'Improved' Spectrum causes software problems

In an attempt to solve two long-standing problems with the Spectrum's graphics, Sinclair has created a new headache for some software houses.

The latest Series 3 Spectrums, produced over the last six to eight weeks, contain a new ULA (uncommitted logic array) chip. The new chip is intended to improve the quality of the Spectrum's colour graphics display, and to ensure that it is now compatible with all makes of TV set.

But according to Mary Reinman, of Sinclair Research, the new chip has had "unforeseen side effects".

Parents: 'You're to blame'

Parents are to blame for girls falling behind in computing, according to Acorn's boss.

He was commenting on his company's research, plus a survey — first reported in Home Computing Weekly — showing boys are 13 times more likely than girls to use micros at home.

Chris Curry, Acorn's joint managing director, said: "Many teachers in our survey pointed out how many more boys than girls use micros at home."

SUMLOCK MICROWARE

SUPERB SOFTWARE FOR THE VIC 20

SP.01 SKRAMBLE
Destroy the enemy installations and missiles in their underground silo. Joystick or keyboard.
M/code. **£7.95**

SP.02 JUMPIN JACK
Cross a busy road and treacherous river to get Jack home. Joystick or keyboard. Multi-colour Hi-Res Gr.
M/code. **£7.95**

SP.03 TRIAD Defend your base against the suicide fleets of alien hoverships. Joysticks or keyboard.
M/code. **£7.95**

SP.15 SCORPION
Destroy the poisonous cacti and deadly scorpions to survive. Joystick or keyboard.
M/code. **£7.95**

SP.06 ASTRO FIGHTERS A space duel played by two players at once. Requires Joystick.
M/code. **£6.95**

SP.07 CHOPPER
Attack and destroy the enemy base but watch out for guided missiles. Joystick or keyboard.
M/code. **£6.95**

SP.04 GRIDTRAP Your man has been placed on a grid of traps which open after he walks over them. Defuse the time bombs in less than 60 seconds. Further hazards are presented by a series of mines scattered around the grid which cannot be walked on and a wandering 'BOOT' which must be avoided. The more you play this one the harder it gets. Bonus life 100,000 points. Programmed in Machine Code. Hi-Res Colour Graphics and novel musical sound effects.
Joystick or keyboard control. **£7.95**

SP.16 MULTITRON Lightning responses are demanded when manning your Starfighter through what can only be described as the biggest alien encounter of all time. Use your laser cannon, destroy or be destroyed. The Cosmic Phoenix, Space Turtles, Star Hoppers, Tri-Missiles, Warp Stingers, and Meanies defend the space lanes in wave after wave of invasion action. The ultimate journey now awaits you... The winding space corridor! Hi-Res colour graphics. Sound effects.
Joystick or keyboard. M/code. **£7.95**

SP.08 DESTROYER
Battle against Sea Air attack with the destroyer H.M.S. Victory. Joystick not required.
M/code. **£7.95**

SP.9 GUNFIGHTER
Duel with a deadly hrombe in a western shootout play the computer or 2nd player. Joystick or keyboard.
M/code. **£6.95**

SP.10 SPACE RESCUE
Pilot your rescue craft through the asteroid belt and save the stranded crew. Joystick or keyboard.
M/code. **£6.95**

SP.13 STARSHIP ESCAPE
A compelling and exciting real time graphic space adventure game. Joystick or keyboard.
M/code. **£9.95**

... AND THE COMMODORE 64

LW01 SKRAMBLE Enhanced features. Hi-res graphics, Sprite graphics. Synthsound. No. 2 option. Pixel plot graphics. Screen scroll. **£8.95**

LW02 JUMPIN JACK Enhanced features. Hi-res multi-colour graphics. Sprite graphics. Synthsound. 2 Player option. Lady Frog. Crocodiles etc. **£8.95**

LW03 TRIAD Hi-res graphics. Sprite graphics. Synthsound. Pixel plot graphics. 2 Player and game level option. **£8.95**

LW04 GRIDTRAP Hi-res graphics. Sprite graphics. Synthsound etc. **£8.95**

SP.17 AT THE CIRCUS
Requires 3K or more expansion Educational adding and subtracting program for 4-8 year olds 3 Levels animated graphics. (not illustrated) **£5.95**

Continued from front page

"It has affected some software, though none of our own programs or those from our major suppliers," she said.

Specifically, it appears that the new chip has affected the IN function, used to monitor input ports, when the Spectrum is in graphics mode.

It means that some programs, like Buttercraft's Power Graphics, written for the old series of Spectrums, won't work properly on the new ones.

But Sinclair has no plans to modify future Spectrums. Mary Reinman said: "Rather than seeing Spectrums as being affected, they are to our minds improved. It took a long time to develop the new ULA chip, and changing it again is not something we intend to do. It's really a software problem, and changes will have to be made by the software companies."

"The function affected is one that software companies have discovered for themselves — it wasn't in the Spectrum's manual or in the specifications. We didn't say it would be unchanged for ever and ever."

So far, the number of programs affected by the new chip seems to be small. John Rowland, computer buying manager at WH Smith, said: "to date, we have not received any customer complaints, though following this report we will be conducting a full investigation."

And Paul Cooper, software manager at Quicksilver, said: "I'm not keen on the screen display on the Series 3 machines, because it's shifted to the left by about two characters. But so far the only actual problem we've come across is with one of the new machines breaking on us."

**Stand up
your
computer**

Shinecraft's new computer work station has space for your micro, TV, cassette recorder and programs.

And it's on castors so that you can just roll it discreetly out of the way if your family starts to complain that the micro is taking over. Price: £60.

Professional Software for Spectrum and ZX81

SPECTRUM 48K

■ **Payroll:** Weekly, monthly, hourly. All tax codes, and pay levels. Guaranteed correct. £25.00 ■ **Statutory Sick Pay:** Better than programs costing 10 times as much on other machines. £40.25 ■ **Stock Control:** Over 1500 lines. Find, add, delete, in 2 seconds! Sinclair or full-width plain paper printer (with interface) supported. £25.00 ■ **Spectrum Demo Tape:** Demonstration versions of payroll, stock control, SSP. On one tape. £3.95 ■ **Critical Path Analysis:** Enter network of over 500 activities. Program finds critical path. Durations and costs can be modified, and the calculation repeated. Full-width printer supported. £15.00

SPECTRUM 16K (usable on 48K)

■ **Mortgage:** See how repayment amount affects duration and total amount paid. While paying, see how much interest and how much capital you are paying. Month-by-month table printed. On the same tape. ■ **Loan:** Calculates true interest when paying instalments etc. £8.00 (both programs together)

Parallel Printer Interfaces:

■ **The Standard Interface:** Centronics interface to link your ZX Spectrum to many popular dot matrix and daisywheel printers. The package includes: interface, simple word processor, 3 sets (different) of printer software, cable, centronics plug, full instructions. The **LLIST** and **LPRINT** commands are supported. Many other features also. £45 inc. VAT. Post free. ■ **The Deluxe Interface:** Includes all the features of the standard package, and also has a 3.5 mm jack socket and special circuitry which allows the ZX Spectrum to **Save and Load**, without having to unplug or switch anything! £65 inc. VAT. Post Free. ■ **The Professional Interface:** Includes all the features of the deluxe package, but also allows the ZX Spectrum to be used as a very powerful peripheral processor for a bigger computer! Software is supplied which post-processes word processor output with straight right and left margins. £99 inc. VAT. Post Free.

Tape Loading Problems With Your Computer?

■ **Loading Aid:** Allows you to get tape playback level right first time. Helps with dropouts and to check tape quality too! Standard model £5.95, Deluxe model £7.95 ■ **The Microcomputer User's Book of Tape Recording:** Is a practical guide to help you get programs in and out of your computer. Written for the computer user - but several audio and computer professionals have found it useful! ISBN 0 946476 00 4. ONLY £3.15 incl. postage (£2.90 in shops - temporarily out of stock) ■ **Test and Alignment Cassette:** Tape loading problems are often due to a mis-aligned tape head. Align your tape head by ear with our tape - no instruments required! £4.90

ZX81 16K

■ **Beamscan:** Computers bending moment and shear force diagrams for a simply supported beam with 1.99 point, uniform and uniformly tapered loads. £25.00 ■ **Time Ledger:** For up to 17 employees, 200 clients. £15.00 ■ **Optimax:** A powerful linear optimisation program up to 75 variables, constraints. £40.00 ■ **Payroll:** As above but only up to 30 employees. £25.00 ■ **Stock Control:** As above but 400 stock lines in 16K or 2000 lines in 64K. £25.00 ■ **Critical Path Analysis:** Up to 500 activities in 16K. Over 500 activities in 48K. £15.00 ■ **Budget:** Keeps track of expenses and compares with budget. 50 headings plus 12 months or 12 categories. £15.00 ■ **Financial Pack:** Contains three programs: Mortgage, Loan and VAT. £8.00
All items are post free and include VAT. Programs are supplied with comprehensive manuals

Continued from front page

"This has two effects. First, boys get ahead of girls in computer studies. Indeed, the evidence shows that for young teenagers, boys are probably spending more time on computer studies at home than they are at school.

"Second, as the boys race ahead, the girls lose both interest and confidence — a situation aggravated by the relatively small number of machines so far in schools.

"Britain is in danger of losing half its talent if girls don't acquire vital computer skills.

"It is clear that much of the problem is due to parents giving home computers to their sons rather than to their daughters.

"This 'leg-up' for boys means that girls are neither able to compete with their more knowledgeable brothers in school, nor in the even fewer jobs outside."

Some teachers, said Acorn, were so worried that they were starting girls-only computer courses.

A spokesman said the latest research had given added emphasis to an article in the July 26 issue of Home Computing Weekly, headed: "Girls — micros are for you, as well."

Autumn crop of cartridge games

When you've seen the film and read the book, you can play the game.

We've told you about Wargames, the new film about a boy computer genius who accidentally triggers off the countdown to a nuclear war. Now

A million tests later...

Software company Sumlock has moved into add-ons too with a £12.95 joystick with switches claimed to have been tested with a million simulated operations.

The Pro Ace, with a 4½ft cable, is for the VIC-20, Commodore 64 and Atari computers and video games machines and will be on sale next month.

Later models will fit the BBC, Dragon, Spectrum and Oric.

The joystick, guaranteed for two years, has two fire buttons — one on the top and one at the front.

Sumlock, Royal London House, 198 Deansgate, Manchester M3 3NE

Our article in HCW 21 — now concern is growing

Thorn EMI has announced Computer War, a cartridge game based on the film, in which the player's task is to prevent total destruction of the planet.

It'll be available from Thorn EMI dealers in September for the Atari 400 and 800 at just under £30 and for the VIC-20 at just under £20.

Other games cartridges out this month are Major League Hockey for the Atari 400 and 800, at just under £25, and Medieval Joust for the VIC-20, at around £20.

Lagging behind the rest, but expected by October, three of Thorn's games will also be available for the TI-99/4A: Computer War and Submarine Commander, priced at around £30, and River Rescue, at around £25.

Thorn EMI, Upper Saint Martin's Lane, London WC2H 9ED

Winners by 100 legs

Two young arcade game players are off to Munich to compete in the International Final of the Atari Player of the Year Competition.

In the National Final, held in London on 20 August, contestants had to try their hand at Ataris Centipede cartridge. Stuart Murrey, aged 14, won the under-18 event with a score of 221,983.

The over-eighteen event was won by 19-year-old Andrew Brzezinski, with a score of 197,710.

Over 80,000 people originally entered the competition in local Atari stockists. If the two national winners manage to beat the opposition in Munich, they win an expenses-paid trip for two to the 1984 Olympic Games in Los Angeles.

Briefly

RAMwise is the name A&F Software has coined for its programs which will fill the available RAM — including add-ons — and then auto-run. It means that computers with extra memory can run

the more sophisticated programs. A&F began with software for the Atom and is launching six Atom titles, priced at £5.75-£6.90, in time for Christmas. A&F's range now covers computers like the Spectrum and BBC.

A&F Software, 830 Hyde Road, Manchester M18 7JD

Sinclair Research has brought out five new tapes for the Spectrum and one for the ZX81, ranging in price from £4.95 to £12.95. For the Spectrum: Monitor and Disassembler, Zeus Assembler, The Cattell IQ Test, a squares puzzle called Flippit, and a Grand Prix game named Chequered Flag. Mothership is a space adventure for the ZX81 with 16K of RAM.

Sinclair Research, Stanhope Road, Camberley, Surrey

Pinball Wizard, an American import for the unexpanded VIC-20, is claimed to give many of the features of a real pinball table, including nudge. Price: £7.95

Terminal Software, 28 Church Lane, Prestwich, Manchester M25 5AJ

You could be on our pages

We welcome programs articles and tips from our readers.

PROGRAMS should, if possible, be computer printed to a width of 48 characters (use a new ribbon) and/or sent on cassette. Check carefully that they are bug-free. Include details of what your program does, how it works, variables you have used and hints on conversion.

ARTICLES on using home computers should be no longer than 2,000 words. Don't worry about your writing ability — just try to keep to the style in HCW. Articles most likely to be published will help our readers make better use of their micros by giving useful ideas, possibly with programming examples. We will convert any sketched illustrations into finished artwork.

TIPS are short articles, and brief programming routines which we can put together with others. Your hints can aid other computer users.

Competitive rates are paid.

Keep a copy of your submissions and include an SAE if you want them returned. Label everything clearly and give a daytime and home phone number if you can.

Paul Liprot, Home Computing Weekly, 145 Charing Cross Road, London WC2H 0EE

The CPD 8300 computer cassette recorder from Smiths — a new look and more features

New-look recorder

W H Smith has launched a new own-brand computer-compatible cassette recorder, which should be in their branches within the next couple of weeks.

