Sinclair micros may go on sale in China

Sinclair may soon be selling home computers to China — depending on the results of a small-scale trial there of the ZX81 and Spectrum.

The company recently announced that it had shipped small quantities of components for the two machines to China for local assembly and sale.

If these first few machines catch on, Sinclair will have the chance of shipping larger quantities next year.

The idea for the trial came when Sinclair's managing director Nigel Searle visited Shanghai and Peking last month, and met Chinese officials.

The machines will be assembled

Our mice scoop most prizes

National price rested on tiny mechanical shoulders when 14 micromice — lovingly constructed by true enthusiasts — battled for victory in Madrid.

Each had to find its way unaided to the centre of a large table-top maze, using microprocessors to work out the fastest route.

British entrants came away with a notable total of five out of the seven prizes, including Best Novice for Orac, built by a team

Briefly

Could this be the program to end all programs? Software Studios' Games Designer is claimed to make it easy — and fun — to write your own games. There's a sprite editor, a sound editor, and a facility for producing special effects like a moving stars background. You can base your home-made games around four basic formats: Invaders, Scramble, Asteroids, and Berserk. And if you get tired of writing your own, there are eight ready-made games included as well. Games Designer is being marketed by Quicksilver, runs on the 48K Spectrum and costs £14.95. It was written by John Hollis, of QS. *Quicksilver, Palmerston Park House, 13 Palmerston Road, Southampton, Hants SO1 1LL*

■ ■ ■

For Oric owners who want to find out a bit more about their machines, Linsac has brought out The Oric-1 Companion, a detailed technical guide. Contents include a full explanation of the Oric's keywords, screen display, memory, and ROM. There's also an assessment of the Oric-1 MCP-40 Colour Printer. Price £6.95.

Linsac, 68 Barker Road, Linthorpe, Middlesbrough, Cleveland TS5 5ES

■ ■ ■

Chalksoft says it has the first-ever educational adventure game in the form of *Pirate*, for the BBC micro and 48K Spectrum. Featuring full colour animation and sound, it aims to teach children strategic thinking, planning and map-making. It costs £9.25.

Chalksoft, 37 Willowslea Road, Worcester WR3 7QP

■ ■ ■

Lotus-soft is a new Spectrum software company based in West Wales. Its first offering, *Lord Harry and Lady Harriet*, is an animated cartoon maze game. A welcome feature for female computer owners, tired of games that seem to forget their existence, is the option to take the role of either Harry or Harriet, depending on which side of the tape is played.

Lotus-soft, 43 Maes Road, Llannegnech, Llanelli, Dyfed SA14 8UH

BBC Microcomputer System

OFFICIAL BBC COMPUTER DEALER

MODEL A AVAILABLE

£299 inc. VAT
This is the best microcomputer currently on the market. 32K RAM. 32K ROM. 8 modes of operation. Full colour, full-size keyboard, internal expansions such as disc interface, speech synthesizer, Econet interface. In short, it is a personal computer capable of expanding into a small business system.

BBC Microcomputer Model B	£348	VAT	£399.00
BBC Mod B = disk interface	£409	VAT	£460.00
BBC Mod B = Econet interface	£389	VAT	£447.35
BBC Mod B = disk and Econet interfaces	£450	VAT	£517.50
BBC 100K disk drive	£230	VAT	£264.00
BBC dual 800K disk drive	£699	VAT	£803.85
Torch 280 disk pack including 280 2nd processor, 64K RAM and CPN operating system	£699	VAT	£803.85
BBC Teletext receiver (Aug)	£196	VAT	£225.40
BBC cassette recorder and lead	£26	VAT	£29.90
Disk interface kit (free fitting)	£86	VAT	£96.60
Mod A to Mod B upgrade kit	£50	VAT	£57.50
Fitting charge for A to B upgrade kit	£20	VAT	£23.00

TEXAS INSTRUMENTS TI 99/4A

This microcomputer is based on TMS9900 16-bit microprocessor. It includes 16K RAM, 16 colour high resolution graphics (192 x 256). The screen display is 32 characters, 24 lines TH-BASIC. Full-size keyboard. For Software there are about 1000 programs to choose from. There are a lot of peripherals available, e.g. Disk Drive, Disk Interface, Speech Synthesizer, Extra RAM, Additional Language (PASCAL, TI-LOGO, ASSEMBLER).

TI HOME COMPUTER HARDWARE	Description	Price inc VAT
T199-4A	Complete with UHF modulator and power supply	£99.95
PERIPHERALS		
Speech Synthesizer	When used with selected modules will reduce electronic speech	£41.95
Peripheral	This unit takes all card peripherals and on internal disk drive	£144.95
Expansion System	92K formatted drive, mounts internally in peripheral expansion system	£179.95
Internal Disk Controller	Controls up to 3 disk drives, complete with disk manager command module	£149.95
Disk Drive	32K formatted capacity per side acts as 2 drives DSK1 & DSK2 total capacity 184K bytes	£219.95
Double Sided	Complete with own case, power supply & connecting cables	£259.95
Disk Drive External	Provides 2 serial RS232 ports, and one parallel port for interfacing	£109.95
Expansion Card	Adds 32K bytes extra RAM bringing total capacity to 48K bytes	£124.95
RAM	Includes the UCSD-PASCAL P-code interpreter	£189.95
Expansion Card P-Code Card	80 column matrix printer printer GP-100A + cable	£219.95
Matrix Printer	80 column matrix printer with RS232 and Centronic parallel interface	£273.95
Matrix Printer GP250X	80 column, 100 CPS matrix printer	£328.95

Sinclair's first screen pocket TV — smaller than an average paperback

China

From front page

ed by the South China Computer Company, which is a division of the Chinese government ministry of electronics.

They will, according to a Sinclair spokesman, be exactly the same as the Sinclair machines on sale in the UK — so the Chinese will have to learn to program in BASIC.

But the language barrier shouldn't prove too much of a problem if the Japanese, who are already buying Sinclair computers, are anything to go by.

The huge Chinese market would represent a tremendous opportunity for Sinclair, but the company stressed that it would not know whether it could go ahead until next year.

But if the answer is yes, as agenda for continuing discussion has already been worked out between Sinclair and the Chinese government.

The announcement of the Chinese deal was followed by the public debut of Sinclair's flat-screen pocket TV at the Home Entertainment Spectacular held at London's Olympia.

The TV measures 5½ in by 3¼ in by 1¼ in and weighs 9½ ounces. It has a Polaroid flat-battery which is said to last for 15

Oric discounts

Oric Specialist Kenema is offering a 50% discount on its products to signed-up members of the Tangerine Users Group. Just give your membership number, and you'll be entitled to 50% off Kenema's software range, plus hardware add-ons such as a voice synthesiser and motherboard.

Kenema, 1 Marlborough Drive, Worle, Avon BS22 0DQ

hours, and a mains adaptor is also available.

The new TV is to go into full production shortly, but initial supplies will be limited, and available by mail order only. Application forms for the TV, which costs £79.95, can be obtained from Sinclair.

Sinclair Research, Stanhope Road, Camberley, Surrey GU15 3PS

Lynn Nixon, Ann Mortimer and Patricia Lansdowne — the brains behind Cheshire Cat

The cat that ate the cream

Cheshire Cat educational software has a lot to smile about. Just a year after work began on the series, it has made the all-important break into chain store sales, under the Ampalsoft label.

Better still, one of the programs in the range, Basic Tutorial, has been featured by Boots in a special Dragon promotional campaign.

Cheshire Cat was the brainchild of Lynn Nixon, Ann Mortimer and Patricia Lansdowne.

Between them, the three women have seven children — Lynn and Ann have two and Patricia has three.

Patricia said: "That was one of the main reasons why we decided to start Cheshire Cat. We all had Dragons at home, but there was just no good educational software out for the Dragon that the children could use."

Patricia and Ann used to run a computer bureau together, and Patricia met Lynn, a former programmer at UMIST, because their daughters were in the same class at school.

The three decided to combine their talents to produce some educational programs. They enlisted the help of friends in teaching, programming and business, and Cheshire Cat is now growing rapidly.

Each program may involve as many as seven people, and is tested thoroughly before it goes on the market. According to Patricia: "We use our own children to test the programs under all conditions. They're all very used to computers now — they aren't frightened of them at all."

There are three Cheshire Cat programs currently on sale — Maths Level 1 for five to six year olds, Basic Tutorial and Advanced Basic Tutorial.

Due out soon are Maths Level 2, for seven to eight year olds, Maths O-level Revision 1, and Super Spy, a modern history simulation.

Not to be confused with the Richard Shepherd adventure game of the same name, Super Spy involves you taking the role of a German spy parachuted into Glasgow.

Cheshire Cat's plans for the future include O-level programs on French, German, and Geography, plus beginners' programs on physics, chemistry computer science and general science. Ampalsoft, PO Box 19, Knutsford, Cheshire WA16 0HE

This function key guide for the BBC micro tells you the functions of the 10 keys when the computer is in mode 7. Just slip it under the clear plastic strip above the keys. You can use two functions together — for example, flashing red. The other side is blank for you to write in your user-defined functions. The guide was prepared by BBC micro specialists Micro-Aid, 25 Fore Street, Praze, Camborne, Cornwall TR14 0JX

Orac with the team that built it

Micromice

From front page

of teenagers and sponsored by software house CRL.

But, as expected, the Finnish team scooped the two main prizes. Their Tellu, a three-wheeler with no less than 19 infra-red sensors, took just 32 seconds to complete the course and win 1,000 dollars.

Its twin, Manu, was unplaced. In fact, the only difference between the two was a different processor board.

Microsaurus, also from Finland, was the favourite in trials, with times of around 15 seconds. But it came second in the final and won a Spectrum.

It had taken a year of part-time work by four university students to build. They had packed hundreds of pounds-worth of equipment into their mouse: four ultrasonic sensors, 20 infra-red sensors, a Motorola processor, 4K of RAM, five servo motors, and four DC motors.

Knownaim, one of two entrants by Dave Woodfield, won £150 for being placed third. A three-wheeler, driven and steered by the front wheel, it uses eight infra-red sensors and a Z80 processor.

And his Thumper, which won the European finals in 1981 in Paris, came fourth. It was Thumper which got the most laughs, because Dave had added a Votrax speech chip.

As Thumper, a four-wheeler, trundled around the maze it "spoke" sentences like: "I wonder why the other mice don't speak to me", "I've been here before" and "I don't like bends." Its maze program was written by Andrew Keatley.

T3, placed fifth, was constructed by another veteran, Alan Dibley. In fact Dave and Alan and their families had travelled together in a hired minibus, taking the ferry to Santandar from Plymouth.

T3's best time to the centre of the maze was 1 min 13.8 secs, just 1.2 secs slower than Thumper. Using the guts of a ZX81, T3 was one of three entered by Alan.

T3, 1982 UK champion, also has three wheels but, unlike his T4, stops before making a turn. His Thezeus, controlled by a ZX80 with the keyboard removed with a hacksaw, was unplaced.

Orac, winner of the Best Novice prize, raised a gale of laughter from the hundreds in the lecture hall audience — all delegates to a high-powered computer conference.

Built in the shape of a two-wheeled black box and wearing the CRL logo, Union Jack and L-plate, Orac was made by five Ilford school pupils.

They are Matthew Hampson, 14, and Edmund Forrester, Michael Geaney, Jay Derrett and Andy Dukes, all 15.

CRL's managing director, Clement Chambers, who financed the work and the team's trip, had a proud look on his face.

Second in the Best Novice section was Fully Automatrix II, entered by David Jones and Jonathan Holt, both 16, and William Forster, 17, all from a school in Penley, near Wrexham.

As well as their prizes, each winning team was also presented with a novel trophy — a wedge of gold-coloured "cheese" mounted on a wooden base. Next year's contest will be held in Copenhagen.

The micro that has everything?

Elan's new personal computer, previewed in HCW 24, had now been officially unveiled — but you won't be able to buy it until next March.

Called the Elan Enterprise, it comes in two versions. The 64K version will cost around £200 and the 128K version £300.

As we told you, it has a real keyboard, with eight user definable keys. It also has a built-in joystick.

The Enterprise can display up to 84 columns by 56 lines of text, enabling business applications such as word processing to be carried out easily. And to make the most of that display, it comes with a built-in word processor on ROM.

But if you just want to play games, there are plenty of features to appeal to you too. Like the Atari 400/800, the Enterprise has dedicated sound and graphics chips, separate from the main processor. A first for Elan is the capability for stereo sound.

And when it comes to linking the Enterprise to peripheral equipment, there are plenty of possibilities too. You can connect up two joysticks, and two separate cassette recorders, which can both be started and stopped under computer control.

It has a Centronics parallel and RS423 serial interfaces, allowing you to connect up a range of printers. A local network facility will let 32 computers communicate and share peripherals.

There's a slot for cartridges one side, and on the other, a 64-way connector to link up to peripheral devices via a flexible cord.

The Elan peripheral units, such as extra RAM and disk drives, will be designed to plug into each other to form a neat stack.

The base of the stack is a special unit to provide power for the peripherals.

