## Boots to stock more micro products

The Boots chain has announced plans for a major expansion of its home computer coverage. By the end of September, it aims to have home computers, peripherals, and an extensive range of software in 250 of its major stores — and 32 of them will have a special computer department with a computer consultant in attendance.

From September, most Boots stores will stock the ZX81, Spectrum, Dragon, VIC-20 and Commodore 64, a range of peripheral equipment including cassette

## Felix takes a bow at Acorn show

Felix is out to rival Horace as a character in computer games.

He will make his first appearance, complete with flat cap, at next week's Acorn User show.

Program Power is bringing out the first two of a range of £7.95 games for the BBC model B micro which feature the new character.

In Felix and the Fruit Monsters his mission is to protect fruit from

# HAVE YOU BEEN INVOLVED IN A MYSTERIOUS ADVENTURE RECENTLY?

If so, it is quite probable that you are presently suffering from TIS, more commonly known as Total Involvement Syndrome.

TIS manifests itself in a number of ways, one of the most dramatic symptoms being a victim's complete inability to feel at ease in the world of reality. Other symptoms include insomnia, a desperate need to play a Mysterious Adventure, and an overwhelming sense of acute enjoyment.

Experts believe that TIS is usually contracted as a result of prolonged exposure to Mysterious Adventures, this is commonly caused by owning any of the following Home Computers:-

48K SPECTRUM, BBC MODEL A OR B, TRS80, COLOUR GENIE, ATARI 400/800, COMMODORE 64, DRAGON 32, 16K ZX81, LYNX etc.

When questioned about this epidemic, a representative of DIGITAL FANTASIA, a company who are actively involved in research and development work on Mysterious Adventures said, "There is probably no cure for TIS other than mains failure, faulty RAM chips etc. which can be at best only a Temporary solution", "In the absence of a more permanent cure, I would advise TIS sufferers to submit to the Syndrome and obtain Mysterious Adventures from any sources available to them", "TIS is highly contagious and in view of the current Worldwide Epidemic, I would say enjoy it while you can, resistance is futile".

If you have a BBC Computer or a 48K SPECTRUM, you can obtain Mysterious Adventures direct from DIGITAL FANTASIA in any of the following dosages:-

- |                            |                           |                          |
|----------------------------|---------------------------|--------------------------|
| 1) THE GOLDEN BATON        | 5) ESCAPE FROM PULSAR 7   | 8) THE WIZARD AKYRZ      |
| 2) THE TIME MACHINE        | 6) CIRCUS                 | 9) PERSEUS AND ANDROMEDA |
| 3) ARROW OF DEATH (PART 1) | 7) FEASIBILITY EXPERIMENT | 10) TEN LITTLE INDIANS   |
| 4) ARROW OF DEATH (PART 2) |                           |                          |

Each Dose costs £9.95 including V.A.T. and Postage. Excellent quantity Discounts are available for Pushers.

D.F. MENTAL HEALTH WARNINGS. MYSTERIOUS ADVENTURES CAN SERIOUSLY DAMAGE YOUR SENSE OF REALITY.

# Get Knotted!

## With the latest creation from New Generation

An action game that needs nerve and quick reactions! Hurtling through a void, your task is to travel as long as possible, scoring points along the way. Be careful though as you will have to avoid your own trail and those of up to four chasers. As trails are left you will have to thread your way through, but don't forget the more trails the less space for manoeuvring. You will be terminated when you finally get caught in 'the Knot'.

For 48K Spectrum and compatible with Kempston, AGF and Mikrogen joysticks.

'It is the most astounding thing you'll see for a long time' - Popular Computing Weekly.

# New Generation Software

New Generation Software FREEPOST Bath BA24TD

# FOR FIRST TIME USERS...

A new series of books which introduce newcomers to the most widely used micros in the marketplace.

The books assume absolutely no knowledge about computers and the reader is shown even the most fundamental operations such as "switching on" and "loading a program". The books lead the reader through simple programming and then onto graphics, with several programs which show how to achieve pictures and even animation. The books contain a number of specially written programs which show the full potential of these machines.

*"The text is liberally supported by all manner of useful diagrams and illustrations (including many black and white photographs of the screen). The overall presentation is excellent. The printing, setting out and listings are clear and positively invite the reader to have a go."*

## READ-OUT

HCW24

## Felix

*Continued from front page*

garden monsters by carrying the fruit to a safe place and gassing the monsters.

And in Felix and the Factory his job is to keep a machine operating. He runs up ladders and along walkways oiling the machine and poisoning rats which threaten production.

Marketing assistant Christopher Payne said there would be at least two more arcade games in the series.

Program Power is also launching a two-player game for the BBC at £6.95, called Bandits at Three O'Clock.

Players are in control of biplanes firing at each other. There is a choice of night or daytime flying and the hazards include murderous barrage balloons and a church spire.

The show is being held at the Cunard Hotel, Hammersmith, on August 25-28 and Acorn will be launching its new £199 computer, the Electron, based on its successful BBC micro.

Several companies will be showing software for the new computer, including Acornsoft with new versions of their BBC favourites, like Monsters, Snapper, Meteors and Starship Command, all at £9.20. Chess, Draughts, Reversi and Tree of Knowledge will also cost £9.20.

Electron versions of Lisp and Forth cost £16.10 each and Personal Money Management is £11.50.

Acornsoft is also showing several new games, all at £9.95, for the BBC micro. Freefall, Crazy Tracer, Carousel and Meteor Mission are arcade games, Kingdom of Hamil is an adventure and Droyna is a two-player game of logic.

R. H. Electronics will be releasing three new games at £8.95 each

— Ski Slalom, Galactic Wipeout and Viper. And there will be two three-in-one cassettes, priced at £7.50 each. All are for either model of the BBC micro. The company also has a light pen at £44.95.

Advanced Memory Systems is showing its three-inch disc drive — based on Hitachi mechanism — which costs £225 for the single disc version, storing 100K on each side and with a claimed access time of three milliseconds. Twin drives are £399.

● dk'tronics will not be at the show, but the company has just brought out BBC versions of its two Spectrum tapes, both at £6.95. They are Dictator, a role playing game, and an arcade game called Proteans.

## Boots

*Continued from front page*

recorders, disc drives, printers and memory expansion, and more software than ever.

The major stores will also stock the BBC micro and as many as 350 different software titles, including some disc-based software.

But Terry Steel, Boots' public relations director, denied that Boots was changing its image. "Far from it. If you look at home computer in the context of our established business in audio and photographic equipment, it's a natural move.

"This is quite simply an expansion of the departments we've been having for quite a while."

Nor will any of Boots' existing product lines be edged out by micros. Space for the new departments will be made by rearranging existing areas.

Boots plans to have trained staff on hand at all its outlets that stock computers, but Mr Steel admitted that training was "a big problem".

He said: "We're taking it gradually and steadily. We have a standard computer training course run by our training department which all staff in the 250 stores that will stock computers have taken part in.

"We're also recruiting outside people with experience of selling computers for the top 30 stores, and they will be going through a more intensive course.

"We see training as a process of gradual increase in experience by our staff as they become more familiar with the machines. We've made considerable strides

already, and we propose to continue along the same lines."

Commenting on the Boots initiative, Stewart Binnie, merchandise controller for W. H. Smith, said: "We share their perception of the marketplace, and in consequence are already selling computers in 250 branches. We plan to open more computer shops-within-shops before Christmas."

## Programs are on the books

Pan Books and Personal Computer News have got together to bring out a range of computer books.

The first four, due out next month, will each contain 40 programs for the BBC micro, Dragon, Spectrum and Oric and will be the first of its Bumper Book of Programs series.

In November its series called the Definitive Companion and Instant Arcade Games begin and more are planned for next year.

*Pan Books, Cavaye Place, London SW10 9PG*

## Microdrive latest

The first batch of Microdrives were due to be despatched to Spectrum owners last week, said Sinclair Research. A high proportion of people sent order forms decided to take up the offer, said the company.

It would be continuing to control the number of units offered so the company could keep to its promise of delivery in 28 days. *Sinclair Research, Stanhope Road, Camberley, Surrey*

# You could be on our pages

We welcome programs articles and tips from our readers.

**PROGRAMS** should, if possible, be computer printed to a width of 48 characters (use a new ribbon) and/or sent on cassette. Check carefully that they are bug-free. Include details of what your program does, how it works, variables you have used and hints on conversion.

**ARTICLES** on using home computers should be no longer than 2,000 words. Don't worry about your writing ability — just try to keep to the style in HCW. Articles most likely to be published will help our readers make better use of their micros by giving useful ideas, possibly with programming examples. We will convert any sketched illustrations into finished artwork.

**TIPS** are short articles, and brief programming routines which we can put together with others. Your hints can aid other computer users.

Competitive rates are paid.

Keep a copy of your submissions and include an SAE if you want them returned. Label everything clearly and give a daytime and home phone number if you can.

