a point to gain Jason Day's. It enables you to carry on playing even if Arnold wins five times.

DIZZY

THE
MAP

COMPUTING
AMSTRAD

I think with the tips and poking we've had on this game, and looking at the pile of contributions waiting for a slot, this map will have to be the last word on *Dizzy* for a while.

It's a team effort: The people Jason Brooks came up with the idea, and sketched the original. The

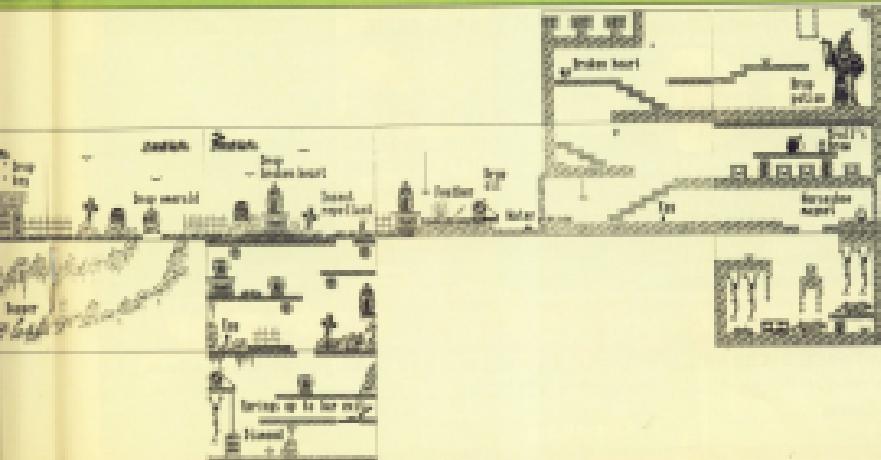

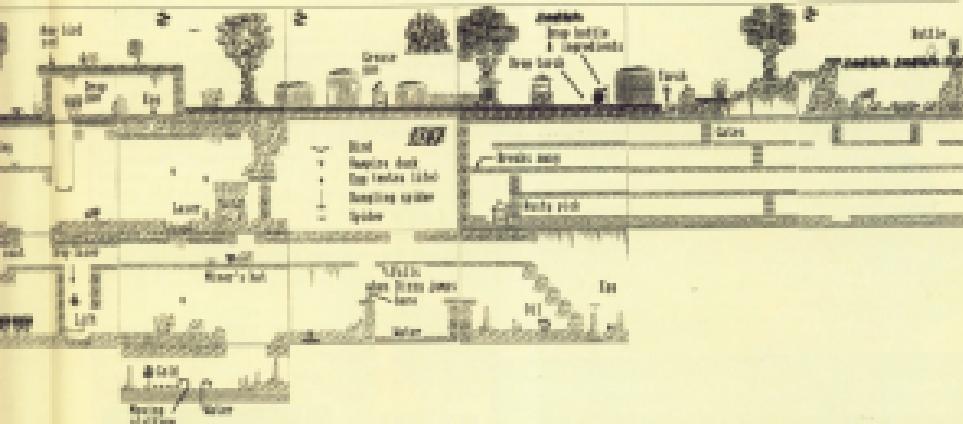

Olive twins kindly supplied a cheat mode which allowed Dizzy fans in the office to go through and save the screens to disk with one of those naughty robotic boxes.

I tidied them up with an art package, added Jason's text, and printed them out. If you haven't got *Dizzy*, an

budget games go it's well, and worth adding to your collection.

I must give a special mention to David Bradford of Newcastle upon Tyne who sent another map with a variation. He was let late, but I'll see if it can be included at a later date.

Tiffany

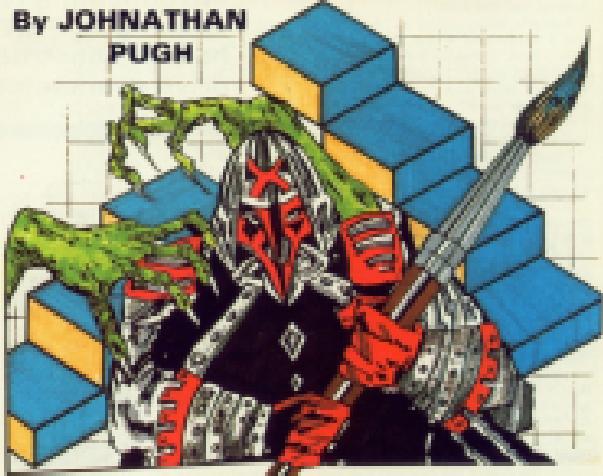

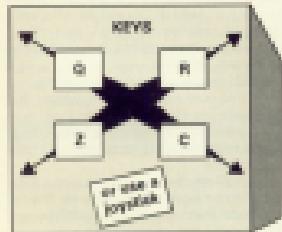

CUBE WARS

By JOHNATHAN
PUGH

CUBE Wars is the Amstrad version of an arcade classic. You are the ruler and sole inhabitant of five planoids in another dimension. They're like the Perth bridge - always in need of a lick of paint. You spend your days hopping round, painting the cubes making up each planoid, and by the time you've painted number five the first one needs doing again.

A bit tedious it may be, but relaxing, and not too difficult - just the thing to while away eternity. That is if used to be before an invasion of hungry green things. Now it's something hot stuff, and certainly not easy.

Your every move is dogged by a toothsome green alien intent on a square meal. Good luck. Don't get eaten, and whatever you do, don't fall off.

Turn to Page 28 ►

IT'S surprising how a second drive comes in useful, especially if you do a lot of server work such as programming, database management or word processing. However, second disc drives tend to be expensive - around £180 - so how about building one yourself for around half the cost?

Actually we're going to cheat and use a ready-built disc drive mechanism and electronics. Mitsubishi HD005SX and HD005600X drives are available from a variety of sources, but we got ours from Maplin's Office Electronics Ltd - the address is at the end of the article.

The other comes without case or power supply so the purpose of this project is to provide the 12 volts and 5-volts required. It shouldn't be beyond the ability of most people to construct a simple protective casing.

Total cost of the project is around £80 - £82.14 including VAT and postage for the drives, plus about £7.00 for the power supply, not including the case. You'll also need a cable which is £8.80 from Maplin, but can be made much more cheaply.

I use a CPC612B and it is this machine for which I've built the project. There's no reason why CPC64 owners shouldn't build it, and as far as I know CPC464 users just need to use a different connector to match the one in the cable to the first disc drive.

In addition to the parts, you'll need

BRING YOUR DRIVE ALIVE

Introducing a two-part project in which JOE PRITCHARD shows how to construct a second disc drive economically

the following tools: A small soldering iron and some solder, a pair of wire strippers, pliers, screwdriver, and a test meter.

You can manage without the test, but it makes testing much easier. Anyways, if you intend doing any other projects, a small test meter is cheap and a worthwhile investment.

The drive requires 12 volts at 0.8 amps to drive the stepper motor - the gear which positions the head - and the motor which spins the disc. Five volts at 0.8 amps are needed for the drive's electronics.

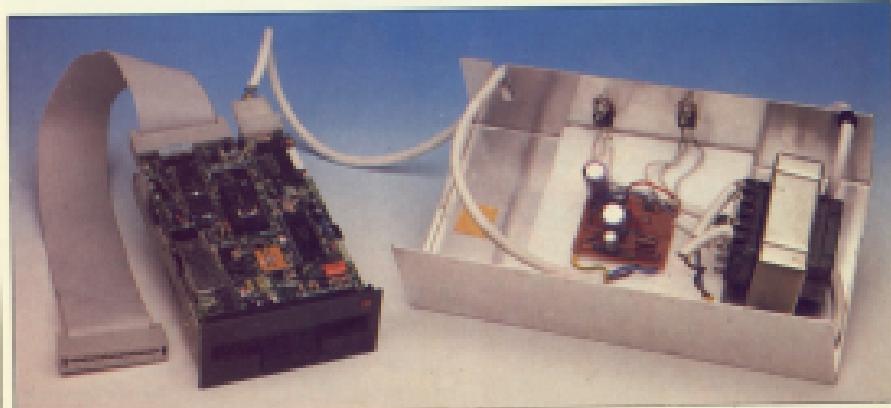

These voltages are both floating around in the CPC612B, but using the internal power supply could lead to overloading. To avoid this we derive both voltages from the mains supply

using the circuit shown in Figure 1.

