High street price wars

After last week's fall in the price of the Commodore Plus 4, the high street retailers have decided to sell it's little brother the C16 at a huge discount.

In branches of both Boots and Dixons the C16 starter pack is now selling for just £79.95. The official Commodore price for the pack is £139.99.

Commodore's official line is that 'it is a decision of the retailers.' A spokesman said: 'They are selling off overstocks and want the cash in their hands now instead of profit in the future.'

Continued on page 5

Non-starter wins race

Automata's Deus Ex Machina has been voted program of the Year at the recent CTA award ceremony, yet only 12 copies of the C64 version have been sold.

There have been more sales of the Spectrum version, but even this hasn't sold in vast quantities because certain distributors have refused to market the product.

Part of the difficulty is due to the way software reaches the shelves of your local shop. A number of distribution companies have had financial problems lately and this has caused difficulties for small software houses.

It is software houses who suffer when a company crashes because they may be owed large sums of money. In an attempt to prevent this Automata decided to supply the program only to those distributors who pay as they order. This policy has prevented the company from risking it's future but resulted in a number of distributors refusing to buy the game.

FAST AND FURIOUS SLAP SHOT

ANIROG

SPEECH
No Hardware Required

ALL ACTION ICE HOCKEY

SLAPSHOT from Anirog is a two player, fast action, ice hockey program. Also in this thrilling game there is included a smoothly running speech synthesis system of the very highest quality. Before the actual game starts each player must select an international hockey team to represent. After doing this you must quickly and skillfully manoeuvre your man across the glistening ice whilst your other team-mates move automatically around the rink waiting for you to pass the puck to them. If you do manage to race past the opposing defence then you have a chance to shoot for goal and score. However, you still have the goalie to beat who is able to dive in all directions. Also included in this amazingly quick and totally original game is the ability to actually physically bodycheck your opponents. Never the less, do not be too aggressive otherwise you could incur a "roughing penalty", resulting in a faceoff in your own end, giving the opposing side an easy chance of scoring. Also other extra features available include: Pause mode, and three levels of play ranging from fast to slow as well as a re-start option. Slapshot from Anirog is a totally original two player game with lightning fast action never seen before on the Commodore 64.

Two J.S. Commodore 64 Cassette £8.95 Disk £10.95

Non-starter wins race

From front page

'With this program we wanted to show the industry that there is a great deal more in home computer technology than has been used before', commented Christian Penfold, a partner with Automata. 'Basically we won this award because we kept our mouths shut. Too many people shout about mediocre products, we waited for them to tell us how good it was.'

The game is based around the concept that you are assisting in the creation of life with the aid of the computer. It is sold as a two cassette pack one containing the program and the other a soundtrack synchronised to the computer game. There are a number of stars on the soundtrack, Frankie Howard, Ian Drury and Jon Pertwee all making distinctive contributions.

'We hope that the award will give the program a second lease of life, but we won the same award last year with Pimania and that still wasn't handled by the large distributors,' commented Mr Penfold.

Program of the Year 1985

There were a number of other awards presented at the ceremony including: Programmer of the Year (leisure) which went to Elite's Ian Bell and David Braben; Program of the Year (utility) presented to White Lightning; Programmer of the Year (utility) awarded to Locomotive for Amstrad BASIC; Program of the Year (educational) won by ASK for Podd.

The hardware prizes were given to Amstrad for the CPC464 computer, voted

Product of the Year (computers) and to Rotronics for Wafadrive as Product of the Year (peripherals).

Automata, 27 Highland Rd, Portsmouth, Hants PO4 9DA

High Street Price Wars

From front page

A spokesman for Boots contradicts this view. 'Smaller memory machines are less popular now due to the fall in price of the larger memory models.' 'We were not overstocked after Christmas, but believe that our prices must be competitive.'

Boots is also extending its Price Pledge to this item, so if you buy from Boots and find you could have bought cheaper within seven days in the same town, Boots will refund the price difference.

W H Smith has also dropped the price, but only to £119.95.

The fall in price seems to be due to the recent price slashing of both Acorn and Sinclair computers which has thrown the high street into disarray.

The changes came so quickly for some of the stores that they were relying on hand written price cards for their computer lines, because there was no time to print up the new ones.

Jack Tramiel, boss of Atari, has also waded into the price cutting flood.

He has announced the Atari Starter Pack, comprising the Atari 800XL 64K a 1010 program recorder and cassette versions of Pole Position, Invitation to Programming 1 and a graphics demo.

This means you will be able to choose from three machines all at £129.95: the Spectrum, Atari and the Electron with 48K, 64K and 32K respectively. It will be interesting to see who wins and who loses in this battle of the giants.

Atari, Railway Terr, Slough, Berks SL2 5BZ

Another £129.95 computer pack

Jimmy Savile receives the Hit Bit for Stoke Mandeville

In a good cause

Sony UK has donated a Hit Bit MSX computer for the use of patients in Stoke Mandeville Hospital. The presentation was made to Jimmy Savile, well-known for his association with the hospital.

The remote control joystick is particularly useful for disabled or bedridden patients, according to Sony.