The new recorder is called the CPD 8300, and is said to operate reliably with any personal computer that loads and saves programs using standard microphone and earphone sockets.

The CPD 8300 has all the features of Smiths' original computer cassette recorder, but has

Dragon takes flight

Dragon owners can fly through the air with the greatest of ease with the Dragonfly Flight Simulator from Hewson.

But Dragonfly should not be confused with Hewson's Night Flight program for the Spectrum. According to Gordon Hewson, "Dragonfly is written by a completely different person, who flies as a hobby — it's not a conversion from Night Flight.

"Because of the Dragon's limited graphics, some of the instruments you find in the Spectrum program are missing, and information like the bearing has to be given in figures.

"But there are two runways on Dragonfly, and you can do things like loop the loop and barrel rolls."

You take off from Norwich Airport and fly a circuit landing at their either Hethel or back at Norwich, depending on how much of a challenge you want. At Hethel, there are no runway lights, and you have to make your landing with the aid of a radio beacon.

Dragonfly can be played with a joystick and costs £6.95. Hewson, 60a St Mary's Street, Wallingford, Oxon OX10 0EL

been redesigned to give better visibility. It has a three digit tape counter and a cue/review facility.

It also features an electronic pause which can be overridden by computer control, using the remote motor control socket. This also means that you can use the recorder while the Remote connection is still plugged in.

Both Save and Load levels are adjustable, and there are two Save input sockets to cater for computers with Save signals of different levels. The signal level indication meter lights up for easier viewing.

The recording/playback head has also been designed to be easily adjustable.

Price: £39.95.

W H Smith, 10 New Fetter Lane, London EC4A 1AD

Ian makes a Splat . . .

Software writer Ian Andrew, 24, is bringing out his first game under his own label.

Mr Andrew, who wrote Mined-Out for Quicksilva, is now the managing director of Reading-based Incentive Software — and his mother, Barbara, is the company secretary.

For the last four-and-a-half years he has been selling collectors' postcards by mail order and it is the profits from this that are being used to launch Incentive.

The new company's first cassette is Splat, a £5.50 game for the 48K Spectrum due out in about a fortnight. Mr Andrew said he and 18-year-old Ian Morgan wrote it over six months. It featured a £500 prize for the best score by January.

Mr Andrew said: "I've got several ideas in the pipeline. I'll have to see how Splat goes. I thought it would be a bit of a challenge to compete with the big boys." He would continue writing for Quicksilva.

Incentive Software, 54 London Street, Reading, Berks RG1 4SQ

If music be the food of micros . . .

The British home micro industry has reached an impasse: it cannot go much further in its present direction without stagnating. Furthermore, for the first time it now faces serious competition from Japan with the arrival of the Sord M5.

So is this new jewel in the crown of British industry finally to go the way of so much of manufacturing industry recently? Is it to suffer the same indignities as cars, motorcycles and cameras at the hands of the ruthlessly efficient Japanese export machine?

For several reasons the answer is probably no — at least, not for a long time. For one thing, the home micro industry enjoys a degree of government collaboration that the rest of manufacturing industry does not.

British micro makers also have an advantage in components: the Americans and Japanese may lead in big RAMs and processors, but the UK is widely renowned for low volume custom-made chips.

There is also, I believe, a more subtle reason why our micro industry will survive — one related to innovation.

Consider the car industry. The innovations on new cars tend to be limited and cautious, the approach is evolutionary rather than radical. Competition between companies is on the basis of cost which usually depends on production management.

Contrast this with a computer program which requires virtually no production management but consists, as nearly as anything can, of pure ideas.

Most manufactured objects fall somewhere between these two extremes, but if we imagine a scale with cars at one end and programs at the other then micro computers will tend to fall nearer to programs than they do to cars.

The fact that the Japanese are very successful at making cars and the British very successful at producing good software therefore promises well for the micro industry.

There is however a critical difference between having a talent for innovation and applying it in the right place, and recently the market has grown a little stale.

New models tend to look very much like old models, and you could be forgiven for thinking that the only reason the micro was invented was to play games that have changed remarkably little since Space Invaders.

One innovation likely to catch on is the Microdrive and its partner the Interface 1. With the competition nowhere in sight, it is likely that interfaces to connect the Microdrive to other micros will be made. Nevertheless the Microdrive is a device more likely to consolidate old markets than create new ones.

Ironically, it is the M5 itself with its "mini synthesizer" that clearly indicates one way forward.

I am constantly astonished that a country like ours, with such an enormously successful music industry and where Yamaha sell thousands of organs every year, should produce home computers on which the music facilities are invariably poor, derisory or non-existent.

Manufacturers naturally want to keep the cost of the basic unit down, but there is also a general lack of musical add-ons. Music could well provide a growth area that is as large as the whole industry is at present. With the increased popularity of standard interfaces a potentially fast growth area.

British micro manufacturers have made a huge impact both at home and abroad. With a little imagination and making full use of their advantages they are ideally placed to sound off the Invaders.

NEW HOME COMPUTER CABINET

£95

incl. VAT & Delivery

Especially designed for your home computer system, whilst also accommodating your video recorder.

Our cabinet has been custom designed after intensive consultation with P.C. users to provide maximum comfort and convenience during those long hours spent slaving over a hot micro.

The cabinet includes many features not previously available, and as well as combining the very best aspects of modern furniture design, it provides an ergonomic and practical layout for all the major components of your system.

In fact, we are proud to claim that your cabinet will look perfectly at home in your lounge, dining room, or even bedroom.

JUST CHECK THESE STANDARD FEATURES

- 1 Smooth sliding shelf locks in position just where you require it — and neatly glides away after use.
- 2 The computer shelf has been designed to allow adequate 'Knee room' for you to sit comfortably, and will avoid 'programmers back-ache'.
- 3 Adequate room to position tape recorder, printer, disc-drives, etc, alongside computer for ease of use.
- 4 All cables neatly and safely out of sight, while allowing all units to be permanently connected if desired.
- 5 Lots of storage space for cassettes, cartridges, books, listing paper, joysticks, etc.
- 6 With shelves and doors closed, instantly becomes an elegant piece of furniture.
- 7 The lower shelf accommodates all makes of video recorders currently available.
- 8 Smart teak effect finish.
- 9 Supplied as a flat-pack. Very simple to assemble, using just a screwdriver. Full instructions supplied.

TERMS OF OFFER UK Mainland Customers only. Please allow up to 28 days for delivery. Cash with order or charge to one of the credit card accounts specified. Money back guarantee if not satisfied provided the goods are returned undamaged within 72 hrs of the customer taking receipt.

Line 120 is to clear the screen. If the program is run/stop and restored, it must be entered again. Make sure the program is saved before running.

Philip Bidwell

Data speed VIC-20 / Commodore 64

This program may be used on a VIC-20 or Commodore 64, speeding up a file saving on both machines. As data is saved at 300 baud, any improvement is a blessing, saving both time and tape space.

The program uses routines in the ROM to save at the same baud rate, but achieves greater speed (usually 10 times faster) by saving individual bytes instead of whole variables, totally in machine code. Thus, saving speed is increased but reliability is exactly the same.

For example, to save a screen to tape, the quickest method in Basic is to use integer variables, which as a file take up five bytes each. The whole screen takes seven minutes to save. Using Dataspeed, variables are stored as 1 byte and the screen takes 40 seconds to save.

To use the program, AS must first be set to the function you want the routine to perform: saving or loading. A% is then set to the start of memory to be saved, and B% to the finish of the memory section. The program may then be run.

Note that on loading, the variables will be stored at the same locations that they were saved from.

Machine code is stored at the top of Basic RAM. To protect it from being erased by variables, the pointer to the top of Basic

Here's a selection of bright ideas sent in by our readers. If you've made a discovery about your micro, why not share it with other enthusiasts by sending it in to us at: Micro Tips, Home Computing Weekly, 145 Charing Cross Road, London WC2H 0EE.

RAM is lowered using lines 10 and 20.

Lines 30 to 60 poke the routine into this RAM. The mid part of the program operates this routine and converts the integer variables into a form usable by machine code. Locations 251 to 254 are vectors for the machine code. Finally, lines 1000 onwards contain data of the machine code to be poked.

Take a BREAK ZX81

Every ZX81 owner knows that the BREAK key is situated in the bottom right-hand corner of the keyboard. However, we've found that if you press SHIFT, Z, V and B simultaneously, this will also interrupt a program and produce the D report code.

I also have some useful USR routines. If you type RAND USR 836, the display will freeze until only the BREAK key is engaged.

And here's an alternative to typing NEW to clear your program. If you type RAND USR 0 (followed by NEWLINE), this will act in the same way as the NEW command.

ZX81 owners are probably aware of the POKE numbers in Chapter 28 of the ZX81 manual. However, poking address 16384 can affect the screen display very dramatically. Try POKE 16384,40 or POKE 16384,171.

Andrew Barr & Andrew Medcalf

Cap it all Oric-1

I recently discovered yet another way of turning on or off the caps lock on the Oric.

As you will already know, CHR\$(20) switches caps lock, but caps lock has a toggle effect.

To get around this you can PEEK into the screen location where the caps reminder normally is.

So to switch off caps use: IF PEEK (#BBA4) = 67 THEN PRINT CHR\$(20)

And use the same line to switch them back on again.

J.B. Laverick

Rolling titles TI-99/4A

Here is a tip for that nice "rolling titles" effect, for the much-neglected TI-99/4A.

```
1 REM ROLLING TITLES PROGRAM

Peter Maskell—Glynn

Amazing draws Spectrum

Try the following:
10 PLOT 100,100 : DRAW 10, 10,44

This powerful effect is probably the result of a bug in the Spectrum's ROM, but by careful manipulation we can produce some clever patterns using a small amount of memory. I offer no more examples, since this routine is best learned through practice.

Tim Boone

Direct colours Spectrum

Go into Extended mode (cursor E) after a line number and press 2. The cursor will have turned red. What we have done is altered the paper colour directly. CAPS SHIFT followed by a number 0-7 gives us directly the ink colour as printed above the appropriate key.

Using this method we can also directly employ the BRIGHT, FLASH, and INVERSE commands — see the table on page 115 of the Spectrum manual for the combinations.

The users of this are many and varied. You can highlight REM statements, manipulate colours within strings of graphics and even produce blank listings.

After the copyright message on your amazing program, go into extended mode, press CAPS SHIFT 0, and then 0 again in Extended mode. The listing will appear all black: safe from prying eyes!

Incidentally, each direct colour command takes up only two bytes instead of the eight you would use typing INK X. Enough of my chat — go away and practice.

Tim Boone

Watch that space

Our review panel boldly goes to check out another batch of space games

Venus Voyager 2 Atari 400/800 32K £14.95

English Software, 50 Newton St, Piccadilly, Manchester M1 2EA

Argh! I've always believed in making games challenging at the lower levels, but this is ridiculous.

The scenario is simple. You have to manoeuvre your spaceship down into caverns, avoiding collisions, to rescue six people by landing on the pads.

There are various static objects such as radar and space mines to be avoided.

Simple? This pilot admits to rescuing one person from the six caverns with his regulation six ships.

The ship responds well, and

retro control is easy enough, but I just could not succeed.

The ships can be refuelled in-flight, but this too was beyond me.

This one is for people with better reactions than mine, and a lot more patience.

playability	85%
graphics	70%
value for money	70%

Operation Moon TI-99/4A (Extended BASIC) £10

Lantern Software, 4 Haffenden Road, Tenterden TN30 6QD

I have mixed feelings about this program, whose graphic excellence is marred by apparent deficiencies (still!) in the Sprite facility of Version 110 Extended BASIC.

The aim is to ferry supplies from three planet-based platforms to a mother ship, avoiding collisions with an orbiting comet and confrontations with 'blood-red banshee space bats'. You can get the bats with 'glee bombs' or the comet, but you need to exercise care!

The detailed, if difficult-to-read, instructions warn that

docking must be spot-on.

But on several occasions I noted either a lack of vertical movement while close, but not close enough, to the mother ship (you need to back off and try again), or an apparently perfect docking, pixel for pixel, which results in an airtlock opening in space on attempting unloading, and hence disaster. Bugs such as these are extremely disheartening, and confusing to the novice.

The degrees of difficulty offered are 1:hardest to 10:easiest, and control is through the keyboard rather than joysticks. Although the game will interest younger players, it does not warrant its high price.

instructions	80%
playability	75%
graphics	85%
value for money	40%

Confusion 48K Spectrum £5.95

Blaby Computer Games, Crossways House, Lutterworth Rd, Blaby, Leicester

Your ship can be positioned at any one of six levels in space. Alien craft then approach you from the left and right, and you must destroy them by flipping your craft through 180 degrees and shooting them down.

If you miss the alien craft and they collide with you from the front or the rear, you lose the ship. When you have written off five ships, the game ends.

The graphics are good and so are the sound effects, but the balance of this game seems to be wrong.

There appears to be no difference in skill levels between the

six levels in space and therefore, there was little point in moving. All the alien craft accrue the same points when hit and they all move at the same speed (only the colours and shapes are different).

Also, one's craft has an unlimited supply of ammunition, so there is no penalty for continuous use of the fire button. In addition, there was little difference between the 'slow' and 'fast' speed options.

This game seems to have quite a good potential if the plot and balance of play could be suitably redressed.

Droids Dragon 32K £6.95

J. Morrison, 2 Glendale Street, Leeds LS9 9JJ

An exceedingly difficult, arcade style, shoot-out game. Horrible little droids insist on removing a series of shields which support three large and deadly trioxin bombs.

If they succeed, then you are immediately relieved of one of your three lives.

Other ways to disaster are to be hit by the discarded lead shields as they drop, or machine gunned by one of the remaining few droids, which start moving at an incredible rate when most of their colleagues have succumbed.

The droids have a further advantage in that they appear to scroll sideways round the screen,

whereas you are forced to move left and right to intercept them.

It is well worth the effort to clear the first screen, though, as a pleasant tune is played and you are rewarded with an extra life. Second and subsequent screens are in a different colour set.

There are two versions on each cassette — joystick, or an even faster version using arrow keys and space-bar.

Loading was always successful with no need to use the back-up

copy on the 'B' side. The choice of colours means that a black and white TV set can be used if necessary.

instructions	90%
playability	85%
graphics	90%
value for money	90%

What would you do if you were walking along, minding your own business, when you saw a helicopter in trouble and its crew bailing out?

This is what happened to Fred as he was crossing the bridge on the way home for his tea. Being no fool, he realised that if he didn't catch the falling men they would drop into the river and drown.

So he waited for the first men to come sailing down and — well — you can find out for yourself what happened by typing in my program for any Spectrum.

Once you have typed it in, it will draw a bridge at the bottom of the screen with Fred standing on it. As the helicopter gets lower and lower, it gets harder and harder to catch the men, but here are only 12 of them.

It can be done, but when Fred has successfully caught the first lot, along comes another helicopter, losing eight rapidly...

Use O to move Fred left and P to move him right. If you move him off the right side of the bridge, he will appear on the left.

How it works

0-180 defines graphics
300-410 main loop
1000-1220 second loop (with parachute)
2000-2070 adds one on to score
3000-3020 takes away one life
4000-4078 finish
5000-5500 instructions
6000-6040 "you did it!"
Note: to save, type in SAVE "PARATROOP" LINE 1

Be a hero — here's the catch...

Help gallant Fred save the helicopter crew from a watery grave, in Geoff Allen's game for any Spectrum

```

Hints on conversion

There are seven different graphics used in my program. Three for the bridge, two for the helicopter and two for the parachutist. The man on the ground is the same graphic as the bottom half of the parachutist.

