### The men behind the Microdrive

A four-man team who took an idea by Sir Clive Sinclair and turned it into the Microdrive mass storage devices.

Heading the team was research and development director David Southward who said: "It's been a difficult project with a lot of problems to solve."

"It has taken a bit longer than we hoped. But we knew it would be difficult because we were doing things which people said could not be done."

Mr Southward, 46, began work on the mechanical side before the Spectrum was launched.

### New game: what the Yard says

Scotland Yard is taking an interest in a new computer game called *Vandal*.

It features a character called Harry O'Hooligan who smashes windows and tries to evade police officers.

If he is caught — or if he strikes a policeman — he is taken away in a police van, complete with siren sound.

*Vandal* is one of five Spectrum

Continued from front page

Microdrive men (from left) — Ben Cheese, Martin Brennan, John Williams, David Southward

He said: "Clive said 'What we want to do is this' and I came up with various ways of doing it. There were perhaps a dozen different ways.

"The satisfaction is not when it's launched but when a year or so has passed and there are tens of thousands of people with them.

"That's what really counts; that's what R and D is about."

Mr Southward, who works at Sinclair's St Ives laboratory, was recruited by Sir Clive from his earlier company, Sinclair Radionics, which has been taken over by the National Enterprise Board after running into money troubles.

John Williams, a colleague at St Ives who worked with Mr Southward on the ZX Printer, looked after the detailed mechanical design and Ben Cheese and Martin Brennan, both based in Cambridge, were responsible for the Electronics and software respectively.

Continued from front page

games, all at £5.95, just out from Apogee Games, trading name of Dialogrove.

Marketing director Chris Mallet, 28, said he and his brothers and fellow directors, Gareth and Chris, thought hard before deciding to bring out the game.

It was sent in by an unemployed Welsh student and originally, said Mr Mallet, "there was a certain amount of blood and we toned it down." The police were also missing from the original.

Mr Mallet said: "We first looked at it in April. At first we were not going to market it. We naturally thought it might encourage people.

"But now people grab you. You have no chance of winning if you hit a policeman. There is a chance of getting away if you break a window.

"There's always the problem of people being encouraged by these things. But I think it will

They have also spent a lot of time at the manufacturers helping to get production under way.

Microdrives, which cost £49.95 each, have a 12 month warranty and run tape in tiny cartridges at 30in a second with a claimed minimum storage capacity of 85K.

Each cartridge, costing £4.95, contains 20ft of tape — similar in quality to video tape — with two tracks on a width of a little over one-sixteenth of an inch.

The Microdrives have to be connected to Spectrum via the ZX Interface 1, costing £29.95 with Microdrives, or £49.95 separately.

As well as controlling up to eight Microdrives, the unit incorporates the industry standard RS-232 interface — allowing the

● **Microdrive review** — see pages 11

*Sinclair Research, Camberley, Surrey GU15 3BR*

keep them at their computers all day rather than throwing stones at windows.

"We hope the name Harry O'Hooligan will not encourage people to think only Irish people throw stones."

A Scotland Yard spokesman said: "Obviously, anything which encourages people to go out and do the real thing is a bad thing.

"Vandalism is a very big problem in London. Last year criminal damage increased by eight per cent over 1981, from 87,000 incidents to 93,000 in the Metropolitan Police area.

"We have not come across it, so it's too early to say if it will have any harmful effects on young people."

Apogee's other four tapes which have just been launched are three space games — Space Mite, Moon Strike and Lazer — and a version of Frogger called ZX Froggy.

*Dialogrove, 10A James Street, London WC2E 8BT*

computer to be linked to other computers and peripherals such as printers — and a network of a maximum of 64 Spectrums, provided none is more than 30ft apart.

A handful of software houses has already got the new equipment so they can produce software on cartridge.

Sinclair's managing director, Nigel Searle, said: "Initially there's not going to be a huge market. Although there are half a million Spectrums out there, there are not half a million Microdrives.

"I would think that it will follow the same pattern as

cassette software. I would guess that someone will set up a duplicating service for Microdrive cartridges for the software companies."

Sir Clive, questioned later about the Government's approach to computers, said that the fifth generation of computers needed a central laboratory employing the country's best minds.

He said: "It needs to be done on the same principle as the atomic bomb.

"This new industrial revolution is as dependent on semi-conductors as the first was in the manipulation of metal."

## You could be on our pages

We welcome program articles and tips from our readers.

**PROGRAMS** should, if possible, be computer printed to a width of 48 characters (use a new ribbon) and/or sent on cassette. Check carefully that they are bug-free. Include details of what your program does, how it works, variables you have used and hints on conversion.

**ARTICLES** on using home computers should be no longer than 2,000 words. Don't worry about your writing ability — just try to keep to the style in HCW. Articles most likely to be published will help our readers make better use of their micros by giving useful ideas, possibly with programming examples. We will convert any sketched illustrations into finished artwork.

**TIPS** are short articles, and brief programming routines which we can put together with others. Your hints can aid other computer users.

Competitive rates are paid.

Keep a copy of your submissions and include an SAE if you want them returned. Label everything clearly and give a daytime and home phone number if you can.

Paul Liptrout, Home Computing Weekly, 145 Charing Cross Road, London WC2H 0EE

## Commodore: VIC-20 goes on — and up

Commodore, expecting to out-sell Sinclair computers soon, has condemned a report that VIC-20 production is to cease shortly.

Marketing boss John Baxter stressed: "Any rumours you hear about us withdrawing the VIC are nonsense."

Software houses Imagine and Quicksilva said they were now turning to the Commodore 64, which has 64K for the new price of £229. The unexpanded VIC-20 has 3½K and costs £139 for a package which includes a cassette recorder.

Imagine is soon to bring out a VIC-20 arcade game called Bewitched and general manager Bruce Everiss said: "We are not going to do any more games for the VIC."

"They are to stop making it this month. I'm not being dogmatic about August, but it's our perception that the VIC has only a limited life."

"It's cheaper for them to make a 64 than a VIC and also the VIC is totally out-classed by the Spectrum and Oric — even the Atari — on price and performance."

Mark Eyles, a Quicksilva director, said his company had no reports about VIC-20 production coming to an end.

He said: "We are no longer actively looking for games for the VIC-20. We are heading for the 64. It seems to be filling the gap in the market at around the £200 mark."

Mr Baxter said rumours may have got around because Commodore in America had stopped taking order for the VIC-20 — but only because of the demand.

He said: "You have got to plan months in advance and they took so many orders for the VIC — and they planned to make a million — that they had, not unaturally, closed their order books."

"We are beginning to get into the same situation in the UK. We

## Where to take those upgrade problems

We have had a number of letters from readers with problems regarding upgrades from the 16K to the 48K Spectrum. If this sounds like you, then the address to write to is Sinclair's Camberley office, below. Alternatively, ring Camberley on 0276 685311.

Sinclair Research, Stanhope Road, Camberley, Surrey GU15 3PS

are fairly certain we can sell all our computers until the end of December. We put forward phenomenal sales targets.

"We are even asking other countries to let us know if they don't want all of theirs. I can guarantee that not only will we be producing until Christmas but for long after."

"If no-one wanted it we would withdraw it. But, to give an example, we sold 50,000 in June — along with 10,000 64s — and we could have sold a lot more VICs than that. We can sell more than we can produce."

"We are bringing out at least 15 more VIC programs by the end of the year."

And this is what Mr Baxter had to say about the competition: "Not only are we out-selling Sinclair, we are swamping them worldwide. We will also do this in the UK, not yet, but we will."

"We believe that in the UK we are selling 50 per cent by value and he has got 50 per cent by volume."

This meant Spectrum and ZX81 sales totalled 22 per cent of sale by value and Commodore's was 30 per cent by volume.

He said: "We are not sure whether we will beat him by volume this year, but we will beat him by value. We are selling more in America than Sinclair sells worldwide."

Commodore, he said, had 33 per cent of the US market, selling 5m computers.

## Hitch for mail order plan

The Computer Trades Association has run into a snag with a proposed bonding scheme to protect mail order customers.

General secretary Nigel Backhurst said: "Two of the insurance companies we have spoken to have turned it down because there are too many variables in the market."

"It looks as if we would have to go to Lloyd's, which would mean the scheme would cost more."

The CTA began looking at the possibility of a bonding scheme — financed by the software companies — after receiving between 300 and 400 letters. Customers could claim for late or non-delivery.

Now it was planning a conference, probably in September, where software houses, magazines and the Department of Trade could discuss the issue.

Computer Trade Association, 108 Margaret Street, Coalville, Leics LE6 2LX

The Aquarius, with plug-in Mini Expander (right) and Home Controller. Two remote control modules for home appliances are on the left

## Micros amongst the groceries

Computers will soon be on sale in TV hire shops and alongside groceries in hypermarkets.

Radio Rentals are test marketing the £79.95 Aquarius this month and next. And Asda, the big hypermarket chain run by Associated Dairies, has agreed to sell the computer. So have other stores.

Mike Lunch, managing director of distributors Mattel, said Mattel, said Radio Rentals had been a long-standing customer for Mattel's Intellivision games players.

He said: "I'll put the computers where the people are, not where the expertise is."

But retailers had to carry a wide range of peripherals, make demonstrations, have staff training and have enough traffic through the store to make it worthwhile.

He said he even saw the computer going on sale in DIY shops and furniture showrooms, saying it was an entry-level machine designed for the family.

Mattel officially launched the Aquarius here last week. The basic unit measures 13in by 6in with 49 Spectrum-like keys and 4K of RAM.

Add-one available at launch include a thermal printer (£139.95), cassette recorder (£49.95), Mini Expander with games controllers (£49.95), and 4K (£19.95) and 16K (£29.95) RAM packs.

There are 256 graphics characters, 16 colours on screen and a resolution of 320 by 192 pixels, or 40 by 24 characters.

Microsoft BASIC is built in

and a range of games, education and home management cartridges will cost £19.95 to £49.95. Several Intellivision cartridge games have been adapted for the Aquarius.

● Mattel also demonstrated a home control system which, using the Aquarius, will control lights, appliances, central heating and any other electrical device. A Home Controller unit and two modules will cost about £100 when available in the UK early next year.

The modules are plugged into wall sockets and appliance connected to them. And the Home Controller sends signals along the mains instructing them to turn on or off.

Mattel said up to 256 appliances can be controlled for up to 32 on/off switchings in seven-day cycles. Graphics guide the user on programming the unit.

Mr Lunch said the advantages included energy saving, security and convenience.

Mattel Electronics, 3 Fulton Road, Wembley, Middx HA9 0AE

## US giant plans TV software ads

American company Parker Video Games is moving into home computer software, and plans to spend \$6 million over the next few months to push its wares in the UK.

Television ads will tell British buyers about Parker's programs for the Atari 400 and 800 and VIC-20, as well as for dedicated games machines.