The machine will be used in the new craft centre of the Spinal Injuries Unit, where patients learn new skills.

Sony also presented software and peripherals with the new MSX.

Amstrad sorcery

Virgin Games has just released a new version of the game Sorcery. Originally for the Spectrum, it's now available on the Amstrad CPC464.

The game comes complete with Virgin's new fast loader Fastload, and is priced at £8.95.

Virgin Games, 2-4 Vernon Yd, Portobello Rd, London W11 2DX

Available on both cassette and disc, the game costs £9.95 and £12.95 respectively.

US Gold, Unit 10, Parkway Ind Centre, Heneage St, Birmingham B7 4LY

Bigger and better

Rocket from Alligata, for the C64, is to be relaunched in a slightly modified version.

Originally released in autumn 1984, Alligata is confident that this time round it will be significantly more popular. Alligata describes the game as 'excellent and extremely difficult to master'.

The new version includes a reduced skill amateur level and a joystick facility, both unavailable on the original. There is also a free poster. The game costs £7.95.

Alligata, 1 Orange St, Sheffield S1 4DW

Slave trade

A & F Software has moved into the firmware market with the introduction of a new 16K EPROM for the BBC called The Slave.

According to A & F, the product encompasses all the good points of those ROMs which are already available, plus more indispensable routines for the programmer. It comes with a 64-page manual called The Slave Drivers' Guide.

The Slave will cost £49.95 and will be available initially by mail order only.

FAST bill makes progress

Legislation against piracy came one step closer to reality with the second reading of the Copyright (Computer Software) Amendment Bill in the House of Commons on Friday, February 22.

The bill was proposed by William Powell, Conservative member for Corby, on behalf of FAST, the Federation Against Software Theft.

If the bill becomes law, software pirates face possible imprisonment of up to two years and unlimited fines. William Powell quoted the amount of revenue lost to software houses as £150m in 1984.

The new law would provide protection for both business and leisure software. Donald McLean, FAST chairman, stressed that those who risk prosecution once the new law is passed will be the thieves who copy and then sell software.

And FAST directors are anticipating an unopposed passage of the bill. Once it has been debated at the second hearing, it is discussed by a special committee, and goes before the Commons one more time, before being referred on to the House of Lords and then finally comes before the Queen.

FAST was set up in July and William Powell's backing was established in November. He is proposing the Copyright (Computer Software) Amendment Act as a private member's bill. Mr Powell explained that approximately 500 members' names go into a hat at the beginning of a session, and six are pulled out, with the guarantee of a second hearing. His name was the sixth.

The new copyright act will establish the protection of all software, whether or not it existed before the bill becomes law. The issue in question is whether intellectual property can be copyrighted.

William Powell commented: 'The problem of software piracy has reached epidemic proportions worldwide, and FAST is not unique. Similar organisations have been set up in Canada, Australia and the United States.'

'The Copyright (Computer Software) Amendment Act means that all doubts in lawyers' minds will be erased. The police will be given the power to search, and since the video copyright act came into being, it is estimated that two-thirds of the piracy in that

Keith Halliwell, inventor of Safe Load

industry has been eradicated.'

He went on: 'This bill is therefore an immensely important projected change. A possible £100m can be saved with the enforcement of the new law.'

Roger Tucket, FAST director, said: 'Computer games have a shelf life of about three months. Within a week of a game being released, a pirated version is taken. We know of 10 or 12 operations in existence. These are people who were operating as pirates of sound recording, and who have found that copying software is more lucrative and safer.'

He continued: 'We estimate that 30 per cent of games are counterfeited. Once the trading standards officer is able to enforce the law, the problem of software theft should be minimized.'

'Software cassettes have to carry some form of identification, like a hologram or a magnetic imprint. There must be some means of recognising authentic cassettes.'

● Safe Load, 'the ultimate anti-piracy system' was demonstrated recently at the Houses of Parliament.

Maplin Electronics, who developed the system, showed how a physical change in the design of a computer cassette would make it impossible for anyone to make a working back-up copy.

Numerous software houses expressed an interest in the system which could put an end to software theft, current estimates of which vary from £30m to £100m.

Home Computing Weekly has agreed, with the co-operation of a couple of software houses, to monitor the system and investigate the claims made about it.

Robots for all

Intergalactic Robots launched the new Zero 2 which is the first real robot under £100.

Interfaces for the C64, Spectrum and BBC are already available and also a universal interface for machines with an RS232 interface.

At the moment the connection to the computer is by an

The Zero 2, 'the first true robot under £100'

Present = prize

Ian Etheridge bought some Ariolasoft games and won an £800 computer in the monthly prize draw. The prize was a Commodore SX-64 portable computer. 'Now my nephews can have the old Commodore machine and I'll use the SX-64' said Ian.

There will be prize draws every month until May, each with the same prize.

Ariolasoft, Asphalt Hse, Palace St, London SW1

umbilical cord, but there are plans for an infra-red connection in the near future.

The software available is all education or entertainment based, but other useful programs are in the pipeline.