The Spectrum uses a grid for its graphics and FOR/NEXT loops to create them.

PAPER controls the background colour.

INK controls the foreground colour and

BORDER controls the border colour

BRIGHT means exactly that and can be omitted if your computer doesn't have this feature

CLEAR means 'clear the screen

FLASH means flash on and off like BRIGHT it can be omitted.

The Spectrum's screen arrangement is 20 lines down by 32 lines across. Line 0 is the first number in both cases.

So line 10 which says

10 PRINT AT 10,5; FLASH 1;

"Stop the tape"

means print at line 10,5 which on the Spectrum is roughly in the middle, flashing "stop the tape".

The Spectrum's sound is controlled by the BEEP statement.

The only one used is in line 200. This line can easily be changed for your computer.

Variables

score your score
hi high score
lives lives left
a y coordinate of helicopter
b x coordinate of helicopter
g x coordinate of Fred

SOFTWARE REVIEWS

Demon Decorator BBC B £7.95

Program Power, 8/8a Regent Street, Chapel Allerton, Leeds LS7 4PE

This is the kind of decorating I could enjoy. The game features the unlikely combination of a paint roller chased by an octopus around a grid. The aim is to guide the roller to paint in the grid squares and points are awarded for each square completed.

If the octopus gets too close for comfort pressing the 'stun' key immobilises him for a few seconds. Only five stuns are available, unless you can collect extra stun diamonds on your travels around the grid. The completion of a full grid earns you an extra roller.

The instructions on the

cassette insert are adequate, and the program also indicates which keys to use.

The graphics are quite good and the action is smooth, apart from the actual filling in of a square which is a little jerky.

As each grid is completed the octopus gets a little faster on the next level — so save those stuns as long as you can.

One useful feature, games programmers please note, is a pause and restart facility, which is just the thing for those occasions when the phone rings as you are about to beat your high score.

No obvious bugs were detected, although occasionally the roller did seem to have a mind of its own.

instructions	80%

Quackers Spectrum £5.99

Rabbit, 380 Station Road, Harrow HA1 2DE

Roll up, roll up! Take off your jacket, take aim and take your best shot at 'Quackers' a

delightful and diverting game for the young at heart.

The game is set, as you may have guessed, in a shooting gallery and you are invited to take pot shots at moving cats, bunnies, ducks, faces and even a full size, if rather docile, turtle!

Good use is made of colour graphics and sound — the game feels like a shooting gallery with

Danger Mower BBC B £5.95

Logic Systems, 129 High Street, Cherry Hinton, Cambridge

Danger Mower is original but also rather boring, unfortunately. The aim of the game is to steer your mower around a lawn and avoid the hazards you meet along the way — cowpats, rocks, and walls.

You have also to collect fuel for the mower, which is spread in cans over the lawn too. You collect points for the areas of the lawn you haven't already cut and leave a yellow trail behind your mower so that you know where you've been.

The colours are rather difficult to see unless you have a good monitor, as the yellow cut path on the green lawn shows very little contrast. The graphics are only

fair too, using just four colours. This is a real pity, as they could have raised my enjoyment of the game considerably.

There is also a constantly-playing tune which, although pleasant in the short term, is wearing over long periods. You can, however, turn this down if you wish.

I found the dexterity involved enjoyable, but the lawn was far too big to complete before losing concentration. I have begun to expect more than software houses than this program gives and I feel that it is vastly over-priced.

Worm 48K Oric £4.95

Pasesoft, 213-215 Market Street, Hyde, Cheshire, SK1 1HF

If the title sounds familiar then it's because this is another rendering of an old favourite, which usually goes by the name of snake.

The scenario follows the usual pattern: you are a worm

(somehow it doesn't sound as glamorous as a snake) and your aim in life is to move around the garden eating any stray numbers which you may come across.

With each meal your body increases in length according to the size of the number you eat. Unfortunately for you you cannot stop moving, and so as the game progresses it becomes increasingly difficult to avoid eating your own body (and consequently killing yourself).

As if that isn't enough to contend with there are various other nasties (fortunately stationary) such as spiders and flowers randomly strewn about the garden. Contact with any of these or the garden wall kills you for no readily apparent reason.

This is a competent attempt at a fairly straightforward game. It is fast enough to give it that addictive quality and the inclusion of nine different levels of play should keep you occupied for

quite a while. Another nice touch is a hall of fame to save you noting down your best score of the day.

Domestic dramas on-screen

Instead of dodging laser bolts and asteroids, the hazards you'll meet in these games are more down to earth

the numerous targets moving in different directions.

The faces are quite hard to hit due to the presence of a moving wall in front of them with only a small gap in it. If you manage to hit all the targets within the time limit you get to take on the turtle.

In my view the game is a little too easy and lacks lasting playability for this. The turtle was an easy 200 points! Nevertheless this novel game will pro-

bably become a firm favourite among Spectrum owning children and tired parents longing for a change from 'shoot 'em up' games.

Centipede Oric-1 £6.95

PSS, 452 Stoney Stanton Road, Coventry, CV6 5DG

Featuring the usual multi-legged creature wandering round the garden at high speed in between the mushrooms, and backed up by mushroom laying bugs, fleas and a spider that appears when you have shot down all segments of the centipede for the first time.

Starting with three lives, the object is to eliminate the centipede that is travelling down the screen before it, or any of the other insects get you. As you fire at the centipede, it breaks up and attacks from different angles.

If you kill the centipede, the game restarts with fresh sheet and, on the third sheet, a

mushroom laying bug will drop from the top of the screen. On the fifth, there are two centipedes to contend with, but it is difficult to reach this stage.

Although the sound levels are not high, graphics are good, but unfortunately the centipede, mushrooms and spider, along with your gun, are all in white, and lack colour variety. The only brief flash of colour is when you have shot down the centipede.

Centipede is an addictive game and PSS provides a quick-moving, all-action version. But I've seen better — and cheaper versions.

Set your sights on ducks instead

Hints on conversion

It would be rather difficult to convert Duck Shoot to run on another computer as the Dragon has rather special hi-res graphics commands, such as GET and PUT. The best way is to use the idea and write your own program. Sorry, folks!

If you are fed up with blasting alien invaders try blasting ducks instead.

My program for the Dragon, with joystick, is loosely based on the fairground shooting gallery.

The joystick acts as your rifle and the button is the trigger.

At the start of each game you get 10 shots and the duck will pass 15 times at a random speed to make it even more tricky to anticipate its position.

Duck Shoot is written in BASIC mode 3 with a machine code routine to simulate the gunshot sound.

If your Dragon does not support the high-speed POKE, delete line 10 and that POKE (&HFFD7,0) in line 390.

Main variables

GETA yellow duck
GETB green duck
U and I DRAW loop for half circles on canvas top of booth
HT hit counter
SH shot counter
JO joystick inputs
R main loop
RD rifle starting point
X1,X2,Y1,Y2 co-ordinates for rifle
FR detect fire button
C detect hit
X random speed for duck

How it works

50-80 DRAW and GET yellow duck
90-130 DRAW and GET green duck
140-330 DRAW and PAINT show booth
360-470 main play loop
390 PUTs yellow duck on screen and move it along four points at a time
500-530 hit loop
400 READ joystick, DRAW gun
450 fill in gun drawing
460 fill in duck at end of run
520 PUT green duck on screen if yellow one is hit
540-580 machine code shot sound
590-670 scoreboard
680-750 instructions

Your chance to test your skill at the computer version of a fairground shooting gallery. Alan Gray's Duck Shoot game runs on the Dragon, with joystick

LOOK WHAT'S TURNED UP!

SPLAT AN ORIGINAL 48K ZX SPECTRUM CHALLENGE BY THE AUTHOR OF MINED-OUT, OBJECTIVES: EXPLORATION, SURVIVAL AND EATING GRASS! Zippy, Plums, Rivers, a massive 21K play area, 7 levels to explore, User defined controls, also Kempston & A.G.F. joystick compatible, £500.00 high score competition. SPLAT evolution by Ian Andrew & Ian Morgan. Price £5.50 — post free
Also available from all good computer shops — dealer enquiries welcomed

INCENTIVE SOFTWARE LTD · 54 LONDON ST. · READING RG1 4SQ · (0734) 591678

You're a film producer, thanks to the computer

If you have seen the Walt Disney film *Tron* you will know how animation can be created by computers.

Each frame of the film was composed of millions of pixels, using huge mainframe computers.

The Dragon's maximum of 49152 pixels seems meek in comparison, but they can still be used to great effect if you have an ordinary home video recorder.

The diagram shows how to set up the video so it will record pictures from the computer.

Make sure first that you have enough mains sockets within easy reach — and don't overload any one socket.

Set up the computer and video recorder as usual, then take the aerial lead out of the video and in its place put the computer's TV lead. Any picture or sound that is transferred to your usual TV can also be transferred to a video recorder.

Try taping an arcade game. You can analyse it to find your weak points and improve your ability at the game.

Although you probably haven't noticed it yet, you have already witnessed one of the advantages the Dragon has over its rivals: channelled sound.

Most other computers, like the Spectrum and the Oric, produce sound internally and do not transfer it to the TV. As a result, it would also not be

Link your computer and a video recorder and you can create some great graphics and sound effects on the screen. Brian Hughes shows you how

transmitted to the video recorder.

Using a computer like the Dragon, you could channel pre-recorded sounds from an audio cassette to a video cassette very easily.

This can be used to add sound effects to an animated se-

quence, or to add music to a home-made pop video.

Here is how to add sounds to animation using the Dragon:

- 1 Record the sound effects on a cassette tape
- 2 Set up the video recorder and computer as I've described

- 3 Load or tape the program for the sequence.

- 4 Type `AUDIOON:-` `MOTORON:RUN`. Do not press enter yet

- 5 Find the recorded effects on the cassette and press play (the tape recorder should not start until the enter key has been pressed)

- 6 Press record/play on the video recorder and press the enter key on the computer

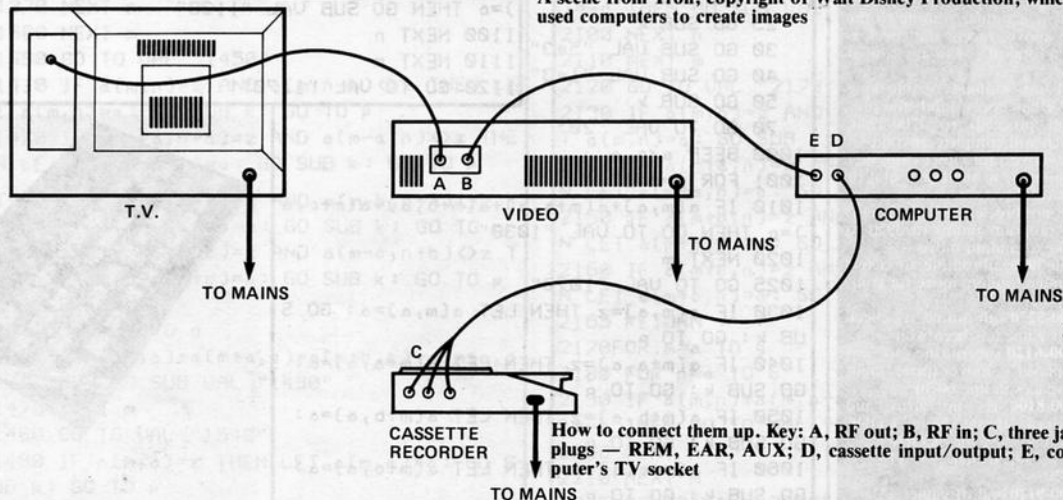

The program will now be taped on the video recorder with the sound effects added.

In my opinion, the best use of this technique is for the credits and titles at the beginning and end of a film.