Elan Computers, 31-37 Hoxton Street, London N1 6NJ

The Elan Enterprise — a lot of memory at a low price

Games of the unexpected for the unafraid...

THE WHITE BARROWS

Somewhere amid this maze of burial chambers lurks an Evil Sorcerer whom you need to trap. Trouble is, he's protected by Trolls, Dwarves, Serpents and the occasional Dragon or two! Your magic staff will block the tunnel to prevent him escaping unless, that is, he outwits you.

A real brain twister, White Barrows requires both brains and brawn from its players. It's no good just hacking your way through the Barrows and hoping to fall over the Sorcerer. Eventually you'll meet a Dragon, and they don't hack easily! You'll need all your strength and cunning to survive this one for long.

THE WHITE BARROWS Only £6.50 all inclusive!

CELLS AND SERPENTS

More monsters than you ever thought could live behind your keyboard. Wander the hills in search of gold and glory but be very, very careful where you tread! There are things here that will make your wildest nightmares look like Julie Andrews. Fancy meeting a Mind Flyer, for example? Or how about shaking hands with an Asmodeus? (You'll only do that once!) Treasure is here to be found though... the hard way.

See just how good you really are at adventuring with this practically unsurvivable fantasy. Not for the faint of heart or the slow of sword.

CELLS AND SERPENTS Only £6.50 all inclusive!

** SPECIAL DEAL **

Both programs for only £11.45 all inclusive!

Our Adventure Series programs are available on tape for the following systems:
Commodore VIC-20 (not available for White Barrows), Commodore PET, Sharp MZ-80A and MZ-80K, Tandy TRS-80 Model 1, BBC Model B or 32K Model A, Atari 400 and 800, Sinclair 48K ZX Spectrum.

ASP Software, ASP Ltd,
145 Charing Cross Road, London WC2H 0EE

Please send me . . . tape(s) of the following programs:
The White Barrows @ £6.50 each
Cells and Serpents @ £6.50 each
Both tapes at special price only £11.45
My system is a computer

NEW HOME COMPUTER CABINET

SPECIAL SHOW OFFER £79.95

incl. VAT & Delivery

Especially designed for your home computer system, whilst also accommodating your video recorder.

Our cabinet has been custom designed after intensive consultation with P.C. users to provide maximum comfort and convenience during those long hours spent slaving over a hot micro.

The cabinet includes many features not previously available, and as well as combining the very best aspects of modern furniture design, it provides an ergonomic and practical layout for all the major components of your system.

In fact, we are proud to claim that your cabinet will look perfectly at home in your lounge, dining room, or even bedroom.

JUST CHECK THESE STANDARD FEATURES

- 1 Smooth sliding shelf locks in position just where you require it — and neatly glides away after use.
- 2 The computer shelf has been designed to allow adequate 'Knee room' for you to sit comfortably, and will avoid 'programmers back-ache'.
- 3 Adequate room to position tape recorder, printer, disc-drives, etc. alongside computer for ease of use.
- 4 All cables neatly and safely out of sight, while allowing all units to be permanently connected if desired.
- 5 Lots of storage space for cassettes, cartridges, books, listing paper, joysticks, etc.
- 6 With shelves and doors closed, instantly becomes an elegant piece of furniture.
- 7 The lower shelf accommodates all makes of video recorders currently available.
- 8 Smart teak effect finish.
- 9 Supplied as a flat-pack. Very simple to assemble, using just a screwdriver. Full instructions supplied.

TERMS OF OFFER UK Mainland Customers only. Please allow up to 28 days for delivery. Cash with order or charge to one of the credit card accounts specified. Money back guarantee if not satisfied provided the goods are returned undamaged within 72 hrs of the customer taking receipt.

ORDER FORM

Please send me one of your new Home Computer Cabinets as advertised. I enclose my cheque for £79.95 or please debit my Access/Barclaycard No Name (Block letters) Signed

Save selectively VIC-20

Owners of the VIC 20 micro are now able to save selective memory blocks on to tape using the steps below. The SAVE command only saves programs.

- 1 POKE locations 193 and 194 with the start address of the memory block.
- 2 POKE locations 174 and 175 with the end address of the memory block.
- 3 POKE locations 186 with the device number (1 for cassette, 8 for disk etc.) and location 185 with 3.
4. POKE location 147 with 0 for load and 1 for verify.

To perform save simply SYS 63109 and to perform load simply SYS 62795 (this routine doesn't inform you when it has found something).

The main uses of saving selective memory blocks are for performing screen text dumps onto tape and also to perform a character generator dump onto tape (hi-res picture saving). Now there is no need to load characters from data statements.

```

1 REM SCREEN DUMP PROG DEMO
2 REM INSERT TEXT TO BE SAVED BETWEEN LINES 20-100
10 PRINT CHR$(147)CHR$(5): POKE 36879,8
20 PRINT "TEXT TO BE SAVED"
100 GOSUB 1000
110 PRINT:PRINT "WANT TO LOAD SCREEN?"
120 GET A$:IF A$ = "N" THEN END
130 IF NOT A$ = "Y" THEN 120
140 GOSUB 2000
150 GOTO 150:REM FREEZE
999 REM SAVE SCREEN ROUTINE
1000 GOSUB 3000
1010 IF PEEK (37148) = 254 GOTO 1010
1020 SYS 63109 : RETURN
1999 REM LOAD SCREEN ROUTINE
2000 PRINT CHR$(147) : GOSUB 3000
2010 SYS 62795 : RETURN
2999 REM SET UP
3000 POKE 193,0 : POKE 194, PEEK(648)
3010 POKE 174,0 : POKE 175, PEEK(648)+2
3020 POKE 186,1 : POKE 185,3
3030 POKE 147,0 : RETURN
Line 110 waits for the user to press play and record.
The routines don't display any messages such as saving etc.
When run press play and record.
    
```

David Redmonds

Got a bright idea for using your micro? This is the page where you can share your brainwave with other computer enthusiasts. Send your hints, warnings, discoveries and suggestions to Micro Tips, Home Computing Weekly, 145 Charing Cross Road, London WC2HOEE

Find that location VIC-20 plus 3K

When working out user defined graphics etc, it is always a problem to find out the exact memory location to POKE the new values to. This line of program, when used with DATA statements solves this very quickly.

```

LN FOR CH = 0 to CN:READ CS: C = (ASC(C$) - 64) * 8 = 7168: FOR CS = 0 TO 7: READ CQ: POKE C + CS, CQ: NEXT CS,CH
where LN = line number, and CN the number of characters to define.
    
```

A matching DATA line would be:—
LN DATA "X",123,234,0,34,62,1,3,0

David Shepherdson

Make an introduction Any micro

Before you load data into your computer do you introduce the program via the TV speaker? With the tape recorder linked through to the TV, you don't have to be an expert to realise that this is possible.

For the interest of beginners like myself, here is how I go about the operation with my TI-99/4A. Start when you are ready to SAVE your program on to tape. Do not connect computer cable to recorder. Rewind tape to 000 or selected starting number. Record intro in normal manner.

Example: "HCW June 7, '83 program. Subject: Game. Title: Last Stand by Vince Apps. The aliens have invaded the earth and you are the last survivor. In your tank you strive to reach alien headquarters and destroy it before you are wiped out. You can do this by hiding behind trees as you advance... Typed in 27 June... stop recording and ad-

vance meter reading by 4 numbers NOW."

You have finished voice recording. Disconnect mike (if not built-in), connect computer cable. Next start SAVE routine, remembering that you do not need to rewind, but advance four numbers instead.

With your program on cassette, the play procedure is straight-forward. attach computer cable. Start from your beginning number, listen to the recorded message and press the recorder STOP button immediately as instructed. Do not press enter. Advance the four numbers and proceed in normal manner, that is, press enter but do not rewind.

You may find this method a convenient way of storing information. You do not have to listen to the introduction every time but it is there when needed.

To me it seems quicker and more personal than typing in a screened introduction. The cassette file card would read (say) 1-12 Intro, 16-26 "Last Stand".

Joe Berry

Fun with colour TI-99/4A

This short program for the TI-99/4A shows off the colours in a bright display.

```

10 CALL CLEAR
20 CALL SCREEN (15)
30 X = 3
40 FOR T = 40 TO 144 STEP 8
50 CALL CHAR (T, "FFFFFFF")
60 CALL VCHAR(1,X,T,48)
70 X = X + 2
80 NEXT T
90 FOR T = 2 TO 15
100 CALL COLOR (T,T,T)
110 NEXT T
120 G = 1
130 FOR T = 15 TO 2 STEP -1
140 CALL COLOR (T,G,1)
150 G = G + 1
160 NEXT T
170 GOTO 90
    
```

Neil Sherwood

Protect your screen 48K Oric 1

Owners of the 48K ORIC who wish to protect part of the screen from scrolling can alter the value stored at address #26F. The value stored determines the number of lines to be used for normal scrolling printing etc.

Changing the value takes just one simple line:—
DOKE #26D, #BB58:POKE #26F,x:CLS

The variable x being the value to be stored.

This line could obviously be incorporated in a program if necessary

Colin Failes

Practical POKES VIC-20

On the VIC-20 there are lots of POKES to do weird and wonderful things, but for some reason they are not listed in the user manual. So here I have made a list of some of them. I hope they prove useful to you...

Poke 808,127 disables the RUN/Stop key (any memory VIC)

Poke 808,112 re-enables the RUN/Stop key.

Poke 36864,(0 to 128) moves the screen horizontally.

Poke 36865,(38 onwards) = Moves the screen vertically.

Poke 36866,(1 onwards) = Sets the number of chars on a line.

Poke 36867,(1 onwards) or 128 = Sets the number of lines.

Poke 199,1 = Turns the reverse field on.

Poke 199,0 = Turns the reverse field off.

Poke 204,0 = Flashes the cursor in a GET statement.

Poke 211,(0 to 22) = Sets the cursor column position.

Poke 214,(0 to 22) = Sets the cursor row position.

Poke 649,0 = Disables the keyboard.

Poke 649,10 = Re-enables the keyboard.

Poke 650,255 = Makes every key repeat.

Poke 650,0 = Sets repeat functions to normal.

An interesting effect is obtained by entering:

Poke 36879,8
CTRL 2

Poke 788,223

Then move the cursor around with the cursor keys.

Alan Blackham

The Train Game £5.95

Microsphere Computer Services, 72 Rosebery Rd, London N10 2LA

The drawing on the front of the inlay card is reminiscent of a bygone age. An age when wide eyed youngsters gazed in awesome wonder at those panting, gleaming monsters, the steam trains. When those same youngsters, and oldsters, could recite every detail about most trains in existence.

Over decades, this same enthusiasm has been carried into thousands of homes in the form of model railway layouts. I am not saying that you need to be an enthusiast to play this game, but if you are not then I am sure that your outlook on railways will change after playing.

There are two track layouts on

the tape, which loads first time, and after loading the track of your choice you have to choose your skill level. These range from one to seven with the first six having five sub levels, and the seventh having nine sub levels. The idea of the game is to direct the train(s) to stations by means of switching the points, each set of points identified by a letter. At the stations you score points which vary from level to level, by picking up passengers.

Fun, fun, fun to play, with just two small niggles. One, I found the letters identifying the points difficult to see, and two, all the instructions are on the inlay card, so don't lose it. **B.B.**

Spectrum selection star-rated

New tapes for the Spectrum go before our jury. Here are their verdicts

Element Serpent £4.50

Cloud 9 Software, Tavistock PL19 9EA

Having had a little difficulty, when first using this program, in seeing the snake on the screen I was very pleased when at last it showed up.

The program is designed to teach you the elements. This is done by directing a serpent around the screen using the cursor keys. In the bottom part of the screen you are given an element, the rest of the screen is covered in symbols on which the snake feeds.

Pressing any key will start the snake moving, rather fast I felt. However, you must now direct it to the correct symbols. You don't get any points for eating part of it, so you must now aim

quickly for the next part not hitting the side of the screen or you die. You also kill the snake if you eat the wrong element.

Should you choose the wrong symbol the correct answer will appear. Should you kill the snake you have to go through a tune, being asked if you want instructions and choosing the level of skill again, which can be a bit tedious.

There are three levels to choose from, level one being elements that I am sure most of us have heard of, and level three more complex.

Bedlam £4.95

AWA Software, 50 Dundonald Road, Didsbury, Manchester M20 0RU

To get an idea of what any game is about I read, when possible, the description on the inlay card. All too often what appears on the screen doesn't match up with the written description.

This is because on the one hand we have the influence of the author's imagination, and on the other the cold, uncompromising screen display. When the players' imagination and enthusiasms match those of the programmer then you can be sure that the player will enjoy the game, whatever it is. Any imbalance of either quality and you have disappointment.

My first disappointment was in the description "arcade

game". It didn't resemble any arcade game that I have ever seen. As for "synthesised sound effects" that is stating the obvious.

That said, there are three levels of skill, where each level is slightly faster than the other. Killing off the baddies takes you through to other levels where there are even more baddies. For some which fire back at you. For some reason "you" resemble a large fly. Because I didn't recognise "me" I didn't move, and lo and behold, all the baddies obligingly marched down to be shot.