Parker Video Games, Palitoy, Owen Street, Coalville, Leics LE6 2DE

# Do you sincerely want to be conned?

As the owner of a working micro, the attitude of many home computer buyers makes me sick.

People without the slightest interest in computers and their uses are rushing out like lemmings to buy them — just because, all of a sudden, computers are the thing to have.

We've seen it all before, of course. Electric toothbrushes, sunbeds, tea makers, video recorders, Sony Walkmans (Walkmen?) — just five out of a long, long list of expensive consumer goodies which people with more money than sense feel that they have to buy.

And why? Just because, as Amundsen said on his reasons for going to the North Pole, because it's there. Or because the Joneses have got one. Or because, well, that's progress — isn't it?

Some of these items can and do make life easier and more pleasant. You might buy a video recorder to avoid the expense of going out to the cinema, or because you work nights and always miss your favourite TV programmes. A Sony Walkman might make your journey to work more tolerable — and be easier on the ears of your fellow-passengers than a blaring transistor radio. So let's be charitable and assume that most people buy these things with a definite purpose in mind.

However, browsing through the computer mags, time after time I read letters from people moaning that the High Street chains which now stock micros won't tell them what the damn machines are for. What on earth is the point of buying a computer if you don't even know what you want to do with it?

It seems as though spending money — and we're talking about hundreds of pounds now — has become an end in itself. People feel they have a right to be sweet-talked into buying yet another hi-tech gadget they don't really need. They feel hard done by if the sales pitch isn't forthcoming.

I, for example, bought my computer as part of a word processing system, because word processing helps me to do my job faster and more easily. With the help of the computer, I can either do more work and make more money, or do my existing work faster and have more free time. As a £400 tool of my trade, it's cost-effective (and tax-deductible). As a £400 toy, it would be obscenely expensive.

There are all sorts of other useful jobs that computers can and do help people to carry out. Because a computer is programmable, the list is almost endless. But the fact that you can program a computer is the only thing that set it apart from any other tool — a drill, a lawnmower, a liquidiser.

And after all, you wouldn't just wander into the do-it-yourself section of your local department store, your money burning a hole in your pocket, and say to the assistant, "Look, what do these drills do? If I bought a drill, what could I do with it? I want to spend some money on a drill, but first, tell me what it's for."

You might want to know what sort of drill to buy to do a particular job — but would you expect a chain store to give you that kind of information? I certainly wouldn't — I'd go to a specialist shop. And a computer is a lot more complicated than a drill.

No doubt the High Street stores will soon wise up to the vast profits to be made and train their staff to give customers what they want to hear: how a microcomputer will boost their IQ, send their kids to the top of the class, make the breakfast, improve their sex lives and make them the envy of the neighbourhood. But I'm not convinced that it will really be a good thing.

**Lynda Shaw**  
Freelance writer  
Halifax, Yorks

Rosalind Bevan and Horton Venture — backed by Dragon Data

## Dragon in sponsorship schemes

Dragon Data is putting its money on a horse — and its rider. The company is sponsoring three-day eventer Rosalind Bevan and her horse Horton Venture to the tune of £10,000 a year.

Rosalind, 18, is a near neighbour of Dragon's — she comes from Swansea. She was

part of the British junior team that won the recent junior European Three Day Event Championships, and has her eye on the international competition.

Dragon also sponsored the Mirror Dinghy Class World Championships, held at the Mumbles Yacht Club in South Wales. A Dragon-32 micro was used to log times and calculate results during the event.

Dragon Data, Kingfish Industrial Estate, Margam, Port Talbot, West Glamorgan

## Now there's two jacks

Jumping Jack has jumped once too often... and ended up giving his name to two different games.

Sumlock, the Manchester-based software house, brought out its Frogger-type VIC-20 program 'Jumpin' Jack' about 12 months ago.

And now Imagine has brought out an entirely different arcade game for the Spectrum called Jumping Jack, with an added g.

But the two companies have

## Chip in to your BBC

BBC owners can put their own software on to an EPROM (electrically-programmable read-only memory) chip with the Eprom Programmer from Technomatic.

The programmer plugs straight into the BBC, and is driven by software on cassette, disc or even another EPROM. It takes around two to three minutes to program a wide range of EPROM chips.

You can also use it to customise commercially available EPROM chips. It can read, blank check, program and verify at any location on the EPROM.

Cost: £90.85.  
Technomatic, 17 Burnley Road, London NW10 1ED

come to an amicable agreement. Both will continue to market the games for the present machines.

And when Imagine launches versions for the Commodore 64 and Atari the name will change to Leggit. Sumlock will continue with the original name with its Commodore 64 version, due out in August.

Sumlock's sales director Alan Lee said: "It's a different game and a different computer, but this should avoid confusion. There was no need for any hard bargaining."

And Imagine's general manager Bruce Everiss explained: "We did a search of trade names, and the name wasn't there."

Sumlock, 198 Deansgate, Manchester M3 3NE  
Imagine, Masons Building, Exchange Street East, Liverpool L2 3PN

## Make your BBC talk back

Just a few weeks after the launch of Acorn's speech chip for the BBC micro, a rival in the speech stakes has come on to the scene.

Smartmouth is a self-contained unit that plugs into the BBC's user port. According to its manufacturer, Technomatic, it can give an unlimited vocabulary

Price: about £45.  
Technomatic, 17 Burnley Road, London NW10 1ED

## Dragon extras

Elkan has announced three new products for use with the Dragon.

To help with your programming, there's a quick reference guide which fits neatly into your pocket.

It consists of 10 cards joined together concina-wise, and containing all sorts of useful facts and tips: a memory map, system commands, control codes, special keyboard keys, and much more besides.

## Teaching with animal magic

Four maze games make learning fun in Pathfinder, Widget Software's new Spectrum tape for young children aged three to eight.

A rabbit has to eat its way through a maze of carrots. A kangaroo can be programmed to hop its way through a maze by remote control. A monster must be guided through a park to eat its picnic in a certain order. And there's a frog who has to get across a lily pond, collecting friends along the way — but without landing on any waterlilies.

Each game has two difficulty levels and colourful graphics.

You can see Pathfinder, which costs £5.95, at the ZX Fair in London on August 20.

Widget Software, 48 Durham Road, East Finchley, London N2 9DT

## Control with no strings attached

Due out soon from Unicorn Research is a cordless joystick for the Spectrum.

It works by sending an infra-red signal to an interface which plugs on to the Spectrum's edge connector, and will initially control any game designed for Kempston joysticks.

Later on, Unicorn hopes to develop a multi-programmable device so that any Spectrum game can be played by remote control. Oric and VIC versions are on the way.

Unicorn is also working on a duplicate keyboard for the Spectrum, for use in two-player games, and a 48K Spectrum adventure game called Elementary, My Dear Watson.

It's a 3D graphic adventure in which you must follow in Sherlock Holme's footsteps and solve 20 cases.

Unicorn, 312 Charminster Road, Bournemouth BH8 9RT

The guide is a joint effort by Elkan and US firm Nanos Systems, and apparently contains some information that hasn't yet been published anywhere else. Price: £3.95.

Secondly, the Dragon Cruncher conversion program will convert most Dragon programs for use on the Tandy Colour computer — or, more to the point, convert listings from one machine to the other. Price: £7.95.

Finally, for keen games players there is the Quick-shot self-centring joystick controller, with positive response fire button and contoured grip.

The controller plugs directly into the Dragon — no need for adaptors. Price: £15.95 each, or £26.45 for two. Also available for Atari 400 and 800, VIC-20 and Commodore 64.

Elkan Electronics, 11 Bury New Road, Prestwich, Manchester M25 8JZ

## From book to software

Book publisher Collins has followed into the educational software market with a range of children's programs for the Spectrum.

Starting with pre-school children there's What's The Time, then Spectrum First Number, a counting program for four to six year olds. Both were written by primary school teacher Peter McBride, and cost £6.

For seven year olds upwards, Spectrum Know Your Tables aims to put the fun back into table learning. Written by Brian O'Byrne, the cost is again £6.

Finally, Peter McBride has produced a Spectrum Game Writer's Pack to teach children of 11 and over how to design and write their own games. Some ready-made games are also included. Price: £8.

Collins Educational, 5 Buckingham Place, London SW1

## Sixty-four varieties

It's no surprise to find that The Six-Four Supplies Company specialises in products for the Commodore 64. In particular, it is selling a range of 64 software imported from the USA.

Its range includes two word-processing packages, Script 64 and Totl. Text; a music synthesiser, Note Pro II; a Forth cartridge; Recipe Box, a database system; and Backup, which allows backup cassettes to be made for VIC or 64 software.

The Six-Four Supplies Company, PO Box 19, Whitstable, Kent CT5 1TJ

Pack away your Spectrum

## Spectrum just in case

Treetop Designs have brought out a briefcase specially designed to store your Spectrum and accessories, and to double as a console too.

From the outside, it looks like an ordinary black briefcase. But the lid lifts off and inside there's a raised support for the Spectrum, housing for the power

pack, recesses for printer and tape recorder and a socket for a 13 amp plug. There's also room for six cassettes and printer paper.

A switch panel allows you to turn the power on and off from the console.

The computer case costs £47.45 including postage.

Treetop Designs, 61 Widmore Road, Bromley, Kent

Sord's M5 — now £40 cheaper

## Sord slash

Sord has slashed £40 off the price of its new M5 micro, just a few weeks after its UK launch.

General manager Yoshi Makishima gave two reasons for the price cut:

● Journalists and the retail trade told Sord the original price was

too high for hobbyists and students.

● Sord's efficient plants in Japan had brought costs down.

Now the M5, marketed here by CGL, costs £149.95. And people who bought at the higher price are being offered Sord's BASIC G cartridge, usually £35, free of charge.

Sord, Samuel House, St Albans Street, London SW1

# Hit the road with your micro

**Driving's the theme of these five games. But are they drivingly addictive or will they drive you up the wall?**

## Race Fun 84K £5.99

Rabbit, 380 Station Road, Harrow HA1 2DE

This is a motor race simulation. On the left of the screen you have a speedometer, a fuel gauge, and current and highest scores. To the right you have a plan view of a race track with wide and narrow sections.

There are other cars on the track, moving at their own speeds, and you have to try to avoid contact with them.

While the program provided good and colourful graphics and a clear sense of competition with the other cars, there were some slight weaknesses.

When the speedometer shows zero speed, your car is still moving at a rate of knots, and you may think you are getting

## Turbo Driver Spectrum £5.95

Bos, Flockton House, Audby Lane, Wetherby, W. Yorks LS22 4FD

Turbo Driver doesn't quite match up to the specialised game console versions, but, then again, it doesn't cost £29.95!

Your car is left standing on the start line, and you must weave your way through many hazards, before catching the pack. It is then a question of trying to keep out of trouble, and in the lead, while four other cars try to carve you up!