However, a really enthusiastic film maker could take over where Disney left off.

A scene from *Tron*, copyright of Walt Disney Production, which used computers to create images

It's your move — against the Spectrum

How it works

The game is played in an array $a(m,n)$, where m denotes the column and n the row number, counting from the bottom row. Each element in the array can have one of three values: +1 (occupied by the computer), 1 (occupied by the human player) and 0 (empty).

A winning row of 4 in any direction will therefore total +4 if the computer has won, and -4 if the player has won. A total of +3 or -3 in any row of four elements indicates a potential winning move by the computer and human respectively.

Block by block, this is how the program works:

1-3 assigns values to the variables used in the program. These remain fixed values, used to avoid use of numbers in program lines.

5-7 print column numbers on screen

10-70 direct the program through the various subroutines in the proper sequence

1000-2940 subroutine to determine the computer's move, by calculating the sum of all combinations of four elements in a row within the array.

If this is three, then a potential winning move is indicated. If the vacant space is on the bottom row, the computer occupies it and wins.

If on higher rows, it first checks to see if the space below is occupied to determine if a winning move is possible.

In 2000-2620 it checks to see if a blocking move is required. This is a similar routine to the one above, except the check is for a total of -3 in any row of four.

If no winning or blocking move has been found, the program proceeds to 2700-2940, which will complete any line of two moves, for either computer or human, in the horizontal or vertical directions.

If no directed move is found, the program jumps to 3950 to make a random move

3950-3980 subroutine to determine random move for computer

5000-5270 subroutine to check if game has been won

6000-6120 subroutine to get player's move (print eight spaces in line 6070)

8000-8100 sets up array and draws frame. Note: CODE "FN" = 168; CODE "*****" = 39; CODE "CAT" = 207

9000-9120 end of game

Try to get a row of four before the computer does, in David Haworth's game of strategy for any Spectrum

Variables

a 1
b 2 and so on until
g 7
z 0.
k 7000
l 9000
p 9100
v 60 (note CODE "(less than sign)" = 60

Hints on conversion

The program is written in simple BASIC with a minimum of graphics so conversion to other computers should be straightforward.

```

My game is a relaxed alternative to the usual shoot-em-up computer games. No fast reactions are required — all you need is logic.

The game is played in a seven by six array, and the first player to get four squares in a row — either horizontally, vertically or diagonally — wins.

The computer has first move, to compensate for its inferior intelligence. Its moves are printed as O and yours are printed as X.

As you play, the computer's skill level will reflect your own skill level in understanding the logic of the game and translating it into computer logic.

Unfortunately, in the 16K Spectrum there wasn't enough memory for all the logic I wanted to include. If you have the 48K version, there is plenty of scope to extend the program between lines 2940 and 3950.

In particular, I would suggest logic to make the computer play a more attacking game, and logic to stop the computer from making random moves which are advantageous to its human opponent.

You could also improve the graphics, colour and sound.

TI-99/4A PROGRAM

You'll find out just how dangerous mining can be when you play my game for the unexpanded TI-99/4A.

To reach the jewels you must avoid falling rocks and hammers, open mine shafts... and the Mine Guardians. And you have to reach the top before the timer counts down to zero.

After the instructions are displayed there will be a pause while the array holding the positions of the rocks is built up.

Then the screen will clear and the course will be displayed, consisting of a counter in the bottom left, a cave containing the three jewels in the bottom centre and, a passageway across the bottom of the screen with a Mine Guardian at each end.

In the top right will be an open space containing a man and a number telling you whether he is miner 1, 2 or 3.

You move your man using the arrow keys, plus those between them for diagonal movement. He collects a jewel by

Dig for a fortune in gems

Glittering prizes await you in Jewel Mining, a game for the TI-99/4A by James Wilson. But first you must avoid the hazards... and beat the clock

dropping onto it and must then return to the open space above.

Whatever the result, the course is reset and you may then try for the next jewel.

If your man successfully recovers all three jewels, you will be given a score and asked if you wish to play again. You will be given the same option if your man fails to survive but, of course, there will be no score.

The game can be made easier or more difficult by changing certain values:

390 if the numeric value 1.16 is increased more rocks will appear, up to a maximum of 15 per line

570 if the limit value of the FOR-NEXT loop is increased more men will be available.

1060-1080 the ASCII codes for

the counter numbers could be changed to give more or less time

2010 if the numeric value 1.14 is decreased the lasers are less likely to fire and the opposite is also true

2110 changing the figure 1.16 will increase or decrease the likelihood of hammers dropping

Here are a couple of points of interest about the program.

TI BASIC does not support AND/OR statements. However, these can be initiated by enclosing the relational expressions in brackets and using the plus sign for OR and the multiplication sign for AND, as in line 1500 (AND) or in line 1480 (OR).

In lines 1300 and 1310 the new values of I and J are calculated thus: the expressions

in brackets — for example (KK=69 — will be given a value of zero if they are false or a value of minus one if they are true.

Consequently, adding all these values together, then adding them to the values of Y and X gives new values for I and J.

Hints on conversion

Conversion should not be too difficult on any home computer allowing user-defined characters. Here are explanations of some commands in TI BASIC, all prefaced by the word CALL:

CLEAR equivalent to CLS, places space character in all screen positions

SCREEN changes screen colour according to colour code

CHAR re-defines the standard ASCII characters according to a 16-place hexadecimal string code

COLOR sets colour of the character group in the format (character group, foreground colour, background colour)

HCHAR positions character and optionally repeats it horizontally in the format (row-number, column-number, ASCII code, number of repetitions)

VCHAR as for HCHAR, but repetition is vertically

GCHAR takes the format (row-number, column-number, return variable) and places the ASCII code of the character found in the specified position in the return variable

KEY places ASCII code of key pressed in the key variable, takes the format (key-unit, key variable, status variable) where status variable indicates whether or not a key was pressed

SOUND takes the format (duration, frequency, volume) where the duration is in milliseconds, frequency ranges from 110 to 44733 Hz, volume is 0-30. If a -ve frequency (-1 to -8) is specified, a "white noise" is produced; if a -ve duration is specified, an immediate sound update is carried out when the next CALL SOUND statement is encountered. Optionally, up to three frequencies and volumes may be specified in one CALL SOUND statement to produce chords.

The TI-99/4A uses a screen display of 24 vertical by 32 horizontal in the graphics mode, and 24x28 when printing words. Each square is further divided into an 8x8 matrix which is used for defining the characters

(KK 69) — will be given a value of zero if they are false or a value of minus one if they are true.

Variables

In the interest of saving memory, several variables are used for different purposes.

N controls several FOR...

NEXT loops, return variable for GCHAR statements, to detect mine shafts, walls and in timer operating loop

Z is used in several FOR...

NEXT loops, counter in building array holding rocks and in displaying rocks, row number in DISPLAY AT sub-routine

HT holds best (lowest) score

I/J row/column position when displaying rocks or new row/column position when moving man

Y/X old row/column position when moving man

MEN number of men

Q start column location in DISPLAY AT sub-routine

JE number of jewels "in transit"

RK return variable in GCHAR statement to detect rock above man's new position

MAN holds ASCII code of man moving left or right

TT score in current game

KK holds ASCII code of key pressed

SS status variable, detects whether key was pressed in CALL KEY statement

P holds ASCII code of space man will leave behind

RV/RH vertical/horizontal locations of a rock above man's new position

WS string variable to hold character code in READ statement, or holds message in DISPLAY AT sub-routine

R(316), S(6,3), G(3,2) arrays holding positions of rocks, mine shafts, jewels

Invasion TI-99/4A £5

Stainless Software, 10 Alstone Road, Stockport, Cheshire, SK4 5AH

Here you have the task of single-handedly defending your island from landing parties of enemy ships. The display on screen shows the coastline and your gun, which is strategically placed near the bottom in a bay.

The invasion force appears, one at a time, to the left of the screen and travel horizontally towards the shore.

Using keyboard controls to move and fire, your gun is placed so as to blast each ship as it passes. When one is hit, however, it leaves a shipwreck which forms a barrier to any further gunfire.

As the game progresses and more ships are destroyed direct

hits become increasingly difficult. Should a ship land on your island the width of the bay in which your gun is placed becomes narrower. The game ends when either you accidentally crash into the bay or complete invasion is accomplished.

A simple yet enjoyable game, well crashproofed and with some pleasing graphics, but it is one which you can never actually win.

The only goal is to achieve the highest score possible before you are ultimately stopped. Some comment on your performance at the end of each run might well make this more motivating. J.W.

Hen House TI-99/4A £27.95 (cartridge)

Galaxy, 60 High Street, Maidstone, Kent

The player controls, using keyboard or joystick, a farmer

who has two conflicting tasks — to catch eggs falling from a hen house and place them in a truck, while also shooting poachers and foxes (and the odd bird).

Points are scored for each bird or poacher shot, and the game ends when six eggs have been dropped. The pace of the game speeds up as you go along, but there is only one scenario; this

Games to take home to the range

Our reviewers put on their Stetsons and tell you partners about some Texas games on cassette and cartridge

could give the game limited playability.

Instructions are far too brief but adequate if you don't mind a little experimentation. You pick the gun up and drop it by moving to screen left, and put the eggs in the lorry by moving to screen right.

The graphics are quite good, especially the animation of the farmer. S.S.

Torpedo Alley/ Ascot Stakes TI-99/4A (Extended BASIC) £8.00

Lantern Software, 4 Haffenden Road, Tenterden TN30 6QD

Simple spelling mistakes in the instructions for both programs do little to improve them. While excellent use is made of graphics, interest is not sustained, and skill requirements are negligible (or absent in the case of Ascot Stakes).

Torpedo Alley has you launching two torpedoes simultaneously at three ships running the gauntlet between the rocks at night. Only two degrees of difficulty are offered — easy or hard — the difference lying mainly in the game tempo.

The score is displayed as the

'time' counts up to 120. The game might well appeal to the very young or to those with poor hand-eye co-ordination.

Ascot Stakes is graphically excellent, producing a television-type pan of the race, but there is no skill involved at all. Punters select their horses, place their bets (you start with £100) and the computer does the rest.

You play until either all punters are broke or want to give up — you can't stop unless everybody else wants to!

This game is likely to appeal to only the very young. Although providing two programs for the price, the cost is still very high.

value for money	30%

Core TI-99/4A £3.50

Christine Computing, 6 Florence Close, Watford, Herts.

Hidden deep in the earth is the core. To reach it you have to complete all three stages of this game. Firstly your craft descends through clouds, birds and aeroplanes and you have to navigate a clear path.

Secondly, after successfully through the sky you go underground negotiating the cave and caverns.

It takes a little while to realise that there is only one way through but if you complete this the third part looms up and all that stands between you and the core is the 3D maze.

After a number of frustrating attempts you should reach the core. A little light hearted relief will be found here.

If you collide with any part of the scenery your score and the highest so far is displayed along with an invite to play again but no score is given for a successful mission.

Each new game is the same as the last, so once you have reached the core a few times there is very little incentive to play again.

I had no problem in loading this game and found the screen instructions clear, although the spelling of the word 'plains' for planes was a little ambiguous.

The graphics are neat but colour would enhance the game.

Rabbit Trail TI-99/4A £27.95 (cartridge)

Galaxy, 60 High Street, Maidstone, Kent

The screen shows a rabbit run. You are the bunny — very nice graphics here. You must hop along your rabbit run collecting carrots and avoiding some nasty

creatures that seem to like rabbits...

The screen display seems to be a rabbit warren, but on the basis that hawks don't usually fly underground, I assume it must be meant to be a rabbit run, or a series of runs connected by tunnels.

There are seven screens to try your hand at, and the game is against the clock.

Graphics are good, and the

game scores highly for originality and lack of violence (provided you avoid the predators).

Enjoyable. But owners of the 99/4 should note that this module will only run on the 99/4A! S.S.

FOR FIRST TIME USERS...

A new series of books which introduce newcomers to the most widely used micros in the marketplace.

The books assume absolutely no knowledge about computers and the reader is shown even the most fundamental operations such as "switching on" and "loading a program". The books lead the reader through simple programming and then onto graphics, with several programs which show how to achieve pictures and even animation. The books contain a number of specially written programs which show the full potential of these machines.

"The text is liberally supported by all manner of useful diagrams and illustrations (including many black and white photographs of the screen). The overall presentation is excellent. The printing, setting out and listings are clear and positively invite the reader to have a go."

Space hazards come in all shapes and sizes

How it works

- 1-8 set up variables
- 9 reads sprite data
- 11-148 sprite data
- 150-270 introduction
- 290-560 rocket attack
- 570-770 refuelling stage
- 800-985 lunar landing scene
- 1000-3040 alien attack
- 3100-3113 explosion 1
- 3200-4096 mothership pickup
- 5000-5104 end mission titles
- 5100-5104 explosion 2
- 5200-5310 high scoring
- 7000-7040 explosion 3
- 7100-7140 red alert sound
- 10000-10030 introduction sound

Alien Attack is a BASIC program using the Commodore 64's sound and low res graphics to the full.

Fundamentally the game falls into the blast'em and beat'em format with an interesting variety of space scenarios.

There are a potential 31 levels of skill available — all determined by the player using the F1 function key as the game titles are first displayed. Don't be over-

Hints on conversion

Due to the extensive use of sprites and user defined graphics, which are both powerful tools of the Commodore 64, conversion to any other micro could prove very difficult.

Perhaps the VIC-20, with its similar graphics facilities could use the bulk of the program to produce a screen display similar in principle, but in the absence of the 64's excellent sprite abilities spaceship and aliens would present insurmountable obstacles.

Quite simply, unless sprites or similar are available on your micro the best advice is to save up your money and invest in the best!

Packed with action and several varieties of danger, Richard Gibbs' program for the Commodore 64 offers a real challenge. There are up to 31 skill levels

ambitious — you may survive the first section but the difficulty level remains with you.

Stages of play are:

- 1 Introduction titles — note sprite letters
- 2 Music from the Planets — not Holst, to be sure, but he didn't have to PEEK and POKE every note!
Pressing the space bar appropriately commits you to the

game. Attack sirens wail and you exit from hyperspace to withstand a head-on onslaught.

- 3 Twirling rockets — evade the rocket using a joystick in port 1 or keyboard:
CTRL left
2 right
left arrow down
1 up

- 4 Refuelling. Having survived the rockets you can attempt to

Variables

- VO,WA,H,LO,AT,SU voice 1 sound registers

Games off the beaten track

If you're feeling space sick, you don't have to miss the action

Shadowfax Commodore 64 £7.99

Postern, PO Box 2, Andoversford, Cheltenham, Glos GL54 5SW

The instructions describe Shadowfax as a 'real time adventure' game, but the game con-

trols are more appropriate to an arcade offering.

But on loading it turned out to be a sort of mad Donkey Derby. You are riding in one direction while about six horses ride towards you.

The object of the game is to avoid touching another horse. To score points you must zap the enemy horses by firing a thunderbolt at them.

You move up and down the screen while the background and

enemy horses scroll from left to right. The graphics give a 3-D effect with you moving both under and over the background. The galloping sounds used are very realistic and complement the screen display.

Either the joystick or the keyboard can be used to control your movements. The controls are fairly easy to handle and should cause no difficulties.

which moves an entire row of squares sideways and creates new pathways.

The flags can be run over for bonus points, and at the end of each 'phase', you get the chance of more bonus points by dropping your man onto a special flag surrounded by skulls.

After this the game speeds up until you have only seconds to defuse bombs. Also available as an option are 'stamping boots' which chase you round the grid, and you can alter the time delay on the bombs.

I particularly liked the sound on this game, and the range of optional features, but I suspect that the novelty would eventually wear off after a few long sessions.

Lusitanic Dragon £4.95

Coppice Software, 7 March Street, Kirton-in-Lindsey, Gainsborough, Lincs DN21 4PH

No instructions at all were provided with my review copy of Lusitanic, but I understand that instructions will be given with retail versions.

There are two programs on the tape both of which must be loaded. The main program starts with a nicely done graphic representation of an ocean liner.

This apparently strikes a rock and the picture changes to show the side of the liner, a desert island and a motor boat. At least I think it is a motor boat but it may be a floating trampoline.

The hopeful survivors leap from the side of the ship and by moving the motor boat you enable them to bounce from it

over the water to the island. Each man rescued scores a point.

If you fail the man lands in the water and after three deaths by drowning the game is over. The highest score and current score are displayed and you are asked if you wish to play again.

It sounds simple, and so it would be if only one man jumped at a time, but they are impatient and the number and frequency varies. At one time I had five men trying to reach the island at the same time needless to say they did not all make it.

This game probably won't make the best sellers list but I found it amusing using both joystick and keys.

value for money	80%

Manic Miner 48K Spectrum £5.95

Bug-Byte, Mulberry House, Canning Place, Liverpool L1 8JB

This game starts with a pleasant view of a house in downtown Surbiton, accompanied by a pleasant rendering of The Skaters' Waltz. After a few bars

of this merry little tune, the control keys are displayed, and the computer goes into demo mode.

You can choose whether you want to watch this or play the game. The demo will show you every cavern your miner has to explore, this time to the accompaniment of another old favourite, Hall of the Mountain King.

I'm not sure what Grieg would have thought about one of his works being used as the

background to a video game, but you have to hand it to them — it's very clever.

Each of the 20 caverns contains danger in many different forms. Platforms you jump on to crumble under your feet, there are poisonous plants, stalactites and various creatures which try to foil your plan of grabbin' the cash.

All the things you will meet are very strange and weird. There are robots, penguins, performing

seals, Pac-people, mutant telephones, Humpties and toilets (yes, toilets, with seats a-flapping).

N.B.

Danger UXB BBC B £7.95

Program Power, 8/8a Regent Street, Chapel Allerton, Leeds LS7 4PE

This is a good version of an unusual game which I have seen only rarely in arcades, but which is most enjoyable to play, and uses the BBC sound effects to the full.

You are a small nondescript figure in the centre of a grid of blue squares, populated by skulls, bonus flags and ticking time bombs.

The object is to defuse these bombs by running over them, while avoiding the lethal skulls. Should a bomb blow up before you reach it, a life is lost.

Sounds easy? Here's the catch. You can only step on a square once, and it disappears, leaving a space which cannot be passed. You must use the slide control,

The program does have one fault — it gets boring and repetitive quite quickly.

K.I.

Jungle Fever 48K Spectrum £6.90

A & F, 830 Hyde Road, Manchester M18 7JD

A superb game in which you control a walking, jumping and, if you're not too careful, falling figure through waterfalls, across pits, over spiders etc.

Excellent playability and multi-level structure, in which all is never quite revealed, kept me glued to the keyboard for many hours.

Initially, I thought that swinging across the pit on a rope was totally impossible (and when you've got on the rope — getting off is a whole new ball game) but your intrepid reviewer did it in the end, only to be confronted by those 'orrible leg gnashing spiders.

As you progress up the levels, the hazards combine in new and more terrible ways.

I got to the lethal combination of pygmies, waterfalls, spiders and arrows and was doing quite nicely until an arrow punctured my cranium from behind. Ah well!

Hints on conversion

PLOT AT in Oric BASIC is equivalent to PRINT AT in most other BASICS.

The Oric uses parallel attributes where most others use serial attributes.

The Oric plots colour at the stated coordinates for the rest of that line unless another PLOT statement is used.

The colour codes used in the program are as follows: For foreground: 1 red, 2 green, 3 yellow, 4 blue, 5 magenta, 6 cyan, 7 white, 0 black. For background 17 red, 18 green, 19 yellow, 20 blue, 21 magenta, 22 cyan, 24 black.

The program runs in just over 2K.

There's diamonds in them there tunnels — but there's also a hungry monster guarding them.

To get the monster to drop the diamonds, you have to tempt him to drop them by making him chase you underground. Being very short sighted, he will inevitably drop a few, and your fuel level goes up each time you can get to the diamonds and pick them up before he does. Pink diamonds score 15 fuel units and red diamonds score 10.

The screen is divided into three areas: yellow, above ground; pink, just below the surface; and red, deep under ground.

The monster can only dig passages in the pink area because he cannot see well enough in the

USER DEFINED CHARACTERS

- % 1st GROUND LAYER (PINK)
- ! 2nd GROUND LAYER (RED)
- @ MONSTER
- # MAN
- & DIAMOND

TO CHANGE THE USER DEFINED CHARACTERS, ALL YOU NEED DO IS CHANGE THE VALUES IN LINES 1010 - 1030

Can you dig it?

Grab the diamonds and tunnel for your life in William Bailey's Digger game for the Oric-1