Stomping Stan 48K £4.95

Britannia Software, 116 Woodville Road, Cardiff CF2 4EE

Stomping Stan is an impatient individual who has a mission in life. He has to collect keys, with your help of course, from various locations. Apart from the usual maze-type hazards there are creatures to contend with which are definitely anti-Stan. Because Stan is an egg, heavily disguised, the fiercest creatures are the egg stompers.

Now, if all this sounds familiar it should, because this is a variation of a well-worn theme. The names of the principal characters, the objects to be collected, and the hazards.

So, given the same basic plot, what makes one game more in-

teresting than another? The answer really lies in the skill of the programmer together with the graphics used.

Although this programmer has produced a very smooth action game, the characters are really nothing new, neither are there any new 'twists'. Stomping Stan, by the way, appears to be a very close relation to a ubiquitous character called Horace. No problems in loading the program, and all the instructions are on screen.

Those who have never played this type of game will enjoy this version.

Invincible Island 48K £6.50

Richard Shepherd Software, Freepost, Maidenhead, Berks SL6 5BY

Your task is to find the seven parchments of Xaro, which will lead you to the treasure, hidden somewhere on Invincible Island.

Instructions are typed in using ordinary words, although the vocabulary is limited. Some of the commands are given in the instructions, which makes getting started easier.

There is a graphic representation of each location in the top third of the screen. This is drawn very quickly and complements the written description well. The lower part of the screen contains the description of the location, the commands you have typed in

and the computer's replies which scroll up without affecting the graphics.

There are a considerable number of locations, drawing a map makes retracing your steps easier. Thankfully, there is a facility to record the program in mid-game. There were no problems with loading — apart from the time it took.

There are a number of problems to solve on your way to finding the parchments. Surprisingly, no hints are given within the game itself, although some clues are given in an accompanying program which must be loaded separately. **S.E.**

Finding faults with your Dragon

Hints on conversion

The program is written in Dragon Microsoft basic so it is a fairly easy matter to convert.
CLSC clear screen to blue
SCREEN 0,1 gives orange background to text screen
SOUND 200,1 short beep
EXEC 41194 is a ROM call to wait for a key press
PRINT @ 0 is the top left of the screen, 511 is bottom right

Variables

CS screen colour set in listing to blue
FS & GS data strings
IS input
I val of IS

My program will give you nine common areas of trouble and what to do about them.

Care should be taken in entering lines 280-600 — the punctuation is crucial as this sets the data format within the program.

How it works

20 save to tape
 30-110 initialise and print headlines
 120-230 menu
 240-270 select from menu
 280-620 selection of data strings to form table
 630-1090 data strings
 1130-1150 check for return or new data
 1160 pause to read data

```

Are they worth the money?

Cartridge games reviewed by Mike Roberts. Most also have a joystick option

Parsec £29.95

This is the most beautiful arcade game for the TI that I have ever seen.

The use of the speech synthesiser from within the program is excellent. It simulates an on-board combat computer warning you of impending attack and other warnings such as running out of fuel, and it (or rather she as it is a female voice) will give encouraging remarks as to your progress, a pleasant change from some sarcastic computer games.

The concept of the game is similar to the scramble/defender type, with the space ship travelling horizontally across a moving planetary surface strewn with objects. If you hit this you lose one

of your initial five lives. New ships are granted at regular intervals.

There are eight different types of nasties out to get you and they come in waves, so you have to destroy all of the first type before you go onto the next. If this is not enough for you, you are in constant danger of your laser overheating and your ship blowing up, running out of fuel and having to fly down a tunnel to get some more, and flying through an asteroid belt.

There are 16 different levels to get through, and although I have been playing this game for a week now I have only got to level 4, so it is very challenging.

instructions	100%
playability	100%
graphics	100%
value for money	100%

Alpiner £24.95

A very interesting game with a concept that I haven't seen before. The game needs explaining in some detail as it is different to anything else on the market.

The idea is to climb up six of the world's biggest mountains while avoiding falling rocks, mountain lions, bears, skunks, rotten eggs, bats, trees, etc. The speech synthesiser option generates male and female voices which will warn you of impending doom and give encouraging remarks.

There is an option for two players and seven differing languages are available, although the speech synthesiser still speaks in English. Points are awarded for how high you get, plus various other bonus points.

instructions	100%
playability	85%
graphics	100%
value for money	60%

The graphics are excellent, and produce a good picture of a cliff face with all the animals and other dangers well represented, and a very realistic climber that moves properly as he climbs up the mountain.

The instruction book is up to TI's usual standard and runs to 18 pages, and is quite comprehensive.

Overall this game would be good for someone who wants something that is a bit different to the normal run of the mill zap-the-klingsons game.

Car Wars £19.95

The object is to race around a five-lane race track. Of course there is a computer controlled car racing round in the opposite direction to you trying its very best to smash you up.

The lanes of the race track have four points where you can change up to two lanes. The lanes are filled with dots, which you have to run over, Pac-man fashion, to obtain points. After a user defined number of dots have been cleared the car will speed up. The other difficulty setting is a choice of three speeds, 'creepin', 'fast', and 'flyin'.

A bonus is awarded from 200 to 1000 points depending on skill level.

The instructions are good, ex-

cept that they don't mention that the arrow keys can be used in place of a joystick. The graphics are quite good and the game is very fast.

The only real gripe against this game is that it is very simple and, after a while, boring. It doesn't warrant the price or to be put in a cartridge. When Commodore has a simple but amusing game like Blitz they put it on tape and don't charge an extortionate amount for it.

But aside from that this is a well put together game with good documentation and instructions.

instructions	100%
playability	60%
graphics	90%
value for money	40%

TI Invaders £19.95

Space invaders is getting a bit long in the tooth and TI Invaders is no exception.

This program is a good representation of the game that took the world by storm so many years ago. There are some differences — aren't there always? — and in this case they are for the better. There are two skill levels, called "merely aggressive" and "downright nasty" which is a nice touch. The instructions are very clear and concise except for the point that the keyboard arrow keys can be used instead of a joystick.

After each screen of invaders you can shoot it out with a mystery ship on its own. A new laser base is awarded at 3,000 points and at 10,000 points

one of your demolished forts is repaired.

The graphics are good. Although they look like invaders they don't look like the arcade invaders. The laser bases are good and when one is destroyed it turns into a wreck and is lowered into an underground cavern and another will take its place.

When the invaders have ultimately won they will jump up and down with much glee.

This game is getting a bit obsolete and boring, but it's not TI's fault and this is a good game despite the limitations of the game concept.

instructions	80%
playability	40%
graphics	90%
value for money	30%

Video Chess £34.95

This cartridge gives as much as could be reasonably expected from a computer chess program. Unfortunately, it is rather overpriced compared to other chess programs available for other computers.

The instructions first give an explanation of the game of chess itself and the notation used to describe your moves to the computer.

The manual then goes on to explain the various options available to the user.

These are all menu-driven. The first menu has six options: play game, which starts the play; selection of game type, which gives you three other menus — level of play, style of play, or colour; chess board, which enables

two human players to play; set up a problem, this means you can set up the board in any position and to play the computer from there; play more than one game simultaneously, up to nine games can be played; and to load a game from cassette tape.

When playing a game you can cancel the last move, resign, offer a draw to the computer, replay from start, change sides, rearrange the pieces, change the style of play, correct the last move, and save the current status on cassette tape.

Castleing, pawn promotion, and en passant are all supported.

More haste, less speed

In comparisons between the BBC micro and the Commodore 64, one of the BBC's main virtues is its speed advantage.

There are two reasons for this. The first is that the BBC's processor clock is running at twice the speed of the Commodore's clock. The processor speed determines the main running speed of the computer, and if the CPUs of two machines are similar, comparisons can be made. From this, it can be seen that the BBC has a big advantage.

The second reason is that the BBC's text mode, mode 7, takes up half the memory of the Commodore's screen, so scrolling is twice as fast.

In the face of this advantage, you'd not be blamed for thinking the situation was hopeless, but the Commodore does have a few tricks up its electronic sleeve.

An obvious point is to avoid scrolling or screen clearing, but much more can be done.

BASIC "crunching" is a simple, but effective method. When running a program, each line has to be read and translated, and this slows down your routines. So removing unnecessary sections can be rewarding.

Spaces can easily be removed, and replacing large numbers by variables (less to read) in repeating routines saves time.

Another way to crunch programs is to put several commands on one line, saving time needed to read the data before each line (eg. line number and position).

A final saving can be made by removing actual keywords and symbols. An obvious example is the LET keyword, but there are several less well known instances. Some of these are given in the program listing.

Another time saving tip lies in the fact that some BASIC commands take a shorter time to execute than others. For example, a FOR...NEXT loop can be up to 10 times faster than an equivalent IF...GOTO loop.

The slow commands to avoid are IF...THEN, COS, SIN, TAN and "to the power of". They can be replaced in some cases, such as using an array of SIN values.

The most useful improvement is to PRINT to the screen, instead of the POKE command more commonly used in games, as it can sometimes be twice as fast.

Delving one layer deeper into the computer, we reach the operating system, the routines which keep the computer in good order. This cannot be changed easily, but one feature can be manipulated.

The Commodore 64 has a routine used by an IRQ (interrupt request) which takes time away from your program to update

In the race for quicker processing, the Commodore 64 has a few tricks you can use. David Rees shows how to put them to use

```

8 REM* NORMAL PROGRAM *
9 REM* TAKES 21 SECS *
10 N=0
20 N=N+1
30 PRINT" ";N
40 IF N<999 THEN GOTO 20
50 END
97 REM* FULLY SPEEDED *
98 REM* PROGRAM *
99 REM* TAKES 12 SECS *
100 POKE56334,PEEK(56334)AND254
110 POKE53265,PEEK(53265)AND239
140 X=999
150 FORN=0TOX:PRINT" ";N:NEXT
200 POKE56334,PEEK(56334)OR1
210 POKE53265,PEEK(53265)OR16
220 END
298 REM* BASIC SHORTENING *
299 REM* EXAMPLES *
300 LET A=1
301 A=1
310 PRINT" ";A
311 PRINT" ";A
320 IF A<>0 THEN GOTO 310
321 IF A THEN GOTO 310
330 IF A=1 THEN GOTO 310
331 IF A=1 THEN 310
    
```

data, such as incrementing T1 and getting a pressed key.

This routine is jumped to every fraction of a second, and the

delay time is determined by location 56322. The normal value of this register is 68, but by POKE-ing higher values, the delay time is

lengthened, giving more time to your program.

The interrupt can actually be stopped, but this action is rather drastic. If you do wish to do this, the starting and stopping routines are, respectively:

```

POKE 56334, PEEK (56334)
AND 254
POKE 56334, PEEK (56334) OR
1
    
```

However, please note that once this is done you will lose control of the computer as there will be no key input. I have solved this problem, but the method only works well within a program:

```
SYS 65508: GET AS
```

The final step into the computer involves using the chips themselves.

The video chip is a tremendously versatile tool, but it does have its shortcomings.

In the computer there is a path called an Address Bus. This is used to move bytes around to be processed and normally carries your program instructions. However, for sprites and the screen to be displayed, data must be transferred to the television.

Thus, every fraction of a second the Address Bus is taken over to transfer the 2,000 or more bytes, slowing down your program.

Some time can be saved by using the minimum number of sprites, but the main culprit is the screen. The screen can be blanked, but this is only really useful for non display programs with long, repetitive routines.

If you do have such a program, use the following routines to blank and enable the screen, respectively:

```

POKE 53265,PEEK(53265)
AND 239
POKE 53265,PEEK(53265) OR
16
    
```

Using these tips wisely and taking time to study your program can lead to speed increases of 30 per cent, and in a few cases over 50 per cent so even if you only use a few suggestions, you can make a big difference to your programs' performance.

SEVERN SOFTWARE HCW30
 5, School Crescent, Lydney, Glos. GL15 5TA.

Suitable for either Spectrum model, this simple program (about 5½K) simulates a gymnast on a trampoline.

The object is to get the gymnast to the maximum height in the least number of jumps. Press J to jump. The number of jumps and height attained are displayed continuously.

The data for the user-defined characters is entered in hexadecimal to save programming

How it works

- 10-20 introduction, set up UDGs and starting values
- 30-100 screen display, string allocation
- 110-1012 jump and control of jump routine
- 1015-1060 try again?
- 2000-2050 success display — with jumps, height and applause etc
- 6000-6014 DATA for UDG characters
- 6020-6090 hexadecimal DATA loader

Watch him soar through the air

Gymnast, which runs on either Spectrum, is a short but clever program from Thomas Goodchild which shows how user defined characters can be put to good use

time. The 12 UDG characters are positively identified at the beginning of each data line (6010-6014).

Those who prefer to isolate the data for each character may do so by inserting the plus sign as shown in line 6010. This is not essential but sometimes helps.

The program may be SAVEd, ready to play on re-LOADing, by entering the instruction SAVE "tramp" LINE 15.

The contents of the strings are shown at the beginning of each DATA line.

How much have you won, how big are the bills?

These three simple programs for the ZX81, written by George Skinner, all do useful jobs — working out how much you've won at the races and calculating your power bills

Horse Racing

This program asks you to enter your stake, the odds and the name of the horse you are backing and then calculates your winnings. If you wish, it will then transfer your winnings onto the next horse — if you are lucky enough to back two winners in a day.

When asked for odds, enter in the form 3/1, 7/2, 9/4 and so on. A decimal point should be placed before pence.

This program could also be used for other forms of racing, greyhounds, for example.

Gas Bill

Check your gas bill and/or work out how much your next bill will be by entering your present meter reading along with the reading on your last bill, plus information like pence per therm and standing charge. All this will be on your bill.

Tune into the BBC for games

Don't buy another game for your BBC micro... until you have read our reviews. Here's what our panel thought of five newcomers

Games Pack One BBC B £4.95

Logic Systems, 129 High Street, Cherry Hinton, Cambridge

Games Pack One is a collection of three programs written in BASIC. Firstly, Mastermind is the now classical number sequence guessing game, in which the player plays against the computer.

Sadly, unlike other games of this type, you cannot set the computer a problem to solve and data entry is very confusing.

The two graphics games, Ski-Run — a slalom (their spelling) course — and Car Maze, are variations on the theme where a player avoids upward scrolling obstacles by controlling speed

and side-to-side direction.

The programs work, and are of the average standard of those found listed in magazines, but my only recommendation can be that they are cheap.

Draughts BBC 32K £5.95

Logic Systems, 129 High Street, Cherry Hinton, Cambridge

The playing of board games on computers is an old sport going back as far as the very beginnings of computing itself. The ability to teach a machine to be a "clever" opponent has long been a prized goal.

This program goes a long way toward that goal and plays a very good game indeed. There are two levels of play and I found even level one very hard to beat.

The graphics are very clear indeed and there is no doubt as to how to use the board markings or who owns the playing pieces. The use of only black and white makes the game even clearer. I know it could have been multicoloured and some people like this, but in this case it helps concentration very much.

Even more important than the graphics is the speed of response.

This game is excellent in this respect — it's very fast indeed. And, what's more, it tells you what it is considering, while it is calculating its next move. I found the timing displayed on screen very off-putting as mine was always the longer, by a factor of 10 usually.

The one major criticism I have is that it cheats! It can take a follow through move (after taking one piece to take another) but you can't and if you try to it takes your piece away. Now that's what I call really human behaviour!

The program is excellent in this respect — it's very fast indeed. And, what's more, it tells you what it is considering, while it is calculating its next move. I found the timing displayed on screen very off-putting as mine was always the longer, by a factor of 10 usually.

Pirates BBC 32K £9.25

Chalksoft, Lowmoor Cottage, Tonedale, Wellington, Somerset

This cassette contains two programs which are linked in theme and style.

One is a long adventure game in which various objects must be found, hazards overcome and secrets discovered which have to be solved before going on to the second. This is a shorter program meant to be completed at one sitting during which you explore an island.

The pirate theme is well maintained in both these programs and has a great deal of interest for children of all ages. I was a little surprised, however, that this program should claim to be educational.

It is certainly fun and would encourage language and decision making skills if played in a co-operative situation but I cannot say that it is what most people would regard as "proper education".

This said, the games are very well presented on a split screen format with attractive pictures, very cleverly constructed. Unfortunately the response time is a little slow, for me at least. You cannot turn the sound off either which is rather a pity.

Another feature of the game I didn't like was the restricted vocabulary designed to prevent a child having to spell anything.

Crazy Fruit BBC 32K £5.95

Logic Systems, 129 High Street, Cherry Hinton, Cambridge

Crazy Fruit is a one armed bandit game (with no arms at all!) and is implemented in Mode 7 graphics. The teletext shapes called low resolution and have a very chunky appearance and have a high resolution graphics and held my interest more for that reason.

The only other fruit machine I (Superior Software's) had high interest more for that reason. There is no doubt, however, that this program is very cleverly done.

The game has nudges, holds and you can even gamble the winnings against your reflexes by pushing the win button at just the right movement.

In fact, all the features you

might desire from a fruit machine are here. I do however have serious doubts as to whether I would like to play this distant from winning real money to me!

The only real quibbles I have with it are that there is no winning combination table (is it really that obvious to everyone?) and that it lets you "hold" winning combinations on occasions. The ending of the game has the ominous warning "We'll send the boys round" if one loses or a more cheerful message if one wins, both of which amused me greatly.

Escape From Moonbase Alpha BBC 32K £7.95

Program Power, 8/8a Regent Street, Chapel Allerton, Leeds LS7 4PE

This 3D graphic adventure loads in four parts. Comprehensive instructions are displayed by the program but these become a frustration once familiar with the game as they are displayed automatically on loading.

The game is fun to play and features impressive graphics and a host of characters. It is a pleasant change from the rather dry narrative adventure games.

You control the movement of Joey who has been left abandoned on Moonbase Alpha. His only escape is to locate the Doctor down on level seven and, if

enough bags of gold have been collected on the way, the Doctor will transport him away in the Tardis.

This all sounds nice and easy, until you stumble across Deadly Doris, metal maulers, green grapplers, the Demon and the Wizard. Or, worse still, you could encounter Marvin, the paranoid android, and be bored to death. If you get into a sticky situation you can always take the hulk pill and turn Joey into the Incredible Hulk for five seconds.

A couple of minor criticisms are the choice of keys for moving Joey around, and the pause between changing rooms is sometimes frustrating.

Will you get to the treasure first?

Hidden somewhere on Treasure Island is a chest crammed with gold. Can you find it before the pirate, who is also scouring the island?

You must use your skill and judgement to work out the location of the treasure, using the clues provided.

Then use the arrows keys E S D X (with alpha lock button down) to go and find it.

The clues will tell you how far, in whole squares, the treasure is from the mountains and the jungle. When the treasure doesn't turn out to be where you thought it was, the game can become quite frustrating and addictive.

The pirate is armed to the teeth, so if you meet him you

There are more dangers than just a bloodthirsty pirate in Lance Booth's Treasure Island game for the standard TI-99/4A. Type it in and try for a chestful of doubloons

won't stand a chance. There are other dangers to watch out for too, so take care.

You can alter the difficulty level in two ways.

First, remove lines 900 and 910. This will cause the game to start as soon as the screen display is complete, rather than waiting for you to initiate play.

Alternatively, the number of swamps can be increased by rais-

ing the value of the FOR...TO statement at line 720. This will mean concentrating on negotiating the swamps as much as on finding the treasure and avoiding the pirate and the other dangers.

When each turn is over — whatever the reason — the location of the treasure is displayed. X marks the spot where it was hidden.

Hints on conversion

The program should convert fairly easily to any computer with user-defined characters. Here is an explanation of some of the TI-BASIC commands I have used:

CALL CHAR (ASCII code number, hexadecimal string) defines characters used in the program. The hexadecimal string defines the pattern to be given to the character with the ASCII code stated

CALL HCHAR (row number, column number, ASCII code, number of repetitions) places character with ASCII stated, at row and column specified, and optionally repeats it horizontally the number of times stated

CALL VCHAR (row number, column number, ASCII code, number of repetitions) works in the same way as CALL HCHAR only repeats vertically

CALL GCHAR (row number, column number, numeric variable) equivalent of PEEK, assigns ASCII code of character at row and column stated to numeric variable

CALL CLEAR clears the screen

CALL COLOUR (character set, foreground colour code, background colour code) specifies foreground and background colours for all characters in set specified

CALL SCREEN (colour code) specifies screen colour using colour code

CALL SOUND (duration, frequency, volume) produces sound. Duration in milliseconds, frequency in Hertz (or noise code), and volume in scale from 0 loudest to 30 quietest

CALL KEY (key unit,k,s) equivalent of INKEYS, returns code of key pressed in variable k

How it works

120-170 define characters
180 sets screen colour
190-270 set character colours
290 random numbers
300-350 set fixed variables
360-370 check treasure not in jungle
380-390 calculate distances to treasure
400 clears screen
410-510 display clues
590-810 display island and landscape
820 hides treasure
830-840 initial pirate location
850 stores old character at pirate square
860-870 initial player location
880-890 initial pirate and player display
900-910 wait for player to start
920-930 initial pirate direction
950-1260 main game sequence
950 check keyboard
960 clears old player
970-1040 check for movement
1050 checks new square
1070-1130 check for special situations
1140 displays new player
1150 clears old pirate
1160-1170 move pirate position
1180 checks new pirate square, stores old character
1190-1200 check for special situations
1210-1220 check pirate still on island
1230 displays new pirate
1240-1250 sound effects
1260 sends program back to start of game sequence
1270-1310 change pirate direction if needed
1320-1340 fell in sea
1350-1370 fell in river
1380-1400 fell in swamp
1410-1430 lost in jungle
1440-1460 lost in mountains
1470-1490 pirate caught you
1500-1520 pirate found treasure
1530-1550 sound effects
1560-1670 you found gold
1680-1700 display message
1710-1740 play again?
1750 end

You could be on our pages

We welcome programs articles and tips from our readers.

PROGRAMS should, if possible, be computer printed to a width of 48 characters (use a new ribbon) and/or sent on cassette. Check carefully that they are bug-free. Include details of what your program does, how it works, variables you have used and hints on conversion.

ARTICLES on using home computers should be no longer than 2,000 words. Don't worry about your writing ability — just try to keep to the style in HCW. Articles most likely to be published will help our readers make better use of their micros by giving useful ideas, possibly with programming examples. We will convert any sketched illustrations into finished artwork.

TIPS are short articles, and brief programming routines which we can put together with others. Your hints can aid other computer users.

Competitive rates are paid.

Keep a copy of your submissions and include an SAE if you want them returned. Label everything clearly and give a daytime and home phone number if you can.

How you can crack the code

If you want to move into machine code on your VIC, Allen Webb tells you the whys and wherefores of assemblers and monitors

Most VIC owners will find that BASIC is a perfectly good language for most applications. Occasionally, however, you need some extra speed, and it's at times like that when you could do with a nice machine code routine.

Assuming that you know how to write the routine, for very short routines it is feasible to enter the code directly.

For programs of any length, though, an assembler is invaluable. In this article, I plan to describe what assemblers are, which type is suitable for which user and discuss some of the commercially available assemblers.

But first, for non-users of machine code, here's a thumbnail sketch of the problem. Many VIC users will appreciate that BASIC, as a high level language, is not the actual language understood by the processor.

As far as the processor is concerned, its instructions consist of binary numbers stored in memory. While these instructions are readily understood by the processor, they mean nothing to us poor humans. In order to make life simpler, a set of mnemonics was developed.

These mnemonics consist of three-letter codes which describe the instruction, eg the mnemonic for 'Load X register' is LDX, and the mnemonic for 'Return from subroutine' is RTS.

Clearly, LDX and RTS are easier to understand than the corresponding machine codes (\$R2 and \$60 respectively). Using the system of mnemonics it is straightforward to write the preliminary or source code.

You then have to convert the source code to the machine code that the processor can understand. This is done by a program called an assembler (because the source code is assembled, the mnemonic system is often called assembly language). The assembled code is usually called the object code.

Listing 1 gives an example source code. The two columns on the extreme right are the mnemonic representation of the program. The hexadecimal

numbers are the converted machine code values.

OK, so now we know why we need assemblers. The clever thing about most assemblers is that they have little extras which make life even easier.

Consider the situation where your routine uses a number of memory locations to store data. Rather than force you to remember the values of such locations, you can name them (cf declaring variables in BASIC). Lines 10 to 19 in listing 1 show how this is done.

Similarly, you can name labels for looping (eg lines 220, 330 and 395).

In order to deal with all these labels and names, this type of assembler converts the source code to object code in two steps. Consequently these are called 'two pass' assemblers.

There are a number of simpler 'one pass' assemblers on the market which can be used to produce an object code. They have the restriction that you cannot use names for locations or labels for jumps or loops.

One other item I should mention is the machine code monitor.

Owners of the Commodore PET are fortunate in that their machines (except the first series) have a monitor in ROM. VIC and

Commodore 64 owners are not so fortunate.

OK, so what is a monitor? Well, it's simply a program (normally in machine code) which makes the manipulation of RAM contents easy.

The basic monitors normally enable you to examine and change the contents of RAM, save and load programs and data direct from and to RAM, to examine and change the registers and execute machine code routines direct. In all, a very handy tool.

So what is there on the market? I will describe two packages, both in cartridges, which give examples of both one and two pass assemblers.

A very good example of a two-pass assembler is the Mikro Assembler (made by Supersoft and marketed by Audiogenic). This is a large packaged offering some 16K of ROM and 3K of RAM. This cartridge offers a perfect environment for the assembly and disassembly of machine code routine as well as commands of high resolution graphics, a simple monitor and other useful commands.

The assembler is two-pass and supports labels and names of unlimited length, the usual extra commands (eg the greater than and less than signs for least and most significant bytes) and pseudo op-codes for word tables (BYT, TXT and BYT).

Numerical values can be entered in decimal, hexadecimal, octal or binary. In all, an excellent assembler, of quality comparable to more expensive packages.

Because of the slowness of cassette storage, all assembly occurs in RAM. The BASIC editor is used to create the source code (this can be saved or loaded in the same way as a BASIC program). On assembly, the source code is

assembled and the object code placed in RAM at the required location.

In all, a very convenient and simple system. The machine code can be saved, loaded or examined using the monitor. You can examine any coding in memory with a built in disassembler.

If you have a printer, you can get a hard copy of the source and object codes and any disassembly (Listing 1 was produced by the Mikro assembler).

The main problem of direct assembly to RAM is that you cannot locate code at an area outside your RAM. In addition, if you want to create a program of a decent size, you really need 16K RAM.

You can't use more than 16K expansion because part of the Mikro ROMs sit at \$6000 (although you can assemble code above \$6000 by use of the spare created during assembly).

The extra commands with the package allow you to use high resolution graphics to plot lines and dots. There are a number of commands to enable you to pass values to and from the internal registers; a very handy facility.

An equally useful command is NUMBER which will perform conversions between the four possible bases.

Overall, the Mikro assembler is an excellent package which is worth considering if you plan some serious work in machine code.

If the assembler is so clever, why buy a monitor? Well, although the Mikro assembler contains a simple monitor, for advanced manipulation of code and memory a full blown monitor is the only answer. The Commodore monitor cartridge is one such package.

In addition to the simple commands for saving, loading and examining and moving code, the package contains a range for more advanced fun and games.

First there is a single-pass assembler. This is really only any use for short machine code routines.

As a useful extra to disassemble, there are commands that allow you to search for specific bytes and decode ASCII characters.

By far the most useful commands are for step by step running of code. This allows you to debug your masterpiece without the risk of a crash. You can set breakpoints which help this activity.

There are a range of other commands which makes this package a most powerful tool.

Right, here comes the crunch. Which type of product do you buy? Ideally, given the cash, the answer is both.

Summary

Product	Medium	Addresses	Facilities	Cost	Supplier
			Assembler (2 Pass)		Audiogenic PO Box 88
Mikro Assembler	Cartridge	\$6000, \$A000	Disassembler Graphics Tiny Monitor Various other commands	£48.95	Reading Berks
CBM Monitor	Cartridge	\$7000	Monitor, Assembler (1 Pass) Disassembler Trace. Other commands	£34.95	Commodore Most retailers

VIC-20 PROGRAMMING

Allowing for the limited resources of the average VIC owner, my answer is "if you are new to machine code, the Commodore monitor is a good choice since most of your routines will be short, and you will need to debug

your programs.

If you are an experienced machine code user, though, the assembler package would be best. Overall, I can recommend both packages as being good value and reliable products.

City Patrol ZX81 16K £4.95

Macronics, 26 Spiers Close,
Knowle, Solihull, W. Midlands

The graphics are very good, and a welcome change from target-type games such as Invaders or Asteroids.

You are in command of a laser-firing ship zooming among the skyscrapers of a large city, trying to intercept and destroy the aliens which are descending to destroy the buildings.

The skyscrapers, in four 'layers', appear to pass across the screen in different directions according to your use of the controls.

The motion is, in the style of the ZX81, a bit jerky; but the 3D effect is good. Nearby buildings pass quickly, distant ones appear to go slowly.

The aliens, of course, fire back. There are 'lightning' effects as they fire their guns and if they manage to land they destroy a chunk of city. (They can also destroy you.)

Be warned — the aliens are not easy to catch. You can zoom past them and then have to return and search them out among the buildings!

City Patrol is a straightforward game to play; it keeps score but does not offer different skill levels. But the format and the graphics make it a little different from most of the other games I've tried for the ZX81.

Our reaction to this action

Our reviewers rate these
arcade-style games for a range
of micros

Vultures Dragon £6.95

J. Morrison, 2 Glendale Street,
Leeds LS9 9JJ

A very professional product, 100% machine code and auto-running during loading. The cassette comes packaged in a smart 'mini-video' type case, with an impressive sleeve depicting a bright red vulture protecting its eggs.

As with most good arcade style games, the idea behind it is simple — kill the flock of vultures as they swoop to destroy you.

However when you clear them from the sky, half a dozen eggs begin to hatch, each with an impressive noise.

These 'super vultures' are harder to dispose of, as they change colour and home in on you.

They can only be killed whilst they are in their original colour and if you survive, the speed increases with each successive screen, so the vultures are bound to get you in the end!

You will, however, have the posthumous pleasure of recording the high score on screen.

The game is in colour with excellent graphics and is also very effective in black and white.

It requires one joystick, which is also used to select the speed of play, using a neat moving cursor routine.

Vultures can be recommended to arcade addicts of all ages. E.C.

value for money	90%

Dodo 48K Spectrum £5.95

Blaby Computer Games,
Crossways House, Lutterworth
Rd, Blaby, Leicester

This is a version of the arcade game Pengo, in which your character, transformed from a penguin to a dodo — presumably for copyright reasons — has to avoid a swarm of Snow Bees.

The playing area is a rectangular random maze of ice blocks. Both Dodo and the bees can destroy the blocks, but Dodo can also push a single block which slides along the screen squashing any bees in its path. If any bee is touching an ice block which Dodo destroys, then the bee is also destroyed.

The cassette insert is amusing,

the instructions are supplied on an extra piece of card and are clear and nicely presented, although containing a few grammatical errors.

The game is fast and needs very quick reactions. Graphics, colour and sound are excellent, but movement is of the jerky, square to square variety.

You have a choice of keyboard or Kempston/AGF joystick controllers, the keys are the "arrow" keys 5,6,7, and 8 and need some practice to master. Response is good, but you need the joystick to get really high scores.

Panic 64 Commodore 64 £7

Interceptor Micros, Lindon
House, The Green, Tadley,
Hants

Panic 64 is a ladder game for the Commodore 64.

With your bombs you blast holes in the different levels which you then have to entice the monsters to fall through. The higher the levels, the more floors they have to fall through to meet their doom.

An enjoyable game with good instructions and active on tactics to help you score a bonus but we did have a couple of problems.

Several times after escaping our pursuers and getting the holes lined up, the monsters suddenly got into a circuit from

which they could not be enticed so as to fall through our trap.

The only way to break out of the pattern was to sacrifice a life — bad enough, but as this occurred mainly at the higher levels it was sometimes your last life.

We did manage to corrupt one of the sprites which make up the man and it made it very difficult to line him up on the ladders. I'm not sure how we did this but it did mean reloading the program and starting again.

A joystick makes life easier but is not essential, as in many other games. Get rid of the bugs and value for money is much improved.

Space Hi-Way BBC B £8.56 (tape) £9.70 (disc)

Amcom, 23 Hivings Hill,
Chesham, Bucks HP5 2PG

A healthy mixture of arcade ideas combine as you play the harassed owner of a galactic fuel station.

Armed only with your trusty doublesaturated-photonplasmalasertranscendentalblaster (!), which varies its power when low on charge, you must stop marauding gangs of four different types of aliens from stealing your fuel and destroying you in the process.

All very well, but passing fuel tankers refuse to land and must be shot out of the sky — by

carefully destroying their lifting pods and then catching them as they fall.

All this, plus mutating aliens and the danger of running out of fuel, make Space Hi-Way a well balanced 'fun' game worthy of greatness. I enjoyed it thoroughly.

P.D.

3 UNBEATABLE GAMES

ARENA III
Claim the newly discovered Planet Argal. Trace the mighty, patrolled Zelta Galaxy. If successful land on Argal and discover the mighty machine.

PINBALL/CUBITS
The most intricate pinball game you'll ever see.

CUBITS
Select the two identical numbers that appear backing the cube. An exciting memory game.

TORMENT
A maze game to drive your mad. Openings only appear as you move and you only get 100 moves to reach the centre.

LIZARD GAMES

COMPUSOUND TELESOUND 84

"THE ONLY ONE OF ITS KIND TO
FIT INSIDE THE SPECTRUM"

Probably the worlds smallest modulator!

TELESOUND 84 is ready built and tested to get full Spectrum sound through your unmodified television set, black/white or colour. The unit can be fitted in minutes without any previous experience. Telesound 84 has been developed using the very latest ultra miniature components so that the size is kept to an absolute minimum.

TELESOUND 84 FEATURES

- Sound and vision together for added realism
- Beep volume controllable from a whisper to a roar
- Keyboard prompt click clearly heard to assist program entry
- Programs can be heard with loaded
- Compatible with all other ZX add ons
- No soldering or case cutting required
- Additional amplifier not necessary
- Separate power supply not required

TELESOUND 84 comes with full fitting instructions and costs **£9.95** inclusive of post, packing etc. Please state your computer when ordering.

If an advertisement is wrong, we're here to put it right.

ASA Ltd, Brook House, Torrington Place, London WC1E 7HN

How it works

20 loads graphics
30-80 sets up initial values for variables
85-230 deals player's cards
240-280 deals dealer's cards
285-295 decides who has won
300-360 end game titles
400-540 subroutine to select a card at random and check if it has been used, then set suits and add value to total score
1100-2300 print subroutines for each card
2500-2530 card descriptions to read into pack array

Whether you're short of a partner to play cards with, or whether you just want to get some practice, my game is for you. It plays a standard game of pontoon, recognising pontoons and five card tricks.

Type in the BASIC program first and save on tape using SAVE "PONTOON" LINE 1.

Then use a simple loader such as the one below to enter the graphics and save on tape after the program using SAVE "SET A" CODE USR "a", 168.

This is the loader:
10 FOR N=0 TO 20
20 FOR X=0 TO 7
30 INPUT Z: POKE 32600+

Can you play your cards right?

Polish up your prowess at Pontoon with Michael Plows' program for any Spectrum