This can be split into three sections. The transformer - TR1 - reduces the 240 volt mains to 12 volts AC. This is converted to DC by the bridge rectifier - BR1 - which supplies the two voltage regulators, REG1 and REG2. These are responsible for converting the raw DC into regulated 12 volt (REG1) and 5 volt (REG2) supplies.

In this context regulated means that the supplies stay within a few per cent of the stated voltage for a wide range of voltages at the input of the regulators.

The other devices - the capacitors - are there to get rid of hum on the DC voltages from the bridge rectifier, and to smooth the supplies. This arrangement means sudden fluctuations in

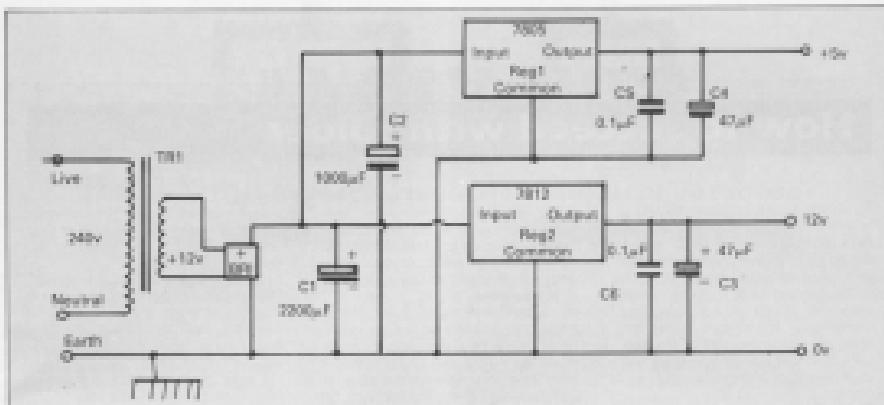

Figure 7: The power supply circuit diagram

the output voltage from the bridge rectifier do not affect the working of the regulators.

The arrival of the voltage regulator chip made it easy to build power supplies such as this one. Before they came along we would have had to build the regulator circuits ourselves - not an easy task.

Building the power supply

The first thing to do is to get the parts. Don't be tempted to use a cheaper lower-rated transformer. The chances are that it would overheat.

The chassis-mounting transformer should have a 240 volt primary, 12 volt secondary capable of providing a current of at least 1.0 amp. I used type BT-0250, from Rapide Electronics (see addresses at end of article) though similar transformers of the same rating will work just as well.

The bridge rectifier, type BR006, is available from Rapide Electronics or Maplin Electronic Supplies. REG1 is a type 7805, 5 volt 1 amp voltage regulator and REG2 is a 7812 12 volt, 1 amp voltage regulator. Again, available from Rapide or Maplin.

C1 to C4 are electrolytic capacitors. You must quote the value and their working voltage. You require:

- C1 2200μF 25 volt working
- C2 1000μF 25 volt working
- C3/C4 47μF 25 volt working

You can use capacitors with a higher working voltage such as 63 volts, but not a lower working voltage. So for C1, 2200μF, 63 volt working is

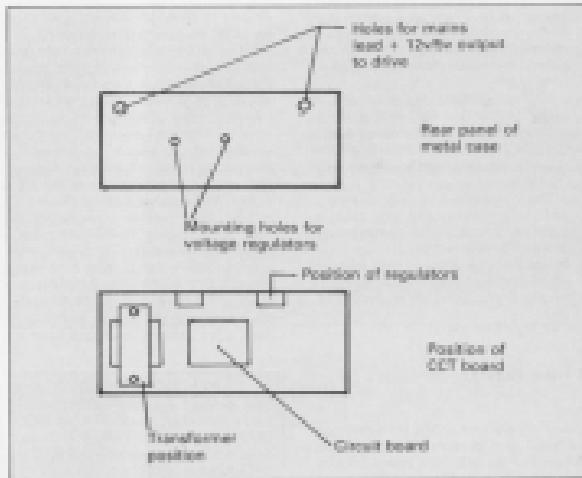

Figure 8: Layout of supply in box

big but 2200μF, 12 volts working is not suitable. C5 and C6 are 0.1μF polyester devices from Maplin or Rapide Electronics.

You will also need a small piece of 8mm matrix veroboard and a box to put everything in. The box should be metal, and large enough to house the transformer inside, standing upright. There should be enough clearance between the box lid and the highest

point of the transformer to preclude any accidental connection between the transformer terminals and the lid.

The one I used is 200mm long by 60mm high and 130mm deep. This is slightly larger than it needs to be - 150 long by 110 deep is about the minimum.

The first step in constructing the

How to succeed with solder

Soldering is the process of joining together electrical components with molten metal. Sounds awful, doesn't it? Soldering is the method of making electrical joints.

It's a good technique to learn, especially if you intend doing any interfacing with your Amstrad. Here are the subtleties of the skill from practical electronics book will give you more detailed instructions.

• Get a good soldering iron rated at 10 to 15 watts. Blow torches, primitive soldering gear, very heavy-duty electrical soldering irons, or electric canes are out unless you want a pool of molten plastic and metal where your circuit should be!

Soldering guns are also available. These are OK, but a little expensive for the occasional user. For a small 15 watt iron which is perfectly adequate and cost less than £10.

The iron has a bit which transfers heat to the joint. Like one that is quite narrow, 0.7mm or thereabouts is ideal for Amstrad.

• Solder is an alloy of lead and tin which melts at a relatively low temperature. It's available in reels, and

looks like thick, silvery wire. You want rosin-coated solder which contains a chemical to make the solder flow properly when heated. The thick bar solder used by plumbers is not suitable.

• Cleanliness, apart from being next to greatness, is crucial. Anything to be joined by soldering must be clean and grease-free. I use fine emery paper or a scapel to gently scrape clean the wires to be soldered.

Dust or the sort that can be delivered by gravity (or even cleaning fingers) is probably the main problem that you need to watch for.

Have a slightly damp cloth to hand. First clean the iron. Give it a half-five minutes to heat up, and wipe the tip with the cloth. Liberally coat the bit with solder until it's shiny all over.

Wipe off the excess solder with the damp cloth, and repeat these two steps until the bit is shiny all over. This is called *tinning* the bit.

Any bare copper wires you intend soldering should also be tinned in this way. The heads of many components are already tinned; this is why they are silver-coloured. These needn't be tinned

again unless you're being very thorough. During the soldering process the bit should be kept clean with the damp cloth.

When making a joint it is important to get a good mechanical connection between the two wires. If possible, twist them together. Then heat the joint with the iron - 5 or 10 seconds is enough.

Some components are very sensitive to heat, so take care not to overheat them. Anything delicate will be charred in the smoke, but it's good practice to treat all components like this.

Now apply the tip of the solder to the joint. If the joint is hot enough, the solder will flow over the it. This should take at most a few seconds. Use as little solder as is necessary to cover the wires.

Don't use the soldering iron to carry solder to the joint. Strength results won't be good, and over a period of time the bit will start to erode.

A good soldered joint should be shiny and smooth. If it's lumpy, dull, grainy or soggy, it must be redone. Bad joints, apart from having a tendency to fall off, might not even conduct electricity!

4 From Page 27

power supply unit (PSU) is to drill out the back and bottom of the box as shown in Figure 1. The holes for the power cables should be slightly larger than the flex, and a rubber grommet should be put in each one to prevent the cable chafing on the metal.

The mounting holes for the voltage regulators should be a couple of inches apart in the middle of the rear panel.

The mounting holes for the transformer in the bottom of the box can be made by placing the transformer where it will eventually be mounted (see Figure 1) and using it as a template to mark the hole positions.

Mount the voltage regulators on the

HEALTH WARNING!

This project involves mains electricity. In other words IT CAN KILL YOU IF YOU GET IT WRONG! If you have any doubts about your ability to tackle the work, get the help of someone more experienced.

inside of the box, with the leads slightly bent away from the casing. The metal back of the voltage regulator should be flush against the metal box.