```

deeper level. In the red area, he will therefore have to follow the tunnels you dig.

Whenever you tunnel into the ground, you lose two units of fuel, and whenever you are underground but not digging you lose one unit of fuel. If fuel is less than 50 units, you will hear a warning "ping" telling you to refuel or die.

You have five lives, but if fuel reaches zero then the game is over no matter how many lives you have.

How it works

- 1-5 sets variables
 - 6-10 defines the characters
 - 16-18 draws four lines of %
 - 21-23 draws 15 lines of !
 - 24-30 prints on the screen number of lives left
 - 40-50 sets remaining variables
 - 90-94 checks fuel, and if necessary warns the player by pinging if fuel is low
 - 95-96 plots the colour on to the screen
 - 97 prints score
 - 98 plots more colours
 - 99-104 monster moves
 - 105-118 you move
 - 120-122 increases score and fuel if you pick up a diamond
 - 123-125 plots diamonds you have picked up on the screen, and if need be clears the screen for new diamonds
 - 126-131 plots the diamonds' colour on to the screen
 - 150 plots you and monster on screen
 - 160 jumps to 500 if you've been eaten
 - 165 jumps to 600 if you run out of fuel
 - 200 loops back to line 90
 - 500 checks to see if you have any lives left. If not, jumps to 550
 - 510-540 deducts one life, omits zap and jumps to line 15
 - 560-610 end routine
 - 1010-1030 data for characters.
- Remember that the Oric uses an eight by six, not an eight by eight grid to define characters
- Note: to show the monster and man more clearly, then add this to your program
- ```

Like most microcomputers, the Dragon uses a modified version of the ASCII character set to represent characters.

The main differences between the Dragon character set and standard ASCII characters are as follows:

- The ASCII lower case letter codes (97 to 122) are displayed as uppercase letters in inverse video.

- There are no ASCII characters with codes in the range 128 to 255. On the Dragon these codes represent graphics characters.

- Various other ASCII character codes are displayed differently — see table 1.

The following small program will display the characters with codes in the range 32 to 255.

```
10 CLS
20 FOR I = 32 TO 255
30 PRINT " ";CHR$(I);
40 NEXT I
50 END
```

With the ASCII character set the codes between 0 and 31 represent control characters, i.e. characters which are not displayed but which are designed to have some effect on the device receiving them. For example code 7 is BEL and normally a device receiving this code will emit (bell) sound.

The following program can be used to see the effects (if any) these codes have on the Dragon.

```
10 CLS
20 FOR I = 0 TO 31
30 PRINT I;"0";CHR$(I);"RD"
40 IF INKEY$ = "" THEN 40
50 NEXT I
60 END
```

If a code has no effect then the PRINT statement in line 30 will display the code followed by WORD, i.e. the character between O and R is ignored. Executing this program reveals that only the codes 7 (BS) and 13 (CR) affect the DRAGON.

Back space (BS) causes the computer to move back a position on the screen before printing and thus WORD comes out as WRD. Carriage Return (CR) causes the computer to take a new line.

The memory map of the Dragon indicates that character codes for the characters currently displayed on the screen are held in locations 1024 to 1535, i.e. one byte for each position on the screen. However, examining the contents for these locations reveals that the ASCII codes are not used.

The following program places a code in a fixed position using

## Your Dragon's characters and how to invert them

### Why does the Dragon go to the trouble of converting ASCII codes into others? David Gray shows how they are used for inverse characters

CHR\$ and then uses PEEK to inspect the value held in the display memory.

```
10 CLS
20 INPUT "CODE PLEASE";X
30 IF X<0 OR X>255 THEN PRINT "INVALID CODE." GOTO 20
40 CLS
50 PRINT #510,CHR$(X); REM PUT CODE IN NEXT TO LAST POSITION ON SCREEN
60 Y = PEEK(1534); REM LOOK AT CODE STORED IN LAST BUT ONE BYTE OF SCREEN MEMORY
70 PRINT #0,"CODE INSERTED = ";X;
80 PRINT #64,"CODE PEEKED = ";Y;
90 PRINT #126,"PRESS ANY KEY TO CONTINUE.";
100 IF INKEY$ = "" THEN 100 ELSE 10
```

Using this program we can see that the BASIC interpreter is translating ASCII codes into codes acceptable to the hardware driving the screen.

In the case of CR and BS the interpreter does not actually place a value in memory but just uses the information to decide where to put the next character.

Why go to all this trouble? The answer is simple. Since the normal ASCII characters represented by codes 0 to 31 are not used in the display memory, these extra codes can be used to supply extra characters. Having these extra codes allows inverses of the characters space to ? (codes 32 to 63), which are not normally available in BASIC.

The following program displays all the available non-graphics characters by POKEing values directly into memory.

```
10 CLS
20 P = 1152
30 FOR I = 0 TO 127
40 POKE P,I
50 P = P+1
60 NEXT I
70 END
```

From the output of this program we can see that the codes 0 to 63 represent inverse video characters and codes 64 to 127 represent the normal characters.

We can also see that they are not in the same order as the normal ASCII characters.

We can also see that there is a simple relationship between the code of a non-graphics character and the code of its inverse. Given a normal character with code N then its inverse has code N-64. The following BASIC subroutine uses this relationship to invert a screen image.

```
3000 REM INVERT SCREEN
3010 FOR P = 1024 TO 1535
3020 K = PEEK(P)
3030 IF K<63 THEN K = K-64 ELSE K = K+64
3040 POKE P,K
3050 NEXT P
3060 RETURN
```

The following program uses this subroutine to continually invert a screen image.

```
10 GOSUB 3000 GOTO 10
```

This subroutine has two significant disadvantages: it is very slow (about eight seconds to invert a screen) and it does not work on graphics characters.

However, using the same principles it is possible to write a machine code subroutine to solve these problems. The following program inserts such a machine code subroutine into memory locations 32745 to 32767.

```
10 CLEAR 500,32744
100 FOR P = 32745 TO 32767
110 REPO:PE
120 POKE P,VAL("BH"+#B)
130 NEXT P
140 END
150 DATA #E,04,00,A6,84,81,7F,22,
#B,0F,20,82,88,40,A7,80,8C,05,FF,
23,ED,39
```

This subroutine can be executed by using EXEC 32745. It takes about a fiftieth of a second to execute and can be placed anywhere in memory if necessary.

The following program demonstrates the use of this subroutine.