```

ANIROG SOFTWARE

MISSILE DEFENCE

MISSILE DEFENCE

Brings the well known arcade game to life on the Spectrum screen in glorious colours. Defend your cities from the missile attack and smart bombs. 10 skill levels.

KB/JS 16K/48K £5.95

SLAP DAB

An exciting game based on the arcade game Painter which combines fast action with Strategy. Giant insects hiding under the old paint surface are released by your paint brush. You require fast action and quick thinking to outwit them and finish the panel. The game is 100 percent machine code and HI RES. Graphics also includes Hi score and remaining score.

KB/JS 16K/48K £5.95

GALACTIC ABDUCTORS

A stunning action packed game with superb, large animated graphics. Giant Space Hawks whirl and weave in intricate patterns as they drop their deadly homing mines which will destroy your base on contact. While you are busy defending yourself the Hawks will feed on your helpless population retaining only their skulls. All M.C. game complete with high score table that will blow your mind with its graphics and sound effects.

KB/JS 16K/48K £5.95

FROGRUN

Popular arcade game. All machine code with brilliant colour graphics and sound effect. Features include snakes, crocodiles, lady frogs, turtles, cars, turtles and logs.

KB/JS 16K/48K £5.95

TINY TOT'S SEVEN

Super games pack for younger children with bright colour graphics and sound effects. Everybody's favourite Simon plus Super Snap O's and X's, Word Jumble, Bomber, Duck Shoot and Mail Delivery.

Here's how to produce cassette inserts and neat-looking letters. Alan Blackham's programs run on the unexpanded VIC-20 with the 1515 printer

Hints on conversion

POKE 36879,8 sets the screen black
 PRINT CHR\$(14) puts micro in to lower case
 PRINT CHR\$(8) stops switching between upper and lower case
 POKE 198,0 clears keyboard buffer
 POKE 204,0 flashes the cursor in a GET statement
 OPEN 1,4 open the printer as a device
 CMD I sends all output to the printer
 SYS 64802 resets the computer

Cassette Inserts

This program for the unexpanded VIC-20 with a VIC 1515 Printer allows you to make cassette inserts on your printer for your music tapes or program cassettes.

The program starts by asking you to enter all the titles of what is on the tape. When you have entered them all you enter 'OK' and you are then told to get the printer ready and then press RETURN. Then the insert is printed with a line around it which, when cut out, fits the cassette perfectly.