The screen display is very fast and smooth-scrolling though the hoped-for 3D effect isn't quite right. Don't expect spectacular technicolour crashes either.

Each time you hit a hazard or

a barrier, you simply use more fuel, and thus finish that bit sooner than you hoped. I suspect that the addition of a Kempston Joystick, for which the game is set up, would add to your chances.

I found the program good fun, without having to learn a million new buttons to press. And I was impressed by the sound. If the Spectrum has only a single channel sound device, how do they produce the horn effect which sounds like a chord? I have an idea, see what you think!

All in all, well worth adding to your collection, and a pleasant change from alien zapping. **D.M.**

## Light Cycle Spectrum £5.95

PSS, 452 Stoney Stanton Road, Coventry

Light Cycle is a futuristic version of the old game Surround, where you create an ever-lengthening wall in an attempt to trap the computer into crashing its wall

into yours, or forcing it to move off the edge of the play area.

The PSS program has not added much to this old plot, and I found the graphics a little disappointing. There was nothing faintly resembling a cycle in the screen display, just thin lines described as laser trails.

On the plus side, the sound effects were excellent, true arcade quality. Nice crunching noises for the explosions were coupled

with rippling colours in the screen border. Quite a lot of skill is needed to beat the computer even when the game is set on its lowest level.

Perhaps computer buffs who don't remember Surround would enjoy whiling away a few hours with Light Cycle, but those of us who do remember, might feel that more could have been done graphically to breathe new life into this old classic. **M.D.**

## Roadrunner Spectrum £5.95

Protek, Clydesdale Bank Building, High Street, South Queensferry, Edinburgh EH30 9HW

After reading the cassette insert, I began to get quite excited. I started the tape and eagerly awaited my chance to drive my "turbo charged hot rod round a tortuous course."

On selecting the slow speed option, I was confronted with a full screen, symmetrical maze. I frantically scanned the screen and concluded that the only thing not moving — a strange, black, hat-shaped thing — must be me.

I started to move it around the maze leaving a pink trail behind. When caught by a ghost — why

ghosts are chasing the "turbo charged hot rod", I cannot imagine — the program plays an abridged version of "Freddie Gustav" (see page 135, Sinclair manual).

On my third attempt I completed the first maze, but I found the second maze to be exactly the same. My last life finished, the program politely informed me that I'd completed "1 screens."

The instructions were quite adequate, but there is not much you can write about such a simple game. One plus point — the program offers a choice of control keys:

	<b>M.T.</b>
instructions	75%
playability	30%
graphics	30%
value for money	30%

somewhere, but the score does not increase.

When fuel is exhausted, a distorted off-key version of the start of the funeral march is played. For anyone who has lost friends in motor racing accidents, this seems crass bad taste, to put it mildly. It is scarcely cheerful for anyone. **D.T.**

## Daddy's Hot Rod TI-99/4A £5.95

Lantern Software, 4 Haffenden Road, Tenterden TN30 6QD

The idea of this game is to drive your dad's Hot Rod car around the block while collecting hitch hikers and taking them to a garage on the way. Your car is displayed in the middle of the screen and the road scrolls up towards you.

You score a point each time you complete the course, and each time you transport a hitch hiker to the garage.

The program loaded first time and the only bug I found was that the program occasionally

paused for a second or so, sometimes distracting your attention and making you crash.

The screen display was very good and colour and sound were both used very well.

Instructions were displayed on the screen at the beginning of the program, but they did not explain how to collect hitch hikers, or how to drop them off at the garage.

All in all, I enjoyed playing this game, and although it wasn't as fast as a game written in machine code, it was faster than most programs written in TI BASIC. **J.J.**

# Microdrive: does it live up to the promises?

**In the first full review, David Nowotnik gives his verdicts on Sinclair's new mass storage device, and the interface unit**

Can it really be true? After 14 months of "coming soon" Sinclair's Microdrives have actually arrived. For me, the realisation of that fact occurred when a review model turned up at my local station the day following the launch.

The equipment arrived without the colourful packaging now associated with Sinclair's products.

I got down to a close examination of Uncle Clive's latest innovation.

By now you might be aware that an interface is necessary to use the Microdrive. The unit Sinclair provided is called ZX Interface 1, and you can use up to eight Microdrives with this interface. This unit is black, measures nine inches wide (the same as the Spectrum) and three inches broad.

It is half an inch deep at the front, and one inch at the back. This wedge-shaped box fits under the Spectrum, inclining the keyboard to a gentle forward angle, making the keys easier to read.

A block connector fits on top of the interface and is fitted into the Spectrum's user port. Before doing this, two of the screws on the underside of the Spectrum should be removed; these are replaced by screws on the interface which lock the unit into position under the Spectrum.

There are four connections at the back of the interface. There is a duplicate of the Spectrum user port for the ZX Printer and other devices, a nine-pin female RS-232 socket, and two 3.5mm jack sockets.

The jack sockets are for the network system. While the Microdrive has received all the publicity, this lesser-known facility on the interface also expands considerably the potential of the Spectrum.

For the ZX Net allows you to communicate with other Spectrums fitted with the interface unit. For example, through this system one Spectrum can access a Microdrive, or use a printer connected to another Spectrum, or transfer programs or data.

The RS-232 interface allows the Spectrum to be connected to a number of devices including professional printers and modems.

On the side of the interface is the port for the Microdrive. A flexible cable is provided to link the Interface and Microdrive.

The ZX Microdrive looks very similar to the prototype appearing in photographs a year ago. It is 3½" in deep, 3½" wide and stands 2in tall. At the front is the slot for the cartridges and an LED indicator light, which lights up when the drive is in operation.

Ports appear on both sides of the Microdrive. For the first drive the flexi-cable linking it to the interface is fitted to the right side. A solid block connector (provided with each Microdrive) fits to the other port to which a second drive can be fitted.

Using these solid connectors, you can have up to eight drives in a row.

The big secret — is it a tape or micro-floppy disc? — was revealed in HCW two weeks ago. The system is a continuous tape. The cartridge is no bigger than a book of matches, 1½in by 1¼in by ¾in.

The tape is about one-sixteenth of an inch wide and 16ft in length. Each costs £4.95.

The interface unit has an in-built ROM which allows many existing commands to be modified for use by Net, the Microdrives and the RS-232 port.

For example, the command RUN (when used immediately after power up, or NEW) will automatically LOAD a program with a filename of "run" from Microdrive No. 1.

Such a program appears on the demonstration cartridge provided with the Microdrive. This program explains the purpose of the other programs on the cartridge, all of which demonstrate uses of the interface.

Particularly useful is a program called "Dbase prog", which uses a database (also on the cartridge) to explain the syntax and purpose of all commands used in conjunction with the RS-232 interface, Net and Microdrives.

The command to LOAD the program from the drive is: LOAD "\*"m";i;"Dbase prog". The asterisk, "m" indicates that LOAD refers to a Microdrive and the figure one indicates Drive No. 1.

The syntax of SAVE, VERIFY and MERGE is similar.

The Microdrive is fast — but not as fast as the Sinclair claims. The average access time is claimed as 3.5 seconds. However the total time to LOAD the display and attribute files (7K) is eight seconds; 16K of program plus variables took 10 seconds to LOAD.

Part of the demo cartridge provides the check of SAVE/VERIFY and ERASE. It took 18 seconds to SAVE and VERIFY a 7K file, and 14 seconds to erase it.

The Dbase program on the demo cartridge loads files from the Microdrive when requested. Loading times were very variable. The same file took 40 seconds to LOAD on one occasion, 16 seconds sometime later.

Times to load files varied between three seconds and 45 seconds; if you ask for a non-existent file you have to wait 45 seconds for the "file not found" error message.

This demonstration LOADED individual records into RAM; it can be consistently faster to

LOAD a complete file as an array.

The CAT command will display on the screen (or send to any other output device) the file names of programs and data on a cartridge, and show the remaining space on the cartridge.

Formatting a blank cartridge (this must be done before it can be used) and use of CAT reveals that only 89K is available on each cartridge. This is somewhat less than the earlier promise of 100K, although Sinclair guarantees that each cartridge will hold 85K or it can be returned for free replacement.

The review units were accompanied by a new 48K Spectrum. Was this unit sent to me as earlier releases of the Spectrum would not work with them?

But, after linking my issue 1 Spectrum to the Interface and Microdrive I can reveal that all was well. It worked as well as the brand new Spectrum.

Two years ago, some continuous tape fast-access devices, nicknamed "stringy floppies", made their way over from America.

Despite their very competitive price compared with disc drives, they never caught on.

However, the "stringy floppy" bearing the Sinclair brand name is a certain hit.

A lot more testing has to be done, but I found little to fault it apart from slow data access and rare error in SAVEing and LOADING.

Time will tell on the reliability of the Microdrive and the delicate-looking tape, but the £80 price tag — if you buy Microdrive and Interface together — is the best opportunity the average Spectrum owner will have to upgrade to a more powerful micro.

It will be particularly attractive to the bored games player seeking more constructive uses for his computer.

A Microdrive connected, showing how the cartridge is inserted

## Set sail for danger with Bill Freestone's Armada game for the Spectrum

Ahoy there! Why not come sailing with your Spectrum? All you need is 16K.

As you look across the deck of your Elizabethan galleon you can almost smell the salty air whiffing through your screen.

But you're not here to enjoy the view, Jim lad. There's work to be done.

The enemy are sailing across your screen and you have to sink them using the ship's cannon. Just press Z, X or C to send a cannon ball hurtling towards the enemy galleon.

The user defined characters are defined at the end of the program to keep them out of the way of the main program loop.

This mean that to start the program you must enter GOTO 300. When saving type SAVE "ARMADA" LINE 300. This will start the program at the appropriate place once loaded.

In case it is not clear which graphics characters should go into which lines they are included in my "How it works" section.

### How it works

100-103 move galleon sub-routine. Line 102 graphics: A,B,C,D,F,E

110-134 fire cannon sub-routine. Lines 110,120 and 130 graphics: G, H, I, J, K and L

140-164 sink galleon. Line 200 graphics: E,D,F,E

210-240 game over

300-575 define characters

600-640 instructions

### Hints on conversion

Spectrum colours are set using INK and PAPER with the following numbers: 0 black, 1 blue, 2 red, 3 magenta, 4 green, 5 cyan, 6 yellow, 7 white.

Colour commands inside print statements set colours for that print only and not the whole screen.

ATTR (R, C) reads the colour of the character square at position R rows and C columns. In this case it has been used to tell whether the enemy galleon has been hit.

BEEP D, P sounds speaker for D duration in seconds, P pitch in semitones relative to middle C

DRAW X,Y draws line X pixels along and Y pixels up from last PLOT or DRAW command

DRAW X,Y,A draws a line X pixels along, Y pixels up and through an arc of A radians.