Now we're in a position to build the circuit board. As many of you may not have done any soldering before, I'll leave you with some tips on how to solder in the adjoining panel. Next month I'll cover the construction details.

FAMILY TIES

IAN WAUGH investigates a genealogical database

THIS Registrar General's office receives a huge number of visitors each day, all eager to discover if they have any famous – or infamous – ancestors. *Geneny* is a specialised database which reflects this rapidly growing interest in family history.

First surprise on loading is a few lines of the tune which begins: It was in Bagnold when my mother met my dad... that's as many printable lines I can recall. Very appropriate, too.

The database can organise and store records of up to 1,000 individuals. It holds their names, sex, date and place of birth, and date and place of death or burial. It also stores the names and birthdates of parents, up to 10 spouses (more than enough for Henry VIII plus marriage dates and the names, sex, and birthdates of up to 10 children).

There is also room for comments such as place of marriage, occupation, documentary references and so on.

Geneny is disc-based and your data files are stored alongside the program on the system disc. Owners of dual drives can use separate data discs, and there are utilities to copy data files from one disc to another, although the system disc backed up without any problems.

Because of the amount of processing and data storage required, *Geneny* is divided into four sub-programs. *Geninit* sets up and initialises the system; *Genedit* lets you write and edit subject entries; *Genlist* is used to read, display and search the files; and *Genchart* lets you trace male or female lineage and produce generation and tree charts.

All options are menu-driven and it's easy to find your way around. There is a lot of disc access and programs can take several seconds, possibly minutes, to process and sort data.

It may even take longer on the CPC614 while it performs a garbage collection. There is a vacate memory option, however, to speed up the job.

The 31-page full manual begins with

a run through of all the options. There's no way you're going to take all this in (the manual admits as much but suggests you browse through it anyway) and it's not until you hit page 12 that you get down to using the program.

I gather I'm one of the few computer users (and enthusiasts) who actually like to read instructions, and I think the manual should have started with the tutorial section.

Apart from a little juxtaposition, it's quite helpful, although I would have expected the producer of such a program to have a knowledge of English grammar. When referring to relationships they insist on writing George's father, for example.

First steps involve playing with the sample database. It contains more than 110 cards so there is plenty of data for you to cut your teeth on before starting to enter family trees in earnest.

It is quite easy to find your way round, and I was quickly able to enter a new database containing several generations of the royal family. *Geneny* is designed to sort on surname, and typical royal family trees lack such

information. I suggest, therefore, that you experiment with something less blue-blooded.

When you enter subjects' details, cards are automatically created for their parents and, if they have any, their spouses and children. Care must be taken when deleting a card to ensure that there are no links between it and any existing cards. It would have been nice if the program checked this, but again it's not something you're likely to do very often.

As you might imagine, there is a considerable amount of cross-referencing. As far as possible, changes made to subjects' details are automatically reflected in the records of their relatives. However, changes of marriage dates, for example, must be made on the cards of both partners.

Many of the options ask you for a reference number, so it's a good idea to write down the card number for each subject as you go. If you don't you'll be forever flipping between readules. It's not the sort of program you'll be using every day, however.

Turn to Page 40 ▶

Typical Geneny output

4 From Page 38

and date since entered will tend to remain static, so it shouldn't cause any problems.

In order to save as much memory as possible, Genkey contains approximately used words. You construct your own lists, one for forenames and the other for place names. Each can hold 127 words and you can extend the lists as you go.

Initially I thought that a genealogical database can't be very complicated - but it is and Genkey makes its operation as easy as possible. However, you do need to take great care with entries, and preparatory work is very important.

I did have a niggle or two. For instance, you can't break out of a search routine and it would take several minutes to search from one end of the database to the other. Think twice first.

You must be careful when editing a record, too. I made a complete mess of one. I couldn't exit from the edit routine and I couldn't get the original

card back. This is where careful preparation and a little familiarity with the program comes in.

The generation chart prints out brief details of a subject's descendants over a four generation span, and the tree chart prints out a four generation lineage chart. I was looking forward to seeing the complete family tree of all 179 subjects in the sample database, but I suppose that is asking too much even of the CPC. You'll have to construct your own tree should you want to hang it round like in the front room to impress the neighbours.

There are several stand-alone utilities on the disk. Setkey lets you programme the function keys with commonly used words. Printset offers a selection of typefaces, and Genlist prints out numerically and alphabetically sorted lists of all subjects on file - a full list could take an hour to produce.

Genkey will produce a birth brief covering five generations and may be of use to family historians and genealogical research agents.

Other versions of the program are

available to run on the Amstrad PC, and PCW computers, and a utility module with this allows Genkey files to be ported between PC, PCW and CPC.

If you are already busy tracing your family tree or if you are thinking about doing so, it will pay to join a family history society. Not only for the help it can give you but because Genkey is available to such societies members at the reduced price of £22.

As far as I know this is the only genealogical database available for the CPC so there is nothing to compare it with. David Computer Software will supply free updates when significant improvements are made, and offers a 10-day money-back guarantee if you aren't satisfied with it. I think you will be.

10 LINERS

Disc file header reader

by Simon Hughes

This is an excellent utility which provides all the information you need to know about a file, including its start address, length, and whether it's locked. Just put a disc in the drive and run the program to see the information on screen or print.

```
10 END 20 PRINT"FILE HEADER READER BY SIMON HUGHES" 20 PRINT"FOR THE AMSTRAD CPC 664 OR 6100" 30 PRINT"ENTER DISK NUMBER & FILE NAME" 40 INPUT D$,"DISK NO?":D$=CHR(17) 50 INPUT F$,"FILE NAME?":F$=CHR(17) 60 PRINT"FILE NAME: ";F$; " LENGTH: ";LEN(F$); " ADDRESS: ";H$(F$) 70 PRINT"LOCKED? ";L$(F$) 80 PRINT"OPENED? ";O$(F$) 90 PRINT"DIRTY? ";D$(F$) 100 PRINT"FORMAT? ";F$(F$) 110 PRINT"FORMAT OK? ";OK$(F$) 120 PRINT"FILE IS READ ONLY? ";R$(F$) 130 PRINT"FILE IS READ ONLY OK? ```

Interrupt driven scroller by Jason Edwards

This clever program lets you to enter a string which is then scrolled across the bottom of the screen. What's so good about that? you ask. Well, as it's interrupt-driven you can carry on programming or running programs while the text is scrolling. When you want it to stop, simply CALL 40960.

WIN up to £10!

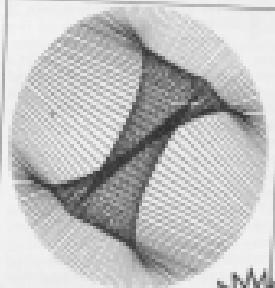

WE'VE only got room for three 10 liners this month, so we've made sure they're goodies. They include a disc file header reader, an interrupt-driven text scroller, and a simple pattern generator. Keep them coming - and don't forget the SAD if you want your tape or disc returned.

H = 11004	S = 11014	B = 10040

Graphics

by Balint Benyadi

GRAPHIC is a simple but interesting program which builds patterns out of various rotating curves, and is well worth trying in. When you've seen one shape, press any key to see another.

```

Adventure

THREE good news this month is the imminent release of the third Magnetic Scrolls adventure, *Zinster*. I have been looking at a variety of pre-release versions, and can say that not only is this the best of their three games, but it also looks like a strong contender for game of the year title.

First impressions are that *Zinster* is as good as the Infocom range. Watch this space for a full review.

Talking of Infocom, I come to the bad news. They and US importers Activision have decided to stop producing adventures for the Amstrad CPC and PCW machines. I've told that low sales are the reason, but that the situation is under review.

I urge you all to write to Activision and Infocom again when you support Infocom fans. Their address is - Activision, 23 Finsbury Street, Hertfordshire, London, HWD 2PR. So don't let the word processors folks, because this is an occasion when you can influence the future of CPC adventuring.

Matthew Watson has written to ask what exactly public domain (PD) software is, what costs are involved, and whether he can get adventures this way.

Public domain programs are those which programmers donate to anyone who wants them. No fee or royalties

Activision's dropping out

Exploring adventures with GANDALF

are charged, and the programs are usually written by members of a club for the benefit of other members. These clubs generally swap the programs with other clubs and, by doing so, manage to build up a library of free programs.