Hints on conversion

This program should work on any micro with a printer with minor alterations. The main things are:

POKE 36879,8 sets the screen to black

OPEN 1,4:cmd 1 sets all prints to the printer

CLOSE 1 switches off the printer

POKE 36879,27 sets the screen to white with cyan border

Variables

TS titles of what's on the tape

X counter

AS input

I FOR loop

P position to print right side of box

```

ZX SPECTRUM & ZX81 EDUCATIONAL SOFTWARE

Spectrum Junior Education £7.50

Use your Spectrum to help your children with their school work. This cassette contains eight attractive, easy-to-use programs for the 7 to 11 age group.

- Topics include English comprehension, spellings, homophones, junior science, maths and history.
- * Entering your own questions and answers allows you to adapt two of these programs for exercises in any subject area.
- * Moving colour graphics and sound are extensively used to improve motivation.
- * Use the "draw" program to produce pictures, maps and diagrams.

Suitable for the 16K or 48K Spectrum. Program notes are supplied.

Overseas orders: £8.50

O-Level Chemistry (C1) £5.50

This cassette contains four clearly presented revision/tutorial programs. The subject matter has been carefully structured to cover the most important aspects of:

- * Elements, compounds and mixtures.
- * Structure, bonding and properties.
- * Redox, electrolysis and the activity series.
- * Acids, bases and salts.

48K Spectrum and 16K ZX81 versions of the cassette are available. Please specify which you require.

Overseas orders: £6.50 (\$11.60) per cassette; includes AIRMAIL postage.

Professional Computer Assisted Learning materials from:

CALPAC COMPUTER SOFTWARE

DRAGON/ATOM/ORIC-1

ADD LOW-COST I/O POWER WITH A VIA BOARD

Drive extra I/O devices, from LEDs & switches to extra peripherals. Link 2 micros for data/program transfer, spool listings to a second micro to print/save etc. (see TEVLINK below).

HARDWARE: 6522 VIA provides 16 I/O lines + control, serial port, 2 timers, interrupt register. I/O, voltage & interrupt lines taken to 26-way IDC plug for easy connection to peripherals etc. Connectors available for Dragon and Atom. The Board may be interfaced to most other 6502/6809 micros, and may be shared between m/c's by changing the plug-in connector.

SOFTWARE: 'TEVLINK' package provides 2-machine parallel link (2 Boards needed), overall speed about 8K DATA bytes/second with error checking. A PRINT SPOOLER is included (only 1 Board needed); connect printer port to VIA board on receiving micro and use normal LIST/PRINT etc.

Dragon/Atom cassette	£7.75
Assembled board + Atom connector	£18.75
Assembled board + Dragon connector	£18.75
Dragon 14K EPROM Board: takes 3 x 4K and 1 x 2K EPROMs.	
Specify 25 or 27 series. Assembled Board	£15.00

PROFESSIONAL QUALITY DRAGON SOFTWARE:

TML-DATABASE: A flexible, general-purpose data filing and retrieval program, with an "Auto-Reminder" feature for birthdays, appointments etc, plus a powerful search facility. M/code program

ORIC ADVENTURE: Tevrog's Kingdom is a real-time text adventure for the 48K Oric. It features spells, clues and problems, as well as enemies and allies - can you steal King Tevrog's Talisman before he returns? Although no two games are the same, the distribution of items around the layout is logical rather than totally random, giving a game which retains its interest even after you have succeeded several times. Excellent value for money.

Jetting ahead

I have found a way to achieve a limitless score in Jet Pac by Ultimate Play The Game. In the fourth screen (where the planes attack you) you fly up and position yourself in the centre of the top right mooncloud.

This way none of the jets can reach you so you cannot be killed. In this screen you receive the points for any alien that crashes or blows up so by just leaving the program running the six digits in the top left can change continuously while you can do whatever you want.

Using this technique I have achieved a score of 700,000 while normally I only get about 70,000.

In Planetoids, by Psion, there is also a way of getting a high score. What you do is position your ship in the left column of the screen where it will run half yellow. Any planetoid that goes over it will just clear that area of your ship. By turning you will be able to see it again.

I have gained scores of over 300,000 using this method, but it gets boring after a while.

Marcus Edwards
Bishop's Stortford, Herts

Quirks among the monsters

I have found a bug/quirk in Softek's Monsters In Hell (reviewed in HCW20). My top score is 5,624 kills and this was achieved in just under four hours by hammering away at all levels under where the monsters appear.

When they appear they will fall down all the levels and die. You only have to collect crosses. This, however, is not as simple as it seems. All action stops when a monster falls past the levels, taking about a second. This seems odd as no sound accompanies the fall.

I failed to see any demons after 65 kills (unless they were a different coloured Mad Monk shape as I was using a black and white Television at the time).

My holy power began to overwrite the "L" and then the "I" in "Lives". Once my Holy Power reached over 3,2767, it was made negative and each successive cross made it 100 nearer zero. As I was interested in what would happen when my power became nearer zero I carried on. I got it down to -263, picked up another cross and it stopped and asked me if I wanted another game?

Send your letter to Letters, Home Computing Weekly, 145 Charing Cross Road, London WC2H 0EE. Don't forget to name your computer — the best letter could win £5-worth of software. Queries cannot be answered on this page

This surprised me as I didn't know why the game had ended. If I had left by power to run out I should have made at least another few thousand kills. This was a good idea for a game but if the monsters always appeared at the same place, why didn't anyone at Softek think of doing what I did?

All that would be needed would be an essential ladder at the left hand side which, if my idea was used, would isolate the man on the lower floors and eventually making the crosses unreachable.

If software companies took as much care checking programs as they did promoting them, then the standard of programs on the market may be a little higher.

Rose Harris
Dunshalt, Copar, Fife

Frank Lech, sales and marketing director of Softek International, said: "We welcome feedback from customers — the more we get the happier we are. We really do appreciate public comment."

"Along with Firebirds, Monster in Hell is our best seller and Mr Harris' comments are the first of this nature that we have had."

"It may be that improvements can be incorporated but it is also possible that there is a technical fault. If he sends us the tape we will see if we come up with the same."

"We will put his comments to the programmer."

"It's very nice to hear of someone who has obviously thought about his criticism and put it into such cohesive form."

Guitar tutor revisited

Thank you for reviewing my program Learn to Play Guitar in a recent issue.

Obviously, I am rather disappointed at the two star rating you gave it. However, I take heart from your comment that the section displaying chord patterns is an 'excellent reference'.

Further comments are:

1. The title of the program. I never intended this program to be sold as a complete guitar tutor to rival some of the excellent publications on the market.

Rather, it was my intention that the program would provide a useful reference for aspiring musicians.

I was not consulted by Lasersound about the title nor the artwork for the cassette insert. I accepted that the program will not teach classical guitar — it was never intended to.

2. On-screen instructions. I agree that a lack of instructions in a program of this type is unforgivable. When I sent the original program to Lasersound, they suggested a few alterations/improvements which I could not incorporate within 16K without cutting out some feature.

The feature which had to be cut was the On-Screen instructions. I assumed that Lasersound would provide these instructions in printed form to complement the very basic on-screen instructions.

Obviously, I was wrong. I have written an instruction sheet and asked Lasersound to supply this with future copies of the program and to make it available to any existing customer who requests it.

3. The table which your reviewer could not understand. If playing the guitar by ear, you would soon notice that certain chords seem to occur together.

For instance, with a song in the key of 'G', other chords which will probably be used are 'C', 'D7' and 'Em'. These are known as the sub-dominant, dominant and relative minor.

If you have worked out the chords used in a particular tune, but the key is not suitable for your voice, you can transpose the tune into a suitable key by referring to this table, which provides the dominant, subdominant and relative minor for any key.

4. Tuning up. I agree that if you read the Spectrum manual you would be able to make the computer do this without the need to buy a ready made program, but then if you read the manual and play around with the computer for long enough, it is surprising what you can make it do.

5. LOADING problems. If the second part of the program refuses to load, try LOAD "part 2" (16K) or MERGE "part 2" (48K). If this is still unsuccessful, contact Lasersound.

I hope that this letter sets the record straight.

J. Douglas Barr, Paisley, Scotland

How to hit out at your hardware

Aggravated at your computer? If you haven't you will be.

Well, aggravated users and programmers of the world, it is now time to fight back. Microfile Systems Corporation has come up with a little device called the Byte Bat.

This truly user friendly device is a piece of soft hardware (or hard software depending on your point of view) that will give you a satisfying but non-destructive way to get back at your computer.

The Byte Bat is made of foam rubber, is 17 inches long, and is shaped like an American Baseball bat. For a mere \$9.95, you get the Bat itself, a user's manual, a Byte Bat badge, a poster showing how to use the Bat, and a decal that warns all who approach that "this computer-friendly liveware is protected by Byte Bat."

Its inventors hope that the device will be another monster seller similar to the Pet Rock. Already the firm has sold out its test run of 10,000.

Believe it or not, this device was designed by a former Texas Instruments engineer who fashioned the prototype out of packing foam. It became an instant success, put into use by numerous TI CAD engineers who took it out on their terminals when their programs crashed.

Four years of testing and product improvement went into the Byte Bat before it was released commercially. How can it fail to sell?

It is made of open-cell foam without a skin. Therefore it is so soft that it will not even get a key to depress on the average keyboard. If it did have a skin, it could possibly cause damage to disc drives or punch out the lights of an LED, for example.

A health and safety warning comes with the Bat, indicating that computer users under three years of age should be watched, so that they do not eat the Bat.

The Byte Bat is compatible, as far as I can tell, with all computers and systems, making it the first globally compatible piece of spongeware (foamware?), in concurrence with statements made by the manufacturer.

If your local dealer only carries computers and software that never create errors, you won't need one. Otherwise you can get one direct from the factory by sending Microfile \$12.50 or ordering by phone.

Not having current address, the best I can do is provide you their toll-free phone in the U.S. Call the U.S. and then ask for (800) 227-3900. Or if you are out my way, in California you can call (800) 632-2122. Waddaya mean, it's the silly season? It's like this all the time out here.

If you like doing graphics on your Tandy Model III, this program may interest you. It is called DRAW, and is a text and graphics editing package that allows you to design a graphics screen or draw a picture in conjunction with your computer and the Grafyx Solution board (both hardware and software are from the same vendor).

The program contains about 10,000 instructions and is written in assembly. By moving the cursor around the screen and entering simple one-letter command instructions, you can do a variety of graphics tasks using lines, points, boxes, or circles.

It is a very versatile system which allows you to alter point size, reverse images, move any section of the screen to any other section, delete sections, and save any or all of your work at any time.

Once you are satisfied, or must leave off for a while, you can either save your work to disc or tape or have it print out in hard copy on any one of 20 commonly used printers. The program comes with 12 high resolution graphics pictures and costs only \$39.95.

I do not know what the necessary piece of hardware costs, but you can find out for yourself by writing or calling Micro-Labs, Inc, 902 Pinecrest, Richardson, Texas 75080, (214) 235-0915. That's all for this week. See you next time.

 Postern is always on the look out for any new games you might have developed.

Trapped! And there are things which don't want you to escape

Part 1

It is Halloween and you are trapped on the top floor of an old mansion house. There are strange and terrifying things that don't want you to escape so you have to use your skill and judgement to find the stairs and the way out.

This program is in four parts, parts one and two are this week and parts three and four will be in the next two weeks.

Part one is some instructions and a title page with user defined graphics.

How it works Part 1

30-97 draw title page
100-195 play random music, wait for pressed key
200-330 print instructions
400-430 load part two
9000-9050 prints a\$
9100-9190 print title block
9200-9270 wait till key pressed
50000-60095 define user characters

The programs will work without this part if you aren't feeling energetic, but it gives the program a bit of atmosphere.

If you have an 8 or 16K RAM pack then part one won't work so just enter part two (it will work without part one).

These are the first two parts of a four-part adventure written for the VIC-20, plus 3K of RAM by Alan Blackham. Part two will appear next week and the final part the week after. But you can start playing straight away . . .

There's evil lurking. A scene from Psycho II, starring Anthony Perkins

A data

Hints on conversion

Part one would be very hard to convert to another micro because it uses user defined graphics. But the game will work just as well without part one, anyway.

```

Part 2

Part two is the first part of the adventure. You have several commands to enter. They are:

Examine
Look
Go
N,E,S and W
Shoot
Get
Drop

In the game you are faced with a screen like:

```

HALLOWEEN
-----
You are in a
Dark Room
-----
VISIBLE EXITS: N E
-----
You can see
Wolf
Mat
-----
What now
?
    
```

This means you are in a dark room and the ways out are North and East. In the room there is a Wolf and a Mat.

So now you can enter Look and that will tell you what you are carrying, if you want to go North you enter N.

If you want to put something down you enter 'Drop' and then

Hints on conversion

This program should be very easy to convert to any micro because it uses no commands that only the VIC has. It's all PRINT and IF...THEN statements.

How it works

Part 2

100-245 print information
300-400 check for examine
400-500 check for N,E,S or W
500-600 check for Look
600-700 check for Get
700-800 check for Drop
800-900 check for other commands
9000-9060 print well done etc
9100-9150 print bad luck etc
40000-40025 initialise
40100-50060 set up variables etc

what you want to drop. If you want to pick up the mat you would enter 'GET MAT'. If you wanted to examine the Mat you enter 'Examine Mat' and the computer will say something like: "The mat is dirty".

All you have to do is work

Variables

I,J and R FOR loops
PS,N,E,S,W data
NMS your input
eS temp store
F(1 to 10) flags
IS(1 to 10) items in rooms
I(1 to 10) where items are
C(1 to 20) what items you are carrying
no number of items
RO room you are in

out how to find the stairs and get on to part three of Halloween.

You can play part two without part three so you can try and get to the stairs and then get next weeks magazine and type in part three.

Warning: Get a friend to type in lines 800 to 900 because if you do it, you'll find out how to get to the stairs and then there is no fun in the game...