Paul Liptrot, Home Computing Weekly, 145 Charing Cross Road, London WC2H 0EE

Acorn's 32K Electron — launched at the show

# Mr. Chip SOFTWARE

## VIC 20 GAMES AND UTILITIES

### BUGSY (Joystick Only)

This is a Minefield with a difference as you step on the stones whilst collecting purple boxes which give you both time and points, they disappear from beneath your feet. DO NOT DESPAIR! "BUGSY" will randomly replace the stones but avoid bumping into him or its sudden death! An original compulsive and challenging game. £5.50

### JACKPOT

This is it, the ultimate fruit machine for the VIC with nudge, hold and respin 100% machine code. "Overall Jackpot is a beautifully written simulation giving superb graphics, animation and use of colour. In fact, this program makes Commodore's fruit machine cartridge look unbelievably cheap & nasty" Home Computing Weekly No. 20, 19/7/83. £5.50

### MINI-ROULETTE — PONTOON — HI-LOW

Three great games of chance for the VIC, try to beat the computer, hours of fun, full colour, sound effects and tunes. £5.50

**DATABASE** — create your own files and records on tape. £7.50

**BANK MANAGER** — Computerise your bank account. £5.00

**SUPER BANK MANAGER** — A full feature version any memory size, but needs 3K expansion. £7.50

**M/C SOFT** — Machine code Monitor and Disassembler, any memory size. £7.50

## COMMODORE 64 GAMES AND UTILITIES

**LUNAR RESCUE** — Our own version of that popular arcade game. £5.50

**PONTOON — ROULETTE — ACE'S HIGH**  
More powerful versions, that make three great games of chance for the 64. £7.50  
Now available on disc with added facilities. £10.00

**M/C SOFT 64** — Assembler and Disassembler, with decimal to hex converter, everything our program for the VIC will do and more. £7.50

**BANK MANAGER 64** — As our Super Bank Manager, but for the 64. £7.50  
Now available on disc with added facilities. £10.00

Full documentation with all utility programs.

Other software available for the VIC and Commodore 64, send for free brochure, including RABBIT SOFTWARE at £5.99 each.

SOFT  
WARE

### GOLDEN APPLES OF THE SUN:

The Golden Apples have been stolen and hidden in seven different locations. Can you recover them all? There's a surprise once you have. Hi-res graphics and text. £8.45

### STOCKMARKET:

Test your skill on the stockmarket. Prices are influenced by your own actions, and Government actions — just like the real thing! See if you can make a million. Text £5.95

### ALIEN ODDESSY:

A four-part adventure game. This tape contains the first two parts, in which you must escape from the Castle, then journey across the Great Grass Plains to the Mountains of the Moon. Hi-res graphics and text. £9.95

### MINI-GAMES:

Four short games on tape consisting of Blackjack, Maths Test (5 levels of difficulty) Guess the Number, and Layers, a game in which you try to survive a year in the farming business. Text £5.95

### INTER-PLANETARY TRADER:

You are the Captain of a Starship. You have to buy a cargo, and attempt the inter-stellar jump to your destination. But beware, meteors and space pirates are out to get you. Text £5.95

## DRAGON TI-99/4A for SPECTRUM 48

### DATABASE: (DRAGON)

A personal filing system we can modify to suit your own requirements. Please ask for quote. Approx. £15.95

### SURPRISE: (DRAGON)

Regain the magic ring, but to do so you must first find the key to the Tower, avoid robbers, and more. Then bewitch the Dragon, and you're home and dry — almost. Hi-res graphics and text. £8.45

### SCANNER 13: (DRAGON)

Set in the City of the future, this game combines the best elements of both arcade and adventure games. Destroy the evil Drones before they destroy you and your City. Three levels of difficulty. Hi-res graphics and text. £8.45

### BOPSWIZZLE: (DRAGON)

A splendid fun game! Beat the ghastly Gloops and the yucky Yerkies, amongst other nefarious nasties. Collect pearls at the same time! Low and hi-res graphics and text. £5.95

### AMAZING: (DRAGON)

Series of five mazes specially for the under 5's ranging from quite simple to fairly complex. An excellent way to amuse pre-school children, and they learn from it too. Hi-res graphics. £5.95

### ALONE AT SEA: FOR THE TI99/4A (TI-99/4A)

Try and escape the sinking ship, but don't forget your supplies which are hidden somewhere. Text £6.50

### K-64 (TI-99/4A)

A mind-bender. Cover the squares once only using the knight and its valid moves. Easy?! Full graphics. £6.50

### MYSTERY MANOR: FOR THE SPECTRUM (SPECTRUM)

Find the murderer before he (or she) finds you and your career as Detective Solvit! Graphics and text. £6.50

### MASTER CODE: FOR THE SPECTRUM (SPECTRUM)

Based on the famous game. Try your skill against the computer. You CAN beat it... Graphics and text. £6.50

All available immediately from Bamby Software, Leverburgh, Isle of Harris PA83 3TX. Includes our no quibble guarantee.  
Access orders welcome by mail or telephone: 085982 313 Dealer Enquires Welcome and 48 hour delivery

## The promises behind the symbol

This symbol will soon be appearing on software cassettes, showing that they are backed by the charter of the new Guild of Software Houses.

As first revealed in Home Computing Weekly nine weeks ago, major software houses have got together to form GOSH, prompted by Quicksilva.

The secretary is Mike Johnston, best known for organising the highly popular ZX Microfairs.

GOSH chairman Nick Alexander, boss of Virgin Games, said: 'We were looking for someone who had administrative experience, was closely involved in the industry and had a neutral standpoint.'

Vice-chairman of GOSH is Rod Cousens, managing director of Quicksilva, and treasurer is Dougie Berne, of Silversoft.

Each is paying £500 a year for membership. Mr Alexander said: 'We are not sure how many we will attract. We are not after numbers, we want people who will abide by the charter.'

Mr Alexander is also an official of the Computer Trade Association, to which the guild is affiliated.

Eventually GOSH plans to have a full-time office and build up a fighting fund to crack down on software piracy — one of the reasons which led to the guild's formation.

The main guarantees in the guild's Customer's Charter are:

- A high technical standard, with faulty goods replaced free and promptly.
- Mail orders despatched within 28 days.
- Action on complaints within five working days.
- No goods advertised before they are available.

Action would be taken against any member failing to live up to the charter, which could mean a fine or, ultimately, expulsion.

*Guild of Software Houses,

71 Park Lane, Tottenham,  
London N17 0HG*

## New micro takes a bow

A new £300 computer will make its first public appearance next month.

British designed and made, the Elan will have 64K of RAM, a real keyboard and a range of software available when it goes on sale in March or April next year.

The Elan range was designed at Intelligent Software but Elan Computers is backed by a consortium of British and foreign investors.

Three directors of IS have a minority interest.

In fact, IS already had a computer on the drawing board when the company was approached with an offer.

IS is best known for programs like Cyrus-IS-Chess, marketed by Sinclair for the Spectrum, because the chairman is the well-known chess champion David Levy, 38.

And Elan's marketing director Michael Shirely, 42, said he expected contracts to be signed with major retailers within a week or two.

Other products, like peripherals, were in the pipeline.

The Elan will make its public debut at the Great Home Entertainment Spectacular at Olympia, starting on September 17. Then it goes on show at the PCW show at the Barbican, beginning on September 28, and at Brainwave, held at Birmingham's National Exhibition Centre, from November 4.

Elan Computers' chairman is Lachu Mahtani and the managing director is M. L. Mirpuri. Both run an import-export company at the same north London address as Elan.

*Elan Computers, 31-37 Hoxton Street, London N1 6NJ*

# My family caught the micro bug

*IT ALL started with computer studies. Not mine, my daughter's. At the time, I just thought it would be useful for her to get up to date with new technology. But of course, that was just the beginning...*

*Her friends had microcomputers, so she caught the bug — and brought it home. I had never really noticed the computer ads in the papers or colour supplements before; I was usually too busy trying to hunt down the articles. Now I started to sit up and take notice.*

*At that point I took another critical step — I bought my first computer magazine. It was followed by another, then another, then another. Each purchase was greeted by cries of "Are we getting a computer, then, Dad?"*

• • •

*I was certainly thinking about it — and my bank account. The BBC programme was running at that time, and I was receiving inputs from everywhere and trying to make sense of them all.*

*Meanwhile, my daughter had been looking at various computers and had decided it must be a Spectrum. I managed to look knowledgeable. "Mmmm, a Spectrum." In conversation with a friend, I mentioned the subject in passing, and was quickly put in my place: "Oh, we bought one last week!" Still, they'd had a ZX81 for ages; they were old hands at the game.*

*The next step came when they invited us over to view a Spectrum in the flesh, or plastic. We were hooked. Mind you, PEEK, POKE, READ and INVERSE looked just as bewildering on the keyboard as they did in the magazines. But the twenty pence jar had been filling up slowly, and there was just enough in there to cushion the shock to the bank account. It was time to take the plunge.*

*Is it really 1.30 in the morning? As you'll gather, we bought the little black box (all that money for that, commented my wife), and I'm now in the throes of ploughing through the manual. Is it me, or are the chapters out of sequence? They don't give you an introduction to the keyboard until the end of the book.*

• • •

*The three children are still happy to program games out of the pile of magazines. Well actually, the youngest just plays the games. Even at this early stage we are having to operate a rota system so that everyone gets a go. But why is it I am on permanent midnight shift?*

*As a beginner, I've found that the best approach is to buy all the magazines you can lay your hands on and piece all the information together.*

*I'm still finding my way round the keyboard, but at least I understand all the functions now, and I've managed to get myself on a residential course on simple programming starting next week — which is back to where it all started I suppose. I have seen the light... now for the illumination.*

**Rod Pickles**

# Soar into space and back in time

**Adventure lurks within your micro — if you pick the right program. Our reviewers return from some strange places to rate these games for you**

## Caveman Adventure BBC £6.95

Program Power, 8/8a Regent St, Chapel Allerton, Leeds LS7 4PE

Frustrating at first but the game then becomes addictive. Effective use of colour, and a picture if one progresses far enough, maintain interest; and the sounds of running water and the odd growl help the player to avoid danger.