CIRCLE X,Y,R draws a circle with center X,Y and radius R

OVER I allows a character to occupy the same square as another one. If your machine cannot do this don't worry - it's only used to underline the title in line 600

POKEUSR "A"+g,r is the way characters are defined on the Spectrum. In this case row g of character "a" is being given the value r

### Variables

A column position of enemy galleon

J number of enemy galleons passed (game ends when it reaches five)

P used in a loop to change border colours while waiting for another game to be started

U used to set up sea and sky

R used to draw ship's deck

X row position of cannon ball

S score

G graphics loop variable

## Screen invert VIC-20

This routine will change inverted characters to normal characters and vice-versa. The routine will only work on a 5K/8K VIC-20.

To invert the screen you must call up the machine code with a SYS 830.

The routine is totally relocatable although it is placed in the cassette buffer by the BASIC loader (Listing 1). Listing 2 is the routine in 6502 assembler language.

### Listing 1

## Examine your memory Spectrum

My short program Hexprint is written for Spectrum and ZX printer owners who want to write machine code programs.

It allows you to see large portions of memory all at once and examine them at your leisure to help you decide the best place to add new routines.

It is small enough to use in a 16K Spectrum even when most of the memory is taken up with machine code.

The addresses are printed in decimal, but the code is printed in hexadecimal.

If you don't want to waste any of that precious ZX printer paper, then modify the program to print to screen by changing all references to LPRINT to PRINT.

Remember to clear XXX-XX, where XXXXX is the ramtop that you wish to set, before loading any machine code. Otherwise the Spectrum will crash.

This program could be converted to the ZX81 simply by rewriting it using one-statement program lines.

Derek Jones

Sample print of hex code

## Protected programs Spectrum

To fully protect your program, you need to dabble in machine code. But if this appears formidable, the following routine will give a virtually undeletable program line. Type in your message at Line 1, such as: 1 REM copyright your name

And then enter POKE (PEEK 23635 + 256 \* PEEK 23636) + 1.0. In effect this alters the starting address of the program, giving a virtually undeletable line at 0. Try removing this line! Using the direct colour tip above you can use line 0 to blank out the rest of the program. **Tim Boone**

## Wall B £5.95

Program Power, 8/8A Regent Street, Chapel Allerton, Leeds LS7 4PE

One of the many Breakout-type arcade games, and not a particularly outstanding one at that.

One of my criteria is whether it is better than versions published as a listing. This game, although providing plenty of options, is not as good as some I have typed in.

The program loaded first time and in two sections, first

instructions (which can be omitted on future loadings), then the game.

Colour, graphics and sound are good, and control keys are efficient. But I found that I soon became bored with it. There isn't even a high score hall of fame feature.

R.E.

instructions	90%
playability	40%
graphics	45%
value for money	30%

## Bouncer B £8

A & F, 830 Hyde Road, Manchester M18 7JD

You control a 'circle of antimatter' into which the

bouncing aliens, who inhabit this planet, are sucked. But if the vortex you control is slightly off centre then the vortex is itself destroyed.

If you cannot clear the area of bouncing beings before the stars twinkle their last then

your time (and game) is gone.

The first two sheets are easy enough, with few and fairly slow bouncers to hoover into your antimatter, but on the third the bouncers bounce off the sky, needing fast thinking and mental geometry unless you are prepared to turn the VDU upside down!

Unfortunately that's it — there are no extra revelations as you move through the game.

D.C.

instructions	50%
playability	40%
graphics	70%
value for money	50%

## Painter B £8

A & F, 830 Hyde Road, Manchester M18 7JD

This is one of my top three favourite games without a doubt! A paint roller has to be steered around some 'rooms' in order to colour them in. It ain't that simple, however, as there are Chasers trying to stop you and who destroy your roller if they do.

With only three rollers and with ever-more intricate patterns to paint, life is bad enough — but the chasers ac-

tually become more numerous and more 'intelligent' as time goes on. (I'd swear they get faster too but no-one believes me!)

This game has high addictive value. One of my guests played it till 2 am. It's fast, colourful, responsive and has some of the rudest sound effects you've ever heard.

## Cosmic Defender B £6.50

Soft Joe's Business Centre, Claughton Rd, Birkenhead, Merseyside L41 6ES

I suppose most people know why games are written in machine code, rather than BASIC — BASIC is just too slow for good animation. Well, this game is in BASIC.

It's a simple shoot/bomb the aliens type, nothing new, unexceptional graphics and one of the worst keyboard control layouts I've seen in ages.

Because BASIC takes so

long to move things around on the screen, sometimes your ship seems to ignore movement commands. I can't think of anything about this one to make me recommend that you buy it.

B.J.

instructions	90%
playability	20%
graphics	50%
value for money	10%

## Swoop B £6.95

Program Power 8/8A Regent Street, Chapel Allerton, Leeds LS7 4PE

A very limited version of the Galaxians arcade game with only a couple of descending aliens at a time.

However on landing they do not return to the pack but mutate into destructive exploding eggs.

There are eight phases of 'sheets' of increased difficulty. Colour and sound is used well, but graphics tend to be 'chunky'.

The keys are responsive and easy to use.

A disappointing game — I have other versions which are far superior (and which cost more!).

# Make fast work of SCROLLing with your ZX81

Fast moving graphics on all microcomputers often depend on routines written in machine code.

This is particularly important on the ZX81 where the operating speed of BASIC is much slower compared with other micros.

But the prospect of writing machine code can be quite daunting to relative beginners to computing. Fortunately, it usually is not necessary to write a whole program in machine code, just the parts that need high speed.

From a library of short machine code routines you could build up a fast moving game. To start you off in the right direction, this article will show you how to build up routines on the ZX81, with four short machine code routines as examples.

The command SCROLL is provided on the ZX81; its function is to move every screen character up one square. You could also scroll downwards, or left, or right, and the routines 1, 2, and 3 in table 1 do just that.

The fourth routine inverts the screen, that is, it converts black to white and white to black in every screen position. Please note that all four routines will only work when the computer has access to more than 4K of RAM.

The easiest method of storing machine code on the ZX81 is in a REM line, this line being the first line of the program.

The numbers in table 1 are in hexadecimal (base 16); each pair of digits represents a number between 0 and 255 in decimal, and requires one byte of RAM for storage. You can enter these machine code hex numbers using the hexadecimal loader in table 2.

Count up the total number of bytes in the routine(s) you want to

**Speed up your programs with a touch of machine code. It's not as daunting as it seems if you follow David Nowotnik's advice. You'll need at least 4K of RAM**

Table 1 — machine code hexadecimal listing

1. Reverse SCROLL

```
01 18 03 2A 0C 40 05 E8 01 F7 02 2A 0C 40 09 ED 88
1B 06 20 3E 00 12 18 10 FC C9
```

2. Left SCROLL

```
06 18 2A 0C 40 54 5D 23 13 7E FE 76 28 03 12 10
F6 3E 00 12 23 13 10 EF C9
```

3. Right SCROLL

```
01 18 02 2A 0C 40 09 54 5D 06 18 2B 2B 18 7E FE 76
29 03 12 18 F6 3E 00 12 2B 18 10 EF C9
```

4. Invert Routine

```
2A 0C 40 06 18 C5 06 20 23 7E C6 80 77 10 F9 23 C1
10 F2 C9
```

use. This is the number of bytes (characters) you will need in line 1 in table 2. Type in one full stop for every byte you need, then add a few extra for safety.

When you RUN this program, type in the hex numbers in table 1, one pair of digits for each INPUT prompt, and S to stop. Make sure you enter the numbers in the right order.

One routine may follow immediately after another provided that you have made enough space available. Just enter the routines you want for your particular application.

Before you use the machine code routines, you should check that all numbers have been entered correctly.

A number of readers reported problems in trying to use the routine in my last article on ZX81 machine code (HCW No. 17). This may be due to the incorrect entry of numbers, so they may care to use this check routine as well. First, delete lines 2 to 8 of the hex loader routine, then add the lines in table 3. Now RUN.

The routine prints on the screen the storage position (address) and the value held at that address in hex. Check the value, then press a key to move onto the next address.

Press BREAK once you have checked the entire routine. If you found you have made one or more mistakes, make a note of the addresses and the correct byte values.

Following BREAK you can correct the value by using POKE as a direct command to place the correct value into the appropriate address. Before using POKE, you will have to convert the hex value into decimal; this you can do using the tables at the back of the ZX81 handbook.

You should also use this routine to note the start addresses of all routines. If you have only one routine (or the first in your series of routines), it will start at address 16514.

You can identify the start of the second and subsequent routines as the address which follows a byte value of C9 (hex).

C9 is the Z80 machine code instruction for RETURN; a machine code routine is similar to a subroutine in BASIC, and you return from the routine in much the same way. You will need to know the start addresses when you call the routines from BASIC with theUSR function.

Note that not all machine code routines will start at their first address and end at their last; it just so happens that these do.

Once you have checked your routines, and noted all the start addresses, delete lines 2 to 10, and enter the program lines in table 4. This is a very simple program to fill the screen with text. SAVE it before you try any machine code routines.

You can get the machine code to work by using direct commands RAND USR x, where x is the start address of the machine code routine. Alternatively, the RAND USR x command can be entered as a program line.

Why not try some? Use inside FOR — NEXT loops, SCROLLing left, right, or down

## ZX81 PROGRAMMING

can be an attractive way of clearing the screen. And invert inside or FOR —NEXT loop produces an effective simulation of an explosion.

As a final note to readers who experienced some problems in my

READ/DATA article in HCW No. 17, I have reproduced table 5. To obtain a demonstration of the OUT OF DATA ERROR message, change the first number in line 170 to 6, and add a final line: 180 PAUSE 200.

Table 4 — demonstration routine

```
10 FOR I=1 TO 10
20 PRINT "ANYTHING ON THE SCREEN"
30 PRINT
40 NEXT I
```

Table 2 — hex loader

```
1 REM .....
2 LET X=16514
3 INPUT A#
4 IF A#="S" THEN STOP
5 LET J=16*(CODER#-28)+CODER#(2)-28
6 IF PEEK X=27 THEN POKE X,J
7 LET X=X+1
8 GOTO 3
```

Table 3 — byte value check routine

```
2 LET X=16514
3 LET Y=PEEK X
4 LET Z=INT(Y/16)
5 LET Z1=Y-16*Z
6 SCROLL
7 PRINT X,CHR$(Z+28),CHR$(Z1+28)
8 IF INKEY#="" THEN GOTO 8
9 LET X=X+1
10 GOTO 3
```

Table 5 — an example of READ/DATA

```
100 LET C=VAL A$(TOUSR READ)
110 DIM Z$(C,10)
120 FOR I=1 TO C
130 LET Z$(I)=A$(TOUSR READ)
150 PRINT Z$(I)
160 NEXT I
170 REM:5, ONE, TWO,
THREE, FOUR, FIVE
```

### FOOTBALL MANAGER 3D

by Addictive Games

for SPECTRUM 48K AND ZX81 16K

ACTION FROM THE PITCH

SPECTRUM VERSION

➡ This superb game is now available from branches of **W.H. SMITH \* and BOOTS.**  
 Manage your own team in this exciting game of skill which vividly captures the drama and excitement of real football.