Special Commands
POKE 36879,X change screen colours
POKE 36878,1 to 15 volume
POKE 36874 to 36877 sound channels
POKE 1984,0 clear keyboard buffer
SYS 64802 reset computer

```

New games: how do they play?

Adventure and arcade games for the Spectrum are given the once-over by our panel of reviewers

Devils of the Deep 48K £6.50

Richard Shepherd Software, Elm House, 23-25 Elmshott Lane, Cippenham, Slough, Berks

In Devils of the Deep you are a diver searching Atlantis for a lost treasure while trying to avoid the giant electric eels.

You have limited reserves of strength and oxygen, but may pick up items from the sea bed to replenish them or to attack the eels. Otherwise you can escape by hiding behind the ruins or skipping into the next sector of the seabed.

The display of this adventure game shows a three dimensional representation of Atlantis, with

ruined buildings and assorted debris, and the diver is moved by the cursor keys, leaving footprints in the sand.

Very useful instructions are given on the cassette inlay, and the program loaded easily. The graphics are bright and cheery, but all the sectors look much the same. The diver moves slowly, and there seem to be few monsters, so the game soon palls.

The game can be saved and restarted later, but running out of strength means a long wait while a new game is generated.

value for money	

Maziacs 48K £6.95

dk'tronics, Shire Hill Industrial Estate, Saffron Walden, Essex

This game must be seen to be believed. One of the best uses of Spectrum in all aspects that I have seen.

— you only see about one fiftieth of the maze on the screen at a time. The rest moves in as you run along its paths. You can view with more variations than most about a twelfth of the maze by pressing V.

Having loaded the tape (machine code) you press any key for instructions. These are extremely good and you move quickly onto the game. The object is to run through the maze to pick up some treasure, this being about 200 moves from the start.

On the way you meet the Maziacs who you fight till death. Around the maze you come to food to keep you going and also prisoners who actually show the way by marking your path in yellow for a number of moves. You may pick up replacement swords but cannot carry both a sword and the treasure.

There are different levels of difficulty, which you don't have to use immediately because a completely new maze is created for each game you play. So you will not tire of playing again and again.

Hard Cheese £5.95

dk'tronics, Shire Hill Industrial Estate, Saffron Walden, Essex

This game reminds me a little of the arcader Mr Do, except that you play a bulldozer instead of a pixie. The fact that I have played Mr Do in the arcades helped enormously since absolutely no playing instructions were supplied with the game.

The idea is to create tunnels with your bulldozer and hide from the ferocious foremen running about in these tunnels.

When a foreman comes too close for comfort you can fire a block of concrete at him — definitely not good for labour relations, though. Placed around the screen are concrete slabs and

these can be consumed for points, but the really big score comes when you tunnel a hole under an apple causing the apple to fall on a foreman.

Once all the foremen have been cleared a new screen is created along with more maniac management to pursue you.

Once I understood it, I thoroughly enjoyed this game. The graphics are mediocre and movement is a little jerky, but this is more than made up by excellent use of sound with no less than three catchy tunes thrown in for good measure. Squashing a foreman with an apple results in an explosion of sound — all on my little Spectrum.

Greedy Gulch 48K £4.95

Phipps Associates, 99 East Street, Epsom, Surrey KT17 1EA

This is an adventure game set in a deserted Wild West mining town and the aim is to find a gold nugget and bring it back to the sheriff's office.

Each obstacle overcome adds to your score. Full instructions are displayed at the beginning of the game. The display shows a series of scenes or sections of a map and the instructions, reports and clues as text above or below

The player must pick up a number of objects — maps, guns, lamps and so on — which he will need later, and find his way through the hazards to his target. There are many branch routines, some with useful items,

some just dead ends — literally, which means he can die of thirst in the desert.

The usual GO EAST, PICK UP type of instructions are used, and there are HINT and HELP options, though they are often quite unhelpful. The program allows the game to be saved and restarted later if required.

This is a most attractively presented game with excellent graphics. It loaded easily and there did not appear to be any bugs, and the instructions are comprehensive and easy to follow.

3D Luna Crabs £6.95

Micromega, 230-236 Lavender Hill, London, SW11 1LE

Yet another bunch of aliens for you to blast out of existence in this very well written arcade game.

This time, you are stuck on an alien planet in a crawler that has lost part of its power. All you can do is to spin round and fire your cannon at the little crabs who have the disgusting habit of galloping up and spitting acid balls at you.

Each crab you kill with your photon cannon counts for 10 points and there is a bonus after each 15 you get.

The graphics really are excellent and the whole program responds extremely quickly to the keyboard. The crabs are

rather Earthlike and don't look at all menacing but they still kill. I did feel, though, that there could have been a bit more in the game to generate more interest.

Perhaps a giant turtle which requires a lot more direct hits to kill could be added.

The only other problem that I found was that the game starts running without a pause on loading, so you can lose a couple of lives while you are sorting out your tape recorder.

It is a great pity that, with so many programs, when you have been killed off the computer asks you to press a key for another go, but not to end the game.

How to corner the software market

Lyversoft, software originators and wholesalers, are selling software in the strangest places. Managing director Barry O'Neill told Dave Carlos all about it

Just think...no more long bus rides, no more waiting weeks for the post to arrive or for your favourite software to become available in your local shop. All that could become a reality if a new idea being promoted by Lyversoft works out.

This brainwave is Computer Corners, which provides a service for shops who have no computer expertise, but who want to sell software. Lyversoft will set up such 'corners' and stock them with top-selling games cassettes for a wide variety of micros.

The idea came from Barry O'Neill, managing director of Lyversoft, who tried it out in four local shops to start with.

"It went so well that since February we have had to become software wholesalers. We have corners in shops of all varieties; wine, video and record, greengrocers, garages, and newsagents.

"Retailers were frightened and bewildered by the vast number of titles and types of software available, so we help by stocking their shelves with proven best sellers, either 50, 100 or 150 titles. We can also supply books and magazines if required."

Computer Corners have now caught on to such an extent that five full-time staff now take orders from shops at least once a week and then supply from vans or by mail. The operation grew out of the other Lyversoft activities of software publishing and retailing.

Equipment Centre, is right in the heart of Liverpool, at 66 Lime Street. It sells only software, magazines and books, and the company claims to stock over 600 software titles already, with a planned 1,000 or more by Christmas. What is more they have programs for nearly every home computer.

Jim Pendlebury, who joined the company from Rumbelows in March, said that they "intend to be the biggest software shop in the North West of England or even the entire UK". Their range covers all kinds of programs; games, adventures, business packages and the educational titles which Jim believes will be the big growth area of the future.

It was from the shop that the software publishing side of the business sprang. "In Autumn 1982, some of our customers started to bring in their programs which we just sold in plain packaging on a purely local basis. They sold very well, and proved popular enough for us to collect together a package for full release in April this year."

The original release was of six VIC-20 games, some of which

had two programs on the cassette.

"Apple Bug and Crazy Climber seemed to catch the imagination and did much better than even we expected", Barry

recalls. These programs were all written by 13 to 18 year olds, some of whom are now employed as consultants advising on new software that comes in.

Another of the company's new

Barry O'Neill (right) and Jim Pendlebury of Lyversoft — helping the retailers

ideas is to provide a room in the shop for their programmers, all whom are freelance, to meet, swap ideas and hold Think Tanks. "We believe that the discussions they have can only help the program quality and assist in the conversion of a program from one machine to another, something we expect to do more of soon", said Barry.

Now, with a range of programs already established, Lyversoft is preparing for the release of another group which should be ready by November. The list is provisional as yet but covers many more micros and types of program.

These are in the hands of Paul Foster who recently rejoined the company after taking an extended computer course and who originally joined them after management experience with Habitat.

There could be five releases for the Spectrum: Liberator, a pilot's eye view shooting game, Lunar Rescue, converted from the VIC, Golf, a double games pack and one game that is too secret even to mention.

There should be a database from the BBC, which Paul is currently working on, two releases for the Dragon 32, Picture Puzzler, which has a moving block theme, and Humanoid Invader which Barry described as "an inverted space invader game".

They are not abandoning the VIC, however and have several titles for that micro too. One, called Space Eggs is a shooting game, Digger will be a two-level arcade type game, Hopping Mad (guess what?) and a space adventure game.

A number of ZX81 games are also under consideration.

All these new releases, together with the existing operations, need a great deal of money. It is here that the parent company comes into its own.

As Barry said "We started this side of the business back in September 1981 when very few companies were involved. The company's background in computers and office equipment meant we had the technical background needed. Now business has grown to such an extent that I have been seconded from the board to oversee Lyversoft's development.

"Having the shop means we know what is selling and how far out some of the published charts are in this respect. We look forward to the price of machinery dropping even more, as this can only help everyone — Lyversoft included."

BC BASIC Commodore 64 £19.95

BC Computers, 31A Grosvenor Avenue, Long Eaton, Nottingham;

BC BASIC is a cassette-based BASIC extension with extra commands for hi-res, sound, sprites and various other elements.

To use BC BASIC you must first load it into memory — which takes about five minutes. You are now ready to go.

The hi-res/screen commands are not very advanced; they do nothing more complicated than draw lines and plot points. Compared with Simon's BASIC this is not a lot. Simon's can fill complicated areas, draw circles, plot gradients, etc.

The sound commands make

programming commands include features such as IF...THEN...ELSE, REPEAT...UNTIL. There are also commands to read the joysticks, paddles, user-port and keyboard.

To sum up, I found well over half have a single PEEK/POKE equivalent. This more or less rendered most pointless to me. Simon's BASIC offers an extensive range of extremely useful and powerful commands.

Graphics and sound sections of the manual explain some related instructions, for the rest you must hunt through the glossary. It would have been better organised into subject sections, as Commodore has done with Simon's BASIC.

At £20 it is a few pounds overpriced. It is, however, a fairly cheap way of getting hi-res and sound commands. The package is well below the standard of Simon's BASIC, but if your

Practical programs: how they perform

A selection of serious software is put through its paces by our team of reviewers

your programs more readable. They do away with lists of POKES and allow a wide range of control over the SID chip. Unlike Simon's BASIC they do not allow music composing.

Sprite commands allow you to define sprites and characters. There is a long list of sprite setting commands. I found these quite pointless — they do nothing a POKE or two to the VIC chip cannot do.

Finally, the structured pro-

gram only runs to about £20 then this is available and it does seem to work well. You only get what you pay for.

value for money	50%

First Aid 48K Spectrum £4.99

Network Computer Systems

This BASIC program is a comprehensive guide to first aid, presented in a lively and interesting manner. It's easy to use and rewarding.

On loading, you are presented with a menu with options for: studying the whole course, revising any topic, or testing yourself on any topic. The list of topics comprises: scope of first aid, body mechanism, asphyxia, bleeding, broken bones, burns and scalds, poisoning, shock, and emergency procedures. In short, all you need to know.

The program really gets to the heart of the matter (sorry!) with concise and lucid text displays. These are supported by simple

but effective diagrams. For example, the blood circulation is shown in full colour with sound effects for the pulse. You study at your own pace, the next page being accessed by pressing any key.

When you answer questions, the program compares your input with key words held in a string variable. This means it will accept the right words in a line full of gibberish! Also, it doesn't tell you which of the words in your answer were the right ones. Despite these drawbacks, it's satisfying when you score well.

C.C.

GP COPY BBC B £3.95

Logic Systems, Cambridge Rd, Gornal, Dudley DY3 2UR
This program is for those BBC owners with a Seikosha GP80,100 or 250 dot matrix printer. It allows high resolution screens to be copied to the printer at the touch of a button. The routine loads into a reserved section of memory and is accessed by a three-line addition which you simply tack on to the end of your graphics program.