By joining the club which can involve a fee, you have access to the library. There is a nominal charge for putting the programs on disc - for the time taken - and the cost of the disc itself, unless you supply your own.

The original idea was to pool the talent within a club for the benefit of all the members. Unfortunately, since the introduction of CP/M on the CPC

range, there has been a tendency for some clubs to perform the service for profit - something that was never intended.

Some companies have also jumped on the bandwagon and have started making up discs of PD software, including commercial programs, and charging for them - effectively making you pay for the PD software itself. This abuses the principle and does not deserve support.

I don't know of many adventures available in PD libraries, but there are a considerable number of excellent utilities and other programs. I recommend that anybody running CP/M on their CPC contacts one of the non-profit PD libraries. They provide a forum for news on CP/M users direct from America and some excellent programs.

If any PD libertines have adventure software in their collection, please feel free to send it to me for review; the adventure worth playing should be brought to the attention of a wider public.

Stephen Lawson has written to help with a problem I had with Leather Goddesses. Namely how to avoid getting a total headache. In short, I must send the barge ahead of me down the canal, and out across land to avoid the location that causes it.

Finally, my thanks to Carsten Blaagaard Bryan, Denmark for his excellent solution to Escape From Knothole (printed here). Thanks also to Graham Wheeler for more suggestions, and to Glenda Pickering for another shifty letter. I would also like to wish Sandra Sharkey luck in her new venture, and continuing luck with the old one.

H-E-L-P

Help! Dorothy has written in with some problems she is facing at Castle Blaister.

She asks:

- How to get the ring without being arrested.
- How to get the sword.
- How to take the gold without being crushed.

If anyone can help, or even better, send me a solution, I would be very grateful.

Dorothy has also sent me some ideas to improve an Glynn Winter's Hall of Fame Adventure Quest solution in our November 1987 issue.

- You do not need to drag the lamp in the room, just the long token -

which you won't need again.

- From the rain-topped hall, take everything down the point slope to the vampire's house in the marsh. Then throw what you need out of the window.

Terry Garrison has pointed out that Anthony Robinson's solution to Warlord leaves a few loose ends. Following the solution strictly will leave you unable to complete the game.

The food, once obtained, should be eaten to reduce your inventory strength to allow you to collect further objects. Failure to do so will result in the message You can't carry any more at several stages throughout the game.

HALL OF FAME

Snowball - A solution by Stephan Parker

Pull the lever and get out of the coffin. Go North to the central panel, and press any three buttons. A coffin will slide out. Go South, and up here to the next level. You are now safe from rightinggates if you keep a closed door between them and you. If you are in the mortuary and you hear them coming, get into a room or the lift until they have gone.

Open the door, go out into the corridor, and find the lift. Press the button and go into the lift. Go down to the bottom of the lift shaft, and take the toolbox. Climb up to the main room, and use the spanner from the toolbox to open the trapdoor.

The mortuary has 18 sections, each with a lift. Each section has 10 levels, connected by the lift, though you can climb between levels through trapdoors. Each level has a circular corridor off which 10 blue rooms open to the south, and 10 green rooms to the north. There is a revival machine north of the lift on each level.

The sections, levels, and rooms are colour-coded: Brown (1), red (2), orange (3), yellow (4), green (5), blue (6), purple (7), grey (8), and white (9). Examining the indicator lights above each door will tell you where you are. For instance, green, orange, red is the code for green section, level red, rooms orange.

Having climbed through the trapdoor, you are now in the N/S tube!

tunnel/ledge which links the 10 sections of the mortuary, and which terminates in an airtight at its south end. In each section, going down from the tube will bring you to the lift door on the black level.

Go South to the airtight and, to open the far door, press the yellow button. Pressing the green button in any airtight will open the door by which you have entered, and the yellow button will open the other door.

Go South, down, and East, and collect the stalker. You don't need the scalpel. Go back to the airtight, and leave the stalker and toolbox, removing the screwdriver from the latter. Go South twice and then wait for a droid to go down the cyclades. Follow it and go South twice. Examine the body, and wear the heart (which is actually one half of a scorpion), the necklace, and the bracelet which tells you your location if you examine it.

Move North four times and take the exemplar. To find the colour codes of the room and coffin holding a crew member, insert it in the video machine in the library.

Remove the battery from the video using the screwdriver, and travel South, East and North to the condo. Research it for the diagnostic probe U.D.s. Insert East and North to the cupboard, take the lamp, and insert the battery in it. Get the cup, and fill it with liquid from the machine in the dining room.

Sorcerer - Part 2 of a solution by Graham Wheeler

You may now enter, so move W, W, S, and get the ball. Open the aqua vial and drink the potion to improve coordination. Throw the ball at the barrier, then examine the glittering scroll. Grando Malyon, drop the aqua vial, and travel N, E, E, NE, and S. Learn Malyon's spell and cast York on the Malyon scroll to make it stronger. Malyon the dragon to open an exit south, then eat it, and drop all.

Get the spell book and orange vial, and Frost yourself to make yourself a light source. Go East, and open the vial. To avoid having to breathe, drink the potion, and then give the spell book to your twin to receive a random combination number.

Move East, set the dial to the number your older self gave you, and open the door. Go East, drop the vial, get the rope, and go up. Travel SW and gain the timber. Then go S, NE, W, W, and tie the rope to the timber. Put the timber across the chasm, drop the rope in the chute, and then climb down it.

Get the scroll and cast Golmac on yourself to become your older self. Open the door and get the smelly scroll. Move East to see your younger self, and say Twin, the number is the number you used earlier. Take the spell book from him, and Grando Vanda.

Go South and wait until the potion wears off. Sleep, learn Gasper, and use it on yourself. Learn Mist, drop the spell book, go East and down, and Mist Spasmeow. The plants die. Get the cratle, W, open and drop it. Get at bat the cake (you will automatically wear the Green suit), then learn Mist, Stevens and Wardie. Turn the lamp on, and move NE and North. Mist the vines they die and spray the Green repellent on yourself.

N.W, and open the white deer. Wardie yourself to protect your mind, and Stevens' bellows. Jason is driven out of Belicos, and because he cannot enter your protected mind, he is beaten and the game ends.

Escape from Khoahline - A solution by Gersten Elstrem

W, W, examine the desk, open the drawer, and get the exits, S, E, E, S, and the cigarettes, E, get the can, and examine it. W, N, M, N, N, R, R, get the meat, R, give the cigarettes to the salman, W, S, E, S, unlock the box with the key, drop the key, get the bottle, and examine it.

R, W, W, S, D, S, S, S, throw the meat to the dogs, examine the pincers, get the lighter, E, S, N, N, N, R, N, R, get the wood, N, W, W, W, examine the closet, fit the lighter, E, S, E, E, R, R, sleep, S, drink the water, S, S, S, S.

Cut the vine, drop the knife, get the vines, S, S, W, get the stick, and examine it. R, M, N, put the path on the wood, drop the can, light the wood, drop the lighter, walk through the waterfall.

E, E, E, E, E, S, S, S, climb the

stairs, enter the tunnel E, E, open the bottle, pour the ether into the hole, drop the bottle, put your hand into the hole, get the stone, examine the star, put the stone into the indentation.

Down, S, trap the snake with the stick, get the pot, W, up, drop the stick, R, M, N, M, M, get the log, S, W, W, S, R, S, S, W, put the log across the pit, R, get the cork, W, W, W, S, take the ana into the pot, put the cork into the pot.

S, N, N, walk through the waterfalls, R, R, R, N, N, drop the wood, E, E, R, N, W, M, M, N, E, get the rushes, and weave them into a mat, S, W, R.

Put the mat across the quicksand, W, W, R, give the pot to the natives, S, E, E, E, E, E, N, N, R, tie the vine to the tree and the spear, throw spear across the ravine, walk across the ravine, R, R.

HALL OF FAME (Continued)

• From Page 43

Leather Goddesses of Phobos - A solution by Graham Wheeler

Select either the girls or the ladies toilets. This solution assumes you choose the girls. Use the toilet, get the stool, and return to the bar. Wait until you are captured.