- FEATURES INCLUDE:**
- \* 4 DIVISIONS \* F.A. CUP \* PROMOTION & RELEGATION \*
  - \* TRANSFER MARKET \* TEAM SELECTION \*
  - \* SAVE GAME FACILITY \* \* \* AND MUCH MORE! \* \* \*

WHAT THE PRESS SAY ABOUT IT—

➡ *If YOU have always wanted to manage a football team, FOOTBALL MANAGER, from Addictive Games, is for you — The game is ideal for a football fanatic but the most interesting thing for us was the 3-D graphics used to create the goalmouth action — the game is a winner SINCLAIR USER FEBRUARY 1983*

➡ *Although I'm no great football fan, I really enjoyed playing this game — excellent use is made of colour and user-defined graphics. The game is very logically put together, so that the development of strategy and tactics has a real effect. For example, one of my teams got through to the fourth round of the F.A. Cup where it was beaten by a second division side. This upset morale and meant that our promotion bid failed, perhaps I should have given up the F.A. Cup run and held some good players back — the possibilities are endless. Brian Clough had better watch out!*

\* SPECTRUM VERSION ONLY.

## SOFTWARE REVIEWS

# Computer simulations: the old meets the new

Meet your old favourites, transformed into computer games

### Darts BBC B £8.50

Rainbow Research, 288 High Street, Enfield EN3 4HF

My first niggles about this program surfaced while reading the on-screen instructions. Why, when the BBC has cursor control keys, direct the target crosswires with keys 1,2,3 and 4?

The drawing of the dart board

was very slow and could do with speeding up, either by using better BASIC techniques or putting this section in machine code.

Once drawn, the target crosswires start to wander around and are repositioned by using the aforementioned control keys.

When you judge you're on target, not always easy as the crosswires tend to merge with the

graphic presentations of the playing cards.

The instructions could be somewhat bewildering to the novice for neither on the cassette card nor on the screen are the rules clearly set out. It wouldn't have cost much to print them on the card, given the very adequate profit margins on games software, and it is something the customer has a right to expect.

For those new to it, it should make a welcome change from ghosts in mazes and with all the practice the computer can give could even prove profitable in those holiday casinos on the Costa Paquet!

G.M.

instructions	65%
playability	90%
graphics	90%
value for money	85%

An effective implementation of the classic game also known as pontoon, twenty-one and even on occasion, vingt-et-un: this is the one Tandy have been giving away free with every TRS80 for ages now and this version is almost as good.

Using a notional four packs of cards, the computer plays banker for one to four players, gives each a (theoretical) twenty pounds, plays ten hands and then cashes up. The winner is of course the richest.

The game keeps track of the cash for each player, and deals out tolerable if somewhat small

### Bandit Dragon 32 £6.50

Soft Joe's £6.50, Business Centre, Cloughton Rd, Birkenhead, Merseyside

A rather nice simulation of a fruit machine, Bandit includes holds, nudges a gamble feature and has large colourful symbols. Excellent instructions explain

how to play and give payout rates.

A jackpot of 500 credits for three Dragon Bars is a very rare event and you start 250 credits with which you start soon disappears.

But not having full sound effects the symbols are displayed much faster and you are not driven mad by the beeps.

This is a very addictive game which you can play for hours

without needing a stack of 10p pieces.

D.W.

instructions	95%
playability	95%
graphics	90%
value for money	80%

### 5-Alike 48K Oric-1 £4.95

Passoft, 213-215 Market Street, Hyde, Cheshire SK1 1HF

This is a game that you may have heard of as Yahtzi, although it is simply a variation of poker dice.

Up to six players take it in turns to roll five dice. Each player can then reroll any of the dice, the object being to make up one of a number of different combinations, such as Pontoon, where the dice add up to 21, a four or five dice kind, or three, four or five of a kind etc.

You have 13 turns and after each turn you must allocate his score to one of the 13 different categories to score points.

As a newcomer to this type of game I was pleased to see a wealth of examples in the instructions, and I found the game to be both compelling and interesting. I would recommend it to anyone looking for a break from frantic keyboard-bashing.

The graphics (consisting of five disc faces) are colourful and attractive and it's nice to hear some alternative sounds to preprogrammed zaps and pings. I suspect that I shall keep coming back to this one for quite a while.

G.P.

instructions	80%
playability	70%

board on a colour TV, you fire your dart by hitting key 5.

The flight of the dart is again very ponderous and may drift off target slightly. On arrival your score is added to the running total until the third dart, when the whole lot is deducted from the total and player two has his go.

The game soon loses its appeal mainly due to the slow speed and lack of good sound effects. J.H.

### Dominoes Spectrum £4.95

Micromega, 230-236 Lavender Hill, London SW11 1LE

This program gives little incentive to leave TRovers and go home to your Spectrum. It is a competent version of the classic pub game, but sadly lacks the welcome chink of glasses and other atmospherics.

The author had remembered that domino novices still exist and good instructions are included on the easy-loading cassette. "Wait a moment!" ordered the computer and 13 dominoes was sat in front of 13 dominoes, dealt by my opponent, the Spectrum, who duly promised to

forget them! Specifying which dominoes I wanted to play was easy, but tell-

ing the computer where to place them was another matter — for reasons best known to himself the author has done away with the familiar right-angle shapes introduced during a game and implemented an unnecessarily complicated system of his own.

This is detracted from the playability of a game whose very subject matter is not the most exciting. Nevertheless the Spectrum is a good opponent and the score is currently 4-2 in its favour. T.B.

# Ughh! Don't let the slugs get their revenge

Your terraced garden is infested with 20 giant slugs, all sucking the oxygen from the air.

To reach your seed-box and plant the seeds you must clear the slugs from each level by dropping slug pellets, using the space bar.

To reverse direction use the R key, but remember that the effort will reduce your oxygen reserve. Do not run out of pellets or descend a ladder before the slugs are killed or they will get their revenge.

### Main variables

- R row of man on screen
- C column of man on screen
- CE erase column of man
- RE erase row of man
- X define direction of man
- SP quantity of slug pellets
- SG number of slugs
- L oxygen level