It will produce a screen copy in modes 0,1,2,4 and 5, and has the option of altering which logical colour on the screen will be represented by black on the printer.
If you don't want to use up half a printer ribbon in one go it is better to set the printout

background colour to white, so that all black sections of the screen appear white on the copy. This does not affect the rest of the colours, which appear in shades of grey.

The routine took approximately six minutes to produce a mode 0 dump with most of the screen used.

Instructions were clear, but the manufacturers do recommend that users read their printer manuals carefully before using the copier. Even so, the routine was very easy to use, only requiring the press of any key to produce the printout.

Beebcalc BBC B £19.95

Gemini Marketing, 18 Littleham Rd, Exmouth, Devon

Beebcalc allows the user to design and set up spreadsheets. It is well documented, easy to load and the screen display excellent, enabling a non-experienced person to use it with ease.

The spreadsheets can have up to 50 rows, 26 columns and each column can be up to 32 characters wide. Each cell accepts text or numerical data. A formula can be assigned to individual cells and the formula can relate to the numerical contents of other cells combined with a wide range of mathematical functions, and will accept any valid BBC expression.

Cells are accessed by direct command or by cursor keys, the

screen scrolling as required. The information regarding any cell is easily manipulated and the program will automatically recalculate after each entry or it can be set to calculate the whole sheet after all changes have been made.

Screen display is in colour and information concerning the current cell, such as contents, related formula and prompts are displayed at the bottom of the screen. Other information regarding modes and cell number are shown above the spreadsheet.

'NOW WIN THE POOLS'

THIS IS MEANT FOR YOU — ESPECIALLY IF YOU USE A SINCLAIR ZX81 or SINCLAIR SPECTRUM COMPUTER, or even ANY COMPUTER.

HAVE YOU EVER HAD THAT DREAM OR EVER WISHED THAT YOU HAD "WON ON THE POOLS" — AT LAST YOU CAN TURN IT INTO REALITY.

THERE IS A SECRET OF "HOW TO WIN ON THE FOOTBALL POOLS" — IT CAN BE DONE. I DISCOVERED THE SECRET A LONG TIME AGO — NOW, FOR THE FIRST TIME I'M PREPARED TO SHARE IT WITH YOU.

HOW DOES THIS INTEREST YOU — I HAVE DOCUMENTARY EVIDENCE BY WAY OF POOLS WINNINGS DIVIDEND SLIPS/ CANCELLED CHEQUES, etc, SHOWING MY PRESENT WINS ON THE POOLS AS FOLLOWS:—

First Dividends	Second Dividends	Third Dividends	Fourth Dividends	Fifth Dividends	Sixth Dividends
765	1,818	2,942	1,952	631	93

A GRAND TOTAL OF 8,201 (EIGHT THOUSAND, TWO HUNDRED AND ONE DIVIDENDS — so far).

I HOLD THE UNCHALLENGED WORLD'S RECORD FOR POOLS WINS

I AM MAKING THIS VERY SPECIAL, REDUCED PRICE OFFER TO READERS OF HOME COMPUTING WEEKLY FOR A LIMITED PERIOD ONLY.

Do not let anyone tell you that it is impossible to "WIN ON THE POOLS" — since I perfected my method, I HAVE WON REGULARLY for over TWENTY-FIVE YEARS — proof that it is no 'flash-in-the-pan'.

I have CHALLENGED THE WORLD with my record of wins and with all the evidence that I possess — NO ONE has ever been able to accept the Challenge — I KNOW NO ONE EVER WILL.

MY SECRET IS NOW PLACED ONTO COMPUTER CASSETTE FOR YOU.

THE METHOD IS THE GREATEST TREBLE CHANCE WINNER IN THE HISTORY OF FOOTBALL POOLS — IT WILL LAST FOREVER — BOTH FOR ENGLISH AND AUSTRALIAN FOOTBALL POOLS, WITH EQUAL SUCCESS.

I now intend to give a limited number of people the opportunity of making use of my method — perfected over 25 years and proving itself on EVERY ONE OF THOSE TWENTY-FIVE YEARS.

You will have noted details of my personal achievements so far, as given to you above.

A GRAND TOTAL OF 8,201, yes 8,201 POOLS DIVIDENDS, including 765 FIRST DIVIDENDS.

My Pools Winnings Dividend slips now number so many, that they fill a very large suitcase and will stand as my evidence of all claims in ANY COURT OF LAW IN THE WHOLE WORLD.

Taking just the past 25 years into consideration, I have won ON AVERAGE over 328, (THREE HUNDRED AND TWENTY-EIGHT) Pools Dividends EVERY YEAR — or — AN AVERAGE of over SIX DIVIDENDS EVERY WEEK for TWENTY-FIVE YEARS.

You have my absolute Guarantee of the complete authenticity of every claim, cheque, document, letter, etc, contained herein.

Don't take my word for it, read what people write about me and my method:—

I won on Zetters last weekend. It was not a big sum, but all the same it was a very nice surprise for me. J.C., Lancs.

I appreciate the straightforward method you adopt, which is such a contrast to the rubbish of misrepresentation which is so common in the Betting World, by unscrupulous and self-opinionated charlatans. C.H., Devon

Winnings cheque received today, sincere thanks. D.N., Devon

I congratulate you on your achievement. R.R., Wales

I should like to thank you for a most exciting season and look forward to hearing from you again. J.C., Hants.

I would like to acknowledge cheque and say how much I appreciate your integrity. J.M., Scotland

Many thanks for your system, it is all you say and more. J.C., Lancs.

Your wonderful system won me £3,527. I intend to visit London soon and will be able to come and see your system. (Overseas Client), P.M., Kampala.

Many thanks for trying so hard to please us all, your brother should be thanked also. One of our daughters, WHOSE HUSBAND YOU HELPED ENORMOUSLY, has just phoned, the four of them have just spent a lovely holiday in Spain. K.R., Isle of Man.

I do have losing weeks, but ON AVERAGE my winnings show over SIX DIVIDENDS EVERY WEEK for the past 25 years.

I know that you are now utterly flabbergasted, it always happens to everyone with whom I come into contact. Please just sit back and imagine for a moment my FIRST DIVIDEND wins alone — they now number 765 (seven hundred and sixty-five) and will probably be even more by the time this advertisement appears in print.

I AM NUMBER ONE IN THE WORLD AND NO ONE DISPUTES IT.

For as long as I continue to enter the Football Pools my wins will continue. I have already said, they apply, with equal success to both English and Australian Football Seasons.

I intend to release a STRICTLY LIMITED NUMBER of copies of my cassette, (either for Sinclair ZX81 or Sinclair Spectrum) — DO NOT DELAY AND FIND YOU ARE TOO LATE, in which case I would have to refund your money.

I am so confident of YOUR success that if do not win at least THREE FIRST TREBLE CHANCE DIVIDENDS in the first 20 weeks of entering, I will completely cancel the balance of the purchase price and you do not have to pay me another penny, at any time, no matter how vast your winnings.

I only wish that space would allow me to give you photographs of my winnings slips, cancelled cheques, etc, but it is of course impossible — they now number 8,201 dividends. I have however given JUST A FEW EXTRACTS from ORIGINAL LETTERS I hold from my small Clientele.

I am the Inventor and Sole Proprietor of my method, Registered as EUREKA — ('I have found it'). I am known as The Professor in Pools Circles — I am of the Highest Rank in Forecasting — this is beyond dispute. I am marketing a limited number of Computer Cassettes, under my Registered Company — FOOTBALL ENTERPRISES.

My initial charge for a copy was £75, but for this SPECIAL REDUCED PRICE OFFER I will send you a copy, (for ZX81 or Spectrum) for £20, (twenty pounds) ONLY, plus your Promise to pay me the balance of £55 — ONLY IF YOU WIN AT LEAST THREE FIRST TREBLE CHANCE DIVIDENDS IN YOUR FIRST 20 WEEKS OF ENTERING — otherwise you owe me NOTHING FURTHER.

This is surely proof absolute of my supreme and utter confidence in my own abilities and in the capabilities of my discovery. I could easily CHARGE £2,000 per cassette on the evidence I possess, but that would not be fair to everyone, which is what I want to do.

My method is WORLD COPYWRIGHT, any infringement and immediate proceedings will be taken, without prior warning. It is truly ingenious and has stood the test of time.

My cassette is simplicity itself to operate and you'll be given FULL DETAILS for weekly calculating. Your entry need not involve you in any large weekly stakes, you can enter for as little as 25p, if you wish.

I charge NO COMMISSION on any of your wins — no matter how BIG they may be.

I realised a long time ago, that it was no good sitting down and dreaming about winning the pools, so I burnt the candle at both ends, working late into the night, occasionally RIGHT THROUGH THE NIGHT, I KNEW there was a way, eventually it all paid off and has been doing so ever since.

I am unable to vary my offer to anyone, so please do not request it, as I shall very easily dispose of the cassettes I have prepared and am making available.

IMMEDIATELY I perfected my method I commenced winning right away, (first with just a little £163, the first week I used it), I HAVE NEVER LOOKED BACK SINCE, amongst all those dividends was one for over EIGHT THOUSAND POUNDS for just one eighth of a penny stake.

I will release a copy on cassette, to you, on receipt of the completed order form and your Signature thereon, confirming you will treat it in the STRICTEST CONFIDENCE between us and retain it for your OWN USE ONLY.

PLEASE NOTE:

If you happen to be the proud owner of a Computer, other than a Sinclair ZX81 or Sinclair Spectrum, you can still purchase a copy of my method, for the same price and program it YOURSELF on to YOUR OWN COMPUTER.

I sent in my FIRST entry last week and won 2nd and 3rd dividends, as you will see from the enclosed certificate. One more and I would have collected over £400 for FIRST dividend. Once I've won a fair amount I shall be staking from winnings and at 2p per line, A FIRST DIVIDEND last week at this would have been over £3,000. C.A., Yorks.

I am very interested indeed and enclose £20 herewith. I agree to pay you the balance of £55 ONLY if I win at least THREE FIRST TREBLE CHANCE DIVIDENDS in my first 20 weeks of entering — otherwise I owe you NOTHING FURTHER at any time — no matter how much money I win. My Signature below is my Undertaking to retain complete and absolute confidence about the method.

Mad Martha

And now—

Mad Martha II

Poor little Henry is the hen-pecked hero of this domestic tale. One night Henry can take no more. He steals his wages from his wife's purse, and sneaks out of the house being careful not to wake the baby or trip over the cat, and heads for the bright lights to have some fun. Trouble is he runs out of money. His only way to raise some cash is to gamble his few remaining pounds on the spinning wheel of the roulette table.

Just as Henry is getting in to his evening at the tables his wife — Mad Martha — has noticed his absence. Realising Henry has absconded with the housekeeping she sets out after him with an axe. Guess what part you play in this happy tale? That's right, you're Henry. Watch out for that axe!

Time for the annual holiday and Martha decides to visit her half-cousin Manuel, who is a waiter in a plush hotel in Barcelona.

One afternoon, Martha sets out on a bus tour with her son, young Arbuthnot, leaving orders for Manuel to keep an eye on Henry. Unbeknown to Martha, crafty Henry has a Spanish pen-pal, and has planned a secret rendezvous. Henry leaves the hotel, brimming with enthusiasm and Manuel (who is totally wacky!) is hot on his trail. The adventure takes us through the thrills and spills of a madcap chase, taking in amongst other delights, a bull fight in which poor Henry is forced to play the leading role. Guaranteed laughs and fun for all the family!

*** FOR 48K SPECTRUM ONLY £6.95** Post & Packing 40p *****

A game to invest in... funny, genuinely original, and the graphics are great... hit the key to begin, the Spectrum plays a real Hollywood-style movie theme tune, and the hunt is on!
Personal Computer News

Marvellous adventure, really dotty... a refreshing change from some of the doomladen programs encountered nowadays... a game where you won't get to the next stage without solving the present conundrum.
Popular Computing Weekly

- ★ Full adventure format — accepts multiple commands at one entry, in plain English
- ★ Witty, intelligent replies to commands
- ★ Skill level select for beginners
- ★ Every location in full screen, high-res, colour graphics
- ★ Three exciting arcade-type games as an integral part of the adventure
- ★ Full help facility and save game command

HAVE YOU BEEN INVOLVED IN A MYSTERIOUS ADVENTURE RECENTLY?

If so, it is quite probable that you are presently suffering from TIS, more commonly known as Total Involvement Syndrome.

TIS manifests itself in a number of ways, one of the most dramatic symptoms being a victim's complete inability to feel at ease in the world of reality. Other symptoms include insomnia, a desperate need to play a Mysterious Adventure, and an overwhelming sense of acute enjoyment.

Experts believe that TIS is usually contracted as a result of prolonged exposure to Mysterious Adventures; this is commonly caused by owning any of the following Home Computers:-

48K SPECTRUM, BBC MODEL A OR B, TRS80, COLOUR GENIE, ATARI 400/800, COMMODORE 64, DRAGON 32, 16K ZX81, LYNX etc.

When questioned about this epidemic, a representative of DIGITAL FANTASIA, a company who are actively involved in research and development work on Mysterious Adventures said, "There is probably no cure for TIS other than mains failure, faulty RAM chips etc. which can be at best only a Temporary solution". "In the absence of a more permanent cure, I would advise TIS sufferers to submit to the Syndrome and obtain Mysterious Adventures from any sources available to them". "TIS is highly contagious and in view of the current Worldwide Epidemic, I would say enjoy it while you can, resistance is futile".

If you have a BBC Computer, Commodore 64, 48K Spectrum, Atari 400/800, or Dragon 32 you can obtain Mysterious Adventures in any of the following dosages:-

- 1) THE GOLDEN BATON
- 2) THE TIME MACHINE
- 3) ARROW OF DEATH (PART 1)
- 4) ARROW OF DEATH (PART 2)

- 5) ESCAPE FROM PULSAR 7
- 6) CIRCUS
- 7) FEASIBILITY EXPERIMENT

- 8) THE WIZARD AKYRZ
- 9) PERSEUS AND ANDROMEDA
- 10) TEN LITTLE INDIANS

Each Dose costs £9.95 including V.A.T. and Postage. Excellent quantity Discounts are available for Pushers.

D.F. MENTAL HEALTH WARNINGS. MYSTERIOUS ADVENTURES CAN SERIOUSLY DAMAGE YOUR SENSE OF REALITY.

Cuthbert Goes Walkabout

Cuthbert is on the Lunar Landing Pad, waiting for the Federal Chief's State Visit. He must turn the lights on by walking across the switches, located at the corners of the squares, before the invading Moronians get him. Watch him do his Victory Dance before he tackles the next "Pad" and another, larger, set of Moronian Invaders. Can you get your name in the Hall of Fame?

Superb full colour graphics with accompanying music.