Get and wearing the map, get the chocolate, and drop the map, eat the picture, blanket, stool and flashlight, and open the door. Move South, and open and enter the south door. Get the paper, and read it. Tell Trent to follow you and then move North, up, and North again.

Light the flashlight, drop and stand on the stool. Get the basket, and jump down again. Enter the circle. You will be transported to the jungle. Trent will give you a matchbook. On it is a mixed-up list of the objects you need.

Move East twice, and get the car. Go NW. Offer the flashlight to the salesman, and accept the matching. Knock on the door. Go down. Put the chocolate in the cage, and then wait. You will be turned into a gorilla. Get the chocolate and house, eat the chocolate, and kiss the gorilla. Open and leave the cage, drop the house, open the stragg, and turn off the power. Stand up. You are in your own body again. Get the house and enter the circle to be transported to the Moomer boats.

Turn the knobs, open the box, and take the coin. Leave the booth and enter the circle. You are transported to Royal Dock.

Board the barge, and press the orange button. Wait until you see

Riley Dock on the north side of the canal, and then press the orange button again. Leave the barge, go north, get the bails, and get and read the message. It says your mission is to contact with radiation number and identify yourself by asking her to kiss your bracelets. Drop the message, go South, and re-enter the barge. Press the people then orange buttons. Wait until you see docks on both sides of the canal and are near the east bank. Press the orange buttons.

Leave the barge at My Kinda Dock and press the orange button. The barge carries us down the canal. Put everything in the basket, move East and South, get the pin, and go North and NE. The sailor will ask you if you will answer a riddle, say yes, and then Say Aloha.

Move West to be asked which wife you want. Give the number from the message, but in reverse. Enter the hanmer and wait until you are taken to the inner hanmer. Tell the wife to kiss your knuckles. You will be given a map and a torch. Take them both, and go down into the catacombs.

Travel NW, N, NE, E, clap your hands, NE, NE, SE, hop, clap and say kewepo, go down, NW, NE, clap again, N, S, hop, say kewepo, clap, NE, up, NW into the dimensions. Get the directory, clap, SW, hop, S, say kewepo, clas, SE, down, E, clap, hop, N, W, say kewepo, clap, E, W, S, hop, clap, SW into the burial chamber.

Get the raft, go North, say kewepo, clap, NE, hop, E, clap, NW, NE, SE, say kewepo, clap, hop, up, NW to the well bottom. Enter the circle. You are transported to icy Dock.

Leave the barge, drop the map and

torch, and wear the bails. Go South, SE, give the coin to the penguin for a one ingredient piece. Still other pieces at camp get killed), N, empty the basket, get and put the baby in the basket, get the blanket and cover the baby with it. S, S, put the baby on the stoop. You automatically hide.

Wait until the nurse takes the baby. She will close, but not lock, the door. Open the door and enter. Get the cotton balls, leaves, N, N, get everything, S, N, W, and enter circle. You are transported to Walk Up Dock.

Move West. Trent appears from the fountain. Get the machine, stir the circle, and drop the can. Go W, NW, put the pin on your nose. You are already wearing the bails. Chop at, put your fingers in your ears, close your eyes and kiss the fog. The fog will change into a princess who will give you a blonde.

Leave all your subjects here for collection later. S, NW, remove the pin, drop it, and enter the circle. You are transported to Cleveland.

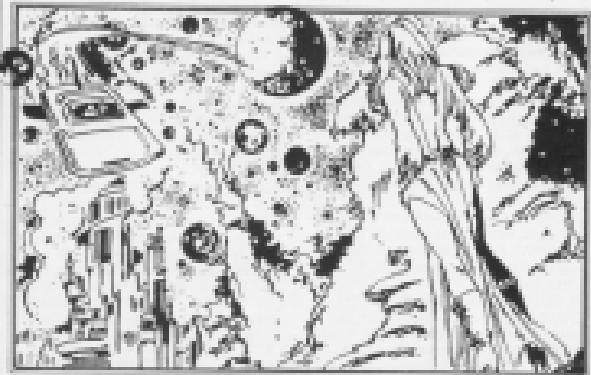

Travel South, get the rale and sack, N, NE, E, move the sack, get the mella, W, up, get the sheet, and tear it into strips. Tie the strips together, tie the resultant rope to the bed, put the rope through the window. Trent offers to climb down.

Wait. Trent goes and gets the headlight and is hit by a truck. Wait again. Trent comes in through the roof. Get the headlight, climb down the stairs, E, and enter the circle. At the end of the hallway go up, N, and enter the circle. You are transported to the jungle.

E, E, the Bythip retreats. W, cover the hole with the bails, open the sack, and cover the trailer with the leaves. Go W, E, and wait until the Rango appears. It will fall into the hole. W, W, get the jar, put everything in the sack, and enter the circle. You will be transported to the spaceship.

Get the sword, S, mount the horse, W, dismount. Get and wear the suit, open the hatch, N. With the sword keep killing Thaddeus until he sword leaves his hand and spins towards you. Get his sword. Give it back to him to prove that he won't win because you are the good guy. He then kills himself.

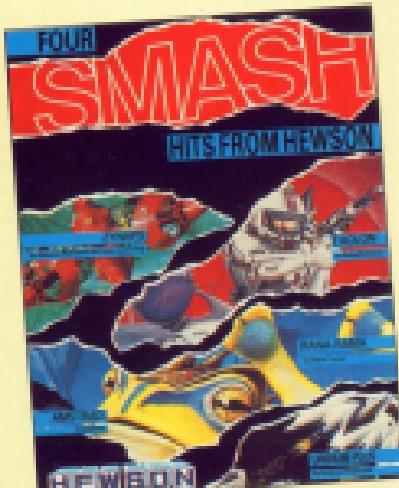

Kill the monster with the sword, ride the warhorse, and follow her to receive a picture of Jean Harlow. For a laugh, open the east door, S, S. Trent appears. Mount the horse, E, dismount, W, W, W. Enter the circle and you will be transported to My Kinda Dock.

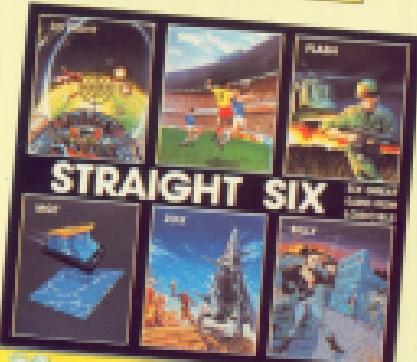

**FOUR SMASH HITS
FROM HEWSON**

Here's your chance to bag four blockbuster titles at a bargain price. This accolade-winning collection represents some of the best arcade action of all time - now to mention the best value for money! Read what computing with the Amstrad CPC's reviewers said:

- **Breakout**: "The best accolade I've ever awarded!" - Jon Rivers, *Computer User*, August 1987.
- **Zaxxon**: "Zaxxon is a great ... Whacko!" - Tom Marston, *Computer User*, November 1987.
- **Robotron**: "For playability alone, this game is probably worth putting in your collection." - Paul Marston, *July 1987*.
- **Ultimate Pinball**: "The original fast-scrolling shoot-'em-up that spawned clones on every type of computer you could imagine!" - Jon Rivers, February 1988.

MASTER MOUSE

Available at last for your Amstrad CPC664/6128, a high quality low cost model! This 3 button mouse is used by our company when we need an optical mouse technology combined with a low cost tool to make a pleasure to use. The simple to connect interface allows full compatibility with all Amstrad computer software, the package is completed with our own exciting "Terry Paws" on disc.

MASTER MOUSE

MasterMouse

MASTER MOUSE & MICRO DESIGN

together for only £14.99

STILL AVAILABLE:

DISCOLOGY

The ultimate in disc utility packages! It includes a disc editor, a full discritec copy and a disc reporter.

£14.99 on disc

DISCOVERY PLUS

The logic to disc transfer program, will transfer the selected of games etc. from tape to disc (including Speccydisc etc).

£14.99 on disc

PRINT MASTER

The logic to disc transfer program. Will transfer the selected of games etc. from tape to disc (including Speccydisc etc).