### How it works

- 150-340 define characters and colours
- 350-420 input and check number of slug pellets
- 430-570 set up screen graphics
- 580-640 set initial variables and man's position
- 660-1200 set man moving, detect key presses and hits on slugs, descend ladders
- 1220-1760 lose and win routines, request another game
- 1780-1810 subroutine to clear screen

```

**Hints on conversion**  
Texas BASIC has some unusual commands for graphics and sound:

**CALL CHAR** (number, hexadecimal string) controls the user definition of characters. Number refers to the ASCII code of the re-defined character.

**CALL HCHAR** (row, column, number) prints the character whose ASCII code is number at position row, column on the screen. The TI99/4A has a screen size of 24 rows by 32 columns.

**CALL GCHAR** (row, column, variable) is the equivalent of PEEK. The ASCII code of the character at position row, column on the screen is left in the designated variable.

**CALL SOUND** (d, f, v) sounds a note of frequency f, duration d milli-seconds and volume v.

**CALL KEY** (O, K, S), the equivalent of INKEYS, will leave the ASCII code of the key pressed in the variable K.

**CALL CLEAR** clears the screen. A direct equivalent of CLS.

**NEW!!  
SPECTRUM  
BRIDGE PLAYER**

At last you can play Bridge against your Spectrum. You can play a wide range of systems with Blackwood and Stayman and Blumlein and many other systems. With our computerised, on-line reply facilities. With our comprehensive, on-line help programs.  
**48K Spectrum - £5.95**

**SPECTRUM BRIDGE TUTOR**

Improve your Bridge with Spectrum Bridge Tutor. Uses the Ace bidding system including Blackwood and Stayman conventions. Each of the 40 hands illustrates a particular aspect(s) of the bidding and play. Following the hand play is an explanation of those aspects highlighted in the hand. The correct bid and play must be made in order to progress but a help feature is included.

For 16k and 48k Spectrum -

Beginners (40 hands) £5.95  
Advanced (40 hands) £5.95

**FLOATING POINT FORTH**

Supports all Forth structures, the ZX printer, and access to I/O ports. Has all the Spectrum's internal colour graphics, plot and draw and transfer facilities. Access direct entry of machine code. Comprehensive user guide.  
**48K Spectrum - £10.95**

**ORIGINAL SPECTRUM FORTH**

Similar facilities to the Floating point version but has only integer arithmetic.  
**16K and 48K Spectrum - £7.95**

**SUPERCHESS II  
For Sinclair 48K SPECTRUM  
THE BEST AT £7.95**

● 7 levels of play ● Plays a variety of openings e.g. French Defence, Sicilian Defence, Ruy Lopez, Queen's Gambit etc. ● Set play mode ● Analyse mode ● Enhanced end game play ● Recommended move option

**ZX DRAUGHTS**

For 48k Spectrum - £5.95  
16k Jupiter Ace - £5.95

**COLOSSAL CAVES  
(Adventure 1 by Abersoft)**

Enter the Colossal Cave, discover the treasure left by the wizard. On your travels you will meet dragons, snakes, trolls and other denizens of the underworld. Be warned, this adventure can be addictive! Includes a save facility so that the adventure can be continued from the point reached when saved.  
**48K Spectrum £6.95**

**SUPERCODE**

The ultimate Machine Code 1001 kit for the Spectrum with 60 plus routines. Both 16k and 48k versions of each cassette.  
**16K and 48K Spectrum - £8.95**

**Speech from the Spectrum**

**48k**  
SOFTALK I 'Multwords' 70 plus words  
£3.95  
SOFTALK II 'Spacgames' 80 plus words  
£3.95

**BEEPER AMPLIFIER**

Plugs directly to the Spectrum's EAR or MIC socket. Battery powered (not supplied)  
£5.95  
or SAVE £1 when ordered with any program  
Please add 35p for p&h

**ORIGINAL SUPERCHESS**

10 levels of play, plus many features  
**16k ZX81 £4.95 48k Spectrum £4.95**

**16k SUPERCHESS £6.95**

The best 16k Spectrum Chess program. 3 levels of play with playing strength similar to the 48k version's first three levels. Analysis mode, plays several openings e.g. Queens Gambit, Ruy Lopez, plus more features.  
Runs on 16k and 48k Spectrum.

**BACKGAMMON**  
Two popular  
48k Spectrum £5.95

software  
**Spectrum  
Software**  
Specialists in high quality, intelligent games

**SUPERCHESS II**

Comes with the features of the original but also includes an on-line available for  
**16k Jupiter Ace - £5.95**

**SNAIL LOGO**

An advanced implementation to the Logo turtle type graphics. Uses the original style Logo instructions to control the movements of a graphical Snail around the screen instead of a mechanical turtle. Includes the following features: ● Full operating system and Editor ● Comprehensive user guide with sample programs ● Multi-level Hierarchic Procedures ● Procedures with Parameters ● Recursive Procedures ● Nestable repeat loops ● Variables ● Colour and wall bouncing controls ● 25 Language Instructions, over 20 warning and error messages ● Commands to control the optional ZEAKER turtle.  
**48K Spectrum £9.95**

**ZEAKER II TURTLE** with Pen and obstruction sensors. Can be used with our Spectrum Snail Logo. The ZEAKER can be used with both the Spectrum and ZX81 or other micros with suitable parts.  
**ZEAKER in Kit Form**  
**ZEAKER Ready Assembled**  
**Z81 interface** if required  
Spectrum interface if required

# Send your Spectrum into space

**The action's extra-terrestrial in these five Spectrum games. We beam you down our reviewers' reports**

## Zzoom 48K £5.50

Imagine, Masons Buildings, Exchange Street East, Liverpool L2 3PN

Fight off enemy planes and tanks to allow the refugees to escape. Similar in concept to many battle/space games but

with outstanding graphics and good sound; this game really is exciting. The realism generated by 3D effects of swooping, diving, bombing, attacking planes and the little men running and shaking their fists at the attackers is superb.

There are options to use the most popular Joysticks

## Violent Universe £5.50

Quest, 119 The Promenade, Cheltenham, Glos

This is a fast, colourful game, making excellent use of the Spectrum's graphics and sound.

Your space craft (same as in Black Hole) moves around the screen, leaving behind it up to six gas clouds to destroy the suicidal anti-matter alien craft which are out to get your convoy of spaceships.

The keys are responsive and easy to use, but there is a joystick option, and using

one makes the game easier to play.

Instructions are given on screen and insert, though I could have done with a chart explaining which were friendly and which were alien craft; telling them apart only comes with practice.

My solution was to simply destroy everything in sight.

An addictive game, with an increasing difficulty level to keep your interest. **R.E.**

instructions	76%
playability	94%
graphics	98%
value for money	92%

## Trog 48K £4.95

Macronics, 26 Spiers Close, Knowle, Solihull B93 9ES

You're the sole survivor of the star-fleet, lost in the far reaches of the Galaxy. In your lust for revenge you

must contend with alien ships and rogue meteors.

You manoeuvre up and down to avoid collisions and to blast your way to a huge points tally. In tight spots you can evade destruction by entering hyperspace.

Your precious fuel is replenished when you destroy a Scapian (who?) ship. But be

careful, they hover tantalizingly out of range.

The game's instructions are clear and concise, but note the spelling errors! The game is easy to play thanks to the well allocated control keys, or you can use a joystick.

Be careful not press CAPS SHIFT and BREAK together at the end of a game.

Imaginative use of colour and graphics combine to produce an effective screen display. **C.C.**

instructions	90%
playability	90%
graphics	90%
value for money	80%

## Hidden City 48K £5.95

Bytewell, 203 Court Road, Barry, South Glamorgan CF6 7EW

Can you free your planet from entrenched alien forces who have built cities underground?

First dive from outer space to the underground space tunnel at bottom right. Your three shields won't last long unless you are quick, even at the lowest of six skill levels.

Dive into the alien fuel dump maze, fill up and on in to the subterranean tunnel. Peculiarly, you can gain points from 'active' space

mines while the 'inactive' dispose of you (as do tunnel walls, floor or defence stations).

At last you come to the alien city. One shot into the hearts of the reactor returns you a hero of your people.

Colour and sound are well used but not spectacular. There are one or two rough edges — some jerkiness of movement and at times control is not very responsive. **P.C.**

instructions	70%
playability	85%
graphics	80%
value for money	75%

(Kempston etc) or keyboard. The keyboard option allows a choice of several different key combinations.

Without doubt the best combat game, so far, that I have played on the Spectrum — I even bought a joystick specifically to play it. **R.E.**

playability	100%
playability	100%
graphics	100%
value for money	100%

## Cosmos £5.95

AbbeX, 20 Ashley Court, London NW4

In Cosmos you use your starship to defend mine cargo vessels from alien ships, warp mines and asteroids. To help you, you have two lasers and an on-board computer which gives you various status reports.

Your objective, as you patrol nine possible sectors of space, is to shoot the aliens and asteroids as you scroll them into your laser gun-sight, located in the middle of your window on space. Your stock of cargo ships

diminishes as they get hit by either aliens or asteroids.

Instead of fumbling for single keys, the whole keyboard is divided into sectors, and any one of five keys in the given sector will work.

This program is well written and has good graphics. The only thing lacking is sound. The struggle to save the universe carries on without a single whisper. **M.B.**

## ZX MICROFAIR

Where else can you see so much for Sinclair Computers?

### ONCE AGAIN AT ALL PALLY THE BIGGEST SHOW OF ITS KIND ANYWHERE IN THE GALAXY!

What Computer Exhibition gives you the opportunity of finding everything (and we mean everything!) for ZX Computers?

Where can you find more than 150 exhibitors dedicated to Sinclair enthusiasts?

Where on Earth can you discover new and original products — hardware, software, books peripherals, programs, add-ons — many additions launched at the show?

Where can you find plenty of space to move, eat, drink, relax and, of course, buy?

**The big show for a quid (or less)!**

Where will you discover that special 'show offer' on the equipment you have been promising yourself?

Where will you find an exhibition hall with so much parking space — and in parkland too?

And what other exhibition offers you all this for only £1 entrance fee (50p for kids under 14)?

There's only one answer: **THE 8th ZX MICROFAIR AT ALEXANDRA PAVILION**

**SATURDAY 20th AUGUST 1983**  
Make a note of it now... and come along for a good day out!

**CUT OUT AND KEEP**

**By British Rail**  
From London (King's Cross or Moorgate) — about every 10 minutes to Alexandra Palace station — free shuttle bus to show with 10min travel!

**By Road**  
Follow signs from the A1 (Jinks with M1 and North Circus). Plenty of parking space available. Variety of routes from Central London.

**By London Transport**  
Underground: Victoria Line from Victoria (via Oxford Circus, King Cross/St Pancras) to Highbury and Islington — change (costs additional 10p) to 58 Suburban Service to Alexandra Palace — free shuttle bus to 5 minutes walk from show!

From any part of the U.K. enquire from King's Cross Travel Centre, London N1 9AP (phone 01 278 2473) about special one trip to the ZX MICROFAIR!

Alternative: Piccadilly Line from Heathrow etc. to Highbury Park or Wood Green — Link with M3 bus service to the fair.

**SATURDAY 20th AUGUST 1983 AT ALEXANDRA PAVILION, ALEXANDRA PALACE, WOOD GREEN, LONDON N22. FROM 10am TO 5pm. Advance tickets available from: Mike Johnston, (HCW) 71 Park Lane, Tottenham, London N17 0HG. Adults £1.00. Kids (under 14 50p). Parties of 10 or more at 20% discount! Please make cheques P.O.s payable to ZX MICROFAIR and include S.A.F.**

**EXHIBITORS! Call Mike Johnston now on 01-801 8172 for details of space at this and future shows!**

# Get Knotted!

## With the latest creation from New Generation

An action game that needs nerve and quick reactions! Hurting through a void, your task is to travel as long as possible, scoring points along the way. Be careful though as you will have to avoid your own trail and those of up to four chasers. As trails are left you will have to thread your way through, but don't forget the more trails the less space for manoeuvring. You will be terminated when you finally get caught in 'the Knot'.

For 48K Spectrum and compatible with Kempston, AGF and Mikrogen joysticks.

'It is the most astounding thing you'll see for a long time' — Popular Computing Weekly.

## U.S. SCENE

# A human face for micros

This week I received a complimentary copy of a magazine called *Micro Discovery* in the post. After having my fill of so-called new and revolutionary computing magazines, I have to say that this one appears to live up to its promise.

All too often, magazines try to be all things to all people, and end up being nothing to anyone. In no other trade is this more true than in personal computing. It seems that all too often most articles I read are either too machine-dependent or not machine-dependent enough. Alternatively, they might be too general or too specific. Not so with *Micro Discovery*. The emphasis is on people involved with computing rather than being hardware oriented, software oriented, or anything-else oriented. I find this approach meaningful and rewarding.

The magazine calls itself the non-technical magazine of personal computing, which is a very appropriate sub-title. As the publisher is quick to state in the introduction, this magazine addresses the human side of micros. There are examples of humor, poetry(!), stories, and articles full of information throughout the pages of the first issue. One feature alone is enough to make me a devoted reader — each issue includes a glossary of special terms. Isn't that a human touch? How many times have all of us reading an interesting technical article only to be stopped cold by a term, phrase, or work we didn't understand? It used to happen to me all the time before I became a foreign correspondent (a little humor there).