I would have preferred not to have been forced into an end game situation as quickly, and as often as I was at first. But you quickly learn to hang on to your life for longer as you get used to the programmer's sense of humour.

The game starts in a cave with

may exist. The aim is to guide the caveman back to his tribe without falling foul of the many dangers of a wild and primitive world: wild animals, river journeys, deserts and mountains. On your travels you find various objects which could be useful in overcoming the hazards. It is up to you to decide if it is worth picking them up, but remember that the most unlikely objects can be useful in the most unlikely situations. The tape loads easily and excellent use is made of the function keys.

playability	90%
graphics	n/a
value for money	80%

J.D.

## Scanner 13 Dragon 32 £8.45

Bamby Software, Leverhulme, Isle of Harris PA83 3TX

The world was attacked by carnivorous Flutter Drones and so a network of towers was built with a powerful scanner weapon. The menace was defeated, the towers decayed, but now the drones are back and only you and the one working tower — scanner 13 — can destroy them. But first, you must discover how to work it!

This is described as a graphic adventure game but is actually more arcade orientated. Written in BASIC, it nevertheless produces good sound and colourful, effective graphics. The response to the player is good, screen

display and error trapping is excellent.

The scenario was given after a first time load, along with a page of "advice" on controls. There are three skill levels and nine controls (effectively seven because two controls are for repeat scenario and advice screens).

Much of the fun is in deciphering the displays, although once mastered there is plenty of action in trying to destroy the action air mines, etc. without being annihilated yourself (and you only have a limited amount of energy).

## Death Satellite Oric-1 £6.90

A & F, 830 Hyde Road, Manchester M18 7JD

Death Satellite is a text adventure, similar to A & F's Zodiac in style, in which your time capsule, out of fuel, has landed on a satellite.

Your task is to find a new fuel supply and escape from all the terrors present on what proves a most unfriendly satellite. Just 10 key words are contained in the instructions supplied, but there are many more within the program which you have to find yourself.

It seems easy at first, but there are many places to explore, and many dangers to overcome, in-

cluding robots, a huge mutant rat and a large daisy. Objects may be carried or dropped to help you cause.

All too often you die at the hands of the mutant rat, radiation sickness or the daisy, or are sucked out into space. I am many hours of searching. I am still seeking the elusive fuel.

But that makes Death Satellite all the more absorbing and provides the right amount of challenge to keep trying — even in the early hours of the morning!

## The Valley 48k Spectrum £11.75

ASP Software, 145 Charing Cross Road, London WC2

The Valley is an attractive adventure game in which you have to enter a wooded or swamp area of the in search of a magic healing. On the way you may find hidden treasure, or be attacked by legion of monsters. Fighting them and any injuries. Fighting usually win the nasties keep on coming.

During play the lower part of the screen shows scores account of combat. The upper shows one of three displays, a map, the castle grounds or the

castle interior, as each stage reached.

The graphics are good, but the monsters are not visible — just everywhere. The program loaded easily, but did not autorun, so the col to get at. An early invitation to position the tape and load was to save your present score and have a breather.

A wide range of monsters and weapons, and random-generated layouts ensure a different game each time. You can choose grades of difficulty during the game, and the monsters get nastier nearer the target. H.C.

## Zodiac Oric-1 £6.90

A & F Software, 830 Hyde Road, Manchester M18 7JD

Zodiac is a text adventure in which you have to explore the 12 houses of the Zodiac, along with a maze, as well as killing the Ice Giant and fire-eating dragon.

In addition, you have to pick up useful objects along the way, and use and then drop them as you make your progress.

The usual NESW and up and down commands are available, but in addition, to make Zodiac an absorbing, but frustrating adventure, there are a number of key words that you must discover for yourself.

One of the most difficult is how to get past the bull in the

House of Taurus — a problem which I wrestled with for a long time, along with a friend who has the same program tested that one.

We eventually solved that one, but so far we have not been able to overcome the obstacle of the Ice Giant.

It looks as if it will take many more hours of keyboard work before Zodiac is eventually solved, but if you cannot make progress, A & F will provide clues.

# Down in the garden there's a battle among the lettuces

## How it works

- 100-290 set colours, define characters  
300-340 draw fence  
350-440 set score to 0; produces random positions for lettuces, checking position is not already occupied. Number of lettuces can be changed in line 380  
450-580 decide random start position for slug and slug, making sure these are not already occupied  
590-620 main loop directing program to 'move snail' and 'move slug' subroutines  
780-810 get character from screen to determine whether planned move will cross trail, hit fence or eat lettuce  
820-860 draw new position of snail then return to main loop  
870-1020 calculate scores depending on move made by snail  
1030-1170 move slug routine  
1180-1210 get character from screen to determine whether planned move will cross a trail, hit fence or eat a lettuce  
1220-1260 draw new position of slug; return to main loop  
1270-1420 calculate scores depending on move made by slug  
1430-1600 subroutine to check whether slug or snail has scored 30 points or more. If winner is decided game ends with message and a chance to try again  
1610-1670 subroutine to print statements and scores

In this game for two players you are the slug and your opponent is the snail. The setting is a vegetable patch where you must attempt to eat as many lettuces as you can to gain points.

The problem is that you both leave a sticky trail which neither of you can cross — if you do your opponent will score a point.

At the start of the game the vegetable patch appears, surrounded by its fence. Thirty lettuces sprout up at random. The position of the slug and snail are also randomly assigned.

As these creatures move about a blue trail appears for the slug and a red trail for the snail. When a lettuce is eaten — by guiding your slug/snail onto it — you score two points and your score appears on the allotment fence.

If you cross your own or your opponent's trail, bump into the fence or your opponent, then one point is added to your opponent's score. The game ends with victory for the first player to win 30 points.

**Your vegetable patch may seem peaceful, but your lettuces are under attack by a slug and a snail. Choose your side in this two-player game for the TI-99/4A by Jackie Willis**