£14.99 on disc

SOUNDMASTER

The stereo sound card for an added dimension to all games and your computer. Adaptable volume/balance controls. Comes complete with top quality 2-way speakers and instructions.
Only £29.99 + £1.00 P+P

I BELIEVE it possible to buy and sell shares over Prestel. I'm thinking of buying a modest and small interface so I can use this service.

My idea is to access share prices, feed them into a home-built database, and then use the information as a basis for trading. Can you tell me if this idea is feasible? — Harold Roberts, Chichester.

■ Yes, it can be done, but you need to think carefully before committing yourself.

If you log on to Prestel in the evening, it is largely free apart from the cost of a local telephone call - around 10p per hour. As soon as you access really useful information such as share prices the charge is 10p carries at charge.

A single share doesn't carry many charges, so if you want to monitor a large number every day the costs soon mount. Other services related to shares and finance are available, but they often require a further subscription to Citicorp, a

specialist area within Prestel. And that isn't cheap.

The costs are, of course, acceptable if they are absorbed by your profits. The online booking service is run by Hounds Gossell. The minimum fee for a buy or sell is £2.80 plus VAT. So, if you buy and then sell one share the total brokerage fee is a minimum of £5.60. Bear in mind that there's a difference between the price a share is bought for and the price it sells at. This can be 1-2 per cent. On £1,000 worth of shares - the minimum they like to handle - you therefore need to make around 10 per cent to break even on the deal, plus enough to cover your other costs.

If you are confident that

on average you can exceed this figure plus what you would have got had you left your money in the bank, all means go ahead. If not, steer clear - it's not, as they say, for widows and orphans.

Of course, and that it is quite safe to do so. — Terry Baker, Farnham.

■ This sounds a bit dubious. The vast majority of Amstrad machines operate without difficulty on the standard fuse.

The value would have been calculated by the engineer who designed the monitor, and it's there for safety - you and the electronics. If the fuse was too small, Amstrad would fit a larger one to stem a flood of returned monitors.

It is possible that the fuse doesn't need much extra current before it blows, and that is a few machines' addition and extra current consumption brought about by manufacturing tolerances may justify a marginally higher value, but this is not a modification to make without very good reason.

Regularly blowing fuses are more likely to indicate a genuine fault which should be rectified by a competent engineer.

Helpful Basic reading

WITH reference to the letter from Mr. Tousay in your February issue, I may be able to help.

I bought a CPC6128 last May with the intention of becoming a proficient basic programmer within about two years.

After getting a very elementary book on Basic, I found the one I'm presently using as a tutor, *Basic Programming*, as the Amstrad by Mervyn James, ISBN 0 906963 02 2, £2.95. It is written for the CPC6128, but is also suitable for the CPC6102.

It is presently out of print but there may still be stocks. I got mine last October from Amstradsoft Ltd, 20 Shirenew Rd, Wallasey, Merseyside L49 4QR. Tel. 051-632 3013.

I have found the book most helpful and I have

learnt a lot by working through it and doing every exercise.

If the book is unavailable, Mervyn James has published a second book, *Basic Programming on the Amstrad 4024, 6024 & 6128* ISBN 0 9467 9336 1.

I haven't seen it yet but if it's anything like his earlier book, it'll do just the thing Mr. Tousay is looking for. — M.R. Hornsby, London.

■ ■ ■

MY recommendations for good books on Basic would be 30 Hour Basic, Standard edition published by the National Extension College, and Advanced Amstrad CPC6128 Computing by Ian Sinclair starting at chapter three which deals with filing techniques. Chapters one

and two are about CP/M.

There are a few instructions in 30 Hour Basic which differ from the CPCs, but are easily converted from the CPC User Guide.

Ian Sinclair also wrote an elementary book Amstrad Computing with the CPC464 but it is out of print. If it is as well written as his later books, it will be very good.

Also The Complete Programmer: A guide to better programming in Basic by Miller Jackson, published by Granada, is very good once the basics have been mastered. It is not written for a specific computer.

In my opinion, great books for the CPC that have brought, including the Amstrad manual, are very badly written and must be very frustrating for a beginner. — John Shaw, Chelmsford.

CPC with a DMP3160

I AM sorry for anyone with a CPC who buys a DMP3160 printer. The hassle is beyond description. Have a go - it'll!

It cost me several long distance calls to Sunderland before they supplied me with the correct lead for a CPC - the one that came with it was for a PC. After following the instructions very carefully I could not get the printer to work.

Eventually I managed to get it to work to a degree, but I never did find the DMP3160 instruction book.

Turn to Page 48 ■

■ **Read Page 67**

to use it properly. I was advised to phone Amstrad (long distance) who told me to phone CPC Components at Prestow Ring distance again.

CPC informed me that the blank would cost over £5. I will not pay the extra. When I buy goods I expect to get a proper working article with correct instructions.

The moral is: Don't buy a DMP3160 for your CPC. It is compatible with the CPC8128, but it will need you. Maybe this letter will save others making the same mistake. — **Mrs Maria V. Mansfield, Coalcliff.**

■ The DMP3160 is really intended for the PC, which is why it comes with a PC printer lead. Using the correct lead it will work with a CPC, but the DMP3160 is the one to get.

It's cheaper, it comes with the correct cable, and the print quality is exactly the same. The only thing the DMP3160 has over the DMP3160 is the IBM character set which includes graphics characters.

The problem, as is often the case, is that not enough beginner-compatible information is given in the manual. I find the Panasonic KXP1001, at only a few pounds extra, a more solid machine with better quality output.

Information is given in the manual. I find the Panasonic KXP1001, at only a few pounds extra, a more solid machine with better quality output.

dated in years. — **Mrs J.A. Evans, Whitchurch.**

■ You are on the right track. The following example uses the HOME command which tests a specific key. Keys 1, 2, 3 and 2 are the numbers of the cursor keys.

The 0 after the HOME command is the value returned by a key if it is pressed without Control or Shift.

It's not the shortest method, but it is easy to

Improve your child's spelling with this fun version of the popular game

This is a cover-up!

Protect your monitor, keyboard and printer against battery drain covers. Made of soft plastic, these and many more soft, clear and washable covers fit over your screen and keyboard and are designed with the computer's keys

CPC monitor cover £3.95

CPC keyboard cover £3.95

DTP monitor printer £3.95

Secure storage for your discs

The ideal storage solution for your CPC discs.

These heavy duty padded PVC cases are designed to protect your valuable discs and can fit up to 100 standard 3½" discs.

Now holds up to 100 disc cases

£3.95

How to keep your collection complete

Designed to easily store and protect your complete collection of CPC games, this disc storage unit holds up to 200 standard 3½" disc cases.

£3.95

All your favourites are here!

WE'VE brought together the best programs from recent issues of Computing with the Amstrad CPC to produce three compilations at a very special price.

Whatever your interests you'll be delighted with their variety, and by studying the programs you will learn so much more about your CPC.

Ten of the Best

Volume 3

Wheel Spin - Drive the city streets, avoiding killer cars, to collect the 20 flags.
Diamond Trap - Dodge the rocks, collect the keys, grab the gems. It all sounds so easy - but it isn't.
Computer Pest - Hunt computer pest in the gardens of the House of Parliament.
Hockey - Hit the ball into the corner pocket - and don't get hit by the ball in return!
Robotpolis - Guide Bally through the complex maze, and drag them into boxes!
Fishing - Cast your line and keep a keen eye on the float to catch that fish.
Eggmania - Find the seven sources of the egg mania by shooting through each.
Computer Pest - The variety of the -hosted bugs which corrupt your system.
Diamond Diggy - Navigate the diamond through the mines, avoiding falling rocks.
Robot Spybots - Guide the Observatory to safety while setting up the spybots.

Ten of the Best

Volume 4

MazeMania - Play this popular derivation game for one or four players.
Age of the Gods - An exciting African board game to life with your computer's graphics.
Apocalypse - An interesting variation on John Crowley's famous game Of Life.
Fun Farmers - Learn about factors with this interesting game for young children.
Obelisks - Compete against the CPC in this classic test of strategy and skill.
Party Machine - See the party leaders in a spin on this one-player board game.
Putman - Try your hand at this popular card game, with the right of re-naming cards.
Quartets - Puzzles must connected tiles on a grid in this clever test of strategy.
Roulette - Place your bets, odds and genetics, with this realistic programme.
Submarine - Hang on to your lucky submarine root, base on the side and let them eat!