```
10 CLS
20 REM DISPLAY ALL CHARACTERS AVAILABLE TO BASIC.
30 FOR I = 32 TO 255
40 PRINT CHR$(I);
50 NEXT I
60 EXEC 32745: REM INVERT SCREEN.
70 FOR I = 1 TO 500: NEXT I: REM WAIT.
80 GOTO 60
```

Two other useful machine code subroutines are given in Table 2 and 3. The subroutine given in table 2 will turn all non-graphics characters into their normal forms and the one given in table 3 will turn them into their inverse video forms. Both subroutines may be placed anywhere in memory.

| Code | ASCII character | Dragon character |
|------|-----------------|------------------|
| 94   | ~               | ↑                |
| 95   | _ (underscore)  | ⊖                |
| 96   | ^ (grave)       | ⊕                |
| 123  | (               | [                |
| 124  |                 | \                |
| 125  | )               | ]                |
| 126  | ~               | ↑                |
| 127  | DEL             | ←                |

} inverse video

ULTIMATE PLAY THE GAME is a trademark of Ashby Computer & Graphics Ltd. The "Game" name is a trademark of Ashby de la Zouch, Leicestershire LE65 5JU.

## Just like the real thing?

Read our reviewers' opinions of these simulations of old favourite games and real-life situations

### 30 Noughts and Crosses Spectrum £6.95

Quicksilva, 13 Palmerston Road, Southampton, SO1 1LL

This game incorporates defined-depth superfast alpha-beta pruning coupled with an ultra-refined static position evaluator and a

ruthless killer heuristic. Or so it says in the 'instructions' section of the game (loaded before the game proper).

This section is actually mainly trumpet-blowing, presumably designed to blind the player with science so that he is convinced he has a good game no matter how much he hates actually playing it.

If you understand the opening sentence of this review then the game is probably for you as you

### Golf Dragon £8

Microdeal, 41 Truro Road, St Austell, Cornwall PL25 5JE

A machine code version of golf for one to four named players.

At the start of the game you can choose the number of holes to be played. The holes are represented graphically and come in three types — easy, tough and very tough. On the harder levels you encounter sand traps and other natural hazards. At all levels, of course, there is the rough.

For each shot on the fairway you pick your club namely wood iron or putter. For the wood and iron you must also pick the number. You must also decide which direction your shot will take, and this is based on a clock face. Once on the green you must

choose both direction and distance.

You can slice the ball and get into all sorts of trouble. Once in the rough you have the options to play or lift. If you choose to lift the area around the ball becomes clear but you do lose two strokes. At the end of each hole your score for that hole the round and par for the course are displayed.

I have never played real golf and I am not an enthusiast but I thoroughly enjoyed this game. I might even become an addict yet. J.H.

### Stockmarket Dragon 32 £5.95

Bamby Software, Leverburgh, Isle of Harris, PA83 3TX

Do you think you could become a millionaire by dealing in shares on the stockmarket? Here's your chance to try it out with Bamby's stockmarket simulation game.

Starting with only £50,000 you buy and sell shares in any of forty four companies — four companies in eleven groups of different markets (from Chemicals to Transport).

Three external influences affect the share prices: government action which may affect the companies in one or more sections of the market; end of year reports, which affect individual companies; and devaluation of the pound, which may affect the lot.

Written in BASIC (the

response time is nevertheless fast enough), this is a one player, black on green, text only game. It is well laid out, with good instructions, a good choice of options and is well error trapped.

A very good game of its type, although I would personally have preferred less companies and a two (or more) player option. A pencil and paper to keep track of shares/money is useful when playing this game.

The government action routine seems a bit vague and you are not told which areas of the market are affected, although this could be deliberate in order to increase the difficulty of the game. R.E.

presumably have a strong interest in computerised strategic games.

But if you don't understand it you should just ignore it and all of the self-congratulatory preamble, because the game is actually pretty good.

It is fast, has four levels of difficulty of which even Beginner is quite challenging, and plays in real time, so exerts strong

pressure. It is easy to input instructions and error-trapping is good.

N.W.

### Empire Dragon 32 £6.95

Shards Software, 10 Park Vale Court, Vine Way, Brentwood, Essex CM14 4UR

It's you versus the evil Dragon Empire — the red menace! in a bid to rule the world. A must for budding megalomaniacs.

This is a version of that very popular board game called "Risk". It is extremely colourful and uses hi-res displays showing a map of the world and close-ups of the various 'continents'.

A separate sheet included with the cassette explains all manoeuvres clearly giving you the option to allocate armies to territories and to attack. All outcomes are judged by the computer and an on-screen "Command Box" keeps you informed of your progress.

There are eight levels of difficulty but I soon found that for a fairly even game you had to go to level five or six. The highest levels seem to have the odds stacked against you and, as the Empire always starts first, it's difficult to achieve any success.

This is a terrific game. I've played it several times and find it visually attractive and highly addictive. The strategies do vary each time you select your initial territories. The neutral zones, although unable to attack, can be a help or a hindrance according to their random positioning.

M.P.

### Hustler Commodore 64 £5.99

Bubble Bus, The Computer Room, 87 High Street, Tonbridge, Kent, TN9 1RT

Hustler is a computer version of Pool. It includes three two-player games and three one-player games. The idea is a good one and is implemented well,

although it is rather limited by using only six coloured balls and a white one. These shapes look like sprites to me.

You must position a white cross in line with the white ball to point your cue in a direction. Pressing the fire button or the space bar will shoot the white ball in the required direction.

There appears to be a few bugs in the program. Quite often the computer will crash when you try to hit the white ball — this can be

very annoying! The only way to get out of this is to reset the computer and re-run the program.

Another time a ball bounced out of the centre pocket and ran along the edge of the pool table and off the screen. There were no problems when loading the program though.

The introduction to the program consists of a title page and option page. Both are accompanied by a tune which Pot Black viewers may recognise. I think

the author of the program could have been a musician at one time because the tune is excellent.

Overall I would say that the game could have been very good, if only it contained no gremlins.

K.I.

One of the main failings of Commodore is their inability to extend the resident BASIC to allow ease of use of the facilities offered by the new machines.

This explains the appearance of the Simon's Basic cartridge which attempts to convert the 64 into a more user friendly machine.

For VIC owners, a Super Expander fills some of the gaps in the BASIC, but at a price. After nearly two years of using a VIC, I realised that it was time that I rationalised the use of some of the VIC's facilities. This article is the result.

One of the functions given in the routine works only on a VIC with eight or more kilobytes expansion and bearing in mind the lack of RAM in the basic machine, the routine is only available on machines with at least 8K expansion.

All commands are accessed by a single SYS call (SYS 24128 (16K expansion) or SYS 15936 (8K expansion)). The command is defined by two letters followed by any parameters.

For example:

SYS (SA) command, parameter 1, parameter 2

The actual syntax has a little flexibility in that spaces can be included to ease reading.

The parameters can be numeric values, variables or functions. The one limitation is that if you use a variable for the SYS address, then brackets must be used. Here are some examples of acceptable syntax:

SYS24128PA,1,1  
SYS 24128 PA,X,Y  
SYS(24128) PA, RND(1)\*10,  
Y12  
SYS(SA) PA, 0,0

# Get at those VIC-20 commands the easy way

It's tricky making the VIC perform some functions . . . unless you type in Allen Webb's programs. There's a choice of two listings, for 8K or 16K RAM expansions

SYS SA PA,1,1 will give a syntax error.

Specifically, the commands available are:

#### Colours

SYS (SA) BC, colour...sets the border colour  
SYS (SA) SC, colour...sets the screen colour

#### Sound

SYS (SA) VO, volume...sets volume  
SYS (SA) TU, voice, frequency...sets tone

#### Print at

SYS (SA) PA, X, Y...sets the

cursor to the specified coordinates

#### Line erase

SYS (SA) LE, Y ...erases specified line

#### Set height of screen

SYS (SA) RO, number of rows...sets up required number of rows

#### Set top of memory

SYS (SA) HI, address of top of memory.

For example, to set the top of memory to \$5000 use SYS (SA) HI, 5\*4096

#### Change location of screen in RAM

SYS (SA) FR, screen number (in the range 1 to 8)

The VIC with more than 8K expansion supports up to eight screens between \$1000 and \$2000. I discussed how this is done in an earlier article (Home Computing Weekly No 1).

This command will switch to the screen position specified in the parameter. NB a parameter value out of the range 1 to 8 will result in a nasty crash. Before you can access all of the screens you must raise the start of BASIC with...

POKE 642,32: SYS 64824

Listings 1 and 2 give the versions for 8K and 16K. Listing 3 gives a short demo which should clarify the use of some of the commands (don't forget to raise the start of BASIC before running it!)

# How the Space Shuttle launched a software shop

Not many companies involved in microcomputer software can claim to owe their existence to the Space Shuttle. It did however have a part to play in the formation of Sumlock Microwave.

"Sumlock was originally involved in office machinery and owned by the American giant Rockwell, but when Rockwell decided to concentrate on major products like the Shuttle contracts, Sumlock was sold to their employees on a franchise basis," said Alan Lee, Sumlock's marketing director.

"From an interest in calculating machines and programmable calculators, we went on to get a dealership for the Commodore Pet, the first affordable microcomputer. We were one of the first in Manchester, and mainly sold business packages and educational software, but eventually the hobby side of the Pet started to grow.

"This meant there was some conflict; we might have a customer trying a complete financial package in one corner whilst another played Space Invaders. It couldn't go on, so we decided to change to the home and hobby side in 1981 with the launch of the VIC 20."

Since then the company has never looked back. It still services business machines in its well-equipped workshop — which also means good service facilities for hobby customers. But now the future of the company is firmly in software production and retailing.

"We sell several VIC programs written by freelance programmers, but now have a team of in-house programmers and are looking to the formation of a separate company for our software," Alan revealed. The programmers in question are Dave Aron and Steve Course, who have been programming for the company for some 18 months now but only recently became full time staff.

Dave and Steve delayed going to University to join the company, a decision neither seems to regret. "We have so many ideas, and the new Commodore 64 is such an exciting machine, we expect to be busy for a long time," Dave said.

"We originally programmed on the VIC and with only 3.5K of RAM to play with it was always a problem deciding which features to leave out of a program. But on

## Regular readers will have caught our reviews of Sumlock's programs for the VIC. Here Dave Carlos finds out the story behind the software — and Sumlock's move into new programming pastures

the 64, we can put in what we like and still have room to spare!"

"Up to now we have concentration on arcade games — that seems to be what most people want at the moment. But we will soon be writing original arcade-quality games using our own ideas. Then we will expand from the Commodore range on to other popular makes," said Steve.

From an attempt at writing a Pacman and a Frogger game in Basic the team, known on their cassettes as 'LiveWire', has come a long way. "We asked them to learn Machine Code and they never flinched," says Alan. "Within a very short space of time they had finished 'Jumpin Jack' for the VIC and the LiveWire series was started."

"One advantage of having the shop is the ability to do market research without too much difficulty. I can't resist talking to our customers and trying to find out what they want from the games. This means we can try to match the product to the customers we know.

"We do feel however that customers should have the chance to see the games before they buy, and the rise in the level of dealer sales makes this more possible."

"An aspect of this business which really worries us is the software piracy. We recently heard of a local schoolboy who was copying games by the gross and selling them through adverts on the school notice board. This is plain criminal and eventually the industry must do something about it or will be in dire straits.

"Another incident which brought this home to us was when a boy came in to buy one micro and sell another because he had over £150 worth of software for the one he wanted, all of which he got 'from his friend!'"

It is little wonder then that the company is considering the production of future releases on ROMs but "One thing is certain," said Alan, "if we got enough evidence against anyone for copying software, we would have no hesitation in taking them to court and hoping for some stiff penalties."

Returning to Sumlock's software range, Alan admitted some uncertainty about the future of the VIC. "If Commodore keeps the price of the 64 at the present level, then there may still be a future for the VIC at the bottom of the price range. We have three new releases in the pipeline for the VIC 20, adding to our current range of fourteen, but now we are concentrating on the 64," said Alan.

"We are just waiting for the artwork for our first Commodore 64 titles which will be Gridtrap and Jumpin Jack. We expect

them to be much superior to anything seen before. They will have 'Halls of Fame', self play, numerous skill levels, one or two player options and include several unique program features. In fact we have tried to incorporate all the features of our present range and add to them from the customer's and reviewer's comments on our past games."

Dave said that time was the main enemy. "We have ideas overflowing but the time to program them all is hard to find. One area we do wish to branch into soon is that of speech synthesis. The Commodore 64 is ideal for this as you can set any note up any way you wish and therefore no hardware expansion is needed."

"It is time we realised that the difference between Arcade Games and micros is that you don't have to put money in them and therefore the games on a micro can be that much more complex and involving," said Steve. "We have some ideas for graphic adventures to exploit this but they will be unlike anything seen yet!"

Overall the company has a great deal of experience in the microfield and doesn't see itself falling behind in any way. "Ideas change so quickly in this business", admitted Alan. "Three months of changes in hardware can change all your plans, but one thing is certain — we expect LiveWire to electrify our future."

Alan Lee: concentrating on the hobby market

## Where's the software?

I have read many letters for and against the TI-99/4A on your letters page. Let me tell you my story.

I bought my TI-99/4A a few weeks ago and it cost me £149.95. Not bad, I thought, until three days later in the same shop it went down to £99.95. I put it down to bad luck and thought I must have been too hasty but my problems were only just starting.