570 S1=Y1
580 CALL HCHAR(Y1,X1,144)

```

## Hints on conversion

CALL CLEAR clears screen  
CALL SCREEN(B) sets screen colour according to value of B  
CALL COLOR(A,B,C) determines colours of characters, where A is the character set, B becomes the colours of those characters and C the background colour  
CALL CHAR(D,"E") command used for re-defining characters, where D is the ASCII character code and E the hexadecimal code  
CALL HCHAR/VCHAR/Y,X,Z,N will produce character Z on the screen starting at row Y in column X and repeating N times horizontally if CALLING HCHAR, or vertically if CALLING VCHAR. The Texas graphics screen is 24 rows by 32 columns, starting at 1,1 in the top left corner  
CALL KEY(O,K,S) scans the keyboard to find whether a key K has been pressed  
CALL GCHAR(Y,X,Z) gets character Z from screen in row Y and column X  
CALL SOUND(DUR,FR,V) produces a sound of duration DUR milliseconds, at a frequency of FR (or a noise if -FR) of volume V

Movements of the slug and snail are controlled from the keyboard — with the alpha lock on — as follows:

Slug:  
S left  
D right  
E up  
X down

Snail:  
K left  
L right  
O up  
comma down

If your opponent is holding down a key when it's your turn, the game comes to a temporary halt until the key is released. This is so that no player takes more turns than he or she is entitled to!

## Variables

SCORE1 snail's score  
SCORE2 slug's score  
N1,N2 random co-ordinates of lettuces  
X,Y co-ordinates of snail  
X1,Y1 co-ordinates of slug  
R,S co-ordinates of snail's trail  
R1,S1 co-ordinates of slug's trail  
ROW,COL co-ordinates for printing scores and messages

### EDITORIAL ASSISTANT

# Computing today

Due to promotion, **Computing Today** is seeking an Editorial Assistant. The person we are looking for is an accurate worker with a sense of humour who will be able to maintain the high standards of the magazine while keeping to deadlines. Knowledge of program assessment, development and debugging is required, both in BASIC and machine code/assembly language (preferably for the Z80 and/or 6502). Applicants should be able to express themselves in English but no journalistic experience is necessary: training in technical journalism will be provided.

Familiarity with other languages, particularly Pascal and FORTH, would be an advantage, as would a general knowledge of electronics.

Salary is negotiable depending on age and experience. All applications will be treated in strictest confidence. To apply, send a CV to:

CT Vacancy,  
Ron Harris, Managing Editor,  
Argus Specialist Publications Ltd,  
145 Charing Cross Road,  
London WC2H 0EE.

# Now software is in chains

I don't know how it is where you are, but over here many conventional book stores have either begun to sell software for popular personal and home computers or are seriously studying the idea. For example, one of the largest chain store booksellers here — B. Dalton with over 700 stores — has been marketing software in roughly 50 test outlets.

Latest product to be marketed by them is Wordvision, a word-processor by Bruce and James that runs on the Commodore 64. I believe that this is a trend that will continue to expand as more and more people become exposed to the variety of low cost versatile home computers presently available.

Even the movie companies are interested in the home computing market. Here's one example. A new bi-monthly magazine called *Microkids: The Magazine For Kids Who Love Computers* and is targeted for children between the ages of 10 and 16, has just been brought out as the first product of the newly established Warner Software division of Warner Publishing, which of course is a subsidiary of Warner Communications Inc. (formerly Warner Brothers film studios).

The new software division will be publishing and distributing (you guessed it) home management, education, productivity, and entertainment software. Just like everyone else.

BSR, well known maker of stereo and home security-related equipment, has decided to enter the home computer market. Its first product is called the X-10 MicRobot, which is fundamentally a hardware-software package which enables a microcomputer to control every electrical item in a home from one central point.

BSR will be introducing this product under its own name shortly, but the initial offering comes in the form of a privately labelled device made for the Mattel Aquarius home computer, and is called the Aquarius Command Console.

I suppose that BSR felt they were really losing a market by letting third parties make adapters that allowed their stand-alone electrical outlet controllers to be controlled by personal and home computers.

When the firm debuts its own products, these will be expected to run on all major brand personal and home machines. Expected list price: about \$75. This for the console alone.

In addition to the console, special adapters, located at wall sockets or light switches to be controlled, are also required. These cost approximately \$16 each. The controller sends signals over the electric power lines to turn the desired adapters on and off either manually or by computer control. The manual/remote/timer stand-alone systems have been available for some time over here and work quite well indeed.

Interested in knowing how the home market for educational software is doing over here? Strategic Incorporated, of San Jose, California, was interested too. In the results of a recent survey, they found that by 1990 consumers will be buying more educational software than will institutions, and that the combined sales in both marketplaces will reach approximately \$1.59 billion (thousand million) by then. Developed any neat educational programs lately? If so, the time is now to perfect it and get it on the market.

That's it for this week  
Bud Izen

Fairfield, California

## Signs of the wrong Zodiac

You reviewed my program Zodiac the other week. Unfortunately, whoever reviewed it has got confused with the other Zodiac that is sold by A&F Software.

The Tansoft Zodiac is not the price shown, does not begin in an icy waste — and there are numerous sound effects which were not reported. At the same time some of the comments do fit my Zodiac and not the A&F program!

I do not suppose it really matters either way, since the overall rating was average. But it would be nice to see a proper review of both Zodiacs.

Congrats on the best weekly mag; well worth the strange cover price of seven shillings and sevenpence!

Geoff Phillips, London NW9

## Desperate? look Sharp

Regarding "Over-Desperate's" letter in HCW 18, I can think of no electronic, electrical or indeed mechanical gadget which takes kindly to tea or jelly inserted in its crevices.

I can think of only one humane way of dealing with brothers who chew tapes — keep them out of his way (they aren't very nutritional anyway).

For the rest, I have been using a micro for over a year, for an average of three hours a day, without the slightest problem.

It has an integral screen (no connection problems with a TV which may not be compatible anyway), and its own integral cassette recorder (no level adjustment problems and, again, no trailing leads.)

It's called a Sharp MZ80B, and is fairly expensive, but there is a 48K down-market version, the MZ80K, which I have reason to believe is equally reliable. The school one of my children goes to has had several Sharp MZ80Bs for over two years and has never had a breakdown.

If "Over-Desperate" has had no luck with these machines, I suggest he takes up another hobby.

I should add that I have no connection with Sharp — indeed, I have a fairly low opinion of their radios and TVs. But credit where it's due.

R. H. Hill, Woodford Green, Essex

Send your letter to Letters, Home Computing Weekly, 145 Charing Cross Road, London WC2H 0EE. Don't forget to name your computer — the best letter could win £5-worth of software. Queries cannot be answered on this page

## Play fair with Pharaoh's Tomb

With reference to your review of Pharaoh's Tomb in HCW 18, I would like to protest. It is not a game, but an adventure.

Who said the objects and treasures must be in different locations each time it is played? I don't seem to remember that was the case in The Hobbit, and all agree that is an excellent adventure.

I have always looked on adventures as a "play it once and discard it" type of product. After all, you don't complete them in one sitting. It takes time to solve the problems, and it is they that are the challenge in an adventure, not collecting treasures.

I assure you, I got exactly what I expected out of Pharaoh's Tomb, and at the price was more than satisfied. I didn't find the problems "pretty easy to solve" — did your reviewer actually complete the adventure?

And in view of all the complaints about mail order companies, I would like to offer a bouquet to Phipps Associates. I bought a black and white copy of their Knight's Quest — another excellent adventure — expecting it to be the coloured version. I wrote to Phipps and received a coloured replacement by return of post.

When I was stuck in Pharaoh's Tomb and phoned for assistance, I got their answering phone service, so left my name and phone number, saying merely that I was stuck. I got a map and clue sheet through my door the next day — someone had gone to the trouble of looking up my address in the files. So software companies are not all the uncaring villains that letter pages would have you believe.

Jacque Rycroft, Hollowell, Northants

*Our reviewer's comment: "If Jacque Rycroft is happy to play an adventure once and discard it, that's fair enough — personally, I find money more scarce than that."*

"Having played several adventure games, I like the sort of adventure that last and, after all, the whole point of an adventure is that you don't know what you're going into.

It's true that the objects stay in the same place each time you play The Hobbit, but that's because it follows Tolkien's book to a close intent. Instead, interest is generated by the fact that Thorin and Gandalf wander about unpredictably.

I found the problems — both the syntax and the mazes — far more difficult in The Hobbit, which I haven't managed to complete yet. Yes — I did complete Pharaoh's Tomb.

But as I said in my review, Pharaoh's Tomb is very reasonably priced.

## Pull your socks up

Your letters column contains many relevant points and opinions, which I read most carefully. I also like One Man's View. I am dismayed at the way in which software companies have abandoned the ZX81, which I own.

This computer was the cause behind many software houses appearing in the first place. Yet no sooner does the Spectrum arrive than most companies discontinue software for the 81. I am in favour of progress, but these software houses make me sick.

Luckily, a few companies such as Artic are developing and selling new products. Other companies are relying on old stock. But original ideas are needed now, not the 30 or so variants of Space Invaders that were first marketed.

Why won't Virgin Games, for example, market software for the ZX81? There are still hundreds of thousands of owners, and a new game might reach the majority of them.

I hope that quite a few of the High Street stores are sending their staff on the computer literacy course, as reported in HCW 12. One local store — part of a chain — has one-track employees.

I went there to enquire about the Jupiter Ace, and was confronted by an assistant who asked me whether or not I wanted to play arcade game, rather than if I needed help. When I said so, he seemed shocked, and I was so annoyed I left the shop without any information.

Why do people think that we teenagers are all button-pushing crazy?  
R. Gill, Aine, York

A VIDCOM CREATION

# MIJID, BECAUSE YOUR PRODUCTS HAVE GROWN UP...

Video games: a 75% growth in 1982. A spectacular increase, giving food for thought! Home micro-computers and video games are nearing full-maturity. Having reached this stage of development, they can only strengthen their impact with the help of a vigorous commercial strategy. And thus Vidcom saw the need and created Mijid.

## COINCIDING WITH VIDCOM, MIJID IS EXCLUSIVELY RESERVED FOR MICRO-COMPUTERS AND VIDEO GAMES

If you are a publisher, programmer or analyst, manufacturer or distributor, the success of your products will be enhanced by attending Mijid.

## FIVE DAYS IN WHICH TO MEET PROFESSIONALS FROM AROUND THE WORLD

retailers and distributors creating and developing their sales networks; producers, from all domains of the software industry, looking for new programming ideas; writers and programmers negotiating rights for promotion, adaptation and distribution; international journalists, there to report on your new products.

## MIJID IS A VIDCOM CREATION

and there is a strong tie between these two shows. It's normal: their interests are complementary. Furthermore, the professional attending Mijid will be able to count themselves among the regular, prestigious Vidcom attendance. A solid guarantee for contacts and contracts.

Get ready for the next surge of growth, attend Mijid.

## Delve into hex with your Oric

**See what Oric BASIC does to your program, says Paul Wilson**

Hex-Print was developed one evening to help me find out what Oric BASIC did with and to a program.

The program is extremely simple in layout and action and, although written on an Oric, is readily adaptable for any machine having BASIC. The only idiosyncrasy to be found relates to Oric's handling of IF...THEN...ELSE.

Basically (sorry about that) it doesn't handle ELSE at all. OK, purists will point out that it does, sort of, but as far as I'm concerned it might as well not.

To use the program, it has to be given a start and an end address. Since I feel happier with hexadecimal than base 10 for addresses, either of these can be given as hex or decimal — just remember to prefix a hex number with the hash symbol.

The subroutines used are:

- 1000 instructions on using the program
- 2000 convert a decimal number to hex
- 3000 print the page heading
- 4000 validate the input addresses

When it is happy with the addresses you have given, the program will loop round expanding each byte to two hexadecimal characters, printing eight bytes per line.

Twenty-two lines are printed on a full screen, then the program waits for you to type a character before continuing. At this point, if you type Q the program ends there and then, otherwise it loops round to produce another page — or as much as you asked for.

A full screen will consist of 176 bytes, a moderately round number in hex (#BO). The calls to machine code routines are to the monitor to suppress the keyboard (CALL #E6CA), and then to recommence scanning it again (CALL #E804).