Among the interesting articles in the first issue are these: Poems, by Ray Bradbury (fiction writer of note), an interview of Grace Hopper (often called the mother of computing, or perhaps the grandmother), and an essay on the need for instructions in plain English (amen). Additionally there are columns on new hardware and software, and a regular column called *The Computer Generation* dealing with the many benefits that children can obtain from micros. Let me heartily recommend this magazine to all you computer-using human beings out there. Write to *Micro Discovery*, 5152 Katella Avenue, Suite 102, Los Alamitos, CA 90720. One year subscription in the U.S. is \$24; no foreign listing was provided.

It looks like Commodore has licked its largest enemy to sales in this country (its own marketing organization). In the first quarter of this year, the firm has announced earnings up 130% from the same time frame last year. The increased income is attributed to increased demand primarily for the 64 and VIC-20 computers.

Not exactly hurting sales was the decision to market those computers through two of America's largest retail store chains, Sears and Zayre. Another large American retailer, J. C. Penney, is rumored to be close to finalizing a deal with Commodore too. Stockholders in the firm were probably very happy when they received 128% higher earnings for the first three months of this year, again compared to the same time period last year.

News on educational programs: Milliken Publishing Company has just announced that it is putting its *EduFun* line of programs in ROM cartridges. Their line is designed for children between the ages of five and fourteen years, so the decision was made due to the fact that such a media is less prone to disaster compared with cassettes or discs. The faster loading time is a secondary but important consideration too.

The programs are basically games, but in order to win, a user must master one or more basic skills. The cartridges (of which there are three packages of two games each so far) all cost \$35, and run on the Atari 400 and 800 and the VIC-20. They will be available for the Commodore 64 in the fall sometime. Milliken is based in St. Louis, Missouri.

That's it for this week

### Alien Taxi TRS-80 Models I & III £12 (cass.) £14 (disc)

Microdeal, 41 Truro Road, St Austel, Cornwall PL25 5JE

Alien Taxi is a simple game to play, but, I found, one of the most difficult to master. Using the arrow keys, or a joystick if you have one, you guide a small space ship off a launch pad (next to a hotel) and land on other space ship 'pads' to collect passengers.

The amount of thrust you give to your ship is shown on a speed indicator in addition to the physical speed of your ship.

The sound is also a great help

as it echoes the speed of your ship by rising in tone with the increase of speed.

This is not a game that you will master easily, but if you allow it to go into the demonstration mode you will quickly get the idea of how it should be played.

The landscape scrolls horizontally. Though, due to my lack of skill, I have not seen all of it yet, I get the impression that, as my skill increases, there are more challenges awaiting me around the corner.

D.B.

instructions	50%
playability	70%

value for money	60%

### Frantic VIC-20 £5.50

Imagine, Masons Buildings, Exchange Street East, Liverpool, Merseyside

One of the favoured activities in many computer games is to kill

as many aliens as possible. This game is no exception.

You pilot a space-ship descending through a planet. Sundry aliens appear and shoot at you. You, if you can, reciprocate. As the aliens shoot, some nice graphics give a 3D impression of a laser coming at you.

To help you locate the nasties, you have two radar screens. I

### Planet Conquest Dragon-32 plus 1 joystick £6.95

Blaby Computer Games, Crossways House, Lutterworth Road, Blaby, Leicestershire

Lunar Lander games have never excited me over-much, but this at least offers variety with options for colour or monochrome TVs, five skill levels and a progression through three screens.

On the first, you land your descending triangle of a ship on one of five flat pads, the number of landings varying with the skill level.

Success brings the launch of a rocket and a trickier surface, then you hopefully go on to a third screen where your ship will

also be fired at from the ground as it descends.

Retaliation is at hand, though, as the fire button will shoot in the direction of travel to remove either a nasty piece of landscape or an even nastier inhabitant.

This joystick control is smooth, and a welcome change from the usual frantic keyboard punching, though it is possible to bump against parts of the planet without being wiped out. This is a drawback, as is the lack of a high-score record.

The high-res graphics are acceptable, though I won't take anyone's breath away — in fact, that can also be said for the game itself.

### Xenon Raid Atari 400/800 32K £14.95

English Software, 50 Newton St, Piccadilly, Manchester

The scene: a convoy of vital new weapons is being transported by road to aid in the war against the Xenons.

# Intergalactic games for earthlings

## Visit strange planets, meet weird alien civilisations... and shoot them.

found these screens difficult to interpret and not really much help.

Overall the graphics are above average but the aliens appeared as messy, multi-coloured blobs.

For some reason Imagine have this aversion to sensible and clear instructions. The first 50% (the bit describing the mission) was simply gratuitous rubbish which, if anything, made the game appear to be better than it was. Come on Imagine, give some de-

cent instructions.

The key options for controlling the ship, however, were excellent.

A.W.

value for money	60%

### Galactic Commander BBC B £6.95

Micropower, 8/8A Regent Street, Chapel Allerton, Leeds LS7 4PE

This is a variation of the Lunar Lander arcade game. There are nine levels of increasing difficulty. Graphics and sound are excellent, but due to mode 4 the colour is limited. Keys are responsive and easy to operate. I found this an addictive, challenging and enjoyable game. Level 0 is easy, levels 3 upwards very hard.

The instructions are good but include a few spelling mistakes. No score of hall of fame feature, but an option to play a particular level or go through the whole sequence to achieve a Galactic Commander qualification. Some

nice, humorous comments are given!

R.E.

instructions	95%
playability	90%
graphics	97%
value for money	90%

Your mission: prevent any of the raiding parties from destroying the convoy.

Three Xenons at a time attack your scoutship as it patrols ahead of the main convoy. You must blast them or wait until their limited fuel reserves dry up, forcing them to abandon the attack.

Next, you must load the refueller with fuel pods and dock with your scoutship in time, then back to the attack.

Xenon is fast, with good sound effects. If you enjoy do or die games, Xenon's five levels and three difficulties should keep you happy for a long time.

# FOR FIRST TIME USERS...

A new series of books which introduce newcomers to the most widely used micros in the marketplace.

The books assume absolutely no knowledge about computers and the reader is shown even the most fundamental operations such as "switching on" and "loading a program". The books lead the reader through simple programming and then onto graphics, with several programs which show how to achieve pictures and even animation. The books contain a number of specially written programs which show the full potential of these machines.

"The text is liberally supported by all manner of useful diagrams and illustrations (including many black and white photographs of the screen). The overall presentation is excellent. The printing, setting out and listings are clear and positively invite the reader to have a go."

A VIDCOM CREATION

# MIJID, BECAUSE YOUR PRODUCTS HAVE GROWN UP...

Video games: a 75% growth in 1982. A spectacular increase, giving food for thought! Home micro-computers and video games are nearing full-maturity. Having reached this stage of development, they can only strengthen their impact with the help of a vigorous commercial strategy. And thus Vidcom saw the need and created Mijid.

## COINCIDING WITH VIDCOM, MIJID IS EXCLUSIVELY RESERVED FOR MICRO-COMPUTERS AND VIDEO GAMES

if you are a publisher, programmer or analyst, manufacturer or distributor, the success of your products will be enhanced by attending Mijid.

## FIVE DAYS IN WHICH TO MEET PROFESSIONALS FROM AROUND THE WORLD

retailers and distributors creating and developing their sales networks; producers, from all domains of the software industry, looking for new programming ideas; writers and programmers negotiating rights for promotion, adaptation and distribution; international journalists, there to report on your new products.

## MIJID IS A VIDCOM CREATION

and there is a strong tie between these two shows. It's normal: their interests are complementary. Furthermore, the professional attending Mijid will be able to count themselves among the regular, prestigious Vidcom attendance. A solid guarantee for contacts and contracts.

Get ready for the next surge of growth, attend Mijid.

# In search of the ultimate game

**Ultimate Play the Game has shown that you can go a long way in eight months. One of its four directors, Timothy Stamper, told Candice Goodwin some of the secrets of the company's success**

It wouldn't be entirely true to say that the name of Ultimate Play the Game is on everyone's lips — it's too much of a mouthful for that. But in a mere eight months, the company has certainly made a name for itself among Spectrum owners.

Its first program, Jet Pac, got rave reviews in the computer press, HCW included, and propelled itself at high speed up the software charts. Its second release, the strangely-named Pssst, was equally warmly received.

And Timothy Stamper, one of the four co-directors of Ultimate Play the Game (henceforth to be referred to as Ultimate), says eager fans have been clamouring for news of the two latest offerings, Tranz Am and Cookie.

Timothy has no false modesty about his company's achievements. "We're really excellent at arcade games", he said. "We chose his company's name because we felt it was representative of our products: the ultimate games. It's also a name that sticks in people's minds."

Ultimate's only slightly more than overnight success becomes more understandable when you find out that three of the four directors came straight from designing games for arcade machines.

"We were working in the arcade game field for two-and-half years, selling games to the US and Japan", Timothy recalled. "So we've got an advantage over other companies because we've got enough experience to know whether a program or concept will sell."

"But in terms of the arcade machine market, we were just a small company. The big companies in the field were starting to use sophisticated techniques like laser disc storage, and that's amazingly expensive. It takes

millions of pounds of investment, and we couldn't afford it".

So the three decided to move into the computer games market. They produced a couple more arcade games which they sold to Japan, and used the proceeds to set up Ultimate last November.

Most of the start-up money went into buying an advanced development system for writing programs on.

Timothy said: "It'd be a bit basic to develop programs on the Spectrum itself. With our equipment we can make modifications on the development system and run the program simultaneously on the Spectrum to see the effect."

"We've got very powerful programming tools on the development system, and we could produce a different program every two weeks on it. It also means we can convert programs very quickly to run on other machines."

Timothy was unwilling to give much away about the system Ultimate uses, but he would say: "The largest arcade company in the States had a custom-developed Hewlett Packard system, and our is faster than theirs by a long way."

He was equally cagey about how much the system cost, but said that it was several thousand pounds.

When Ultimate was set up, the three partners took on a fourth director, Carole Ward, with a degree in graphic design. The other two directors are John Lathbury and Timothy's brother Chris, both of whom are qualified software engineers.

Ultimate never uses freelance programmers. According to Timothy: "There are some very good programmers about, but they aren't quite good enough, because they don't know the market. We wouldn't buy the rights to someone else's program, but we might buy the rights for

Some of the storyboards used in the design stage of Ultimate's games

Carole Ward, Ultimate's graphics expert and co-director

the idea, if it was a good one."

Not that ideas are something Ultimate seems to be short of — Timothy claims that they have hundreds of concepts just waiting to be turned into games. Once one of the team has had an inspiration, all four of them put their heads together to work out what the final product will look like and what will happen in the game.

Ultimate's ultimate aim is to produce a new game each month for all the big-selling micros. The reasons for starting out with the Spectrum were purely economic — to finance the costs of the development system, and to provide revenue quickly, they needed a big-selling computer, and the 16K Spectrum fitted the bill.

Now that the company is well under way, they plan to adapt the games for the VIC-20, Commodore 64 and Atari micros, as well as moving into 48K Spectrum games.