I can find no good software except games which I like but are all mail order. Where is the software for the more serious like myself? But without any doubt the biggest problem is books. In the whole of Manchester — and that includes some very big bookshops — I found only one small paperback priced at £10. I did not bother. But the biggest problem in the shops was how to avoid being crushed by the yards high, feet deep, piles and piles of Spectrum and Dragon software books! Very annoying.

K. J. Bates  
Sutton Estate, Salford

## Why should we wait?

I hope that this letter gets published and that your advertisers read it and take note of the problems facing soldiers serving overseas.

I am the proud owner of a Commodore 64 and, like all of my comrades who own various types of computers, I rely on the postal services of magazine advertisements.

I have yet to receive an item of equipment within a satisfactory period of time, i.e. 14 days or even 28 days. And asking around I find that my comrades are experiencing the same problem. Although our cheques are being cashed promptly, we have to sit back and wait, and wait, and wait.

Would firms please note that we are not the minority over here. In fact, as far as ratio is concerned, 27 per cent of my soldiers and friends own some sort of computer but cannot just go to the shops and buy what we like.

Firms should also deduct VAT from overseas orders and claim it back through the relevant channels.

So come on you distributors — pull your socks up and I am sure that your sales will go up at the same time.

Staff Sergeant J. Gadd  
BFPO 112

**Send your letter to Letters, Home Computing Weekly, 145 Charing Cross Road, London WC2H 0EE. Don't forget to name your computer — the best letter could win £5-worth of software. Queries cannot be answered on this page**

## Oric problems (continued)

May I take this opportunity for thanking you for publishing my letter in HCW25. I have had a number of letters from readers, some of whom have outstanding grievances with Oric and all of whom were dissatisfied with the service they have received.

I am happy to say that Oric has also contacted me through its public relations consultants who seem keen to deal with any problems. If any other readers are having problems with Oric, I will be pleased to hear from them and pass them problems on.

Perhaps Oric will be a little more sensitive to their customers if its responses have to be made in a more public gaze. It is sad that Oric will respond to a letter in the press in less than a week while it is so slow in responding to individual enquiries.

Keith Ollett, Hookstead,  
Goldsmith Ave,  
Crowborough,  
East Sussex TN6 1RG

## Popular Puncman

Thank you for the not-so-unfavourable review in HCW25, but I feel I must write and clarify a few points.

Puncman is one of our best selling programs, mainly to educational establishments, and was written by a qualified teacher using principles in popular use in the teaching of punctuation in many schools.

Although some schools vary in their approach to this subject, nearly always you will find that the "incorrect punctuation" to which you refer is merely a means of simplifying punctuation to remove the clutter of symbols which a pupil finds himself facing. This gentle introduction to simple punctuation is naturally followed later by more specified tuition in the use of apostrophes, quotes

etc. (This is, in fact, following in Puncman 3&4).

The insert tells the user precisely what the program is intended for and which symbols are to be concentrated upon.

The "dreadful slang" is a matter of opinion, but I would again point out that this is written by a qualified teacher in a way which in his experience, will best demonstrate the use and at the same time hold the child's attention.

May I respectfully suggest that you should co-opt members of the teaching profession when testing educational software (if you do not do so) but that if you intend making specific criticisms of the educational content, rather than the material content, you should for the more serious educational programs, involve a teacher with experience relevant to the subject matter of the software.

M. E. Kerlake  
Chalksoft, Worcester

*Educational software in HCW is reviewed by teachers with experience of the appropriate age/study group.*

## Spectrum take over

I am writing to complain about the way that Spectrum advertisements, features and other articles have come close to taking over the pages of many computing magazines.

The advertisements very often take over a whole page of a magazine and this can be very annoying to other computer users such as me who has paid good money for the magazine. As a TI-99/4A user, yours is the only magazine which I regularly buy because it is the only one which has taken a serious interest in my computer although even yours has become perhaps a little too "Spectrummy".

Paul Leathley  
Fallowfield, Manchester

## Making money

I am writing to you concerning the VIC 20 game WACKY WAITERS. I have scored £62.23 on it. I would like to know if anyone has bettered this. On my first go I got 61p.

Anthony Vowles  
Knowle, Bristol

## U.S. SCENE

# Just \$25 for all this

The announcement of a rather clever program for the VIC-20 caught my eye this week. I think it deserves prominent mention.

It is called *Research Assistant* and will run on any VIC-20 having a minimum of 8K RAM, a compatible disc drive, and a printer. In fact, the program will also run on the Commodore 64, although for some reason is not being advertised that way.

The package consists of three programs, and comes on cassette, although it is readily transferable to disc and will support disc files and tape files interchangeably.

The first of the three programs is called *RA.Build*. This is the data entry program which allows you to develop note files on tape or disc. The program is menu driven.

When it comes up, the first menu asks if you are going to start a new file, update or add to an existing file, change input/output devices, or quit. If you choose to enter data, another menu asks if you are planning to enter a source, a reference, or add to the end of a file.

Once source entry has been selected, you can then put it in whatever format you like (such as author, title, comments, etc.). Once entered, the information can be edited, saved as is, or erased. After a source is on file, you can enter additional references within it and the machine will automatically number these and append them.

Each reference can contain the page number and up to 1,020 characters for use as comments. After the comment section, you are allowed to enter up to 12 keywords which the program will then use for indexing. You can then enter two dates to act as a range for each source reference. As entries are made, the program loads them onto either tape or disc as you have indicated.

The second program is called *RA.XRef.Build*. This is the cross reference building program. This allows you to construct a cross-reference table for one or more files built by the previous program.

Within the allowances of memory, and provided you have not used the same number for several different sources, you can merge the files. As you build the cross reference, the program allows you to use up to 20 date ranges and associated keywords for indexing. Using a VIC-20 with 8K RAM, the program will have room for about 112 "slots" (roughly 1,100 bytes) for the cross reference file. Each of the slots can hold one keyword and as many as five references to it.

As the files are read, and the cross references are created, the system puts the identification numbers on the screen as it works. When done, the system returns to the main menu, and the screen also displays how much memory is left.

The final program is called *RA.Print*. This section of the system is able to print the cross reference or the source files in any order and interchangeably from tape or disc. The printout is formatted as follows: the source files are printed with the bibliographic reference first, followed by the comments, in turn followed by the keywords and key date ranges;

The reviewer whose evaluation I read used this program on research notes that he had accumulated over 20 years. He found that the system did all it was advertised to do, and indicated that it would be virtually impossible to hand compile the sort of cross reference list that *Research Assistant* can do so well and so quickly.

He also felt that any experienced historian, genealogist, or journalist or other person practiced in research, would find that the note-taking system conforms to standard procedure, as taught in school or elsewhere.

The system is very good at error trapping, and is extremely user-friendly. It can handle odd reference systems, weird page numbering systems, or even free-form entries having no author citations. Leaving certain data entries blank causes no problems.

Common errors and their fixes are included at the back of the documentation, which is written in clear non-technical English.

If you are doing any sort of research, this program will fill an important gap. Best of all, the price is certainly right. It costs all of \$25. Write for details to TOTL Software, P.O. Box 4742, Walnut Creek CA 94596, (415) 943-7877.

That's all for this week. See you next time.

Bud Izen

Fairfield, California

# HAVE YOU BEEN INVOLVED IN A MYSTERIOUS ADVENTURE RECENTLY?

If so, it is quite probable that you are presently suffering from TIS, more commonly known as Total Involvement Syndrome.

TIS manifests itself in a number of ways, one of the most dramatic symptoms being a victim's complete inability to feel at ease in the world of reality. Other symptoms include insomnia, a desperate need to play a Mysterious Adventure, and an overwhelming sense of acute enjoyment.

Experts believe that TIS is usually contracted as a result of prolonged exposure to Mysterious Adventures, this is commonly caused by owning any of the following Home Computers:-

48K SPECTRUM, BBC MODEL A OR B, TRS80, COLOUR GENIE, ATARI 400/800, COMMODORE 64, DRAGON 32, 16K ZX81, LYNX etc.

When questioned about this epidemic, a representative of DIGITAL FANTASIA, a company who are actively involved in research and development work on Mysterious Adventures said, "There is probably no cure for TIS other than mains failure, faulty RAM chips etc. which can be at best only a Temporary solution". "In the absence of a more permanent cure, I would advise TIS sufferers to submit to the Syndrome and obtain Mysterious Adventures from any sources available to them". "TIS is highly contagious and in view of the current Worldwide Epidemic, I would say enjoy it while you can, resistance is futile".

If you have a BBC Computer or a 48K SPECTRUM, you can obtain Mysterious Adventures direct from DIGITAL FANTASIA in any of the following dosages:-

- |                            |                           |                          |
|----------------------------|---------------------------|--------------------------|
| 1) THE GOLDEN BATON        | 5) ESCAPE FROM PULSAR 7   | 8) THE WIZARD AKYRZ      |
| 2) THE TIME MACHINE        | 6) CIRCUS                 | 9) PERSEUS AND ANDROMEDA |
| 3) ARROW OF DEATH (PART 1) | 7) FEASIBILITY EXPERIMENT | 10) TEN LITTLE INDIANS   |
| 4) ARROW OF DEATH (PART 2) |                           |                          |

Each Dose costs £9.95 including V.A.T. and Postage. Excellent quantity Discounts are available for Pushers.

D.F. MENTAL HEALTH WARNINGS. MYSTERIOUS ADVENTURES CAN SERIOUSLY DAMAGE YOUR SENSE OF REALITY.

TELESOUND 84**

"THE ONLY ONE OF ITS KIND TO  
FIT INSIDE THE SPECTRUM"

Probably the worlds smallest modulator!

**TELESOUND 84** is ready built and tested to get full Spectrum sound through your unmodified television set, black/white or colour. The unit can be fitted in minutes without any previous experience. Telesound 84 has been developed using the very latest ultra miniature components so that the size is kept to an absolute minimum.

**TELESOUND 84 FEATURES**

- Sound and vision together for added realism
- Beep volume controllable from a whisper to a roar
- Keyboard prompt click clearly heard to assist program entry
- Programs can be heard with loaded
- Compatible with all other ZX add ons
- No soldering or case cutting required
- Additional amplifier not necessary
- Separate power supply not required

**TELESOUND 84** comes with full fitting instructions and costs **£9.95** inclusive of post, packing etc. Please state your computer when ordering.

Like the look of those flashing characters you've seen on Prestel and Ceefax displays? Using my program, you can get the same flashy effect on your Commodore 64.

The program uses multi-coloured text mode. This is a more complex mode than the other three text modes because the whole character set needs to be redefined to make good use of the facilities that the mode offers.

The advantages of this mode, however, outweigh the disadvantages for certain applications. Each dot in the character matrix can be one of four colours: background, foreground, and two others defined elsewhere.

These two other colours have their definitions in two of the 6569 VIC chip's registers, and if these registers are changed then the effect is felt all over the screen, and any character using them will have its colour changed.

So if a character set, or in this case half a character set is defined using one of these special colours, its colour can be changed all over the screen by simply changing one register. For a list of the registers used and their locations, see Table 1.

That is the principle behind this program, half of the character set, the reverse field half, is defined using the special colours, one for the foreground colour and one for the background colour. The other half is as normal, except that the characters are only four dots wide — a bit confusing at first, but they are all fairly recognisable.

The method used to change the registers at regular intervals is to redirect the interrupt routine, that is, the one that updates the clock and checks the stop key etc. This is executed every 1/60ths of a second, so it is ideal for our purposes.

The instruction to turn on the

# Multi-coloured flashing

## Want to make your Commodore 64's screen look flash? Mike Roberts tells you how to go about it

flash routine is SYS 49152 and the instruction to turn it off is SYS 49165.

There are four modes of operation of the flashing controlled by poking the flash control register. This is at location 822, so POKE 822,1 gives you mode 1.

The modes are, mode 0: no flashing of foreground or background; mode 1: flashing background only; mode 2: flashing foreground only; mode 3: flashing background and foreground.

foreground colour and 821 the next foreground colour, so POKE 821,1 and POKE 53283,0 would make the foreground flash between black and white.

The alternating colours for the background are stored in locations 820 and 53282, with 820 being the next background colour and 53282 being the current background colour, so POKE 820,2 and POKE 53282,3 would make the background alternate between red and cyan.

Unfortunately only eight col-

ours can be used in multi-colour mode and for this application, they must have values of eight to 15.

To get black text, use the Commodore key in conjunction with key 1. Using values less than eight for printing the characters will result in garbage on the screen instead of flashing characters.

To print flashing text the colour POKES must be set up as above and the system enabled. The character printing colour must be greater than eight, although only the lower eight colours are displayed, and the text must be printed in reverse field.

Of course normal procedure can be carried out for non-flashing characters, except that reverse field cannot be accessed.

To get back to normal mode use POKE 53272,21:POKE 53270,20 and to get back to flashing mode use POKE 53272,19:POKE 53270,216.

Note: Before typing in, or loading this program, the instructions  
POKE 44,24:POKE 6144,0:NEW must be executed to reserve memory space for the new character set. This will destroy any program currently in memory.

**How it works**  
110-110 introduction  
110-1400 character data  
1410-1420 check data is OK  
1430-1500 POKE in data for characters

The speed of flashing is controlled by the speed register at location 823, in 1/60ths of a second, so POKE 823, 60 would make a character flash once every second.

The colours that alternate for the foreground are in locations 821 and 53283, with location 53283 being the current

# sinclair special

4

*Inside...  
Two special offers...  
Six new software titles...  
Microdrive!*

## Something for everyone, from Sinclair!

Welcome to another Sinclair Special. Even if you're not yet a Sinclair owner; I believe you'll find something of interest in this latest issue.