A couple of suggestions for use:

1 Start = #500  
End = #580

This will show you how BASIC lays out the source of your program — the program actually occupies up to just after #B90 if you want to see it all.

2 Start = #B90  
End = #C50

This will show the variable table at the end of the program.

As an experiment, add the line:

91 AA% = 256

then run the program using the parameters in 2 above. Do you see how an integer variable is held?

One last point: the program will quite happily look at the screen RAM in HIRRES mode, but the display function will be drastically affected. The program can be modified to take account of this, but it would be quite a drastic change.

# Programs to put your mind to

If you're after a spot of mental exercise, this selection of software could be right up your street

## Cyrus-15-Chess Spectrum £9.95

By Intelligent Software, from Sinclair, Freepost, Camberley, Surrey GU15 3BR

Whether you're novice or a chess expert, you'll enjoy this excellent tape. Side A is for the 16K and Side B 48K, with few more features. There are eight playing levels or strengths plus three problem levels.

Very simple to use cursor operation takes care of moving pieces, and even give you a chance to change your mind or take back a move. When making an incorrect move, an illegal sign will be displayed and also a buzz. Along with the tape you will

receive a very comprehensive user manual.

When learning you can opt for a demonstration game, where the Spectrum makes all moves. On the 48K version, extra features include altering the colours, getting a printout of the game in progress or completed, and saving the game on tape.

The problem levels allow you to instruct the computer to look for a mate in one, two or three moves, according to the level set, or find by analysis that this is impossible.

C.MeL

## Quiz Pack Dragon 32 £3.95

Shards Software, 10 Park Vale Court, Vine Way, Brentwood, Essex

Good value, this one. Two programs for the price of one. Two first is Word: Here the computer selects a random word from its memory and displays the appropriate clue. You are given a time limit to respond with a letter, and if the answer is correct, the letter is placed on the screen. Unlike Hangman, if there are two letters the same only one is printed.

More points are scored the faster you complete the word. One possible area of confusion is that the inlay card suggests the software is suitable for all ages.

instructions	80%
playability	80%
graphics	60%
value for money	100%

A.G.

This is misleading, as some of the words are quite complex.

In Cross, the second program, the computer selects 10 words and sets them out in crossword fashion. The display is clear and uncluttered, and clues are printed when the cursor is set at the head of a word.

My only criticisms are that the cursor routine is slow to use, and the provision to see the answers is obtained by pressing the space bar, which can be done by accident while playing.

You can enter words of your own choice, and clear instructions are provided to do this.

## Ringo Spectrum £5

Elephant Software, 41 Haymill Road, Burnham, Berkshire SL1 6NE

No, this has nothing to do with the Beatles, although the game can be just as frustrating as some of their songs. If you think that the world holds no challenge for you since you solved Rubik's Cube, may I suggest Ringo.

Two intersecting rings are presented on the screen. Within these rings are a number of coloured beads. The idea is to sort these beads into colour groups by rotating the rings. Not as easy as it sounds.

This is an excellent and novel idea, but the limitations of the program spoil it somewhat.

When a ring is rotated there is rather a long pause while the computer resorts the beads, and this detracts from the playability of the game.

However, the game is sufficiently well devised to remain addictive even if it is slow. I have still to solve the puzzle, and unfortunately the Spectrum can't help me due to the lack of the 'solve' facility you might expect to find in a game of this type. Nevertheless, I'll keep trying...

T.B.

## Chess BBC B £7.95

Program Power, 8/8A Regent Street, Chapel Allerton, Leeds LS7 4PE

I have never been nor will I ever become more than a very mediocre chess player. Apart from the fact that I was soundly beaten on every game, the program is very useable and well presented.

The graphic display of the board is good, although the very bright red and green become a little wearing after a time. This is aggravated by screen judder if you forget to turn off the interface before use.

Moves are entered straightforwardly using the now standard algebraic notation. Illegal moves are trapped, and more advanced moves, castling and en passant,

are very easily carried out. Play is on a choice of six levels — I like to think what level 6 is like.

As well as the standard game there are options for blitz chess (10 seconds!) which must be jotted down on every game. The latter will appeal to the more expert amongst us who like to go over old games.

Instructions are provided on the cassette insert and are very brief but more the less adequate. For those who like to ponder there is a facility to save part played games to tape.

J.W.

## Concentrate Dragon 32 £5.95

Mk 1, 30 Painswick Road, Birmingham B28 0HF

This is a game for two people matching pairs of cards from 28 dealt by the computer. There are 14 different designs randomly placed.

The game is extremely well set out and organised. It did keep me interested for some time but seemed to be getting easier. This was, I flatter myself, a credit to the program, which has heightened my level of concentration and improved my ability to memorise.

A good educational aid I would have thought, with its interesting patterns steering clear

of the standard pack and its gambling connection! Quick to respond, fast paced and good fun.

# Games of the unexpected for the unafraid...

## THE WHITE BARROWS

Somewhere amid this maze of burial chambers lurks an Evil Sorcerer whom you need to trap. Trouble is, he's protected by Trolls, Dwarves, Serpents and the occasional Dragon or two! Your magic staff will block the tunnel to prevent him escaping unless, that is, he outwits you.

A real brain twister, White Barrows requires both brains and brawn from its players. It's no good just hacking your way through the Barrows and hoping to fall over the Sorcerer. Eventually you'll meet a Dragon, and they don't hack easily! You'll need all your strength and cunning to survive this one for long.

THE WHITE BARROWS Only £6.50 all inclusive!

## CELLS AND SERPENTS

More monsters than you ever thought could live behind your keyboard. Wander the hills in search of gold and glory but be very, very careful where you tread! There are things here that will make your wildest nightmares look like Julie Andrews. Fancy meeting a Mind Flyer, for example? Or how about shaking hands with an Asmodeus? (You'll only do that once!) Treasure is here to be found though... the hard way.

See just how good you really are at adventuring with this practically unsurvivable fantasy. Not for the faint of heart or the slow of sword.

CELLS AND SERPENTS Only £6.50 all inclusive!

## \*\* SPECIAL DEAL \*\*

Both programs for only £11.45 all inclusive!

Our Adventure Series programs are available on tape for the following systems:

Commodore VIC-20 (not available for White Barrows), Commodore PET, Sharp MZ-80A and MZ-80K, Tandy TRS-80 Model 1, BBC Model B or 32K Model A, Atari 400 and 800, Sinclair 48K ZX Spectrum.

ASP Software, ASP Ltd,  
145 Charing Cross Road, London WC2H 0EE

# The trophy's yours if you win at Bagatelle

My game is based on Bagatelle, works on both models of the Spectrum and runs in a choice of three modes: fast, rapid and slow.

In the slow mode you can gain bonus points, but be careful not to stray off the right track and into the minefield.

## How it works

10-115 initialisation, call sub-routine to set up graphics,  
 \* draw board  
 120-400 move ball routine  
 1000-1602 score routine, option to replay  
 3020-3060 win routine, display trophy  
 4020-4060 move routines  
 4300-4600 instructions, select speed, display  
 6000-6050 UDG DATA and loader

For all modes you have 10 goes, with an extra go each time you hit the 100. The object of the game is to score 1,000 points. And then your reward, a trophy, appears on the screen.

The highest score so far is retained and displayed continuously.

I have used the full 24 lines of the Spectrum's screen and all the

## Variables

go counts tries (max 10)  
 score counts and records score  
 hi records and displays high score  
 b vertical co-ordinate of ball — moves down automatically during play  
 d horizontal co-ordinate of ball, fired by pressing M and continues to move swiftly and smoothly after release (when in mode F)  
 LINE calls sub-routine to set speed: F, R and S  
 a,b/aa,bb co-ordinates of random hazards/bonus points in SLOW game  
 d,e,x and r used to produce BEEPS and colour effects

21 user-defined graphics characters.

There is no machine code as such. The data for the 21 UDG characters — lines 6010-6017 — is entered in hexadecimal (base 16) to save a lot of programming time and avoid the need for all the commas. Each line is labelled with the characters it contains.

Lines 6018-6040 contain the hex loader, which is a modified ZX81 routine. If you change the program and use fewer UDGs, don't forget to change the figure 21 in line 6018 to the new number of characters.

To see the positions of hazards and bonus points change the INK colour in lines 2015 and 2515.

In line 3040 the graphics characters, in order, are:  
 B C D E F G H I (GRAPHICS 8)  
 J K L M N O P Q R S T  
 (GRAPHICS 3) U.

A is the ball.

If you want to see the trophy, use the direct instruction GOTO 3040.

# Hello there!

We've arrived, and, although we're in a "high-tech" business, we're really very ordinary, friendly people. The first space invaders with their feet on the ground.

We're Websters Software, part of the Websters Group PLC, the £40M communications business that encompasses Bookwise, Books for Students and Felix Learning Systems. We've been set up to provide a personal computer software merchandising service to high street retailers. We've already won a number of large multiple accounts and, very shortly, our name will be well known in high streets throughout the country.

We now wish to appoint a nationwide team of **Sales Merchandisers**, composed of responsible and reliable individuals, able to work on their own initiative with the minimum of supervision.

You will probably be aged 18 - 25, mature but also keen, ambitious and ready for your first real career opportunity. You should have enjoyed a reasonable standard of education and be able to present yourself properly to retail store management.

If you have a clean driving licence and you are looking for a career path into sales and eventually sales management, you could be one of the people we are looking for. The remuneration package includes a salary **circa £5,500.00p.a.**, plus a car and the sort of benefits normally associated with a large and responsible public company.

Please write in the first instance, providing concise details about yourself, your education and career to date on one side of a large sheet of paper. Interviews will be held locally during late August/early September and the successful applicants will be required to start by 1st October.

Martin Corral,  
Websters Software Ltd,  
Langham Park, Catteshall Lane,  
Godalming, Surrey, GU7 1NG.

**Websters**  
SOFTWARE

## Lord of the Balrogs Commodore 64 £6-90

Supersoft, Winchester House, Canning Road, Wealdstone, Harrow, Middlesex

This is a skilfully humorous game which, in spite of its simple nature, I found both difficult and addictive.

The plot is not original. You lead a party of five assistants in a search through a multi-level cave system to locate five artifacts.

Your gang of helpers is a mixed bunch, including a warrior, an Amazon and a Hobbit. With them you have to fight sundry beasts which bear your way.

The game uses standard Commodore graphics characters (I

believe it to be a converted PET program) but gives an effective plan of the caves. Until you locate a certain object, you can see only the room you are currently in.

The use of sound is good and not excessive. I was impressed by the humour of the textual portions including the rather nice fight routine.

The game uses single-key commands and it was occasionally difficult to remember which key performs what. On the plus side, the instructions were excellent.

At the price this game offers excellent value and will occupy you for many an hour. **A.W.**

instructions	100%
playability	80%
graphics	70%
value for money	90%

## Franklin's Tomb Dragon 32 £9.95

Salamander, 17 Norfolk Road, Brighton, East Sussex BN1 4AA

An illustrated booklet helps to visualize the many scenarios of this textual adventure game. Look closely and you might find the essential clues for solving the many puzzles.

This is a very good quality text adventure that is an amusing romp from start to... wherever you get stuck. Written in BASIC you can cheat a little, not a lot, and peek at some of the data statements — but of course you wouldn't do that!

A nice feature is the split screen, which shows the current

situation, inventory and the responses to your statements. A save game facility allows you to carry on from where you left off.

Essentially all these games must remain a mystery so I won't give anything away. However, it does offer a real incentive whereby if you solve the puzzle of the crypt you will gain clues to other adventures coming soon!

It's got plenty to keep you guessing, it's very entertaining and it's something that has absorbed a lot of my time. Salamander has maintained its usual high quality but it is a bit pricey. Hold on to the carrots and good luck! **M.P.**

value for money	80%

## Troll King TI-99/4A £8

Lantern Software, 4 Haffenden Road, Tennerden TN30 6QD

The evil Troll King is holding the Queen captive in his castle and it is your mission, as a brave and fearless hero, to rescue her. But you're not on your own. You carry out your task with the help of a small dwarf who occasionally assists you at various stages of the adventure.

There are no graphics in this game, and colour and sound are hardly used at all.

Unfortunately, there are no instructions either, so you don't find out the object of the adventure until part way through when the dwarf tells you.

A lot of thought has obviously gone into this program, and it

has been cleverly written. But as the computer often comes up with the phrase 'I don't understand' when you input instructions, it can become very frustrating, and is rather over-priced at £8.