But its aim will still be to keep prices competitive. "Our sales strategy is to supply the best product we can produce for the least money", said Timothy.

It's a formula that seems to have worked so far. Ultimate's programs are on sale in most of the high street chains, and Timothy reckons that the company's turnover will be "into the millions" by the end of its first year. Take off a proportion for poetic licence, and that's still a healthy figure.

Mind you, that has come about by the four-partners putting in a 16-hour day, seven days a week, at the company's headquarters — a cottage at The Green, Ashby de la Zouch in Leicestershire.

And most of the first year's revenue will, Timothy says, go straight back into the company. "We believe in keeping our products at the top, and we'll invest money to do so."

# Bamby

## SOFTWARE

## DRAGON TI-99/4A for SPECTRUM 48

**DATABASE: (DRAGON)**  
A personal filing system we can modify to suit your own requirements. Please ask for quote. **Approx. £15.95**

**SURPRISE: (DRAGON)**  
Regain the magic ring, but to do so you must first find the key to the Tower, avoid robbers, and more. Then bewitch the Dragon, and you're home and dry — almost. Hi-res graphics and text. **£8.45**

**SCANNER 13: (DRAGON)**  
Set in the City of the future, this game combines the best elements of both arcade and adventure games. Destroy the evil Drones before they destroy you and your City. Three levels of difficulty. Hi-res graphics and text. **£8.45**

**BOPSWIZZLE: (DRAGON)**  
A splendid fun game! Beat the ghastly Gloops and the yucky Yerkies, amongst other nefarious nasties. Collect pearls at the same time! Low and hi-res graphics and text. **£5.95**

**AMAZING: (DRAGON)**  
Series of five mazes specially for the under 5's ranging from quite simple to fairly complex. An excellent way to amuse preschool children, and they learn from it too. Hi-res graphics. **£5.95**

**ALONE AT SEA: FOR THE TI99/4A (TI-99/4A)**  
Try and escape the sinking ship, but don't forget your supplies which are hidden somewhere. Text **£6.50**

**K-64 (TI-99/4A)**  
A mind-bender. Cover the squares once only using the knight and its valid moves. Easy?! Full graphics. **£6.50**

**MYSTERY MANOR: FOR THE SPECTRUM (SPECTRUM)**  
Find the murderer before he (or she) finds you and your career as Detective Solvit! Graphics and text. **£6.50**

**MASTER CODE: FOR THE SPECTRUM (SPECTRUM)**  
Based on the famous game. Try your skill against the computer. You CAN beat it! ... Graphics and text. **£6.50**

### GOLDEN APPLES OF THE SUN:

The Golden Apples have been stolen and hidden in seven different locations. Can you recover them all? There's a surprise once you have. Hi-res graphics and text. **£8.45**

### STOCKMARKET:

Test your skill on the stockmarket. Prices are influenced by your own actions, and Government actions — just like the real thing! See if you can make a million. Text **£5.95**

### ALIEN ODDESSY:

A four-part adventure game. This tape contains the first two parts, in which you must escape from the Castle, then journey across the Great Grass Plains to the Mountains of the Moon. Hi-res graphics and text. **£9.95**

### MINI-GAMES:

Four short games on tape consisting of Blackjack, Maths Test (5 levels of difficulty) Guess the Number, and Layers, a game in which you try to survive a year in the farming business. Text. **£5.95**

### INTER-PLANETARY TRADER:

You are the Captain of a Starship. You have to buy a cargo, and attempt the inter-stellar jump to your destination. But beware, meteors and space pirates are out to get you. Text. **£5.95**

All available immediately from Bamby Software, Leverburgh, Isle of Harris PA83 3TX. Includes our no quibble guarantee. Access orders welcome by mail or telephone: 085982 313 Dealer Enquires Welcome and 48 hour delivery

## SOFTWARE

### VIC 20 GAMES AND UTILITIES

#### BUGSY (Joystick Only)

This is a Minefield with a difference as you step on the stones whilst collecting purple bones which give you both time and points, they disappear from beneath your feet. DO NOT DESPAIR! "BUGSY" will randomly replace the stones but avoid bumping into him or its sudden death! An original compulsive and challenging game. **£5.50**

#### JACKPOT

This is it, the ultimate fruit machine for the VIC with nudge, hold and respin 100% machine code. "Overall Jackpot is a beautifully written simulation giving superb graphics, animation and use of colour." In fact, this program makes Commodore's fruit machine cartridge look unbelievably cheap & nasty! Home Computing Weekly No. 20, 19/7/83.

#### MINI-ROULETTE — PONTOON — HI-LOW

Three great games of chance for the VIC, try to beat the computer, hours of fun, full colour, sound effects and tunes. **£5.50**

**DATABASE** — create your own files and records on tape. **£7.50**

**BANK MANAGER** — Computerise your bank account. **£5.00**

**SUPER BANK MANAGER** — A full feature version any memory size, but needs 3K expansion. **£7.50**

**M/C SOFT** — Machine code Monitor and Disassembler, any memory size. **£7.50**

### COMMODORE 64 GAMES AND UTILITIES

**LUNAR RESCUE** — Our own version of that popular arcade game. **£7.50**

**PONTOON — ROULETTE — ACE'S HIGH**  
More powerful versions, that make three great games of chance for the 64. **£5.50**

**M/C SOFT 64** — Assembler and Disassembler, with decimal to hex converter, everything our program for the VIC will do and more. **£7.50**

**BANK MANAGER 64** — As our Super Bank Manager, but for the 64. **£7.50**  
Now available on disc with added facilities. **£10.00**

Full documentation with all utility programs.

Other software available for the VIC and Commodore 64, send for free brochure, including RABBIT SOFTWARE at £5.99 each.

Send Cheques/PO's to: **MR. CHIP SOFTWARE**

WANTED: HOT SHOT SOFTWARE WRITER'S, PHONE AND ASK US, ABOUT OUR FAIR DEAL POLICY AND TOP ROYALTIES.

All programs now available on disc please allow £2.50 ea extra.

**DEALER ENQUIRES WELCOME**

**D.T. feted . . .**

May I thank your reviewer D.T. for a very fair review of my program S/S 64, in HCW 19, in view of the errors contained in the program's instructions. These are now being corrected, but I would like to point out another error (yawn) to those who have already bought the program.

A PRINT statement does not have to precede every LPRINT — just one will do after a CLS. This also applies to LLIST.

By the way, the program does not need to combine characters to put them on the screen as it has routines to place each character on the screen independently. This was the only convenient way to make AT, TAB, DELETE etc work in 64 column mode. There is a demonstration on the tape (LOAD "demo") to show this.

Ron Senical, Hull.

**. . . And slated**

We thank you for the review of our cassette The Visual Processor, but we feel that your reviewer D.T. has entirely misunderstood the purpose for which this program was written.

It sets out not to teach machine code but to provide a stepping stone to an understanding of micro-processor operation, which is one of the most difficult concepts to come to terms with on the road to learning machine code.

It was designed as a visually interesting and easily understood simulation for a teaching situation, in which it has been used successfully by the author.

We feel this misunderstanding may have occurred because the pre-production cassette which the reviewer was sent was not accompanied by its comprehensive manual. We were therefore pleased with the instruction and usability ratings given, as these were obviously based solely on the prompts that the program provides (or he has amazing powers of ESP).

With regard to there being only 16 instructions, it is interesting to note that the language Cecil, which is taught to O-Level Computer Studies students, has only 14.

Concerning the fact that 'end' is printed as part of a prompt, in current production versions 'END' has been substituted even though it was close to impossible to enter it in lower case anyway. T.J. Gilberts, Gilsoft, Barry, South Glamorgan

**Send your letter to Letters, Home Computing Weekly, 145 Charing Cross Road, London WC2H 0EE. Don't forget to name your computer — the best letter could win £5-worth of software. Queries cannot be answered on this page**

**Club corner — in Leeds . .**

The Garforth BBC User Group meets on the first and third Tuesday of every month. Meetings are at 7.30 at Garforth Welfare Hall. Dave Carlos, Garforth, Leeds

**. . . in Manchester .**

Manchester Atari computer enthusiasts meet at 7.30 every other Thursday evening at the Ellemere Hotel, Worsley Road, Worsley, Manchester. For further information, ring M. Davies on Bolton 700757 or Jack Young on 061-799 0124.

M. Davies, Bolton, Lancs

**. . . for BBC disc users . . .**

A group of BBC disc users is getting together to produce a monthly disc for members of the Format 40/80 Disc Club.

The idea is to exchange programs of all kinds, including school, educational and of course games. This will be done by a monthly disc to members ready to BOOT up with menu.

Would any interested BBC disc user please send a stamped addressed envelope giving their disc details, for more information to myself at the address below.

Peter Hughes, Format 40/80 Disc Club, c/o The Lending Library, Five Marsh Street, Bristol BS1 4AA

**. . . for ZX micros . . .**

The International Sinclair User Group has now been formed with the blessing of Sir Clive Sinclair and Sinclair Research.

The group will cater only for Sinclair micros, and will publish a monthly newsletter.

ter, ZX Press, and a quarterly supplement which will form into a reference manual.

The group will supply Sinclair related products to members at discount prices, and further proposals are close liaison with Sinclair Research and the formation of a software library. Anyone interested should contact us at the address below.

V. Webber and P. Paton, 176 Todmorden Road, Burnley, Lancs

**Don't let the micro fans suffer**

I have been interested in computers for about a year now, though I did not get my own computer until Christmas last. Over the past months I have watched the industry grow, and there is a fair share of good and bad companies.

Since issue two of HCW I have read all of the readers' comments and noticed the following two points seem to occur. I have called these a grumble and an annoyance.

Firstly, buy-and-try shops are a well discussed subject among those in the business, and I believe that this kind of shops are not a bad idea. The thing that is at the centre of the subject seems to be illegal copying.

Seriously, I think that the tightening of the belt that is going on is going to hurt many people. Not just the company concerned, but the person doing the copying.

I have heard that you can even get fined for not reporting someone that you know is copying tapes etc. A lot of the time it is only young people who are copying a friends tape because he cannot afford his own. I think that copying should be stopped but in a different way if possible.

Secondly, incorrect advertisements seem to be cropping up all over the place these days. Claims that are made but not included in the final product, untold hidden extras, long periods to wait when quick service is stated, these are just a few of the things that are getting out of hand.

I really do think, and many people that I know would back me up, that companies should get their policies right. It is putting a lot of first-time buyers off computers, just because some companies are not telling the truth.

I hope that points are settled soon before it is too late and we all suffer.

D.J. Meehan, Woking, Surrey

## MAIL ORDER PROTECTION SCHEME

If you order goods from Mail Order Advertisers in this magazine and pay by post in advance of delivery, this publication will consider you for compensation if the advertiser should become insolvent or bankrupt, provided:

1. You have not received the goods or had your money returned; and
2. You write to the publisher of this publication explaining the position not earlier than 28 days from the day you sent your order and not later than 2 months from that day.

Please do not wait until the last moment to inform us. When you write, we will tell you how to make your claim and what evidence of payment is required.

We guarantee to meet claims from readers made in accordance with the above procedure as soon as possible after the advertiser has been declared bankrupt or insolvent to a limit of £1,800 per annum for any one advertiser, so affected, and up to £5,400 p.a. in respect of all insolvent advertisers. Claims may be paid for higher amounts, or when the above procedures have not been complied with, at the discretion of this publication, but we do not guarantee to do so in view of the need to set some limit to this commitment and to learn quickly of reader's difficulties.

This guarantee covers only advance payment sent in direct response to an advertisement in this magazine (not, for example, payments made in response to catalogues, etc. received as a result of answering such advertisements).

## EDITORIAL ASSISTANT

# Computing today

Due to promotion, *Computing Today* is seeking an Editorial Assistant. The person we are looking for is an accurate worker with a sense of humour who will be able to maintain the high standards of the magazine while keeping to deadlines. Knowledge of program assessment, development and debugging is required, both in BASIC and machine code/assembly language (preferably for the Z80 and/or 6502). Applicants should be able to express themselves in English but no journalistic experience is necessary: training in technical journalism will be provided.

Familiarity with other languages, particularly Pascal and FORTH, would be an advantage, as would a general knowledge of electronics.

Salary is negotiable depending on age and experience. All applications will be treated in strictest confidence. To apply, send a CV to:

CT Vacancy,  
Ron Harris, Managing Editor,  
Argus Specialist Publications Ltd,  
145 Charing Cross Road,  
London WC2H 0EE.