UTILITIES GALORE!

30

of the most popular
utility programs in
the pages of Computing
with the Amstrad CPC

Utilities Galore!

This superb value collection contains over 30 programs ranging from clever, compact utilities to full games.

There is a menu card index system, assemblies, disassemblies and checkouts programmes; test disk compatibility; program buffer; and machine-code code editor.

You can also programme in assembly, BASIC procedures in their built-in example interpreted programs; load more than one BASIC program in memory; produce multi-directional pointing windows; design and print the basic fonts on your printer; format discs to DSK4; switch off your drive by five to ten per cent; load out all the variables in one BASIC program; produce a shadow screen display; add extra values in memory mode; write DMS files from your listings; RESTORE in any line number; load all vars; and then commands and much more!

TO ORDER, PLEASE USE THE FORM ON PAGE 53

Perfect companions for your CPC

① Binder. Keep your magazines in pristine condition. Up to 12 issues are firmly secured with metal rings in this handsome burgundy binder.

£3.95

② SoundMaster. Play your favourite games wearing these stereo headphones which connect to your CPC via a neat interface. Includes volume control.

£14.99

③ Dust covers. Protect your monitor, keyboard and printer with our top-quality dust covers made of clear, water-resistant vinyl. They're bound with strong cotton and decorated with the manufacturer's logo.

CPC monitor cover £5.95

CPC keyboard cover £3.95

DATA 2000/3000 printer cover £3.95

④ Disk box. This luxury padded box is the ideal storage medium, holding up to 30 3½" disks.

£3.95

⑤ Fun School. Learning can be fun with these very popular educational compilations ingeniously tested in the classroom. There's three age groups to choose from: 3-5, 5-8 and 8-12, with 10 programs in each pack.

Cassette £9.95

Disk £8.95

⑥ Thing! This simple idea makes typing in listings so much easier. The Thing! attaches to the top of your monitor using velcro strong enough to support this magazine.

APP £9.95 Offer price £5.95

Guild of Thieves — it's a steal!

Guild of Thieves is the long-awaited follow-up to the award-winning adventure, The Possum.

You're back in the fantasy world of Rensselaer, in the role of a novice thief who has agreed to become a member of the盗贼 Guild. To prove your worthiness, you must embark on a tour of all its treasures.

These are 25 beautiful illustrations, a massive vocabulary, and a text parser which is claimed to be more sophisticated than the parser in the Infocom adventures.

The puzzles are delightfully well constructed and logically logical... Guild of Thieves must surely beat the lot of best graphics adventure I've reviewed.

LAST month we saw how Bankmanager can store and retrieve records from the CPC6128's extra ram. By its nature Bankmanager is suited to database type applications, so having stored information in the second bank of ram we want to be able to search through it.

Imagine you'd written an address book program which used Bankmanager to store a list of names, addresses and telephone numbers. If the file comprises one record per entry and they're laid end to end, you obviously need some way of retrieving the information relating to a particular person.

In a conventional address book you'd have one or two pages for each letter of the alphabet. This means you get large areas of blank paper between entries or groups of entries - the 'Xs' and 'Ys' tend to be empty while the 'Ts' and 'Bs' are crowded.

This system can be made to work on paper, but presents problems if you try to do the same thing with Bankmanager. You'd have to have large areas of memory free to take future entries, meaning that every time you loaded or saved the file you'd have to deal with the extra 64k. You might find at a later date that you didn't have enough room in one place and had too much in another. It would be quite a headache trying to reorganise the file.

In computer systems there are more sophisticated ways of organising information, but they require equally sophisticated programming. Fortunately Bankmanager has a command that avoids these problems.

Instead of trying to keep the entries in alphabetical order you just add them to the end of the file. If you took that approach on paper, an average you'd have to search half the list every time you wanted to look somebody up. Believe it or not, that's exactly what Bankmanager does, but it uses a fast machine code program.

The command is :BANKERMD which is used like this:

```
:BANKERMD,001,01,11,11
```

The variable `001` is the string you're looking for in the extra ram. `01` returns the record number where it was found, or an error code, or and/or are optional and specify the record numbers where the search will start (`01`) and end (`02`). You can use or without or but not and by itself.

Let's use it in action. Run Bankmanager and type in the following short listing. It sets up a record length of six

Searching through your records

IAN SHARPE concludes his series on the CPC6128's extra memory

and uses a loop to fill the first 200 with spaces. Then it inserts three records, one at 001 and one at 100 each comprising six A characters, the third at 101 being AAAAAA.

```
100000,2
111111,001,00000,0
121212,100,0
131313,101,0
100000,001,00000,0
111111,101,00000,0
121212,101,00000,0
131313,101,00000,0
```

When it's finished, type the following:

```
:BANKERMD,001,01,11,11
100000,001,00000,0
111111,001,00000,0
121212,001,00000,0
131313,001,00000,0
```

If you don't tell it otherwise, BANKERMD starts searching at the current record and carries on until it finds a match or gets to the top of memory. By adding 0 as a third parameter the search starts at record 0 and you will see that it reports a find at 00.

When :BANKERMD finds a match it leaves the pointer to the current record in that position so the next read or write will operate on that record.

What about the second AAAAAA? Bankmanager stopped when it got to the first one, so if you're storing data which might have multiple matches you need to resume the search from the next record, and so on right up to the end of the data.

After the first match has been found, if you haven't moved the pointer on using :BANKERMD it would still be set at record 00. If you then try a further search for AAAAAA, it'll find 00 again because that's the current record. This is OK, if you want to read or write to 00, if you don't, you must tell :BANKERMD to move up to the next record by specifying it:

```
:BANKERMD,001,01,11,11
```

As it is, we moved the pointer on with

:BANKWRITE,001

:BANKERMD,001,01,11,11

It'll start at 01 and come to rest the second AAAAAA - record 00.

What happens if no match is found? Try this:

```
:BANKERMD,001,01,11,11
100000,001,00000,0
111111,001,00000,0
121212,001,00000,0
131313,001,00000,0
```

Here we're resuming the search at record 100 and terminating it at 100. As there is no other record containing AAAAAA no match will be found.

According to the manual it should contain -3. Well it doesn't either of the otherwise healthy machines I've got access to. I get -2, so I assume Peter's bug in the instructions.

If I'd erased out the 00 in the above example the search would have continued to the end of memory. It's just possible that the jumble of random numbers after record 100 will contain a sequence of six As in a record, but it's more likely that after a few seconds delay you'll get -3 in its again.

Now try this:

```
:BANKERMD,001,00000,0,11,11
100000,001,00000,0
111111,001,00000,0
121212,001,00000,0
131313,001,00000,0
```

This illustrates that the search is case specific, in other words a and A are different and searching for the will not find an A. It's a good idea to decide that you're going to work in upper/lower case and stick to it, converting strings with UPPERS or LOWERS as necessary.

If the string you search for is shorter than the record length, only the number of characters in the string are checked in each record. This means that if you do the searches for AAA instead of AAAAAA you'll also turn up AAAA as a match.

AAA would fail to find AAAAAA because the fourth A is compared to the first B. If your string is too long only the characters up to the record length will be compared. There is one

Turn to Page 88 ▶

卷之三

other thing BANCPDIO can do. Say we know that somepeople we had a record ending in BBB but didn't know what the first three characters were. We can introduce a wildcard - a character that matches anything. With Bankmanager the wildcard is C#D#0 - not the digit 0 but the character whose ASCII value is 0.

www.ijerph.org

The search string starts off with three ASCII zeros and ends with 0000 = ASCII value 60. The zeros are taken by Bankmanager to mean "exact character in this position as a match". So anything ending in 000 will be found - 1000000, XY20000 or AAAA00.

If you are going to use Blankmanger for database applications you will want to save the data to disk and load it back in again.

Let's assume you've written a number of records with BankManager, and that the records are stored in a vault.

able sacrifice. Remember that if you have 100 seconds, then on from 1 to 50

Here I've assumed that 2% and

The first step in saving the records is to open a file for output with the OPENOUT command. The next thing to do is to make sure the current record is not open, which is achieved with :RANKOPEN. The loop that follows reads each record in turn and writes it to disk. Finally, the output file is closed.