# Mythological meanderings

Emerging from the mists of time, our reviewers tell you whether these adventures are the stuff that software legends are made of

## The White Barrows 48K Spectrum £6.50

ASP Software, 145 Charing Cross Road, London WC2 0EE

This is a game of logic in which you travel through a maze of rows (barrows) as in burial mound, not wheelbarrows, silly. Your aim: to trap an evil sorcerer and take from him a stolen

There are on-screen plans to guide you; you move about by entering the number of the appropriate room. As you progress, the usual hazards appear: monsters, dwarves or gnomes — who can be helpful if you bribe them from the 500 units of magic you start with.

instructions	60%
playability	60%
graphics	40%
value for money	75%

Otherwise, you may have to transport, stun or burn unfriendly creatures — and it all uses up your supply of magic. To trap the sorcerer, you build walls to block up entrances and cut off his escape.

White Barrows is a difficult game. It's very easy to be killed before you can complete your quest.

But I don't really feel it's an adventure you will get attached to. Could do with more action and moving graphics.

C. Mc C.

## Escape from Perilous Atari 400/800 32K £14.95

English Software, 50 Newton St, Piccadilly, Manchester M1 2EA

This game appears to be the Mark 2 version of English Software's Time Warp. The idea is to guide a little man around the screen to pick up four treasures, whilst avoiding the 'demons' that follow you.

The man is more detailed, the background better planned, but still the game lacks something.

You can walk for screens without seeing anything, and the two monster types are easily avoided. There are three levels to go through.

Somehow I found my way out of the gardens into the caverns,

but there was still a lack of activity — perhaps the monsters were on a lunch break?

An idea that needs developing considerably before it will provide a good game. **M.F.**

# Setting the Pasa in software

**Pasosoft's aim is to be comprehensive — and with 24 programs covering eight micros, it seems well on the way to achieving that aim. Tony Reid, the company's alien-zapping manager, talked to Candice Goodwin about what else Pasosoft has up its sleeve**

At Pasa's shop at 213-215 Market Street, Hyde, software and micros used to rub shoulders with burglar alarms — a relic of the firm's engineering background. Its MD, John Raduch, originally had plans to start an engineering business. Hence the name, which stands for Process Automation Systems Engineering.

But now, 18 months after the shop's opening, the computer business has completely taken over the premises, and the burglar alarms have been moved off down the road.

Pasa has been selling other people's software for some time. But wasn't until April that it started off its own software venture, Pasosoft.

Since then, though, it hasn't been hanging about. It already has 24 titles, and stands out from the crowd because of the number of machines it covers. It has programs for the BBC, VIC, ZX81, Dragon, Lynx, Oric, TI-99/4A and Spectrum — though some machines are covered better than others.

Computer games buyers tend to be young, and it probably helps that Pasa has a young manager, eighteen-year-old Tony Reid. Tony approaches the software market from the viewpoint of an avid arcade-goer and computer games player. When I spoke to him, he was celebrating his highest score yet on TI's Parsec: 124,000.

It was Tony who gave John Raduch the idea of starting Pasosoft, when he approached him with some VIC-20 and BBC programs he had written. Tony had previously tried to sell the programs through his own company, Ozark Software, but the business never really took off. "I had no capital to invest in promotion", he said.

But with the backing of Pasa, the programs started to sell. They were joined by Paseman, a BBC program written by Pasa's engineer Ken Williams, then Tony wrote some programs for the Oric. Now most of the programs come from freelancers, "mainly 16 to 18 year olds who come into the shop on Saturdays", according to Tony.

Tony himself doesn't have time for programming during the day. He's kept too busy running the software business — which includes taking care of tape duplicating. All the copying is still done in-house, using banks of cassette recorders linked up to a reel-to-reel.

And no doubt bearing in mind his own experience of trying to set up in business, Tony has been writing round to all the small software companies he finds in the classified ads section, with a view

to taking over the marketing of their programs too.

Often he doesn't get home until nine in the evening, "and then it's straight on to the Oric and programming until midnight." Tony still has a soft spot for the BBC micro he used to work on, "because it's such a brilliant machine" — but commercial pressures have influenced his taste. "I like the Oric because the software written on it is earning me money", he says.

Looking at the Oric more objectively, Tony thinks that "the

Oric's unreliable in some respects — loading and saving could be improved — but it's got very good sound. The hi-res graphics are good — it compares with the BBC on mode 7. I think it's an underestimated machine."

Pasa has eight titles for the Oric, and finds that because of the shortage of Oric software, they sell like hot cakes. Enquiries have come from as far afield as Australia, Norway and France.

More Oric software is planned. But the next Pasa release will be a batch of programs for the Spec-

trum and for the TI-99/4A in Extended Basic.

Pasa doesn't just sell its own brand of software. It has already brought out a joystick interface which enables the Oric to use any VIC or Atari joystick.

Planned for the future is a motherboard which lets Oric owners blow their own EPROM chips. The finished chips would slot into the motherboard and work like a software cartridge.

These two products are the brainchildren of Ian Dyson, the "electronics genius" who also wrote Pasa's Oric disassembler. But electronic wizardry is just a freelance job for Ian, who works full-time for Oldham Batteries.

Pasa is currently gearing itself up for what Tony expects to be the peak of the software this Christmas. The company has several irons in the fire.

Most of its software business is done by mail order, but it's also opening new shops in Stockport and Rotherham, and supplying increasing amounts of both computers and software to other computer retailers.

And it's keeping in touch with local computer enthusiasts by getting involved in local clubs and school events.

It lends computers, TVs and tape recorders to the Tameside computer club, which now has 30 members.

And it sometimes takes stalls at local school fairs and organises competitions. "For example, we might give away a ZX81 to whoever gets the highest score in one of our games," Tony said. "It all helps to spread our name around."

Four of the Pasemen — from left, Laurence Holt, software writer, Tony Reid, manager, Ken Williams, engineer, and Bill Haydon, shopfloor manager

## 4 Letter Word Atari £6.50

Softlow, 162 Leicester Road, Narborough, Leics

An unimaginative title for a game that hardly stretches the Atari to its limits.

Choosing a one-player game will prompt the computer to select a four-letter word from memory. Your task is to deduce the word by transposing four letters.

The computer will help by indicating the correct position of letter, or correct choice of letter, after every four entries.

A two-player game involves your opponent picking the target word. Score is calculated according to time taken and guesses made.

4 Letter Word is written in BASIC. No use is made of sound.

The game is fun and could be of educational value for small children, but more should be expected of a program designed for the 16K Atari.

## World Geography BBC £6.95

Program Power, 8/8A Regent St, Chapel Allerton, Leeds LS7 4PE

The program starts by drawing a really excellent high resolution map of the world in blue and yellow which, once drawn, calls up the second part of the program comprising the tests. All the instructions are displayed on the screen just under the map and are easy to understand.

The interactive part of the program consists of a straight forward question and answer sessions which first ask if

you want to answer questions on capitals, populations or both; and give a choice of eight levels of difficulty.

The first level tests well known countries but the top level would demand better than average geographical knowledge. Help is given by a spot of light which appears on the map at the approximate position of the country in question.

J.D.

instructions	80%
ease of use	40%
display	70%
value for money	60%

## Chemistry BBC £6.95

Program Power, 8/8A Regent St, Chapel Allerton, Leeds LS7 4PE

This program uses the idea of a fruit machine with three windows, one giving the type of element, one giving the symbol or atomic number, and the other name of the element.

There are 10 jackpots to win in each game and are won by the player pressing a key whenever all the windows relate to one element.

You enter your name and skill level before each game, and there are four skill levels. These claim to range from

beginner to professor, but this is an exaggeration.

The graphics, apart from the moving handle of the fruit machine, are poor and fairly static. The noise, and I use the word deliberately, accurately imitates that of a real machine and quickly becomes very tiring. Fortunately it can be turned off.

The whole game is repetitive and rather trivial so unless there are two or more players one would quickly tire of it.

J.D.

# Programs that have learning taped

Our reviewers investigate a batch of educational programs for a selection of micros

## Amazing Dragon 32 £5.95

Bambly, Leverburgh, Isle of Harris PA83 3TX

A new company on the Dragon scene offering to "help develop hand and eye co-ordination, to aid in teaching conceptual thought and to form an introduction to computers for young children." I tried it on four children aged five, six, seven and eight. Admittedly the blurb mentions pre-school children and that should be borne in mind.

Five mazes are presented using the hi-res screens in

order of difficulty selected by the user. A cursor is moved by the arrow keys to a final point.

One of the problems is that there are only five mazes with no variations. Very limiting. There was little to encourage them to repeat the journey and no variety to reinforce anything learned. There must be a ready market for tiny tots' software but it has to be more stimulating than this.

M.P.

The ultimate Machine Code Tool Kit for the Spectrum with 60 plus routines. Both 16k and 48k versions in each cassette.

16K and 48K Spectrum - £7.95

### Speech from the Spectrum

- 48K SOFTALK I 'Multiwords' 70 plus words £5.95
- SOFTALK II 'Spacegrams' 80 plus words £5.95

### ORIGINAL SUPERCHESS

10 levels of play, plus many features

16K ZX81 £4.95 48K Spectrum £4.95

### 16K SUPERCHESS £6.95

The best 16K Spectrum Chess program. 3 levels of play with playing strength similar to the 48k version's first three levels. Analyse mode, plays several openings e.g. Queen's Gambit, Ruy Lopez, plus more features. Runs on 16k and 48K Spectrum.

### BACKGAMMON

Very popular

48K Spectrum £5.95

Specialists in high quality, intelligent games

### SNAIL LOGO

An advanced implementation on the Logo turtle type graphics. Uses the original style Logo instructions to control the movements of a 'mechanical' Snail around the screen instead of a turtle. Includes the following features: Full operating System and Editor; Comprehensive user guide with sample programs; Multi-level Hierarchic Procedures; Variables; Colour and wait-bouncing controls; Procedures with Parameters; Recursive Procedures; Nestable repeat loops; 25 Language Instructions, over 20 warning and error messages; Commands to control the optional ZEAKER turtle.

48K Spectrum £9.95

ZEAKER TURTLE with Pen and obstruction sensors. Can be used with the Spectrum Snail Logo. The ZEAKER can be used with both the Spectrum and ZX81 or other micros with suitable ports.  
ZEAKER in Kit Form - £52 P.O.A.  
ZEAKER Ready Assembled - £69.50  
ZX81 interface, if required - £13.50  
add £3.00 P&P and 15% VAT

UK Prices include post & packing. Despatch within 48 hours of receipt of order. Send SAE for catalogue. Also available from WH Smith - Computer Branches. For orders outside UK add 80p for postage. Send cheque or postal order to: CP SOFTWARE, Dept. HW 17 Orchard Lane, Prestwood, Bucks. HP16 0NN

TOP RATES PAID FOR HIGH QUALITY PROGRAMS - SEND YOUR MATERIAL FOR EVALUATION AND PROMPT REPLY.

# Get a terrific tan and find clothes that fit you

**In this exclusive Holiday Special we help you get a great tan and ensure you choose the right size when shopping for clothes abroad. The programs, by HCW regulars Ray Elder and Allen Webb, are for the BBC micro, Spectrum and unexpanded VIC-20**

You expect a terrific tan when you go on holiday. And many of us are also tempted to shop for new clothes while abroad.

In this Home Computing Weekly Special we help you to do both.

The programs on these pages — for the Spectrum, unexpanded VIC-20 and BBC micro — will tell you which suntan lotion is best for your skin type and convert your measurements to sizes used in popular holiday destinations.

The **suntan programs** use the Sun Protection Factor which can now be found on the labels of all tanning products.

Remember that, even if you want to tan as quickly as possible, good sun protection should be your main consideration.

Without this you risk prematurely aged skin and serious illness, even two of the three types of skin cancer.

It is best to choose lotions or creams which contain all the following: para-aminobenzoic acid, any of the B vitamins, a powerful ultra-violet deflector, benoxophenone.

Ultra-violet light is strongest between 10 am and 3 pm and can reach your body even if you are not in direct sunlight. And it can even reach up to three feet underwater — so you're at risk even while swimming.

Your protection can be destroyed by sweating, swimming, sand and towel contact, so apply lotions and creams often, hourly if necessary.

Neck and face need a high SPF, 10 or more, regardless of skin type and may need even more frequent applications.

If you become sunburned do

not cover with calomine lotion or a cream containing allantoin or chamomile. A mixture of water and milk will also act as a soothing lotion. Severe burns need treatment by a doctor.

# VIC-20 programs by Allen Webb

120 REM A E WEBB 1983
130 REM
    
```