For instance, if you're looking for the best way to begin computing, turn to our back page. You'll see that leading Sinclair retailers are now offering the popular ZX81, complete with a 16K RAM Pack and a free software cassette, all for £45. That means savings of at least £29 on one of the world's all-time best-selling computers.

Those same retailers are also offering the ZX Printer at its regular price of £39.95, but accompanied by a free 5-roll Paper Pack, worth £11.95.

If you want to add even more speed and versatility to your ZX Spectrum system, you'll be pleased to hear that the new ZX Microdrive has now been officially announced.

Microdrives are being released on an order of priority basis. Spectrum owners who purchased direct from us will be sent order forms, in a series of mailings that begin with the earliest names on our list of Spectrum owners. If you didn't buy direct from us by mail order, send us your name and address (use the coupon in this Sinclair Special). We'll add your name to the list, and send you a colour brochure and details on how to order.

Finally, if you're looking for more ways to use your ZX system, take a look at the software opposite. There are programs for programmers, a space-chase and car race for arcade-game players, a brand new logic game for those who've exhausted 'the cube'.

The Cattell IQ Test is based on the definitive professional psychologists' test—and forms an accurate but easy way of measuring your own IQ. All the new programs are available direct from us, through the order form in this issue.

You'll see what I mean about Sinclair having something for everyone. And we'll have even more to show you at two forthcoming exhibitions: the PCW Show at the Barbican Centre, from September 28th to October 2nd, and the Great Home Entertainment Spectacular at Olympia, from September 17th to 25th.

Nigel Searle, Managing Director  
Sinclair Research Ltd.

# ZX Microdrive System preview!

## ZX MICRODRIVE

At least 85K bytes storage, loads a typical 48K program in as little as 9 seconds: £49.95.

## ZX MICRODRIVE CARTRIDGE

Compact, erasable, revolutionary. Complete with its own storage sleeve. Contains up to 50 files, with a typical access time of 3.5 seconds: £4.95.

## ZX INTERFACE 1

Necessary for sending and receiving information from ZX Microdrive. Includes RS232 interface and local area network facility for 2 to 64 Spectrums. Attaches to the underside of your Spectrum. Purchased with ZX Microdrive, just £29.95. As separate item, £49.95.

# PSYCHOLOGY, GRAND PRIX RACING, BRAIN TEASING, PROGRAMMING, SPACE-BLASTING!

Sinclair have it all taped with six brand-new programs for ZX Computers!

## Chequered Flag

For 48K RAM Spectrum. **£6.95**

Have you ever wanted to drive a Formula One car flat-out round a Grand Prix circuit? With Chequered Flag you'll need one eye on the road and one eye on the instruments, as you steer and brake to avoid hazards, and work through the gears in search of the lap or race record. This outstanding new program puts you in the driver's seat with stunning realism, and gives you a choice of three cars and ten different circuits. Don't crash!

## Mothership

For ZX81 with 16K RAM. **£4.95**

Scream down the claustrophobic confines of the Zarway. Engage suicidal drone fighters in deadly laser combat. Dodge, duck and dive in a high-speed 3-D race to attack the evil Mothership before she claims your home planet. Mothership is a truly tough challenge, and fast, furious fun!

## Cattell IQ Test

For 48K RAM Spectrum. **£12.95**

Although there are a number of so-called self-administered IQ tests on the market, the only reliable way of finding your IQ has – until now – been to visit a qualified psychologist and take a battery of tests – for a fee. Now Victor Serebriakoff, International President of Mensa, has produced Professor Cattell's test in a form which enables you to use your ZX Spectrum to test your IQ.

The Cattell Scale IIIA test is timed by the computer, marked immediately, and the marks standardised against your age. This is the first time that an accredited, standardised test has been available to the general public.

## Zeus Assembler

For 48K RAM Spectrum. **£12.95**

A powerful and easy-to-use programming aid, designed to simplify the entire process of producing machine code programs, enabling you to write in assembly language instructions. Comes complete with comprehensive range of support facilities.

## Monitor and Disassembler

For 16K & 48K RAM Spectrums. **£12.95**

This powerful Disassembler translates machine code into comprehensible assembly language instructions, allowing you to examine the BASIC ROM, to investigate the workings of the Spectrum or to analyse your own machine code routines.

With the highly versatile Monitor, you get an extensive set of facilities to aid the entry, inspection, modification and debugging of your own machine code programs.

## Flippit

For 16K or 48K RAM Spectrums. **£9.95**

Like those cube games, Flippit looks simple. But its fiendish ingenuity results in the ultimate game of logic and patience. Twist, turn and swap the nine Flippit pieces in search of the elusive magic square. But be warned, those pieces can be arranged in *millions* of combinations...

# TWO SPECIAL OFFERS FROM SINCLAIR STARTER PACK: £45

Powerful passport to home computing – now at the lowest price ever!

## ZX81

Sinclair ZX81 – 900,000 sold so far. Touch-sensitive keyboard... black and white graphics... just plugs into most TV sets. With 212-page BASIC manual – step-by-step guide to the world of personal computing. Normal price £39.95.

## ZX 16K RAM PACK

Gives the ZX81 more power – the power to run sophisticated software like Flight Simulation and Chess. Normal price £29.95.

## CASSETTE

Worth £4.95 or more. In every starter pack, there's a top-flight 16K cassette – like Chess or Fantasy Games or one of the valuable education series. Actual title varies with availability. And once you own your starter pack, there are 37 other Sinclair cassettes available (plus dozens from other manufacturers).

Look for the special packs at WH Smith, Boots, John Menzies, Currys and other leading Sinclair stockists. Not available by mail order.

Offers subject to availability while stocks last.

## ZX PRINTER AND FREE 5-ROLL PAPER PACK: £39.95

## ZX PRINTER

Designed exclusively for use with the Sinclair ZX81 and ZX Spectrum personal computers. Printing speed: 50 characters per second. 32 characters per line, 9 lines per vertical inch. Plus graphics direct from screen. Now with a free pack of 5 rolls of special paper (normal price £11.95).

# sinclair

Sinclair Research Ltd, Stanhope Road, Camberley, Surrey, GU15 3PS. Telephone: (0276) 685311.

## How to order

Simply fill in the relevant section(s) on the order-form below. Note that there is no postage or packing payable on Section B. Please allow 28 days for delivery. Orders may be sent FREEPOST (no stamp required). Credit-card holders may order by phone, calling 01-200 0200, 24 hours a day. 14-day money-back option. ZX81 Starter Pack and Printer and Paper offers are not available by mail order.

To: Sinclair Research Ltd, FREEPOST, Camberley, Surrey, GU15 3BR.

Please add my name to the Microdrive Mailing List, and send me a colour brochure with full specifications of ZX Microdrive/Interface 1  (tick here). You can use the above form to send us your name and address.

## SOFTWARE REVIEWS

### SYSTEM — 4A TI 99/4A (Extended BASIC, disk controller, disk drive) £30

Priory Computing, 14  
Bridgewood, Brookside,  
Telford, Shrops

This suite of three spreadsheet-type programs could be a useful alternative to the PRK module for rich Texas owners.

It lets you create a form, called a 'screen', with full control of layout — and without some of the daft restrictions of the PRK. You must design everything on paper first, though.

More than one field per screen line can be specified, and up to 20 fields over 23 screen lines are permitted, up to a total character

count for the field contents of 256.

There are a number of useful screen-editing facilities, and on the whole I found the creation program easy to use.

As with the PRK, you can specify the type of data acceptable for each field, but I found one fault: the first field is used as the form number and must have a particular data type and a minimum number of characters.

It is easy to overlook this, and it can cause problems later. You can come unstuck over character counts in a similar way.

The documentation is very good. I could fault it in only one respect: not once does it tell you that you need Extended BASIC.

|                 |      |
|-----------------|------|
| instructions    | 99%  |
| ease of use     | 90%  |
| display         | 100% |
| value for money | 75%  |

### Statistics BBC B £6

Rainbow Research, 288 High  
Street, Enfield EN3 4HF

The statistics program package from Rainbow offers five procedures with up to 100 values in

each. The procedures available are mean and standard deviations; T-tests; chi-square tests, contingency tables; and regression and least square fit.

The program is menu-driven. On choosing your option, you input the data as prompted and after the last value the S key terminates the data input stage and any further mathematic work is

# Get your micro working

Though it won't actually make the tea, there are lots of useful jobs your computer can do for you — with the right software

computed and displayed.

At this point the program drops out and to run any other option you have to type in RUN. Surely it wouldn't take too much programming effort to return to the menu?

The instructions supplied are adequate if you understand statistics, but the less bright among us, like me, will find them difficult to follow.

The program uses no graphics at all and would appear to turn

the powerful BBC B into a calculator. Graphics could be a useful addition to anyone writing such a package.

| value for money | 15%  |

### Letterwriter Sharp MZ-80K £8

Epsom, 25 Chartwell Place, off  
Downs Road, Epsom, Surrey

OK, so what will it do? Well, as well as allowing you to prepare and enter the text of your letters, you can send the whole thing to your printer for any number of copies to be printed.

You can delete, add or amend any or all of the lines of text, as required, before sending to the printer. Your letter may be saved on cassette for later recall.

You can also save a mailing list on cassette so that individually addressed copies of the same letter can be printed.

Finally, up to five standard paragraphs can be set up, stored in memory and called upon at any time for adding to the main body of text as necessary.

All of this is achieved via an eight option menu and three graphics pad keys.

A true word processor package will cost hundreds of pounds, so for £8 you can expect some limitations. Some of these are: no more than 200 lines, each of 40 characters, is allowed; there is no count or indication of line length; and standard paragraphs cannot be SAVED for future use.

I had a few problems due to my non-standard Centronics printer/interface but a small amount of patching soon remedied the situation.

More worrying was the syntax error reported on line 4360. The program stopped on every run until 4360 was deleted.

|                 |     |
|-----------------|-----|
| instructions    | 80% |
| ease of use     | 65% |
| display         | 70% |
| value for money | 70% |

### Easyplot BBC B £15.95

Synergy Software, Dept 1, 7 St  
Andrews Close, Slipend, Luton

This package is three separate menu driven programs, one for drawing line graphs, one for bar charts and one for pie diagrams.

Up to three line or bar charts, or four pie diagrams may be stored within each program and line or bar charts may be merged. All diagrams can be saved on tape/disc or printed.

It is a sophisticated package which includes an excellent automatic scaling, sorting and labelling facility which removes most of the difficult work in graph design. Users can opt for manual design but I found the automatic option more than adequate for most purposes.

A powerful overwrite facility enables the user to print text

anywhere on the screen and there is a wide choice of plot shapes and bar shading options available.

I found it extremely easy to set up well designed diagrams and the quality of the programming and prompts were such that the manual was almost superfluous.

The only real fault I could find was that printed symbols on pie diagrams were not always accurately positioned. Screen displays for the line and bar charts are black and white, which could be a drawback when coloured printers become widely used.

Easyplot's main use will be as a business utility.

| ease of use     | 95%  |
| display         | 75%  |
| value for money | 75%  |

### Database 48K Oric-1 £4.95

Database Systems, 82 Towers  
Rd, Poynton, Cheshire

A utility filing program for the Oric 1 costing less than £5? Can it be true? So it was with some enthusiasm I tried to load the program into my Oric.

Half an hour later I was still

trying, and my enthusiasm was much diminished. A further 15 minutes went by before my Oric received an error free program.

No instructions were provided with the program, so, if the word 'field' means little more to you than acres of grass, you may have problems.

However, once in use, the program proved to be a quite powerful computer filing system. All the usual features are there; enter, delete, sort, list, search,

save file, and load file. The sort option operates on any field, and is very fast.

The program is 'menu-driven', and the on-screen instructions make it easy to use. You can select the number and names of fields your require.

The screen layout is unimaginative, and I thought the use of sound (e.g. SHOOT and EXPLODE) was misplaced in a 'serious' application program.

However, if you have the pa-

tience to load the program, you could make a back-up copy, and have a simple, but effective and flexible database system for your Oric.

## MAIL ORDER PROTECTION SCHEME

If you order goods from Mail Order Advertisers in this magazine and pay by post in advance of delivery, this publication will consider you for compensation if the advertiser should become insolvent or bankrupt, provided:

1. You have not received the goods or had your money returned; and
2. You write to the publisher of this publication explaining the position not earlier than 28 days from the day you sent your order and not later than 2 months from that day.

Please do not wait until the last moment to inform us. When you write, we will tell you how to make your claim and what evidence of payment is required.

We guarantee to meet claims from readers made in accordance with the above procedure as soon as possible after the advertiser has been declared bankrupt or insolvent to a limit of £1,800 per annum for any one advertiser, so affected, and up to £5,400 p.a. in respect of all insolvent advertisers. Claims may be paid for higher amounts, or when the above procedures have not been complied with, at the discretion of this publication, but we do not guarantee to do so in view of the need to set some limit to this commitment and to learn quickly of reader's difficulties.

This guarantee covers only advance payment sent in direct response to an advertisement in this magazine (not, for example, payments made in response to catalogues, etc, received as a result of answering such advertisements):

# Micro-Myte

# 60

Only

## £48.00

complete, inclusive of  
VAT, post and packaging  
in the UK only.

It's the high speed computer phone link you have been waiting for:

**Transmits/receives at 1,000 Baud:** Three times the speed of most other acoustic modems (including professionals).

**Economic to use:** Communicates data direct between compatible users. Typically 120,000 bits per two minutes of telephone time. (Cheaper than a first class letter.) Also twelve times faster than a telex.

**Simple to operate:** Connects directly to your cassette input/output sockets. Use your home computer like an on line terminal. Link up with your friends by telephone or cable.

The Micro-Myte 60, in its sturdy moulded plastic housing, complements your home computer equipment.

**No fuss, no hidden  
extras, no rental  
costs**

Each kit comprises an acoustic modem, ZX81 and Spectrum software on cassette, connection cable and operating instructions, together with a twelve month guarantee.

**YOU CAN PRE-RECORD PROGRAM OR SCREEN  
CONTENTS ON TAPE. YOU CAN TRANSMIT  
OFF TAPE OVER THE PHONE AND YOU CAN  
RECEIVE ON TAPE.**

**STOP PRESS!**

Micro-Myte 60 will operate with all makes of home computer software available soon

**YOU CAN NOW  
TRANSMIT AND  
RECEIVE  
OFF TAPE!**