Reading the file back again is a similar process. The data file is opened for input and the variable opened with the record length. Next the variable is read; the number of files is stored. The `while`...`WEND` loop reads each record and writes it to the entire array. As each record is read, exception is incremented.

so that where the base grade is constant the number of repeats

The EOF keyword, by the way, tells us if the read operation has reached the end of the file.

As a practical exercise, I suggest you turn to this month's utility, a disk library program. It sets aside an area in the main memory pool and uses it to store RasterOps in a simple way for the rasterizer's records.

It doesn't use the extra ram for storing filenames because we wanted it to be compatible with the CPC464. If you're familiar with your newfound knowledge of Basic and a little knowledge of BASIC, you should be able to adapt it to hold more than 200 records.

QUALITAS PLUS

In the interest of the most prompt attention please to the Bureau of CEC. We appreciate your doing this in your correspondence, or that you address your letter to the Bureau, reports, plans, etc., over your signature when you call at these locations.

- **Pixel resolution quality (RDQ).** Present using the same method as RDQ prints; fine prints with a more blurred, grainy, motion-blurred character. Supports speech file formats from *mp3*, *wma*, *ogg*, *opus*, *flac* and *ape* previously. Each file can be modified or new files created with the *mp3*/*wma* file designer.
 - **Several font models** (each font can be printed in bold, italic, double width, subscript, superscript, underline and emphasized using standard OpenType rules). And stroke height is also available.
 - **Repeating text.** Lines can be repeated with equal repeat distances (character repetition) and text spans can be extended. Text can have up to 16 columns of prepositioned text.
 - **Text rotation.** Text programs now use the powerful features of your word processor, by providing orientation, rotation, and even text range (rotation) and a rotated paragraph. True *WYSIWYG* text as well as other text features.
 - **Very compatible** with nearly all OpenOffice-compatible with *ooxml*, *odt*, *odps*, *ods* and *odg* document formats including the *OpenOffice* and the *writer*, *calc*, the *math*, the *draw*, *impress*, *base*, *writer*, *impress*, *calc*, *math*, *draw*, *base*, *script*, *report*, *CPAN*, *Tkinter* and over 2000 *GNOME* programs.
 - **Expanding text** at first print point and for every next印次, 40 extra 8-16 fonts are available, including Old English, Script, *Tkinter* Tk characters and *Random* characters.

Business Plus seats and \$14.95 ticket. Take version (\$13.95 download only), upgrade from basic version possible. Please note you complete, protect and word process. UK writers used free (Bunyan and El T., Bawlfay and El D., writers) and US writers. Most had ended with Holiday "but instead if not entirely satisfied" question (Bunyan).

"If you want to give your opinion on one feature of the Question, can we accommodate it?"
- Committee with the Australian CSC 2007

PROTEXT from Amstrad is a powerful word processor for Amstrad machines and its speed, versatility and ease of use have made it very popular. Although difficult to improve upon, Protext can be customised with useful extra features by adding some POCs.

Supershift is one such addition. It is a typing aid which can be used by amputees, but was designed for those who find word processing a slow and painstaking task. This includes people whose typing is impaired because of arthritis or other disabling condition.

The idea is very simple. With Supershift enabled, every time you type one of the punctuation marks ... and ? a space will automatically be inserted after it. Furthermore, if the punctuation mark is a full stop and the first character in the sentence is a letter, it will be in upper case without you having to touch the shift key.

Type in the program and save it before you run it because once it has installed some machine code it will wipe itself from memory. Incidentally, it's useful to add a few lines to the program to set up ink colours and key definitions.

Once run you will have two new keys - 180M (Supershift) and 180PF (Supershift off). From Protext's command mode you can operate with the L and use 80M and 80PF. And that's all you need to know to use Supershift; it releases itself to the highest available area of memory and works with versions of Protext higher than 1.20. If yours is earlier than this, get in touch with Amstrad who operate an upgrade service.

For the more technically minded here's how it works:

If the basic loader finds no errors, it will call Supershift's initialisation routine. This first scans the code for any direct memory references to Supershift's code, and adjusts them according to Supershift's current location in memory.

180M causes Supershift to divert the jump table entry for KEY_WAIT_CHAR (address 0000:0000) to point to its own checking routine. Thereafter, all keypresses are checked according to these rules:

- If the character is one of the punctuation marks ... or ? insert a space character in the keyboard buffer, then the punctuation makes a full stop? If so, set the upper case flag, F0H.
- If the above is not the case, is caps lock on? If so, leave things alone and exit.
- If caps lock is off, is the character

Cut down on all that shifting

CHRIS NIXON presents a routine to make Protext easier on the fingers

between a and z inclusive? If so, and the uppercase flag is set, change the character to upper case, clear the uppercase flag and exit.

- If the character is none of the above, exit.

These four rules ensure that capitals

are selected for only one keystroke after every full stop, unless caps lock is on, in which case all characters are left as upper case. When returning to normal keyboard input, 180M reads KM_WAIT_CHAR, points back to the original keyboard routine.

Plan It

... the COMPLETE personal organiser

Now there's a simple way to keep track of your money, plan your budgets, sort out your files and manage your time far more effectively.

PlanIt's three main modules - Personal Accounts, Financial Diary and Card Index - take care of all your day-to-day activities and help you rationalise your future financial position.

And there are two extra utilities - a Loan Calculator and a Calendar - to complete this remarkable package.

Personal Accounts Gives you up-to-the-minute facts about your financial position at any time. Keeps separate accounts of your banking, cash transactions, credit card payments. Allows 20 individual accounts, up to nine different credit cards and warns you when you reach your cash limit and as many as 100 different transactions a month. Sets up your standing orders. Automatically updates relevant accounts with each transaction.

DATABASE SOFTWARE

Card Index Create your own address book, phone directory, tape library title list. Use the flexible editor to enter or amend data. Sort and search. Call up detailed reports on contents in any form. Produce mailing labels on your printer.

Financial Diary All the features of the best desktop diary - plus much more. Enter up to 15 items per day and have them automatically sorted in time order. Add your expenses and have them totalled in separate categories. Speed search for entries, then mark them for future manipulation or replication.

TO ORDER, PLEASE USE THE FORM ON PAGE 53

SCREENVISION
TURNS YOUR
MONITOR INTO
A COLOUR TV!
AT THE AMAZING OFFER PRICE OF £64.95

USE YOUR AMSTRAD CPC464, CPC664 & CPC6128 MONITOR AS A COLOUR TV SET!

Screentronics is a modern 'State-of-the-Art' TV Tuner which simply connects to your monitor, using The existing lead and converts it to an outstanding colour television.

Screentronics has more features than any other TV Tuner and costs less. Each model has seven pre-setted push button channel selection, separate controls for brightness, colour, tone and volume and has built in Speaker, Colour and Radioactive gain control.

Unlike other products, Screentronics also converts to a television Monitor should you change your system.

DAN DARE II

MEKON'S REVENGE

WINTER ISSUE 1985

The story so far . . .

The Mekon has returned, carrying an alien to take revenge on the Planet Earth. In his bid to become ruler of earth the Mekon has developed a new genetically engineered race . . . the SUPERTRIENS!

To save the earth's citizens, must destroy the Mekon space ship before the Supertrions can be launched. There is only one way to defeat the Mekon - face to face. There is only one man for this mission . . . DAN DARE!

Commodore 64/128 cassette £6.95 disk £12.95
Spectrum 48K/128+2 cassette £7.95 disk £14.95
Amstrad CPC cassette £7.95 disk £14.95

Play Dan Dare — or the Mekon in his! Follow up to Dan Dare — "The Price of the Future," the game that was voted the 22nd best Amiga Adventure of 1984, and was selected a Crash Award, C — 1985. Add A Special Alien Class, and your teacher Hugo Corrie, Dan Dare — Mekon's Revenge is up to the mark!

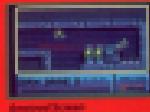

Available from all good retailers or direct from Virgin Games, 301 Weston Road, Plymouth PL2 2QH.