The clothes size programs use official information, but do try on the clothes. Like Britain, sizes can vary between manufacturers.

All the programs include routines which draw figure outlines to make them attractive.

Because of the limited memory, the VIC-20 programs are in three listings. One is for sun care and the clothes size calculator is in two parts. The first loads a set of redefined characters into memory. Simply run the two parts one after the other.

And the Spectrum program has been written in such a way as to make it compatible with the ZX81. All you need to do is expand the multi-statement lines and omit the outline drawing routine.

## ACCESSORIES

Speed up the action with

### PICKARD JOYSTICK CONTROLLER

Allows use of any keys, not just cursors — no special programming — does not affect other add-ons — special price until the end of June.

Price: £19.95 + £1.50 p&p  
Spectrum ZX81 compatible

Success Services, 154 High Street, Bloxwich, Walsall, West Mids WS3 3JT.  
Tel: (0922) 402403

## BOOKS

### ATARI OWNERS YOUR OWN MAGAZINE

PAGE 6 is published bi-monthly and features nothing but ATARI. Lots of programs, reviews, tutorials, hints and tips. Programs from America and elsewhere. Current issue has a special offer of 25% off ATARI software. Can you afford to miss it?

Subscription £9.00 for six issues or send £1.00 for a sample copy.  
Page 6, Magazine Dept. H, 18, Underwood Close, Parkside, Stafford.  
Tel: 0785 41153.

### BOOK SALE? IT COULD BE YOUR BOOKS FOR SALE. RING 01-437 1002 EXT 213 NOW.

### MICRO TAN 65 OWNERS

The Micro Tan 65 is back. If you want to be kept up to date with the latest news — reviews — hardware and software products, then you should subscribe to:

*The Micro Tan World Magazines*

Published by Microtonic Computer Systems Ltd, the new owners of the Micro Tan 65 system. Please send £10 for 1 year's subscription to:

MCS Ltd  
16 Upland Road  
Dulwich  
London SE22  
Tel: 01-693 1137

## CLUBS

Texas TI-99/4A. Module exchange software. Dust cover £3.75. Beginners club, £5.00 annually. SAE to: 40 Barrhill Patcham, Brighton, Sussex BN1 8US.

## HARDWARE

Apple Computers peripherals and software, bought and sold, new and used printers supplied. Bracknell (0344) 84423.

### TI99-4A

Single cassette lead, £3.95. Dual cassette lead, £4.95. Cassette recorder (it works guaranteed), including tape counter, record lamp, hat/mains operation, ext. £22.48. Recorder + single lead, £24.95, all prices inc SAE full list (see also software games classification). Cheques/POs, Christine Computing, 6 Florence Close, Watford, Herts.

### SAVE UP TO 15% ON SOFTWARE

Quality software for: BBC, ORIC, Dragon, ZX81, VIC-20, CBM64, Spectrum, Colour Genie.

We sell only the best games and utilities by: Virgin, Bug-Byte, Artic, Salamander, etc.

Write or phone now for lists to: PATONS, 176 Todmorden Road, Burnley, Lancs. BB11 3EU. Phone: (0282) 53241.

## BUG-BYTE SOFTWARE

BUY OR SELL  
HARDWARE  
THROUGH H.C.W.  
RING 01-437 1002  
EXT 213.

## RECRUITMENT

### 6502/ORIC 1 PROGRAMMERS

We require machine code games for the Oric 1, and machine code programmers (preferably Swansea based) to work on a part-time basis for us. We will pay good royalties or cash in advance. For more information tel: Swansea 403363 or Write.

ARCAOTIA  
SOFTWARE

FREEPOST, SWANSEA, SA3 4ZZ

## FOR HIRE

To Hire a Computer from ZX81 upwards, ring or write to: Business and Computer Services, 292 Caledonian Rd., N1 1AB. Tel: 01-607 0157.

Oric Software Library. Two weeks hire £1. Annual Membership £5. Stamp for list. Les Wilson, Penallick, Tintagel, Cornwall.

## SERVICES

### PETER DAVIS ASSOCIATES

29 Dalton St., Cardiff CF2 4HB.  
Tel: 394277.

Computer Insurance specialists, mainframe to micros, home and overseas. Send for details. True Derangement cover.

## FOR SALE

For Sale. ZX81 Spectrum 16K, also 3 cassettes and 2 books, £70. Not prepared to split. Tel: Wolverhampton 773148.

BBC Model A 16K A to D and joystick port, almost new. Original packing, plus one Acornsoft games tape £250. Telephone Andover 53600.

TI-99/4A plus two cartridges, Soccer and Invaders. Also £75 software. Cost £275. Sell £200. Phone: Blyth 63250.

Texas 99/4A expansion box with memory card, disc drive and controller, RS232 card, costs over £900, will accept £600. Phone: 0455 611479.

Atari 400 32K, 410 recorder, Basic/Manuals, G/condition, £180. Also latest software, over thirty titles from £8. Sunbury 82189.

## SOFTWARE GAMES

Superb new game for Spectrum/CBM 64  
**TRAX!**  
100% machine code action available now  
£5.50  
Cheap at the price!  
Soft Joe's Business Centre  
Cloughton Road, Birkenhead,  
Merseyside L41 6EF.  
Tel: 051-647 8616

### TI99/4A

#### Games

North Sea. Astro Fighter, Core! Code Break/3D Maze. The above at £3.50 each or £6.50 for 2, £9.00 for 3.

#### Literature:

(Tape & Booklet) handy sub-programs, £4.50. See also hardware classification. SAE for list (overseas one international reply coupon).

Trade enquiries welcomed.  
Christine Computing, 6 Florence Close, Watford, Herts.

## BARGAIN GAMES!

Spectrum 48K. Quicksilver Trader £8.95  
Oric 48K. LJK Xenon £7.50  
BBC. Micro Power Killer Gorilla £6.95  
VIC 20. Us Interceptor Crazy Kong £5.00  
Dragon. Salamander Night Flight £6.95  
Prices inc. VAT & P&P. SAE for full list. Cheques or Postal Orders to:

Phildata,  
8, Richmond Terrace, Pudsey,  
West Yorkshire LS28 9BY.

## COMMODORE 64 GAMES

Pakacuda ..... £9.99  
Ape Craze ..... £9.99  
Escape MCP ..... £9.99  
Centrapod ..... £9.99  
Sketch and Paint ..... £9.99  
p&p 50p Cheques/PO's or sae for details to:  
Regency Software, PO Box 28,  
Ascot Berkshire SL5 7RR.  
Tel: 0990-22707.  
Trade Enquiries Welcome

## SOFTLOW Software ATARI 400/800

182 Leicester Road,  
Northborough, Leicestershire.

**DOODLEBUG**  
Any idea in coding Picasso?  
You don't need to be to catch the Doodle bug  
\* Drawing fun for all ages!  
\* 16 colours  
\* Picture save facility

**4 LETTER WORD**  
A provocative title for a "Spell binding game" for 2 players. Once you've started you can't stop. Use your powers of deduction to discover the hidden word — there's over 800 of them!  
Required: 16K RAM, basic cartridge (joystick. Doodlebug only).  
All games are available on cassette only. PRICE £6.50 (free post and packing). Trade enquiries welcome.

**ZX81 16K software:** "Moving Squares" and "Matching Pairs" — mind stimulating and memory games — three levels of difficulty. Both for £3.95 from: T. Frost, The Links, Montrose, Angus, Scotland.

**Jupiter Ace (16K)** "Earth Defence" five stages. Also "Racer" £3.50. M. Caple, 24 Llanon Road, Llanishen, Cardiff.

**Mastermind** for 48K Spectrum. Test your skill against an opponent or the computer, £2.50. From: D. J. King, 1 Garrick Walk, Tilgate, Crawley, Sussex.

## MAIL ORDER PROTECTION SCHEME

If you order goods from Mail Order Advertisers in this magazine and pay by post in advance of delivery, this publication will consider you for compensation if the advertiser should become insolvent or bankrupt, provided:

1. You have not received the goods or had your money returned; and
2. You write to the publisher of this publication explaining the position not earlier than 28 days from the day you sent your order and not later than 2 months from that day.

Please do not wait until the last moment to inform us. When you write, we will tell you how to make your claim and what evidence of payment is required.

We guarantee to meet claims from readers made in accordance with the above procedure as soon as possible after the advertiser has been declared bankrupt or insolvent to a limit of £1,800 per annum for any one advertiser, so affected, and up to £5,400 p.a. in respect of all insolvent advertisers. Claims may be paid for higher amounts, or when the above procedures have not been complied with, at the discretion of this publication, but we do not guarantee to do so in view of the need to set some limit to this commitment and to learn quickly of reader's difficulties.

This guarantee covers only advance payment sent in direct response to an advertisement in this magazine (not, for example, payments made in response to catalogues, etc. received as a result of answering such advertisements):

## ZX MICROFAIR

Where else can you see so much for Sinclair Computers?

### ONCE AGAIN AT ALLY PALLY THE BIGGEST SHOW OF ITS KIND ANYWHERE IN THE GALAXY!

What Computer Exhibition gives you the opportunity of finding everything (and we mean *everything*) for ZX Computers?

Where can you find more than 150 exhibitors dedicated to Sinclair enthusiasts?

Where on Earth can you discover new and original products — hardware, software, books peripherals, programs, add-ons — many additions launched at the show?

Where can you find plenty of space to move, eat, drink, relax and, of course, buy?

Where will you discover that special 'show offer' on the equipment you have been promising yourself?

Where will you find an exhibition hall with so much parking space — and in parkland too?

And what other exhibition offers you all this for only £1 entrance fee (50p for kids under 14)?

There's only one answer: **THE 8th ZX MICROFAIR AT ALEXANDRA PAVILION SATURDAY 20th AUGUST 1983.** Make a note of it now... and come along for a good day out!

### The big show for a quid (or less)!

**CUT OUT AND KEEP!**

#### By British Rail

From London (Kings Cross or Moorgate) — about every 10 minutes to Alexandra Palace station — free shuttle bus or short walk from there!

From any part of the U.K. enquire from Kings Cross Travel Centre, London N1 9AP (phone 01-278 2477) about special day trips to the ZX MICROFAIR!

#### By Road

Follow signs from the A1 (Links with M1 and North Circular). Plenty of parking space available! Variety of routes from Central London.

#### By London Transport

Underground: Victoria Line from Victoria (also Oxford Circus, Kings Cross/St Pancras) to Highbury and Islington — change (cross platform) to BR Suburban Service to Alexandra Palace — free shuttle bus or 5 minute walk from there!

Alternative: Piccadilly Line (from Heathrow etc) to Finsbury Park or Wood Green — Link with W3 bus service to the fair.

**SATURDAY 20th AUGUST 1983 AT ALEXANDRA PAVILION, ALEXANDRA PALACE, WOOD GREEN, LONDON N22. FROM 10am TO 6pm.** Advance tickets available from: Mike Johnston, (HCW) 71 Park Lane, Tottenham, London N17 0HG. Adults £1.00. Kids (under 14) 50p. Parties of 10 or more at 20% discount! Please make cheques/P.O.s payable to ZX MICROFAIR and enclose S.A.E.

**EXHIBITORS!** Call Mike Johnston now on 01-801 9172 for details of space at this and future shows!

WINS  
 ERBY

**HUNT WINS GRAND PRIX**

At yesterday's Monaco Grand Prix, a hunting party strayed onto the track at the climax of the race. Cars were halted as the hounds rampaged around the circuit. "The whole place has gone to the dogs," one driver was reported as saying. The race was restarted, riders and drivers battled bitterly around the course before the Hunt thundered past the finishing line to take the chequered flag (it hasn't been seen since).

**PLAYER WINS OPEN**

Eagle eyed spectators were privileged to see play-  
 score a bird.

**PRIVATE DETECTIVE  
 DISAPPEARS**

Police are baffled by the disappearance of Dan Diamond. He was last seen approaching the eerie edifice known as Franklin's Tomb, but the authorities are completely unable to find any trace of him. Citizens are asked to report any information relating to his disappearance immediately. For further details, buy FRANKLINS TOMB, a new adventure game for the DRAGON 32 and 48k ORIC-1. This adventure comes complete with a 24-page illustrated Case File. £9.95 from BOOTS, SPECTRUM, COMPUTERS FOR ALL, WEBSTERS and all other purveyors of software. Don't