The robot differs from turtles in that a number of add-ons are possible. Speech is a real prospect. Robin Bradbeer, managing director, suggests that the day when the robot greets your guests at the door is now foreseeable.

Controlling the robot is simple and it is possible using just a few lines of BASIC. There are a number of LOGO programs available from other suppliers, including Sinclair's Spectrum LOGO, Logotron's BBC LOGO and a version for the C64. Sir Clive Sinclair described the Zero 2 as 'a very innovative product' and added that 'it should do much to introduce robotics into homes and schools'.

It includes a drawing system with pen up and down commands. LEDs to be switched on and off, a two-tone horn and a line follower. Future ideas include a bump detector and a hole sensor. The aim of the hole sensor is to prevent the robot falling off a table.

Intergalactic Robots, Unit 208, Highbury Workshops, 22 Highbury Grove, London N5 2EE

Soft Aid finalised

Soft Aid, the software industry's response to the Ethiopian appeal, has now released details of the titles on the tapes.

The Commodore 64 tape will contain Gumshoe (A&F), Pitfall (Activision), Star Trader (Bug-Byte), Kokotoni Wilf (Elite), China Miner (Inter-

Ian and nephews collect their prize

ceptor), Gilligan's Gold (Ocean), Fred (Quicksilva), Gyropod (Taskset), Falcon Patrol (Virgin) and Flak (US Gold).

The Spectrum titles will be: Spellbound (Beyond), Starbike (The Edge), Kokotoni Wilf (Elite), Pyramid (Fantasy), Horace Goes Ski-ing (Melbourne House/Psion), Gilligan's Gold (Ocean), Fred (Quicksilva), Gyropod (Taskset), Falcon Patrol (Virgin) and Flak (US Gold).

The tapes will cost £4.99 and around £2 of this will go straight to the fund. They are being distributed at no cost and retailers have agreed to accept reduced margins. Advertisements have been donated by leading publishers including Argus Specialist Publications.

Quicksilva, Palmerston Pk Hse, 13 Palmerston Rd, Southampton SO1 1LL

Spectrum discs plus

Users of the Sinclair Microdrive will soon have an alternative courtesy of Opus.

Opus' Discovery 1 will offer a 3½-inch disc drive and a whole range of other ports. These will include a joystick interface, a parallel printer port, monitor output, a through connector for other peripherals and an on board power supply.

The Discovery will only be available through Boots and there will also be a range of software developed especially for the system.

There are no price details yet but Opus claims the price 'will be a pleasant surprise for buyers and an unpleasant shock for competitors.'

All the facilities are housed within the unit so this may

mean the end of all those boxes daisy chained away from the Spectrum's edge connector.

Opus Supplies, 158 Camberwell Rd, London SE5 0EE

Quicksilva springs ahead

Quicksilva has released five new games for the spring market. Only one is a new program.

The new game by Tony Crowther, the author of Black Thunder, is called Gryphon. Quicksilva claims it is 'an arcade fairytale'. You control Gryphon in his attempt to recover his hoard of gold which is threatened by the 1d monsters. He is armed with bolts of magic and carries gold in his beak to use as stepping stones across the poisonous waters.

Castle of Jasoom and Dungeons of Ba are two titles released under licence from Accelerated Software. Both are arcade adventures with fully animated graphics involving complex maze systems. The central character in both games is Normal the Warrior and the action takes place in a fantasy land of the middle ages. Both are for the C64 and need disc drive and joysticks. Price: £12.95.

The final offerings are conversions of Spectrum games for the MSX computers, the first from Quicksilva. They are The Snowman and Boogaboo the Flea. Other titles planned for MSX are Ant Attack, Games Designer, Fred and Sprite Editor.

Quicksilva, 13 Palmerston Rd, Palmerston Park Hse, Southampton SO1 1LL

Prices fall down

Livewire has slashed the price of its Commodore software.

'We started with quite high-priced software', said sales director Alan Lee, 'but as demand started to fall we reduced our prices slightly.'

Now the prices are at the lowest level and most of the range will be between £3 and £1.50. This will bring Livewire into direct competition with other budget ranges such as Mastertronic and Firebird.

Livewire is also releasing a C64 value-pack containing four titles at £9.95. The titles will include some best-sellers including Jumpin' Jack, Triad and Invaders.

The company is developing games for the C16, but there are no firm prices or release dates for these.

Livewire Software, Royal London Hse, 198 Deansgate, Manchester M3 3NE

New York or bust

Virgin Games is offering a prize to the first player of Sorcery to find the gateway to New York.

You must collect some rather strange objects including a suitcase and a camera and battle with the necromancer and his servants.

The prize is two return tickets to New York on Virgin Airlines. There is a screen showing the aeroplane Maiden Voyager in which the winner will travel. All you have to do is take the objects to that screen and await instructions.

Virgin, 2-4 Vernon Yd, 119 Portobello Rd, London W11 2DX

Mersey progs flow on

Insight is a Merseyside company writing programs for the Spectrum and the first game will be released on March 4 and is called Subteranean Stryker.

It's a fast action game with 40 screens and Insight claims it needs a great deal of manual dexterity. You must guide your craft around the caverns within the planet.

There are numerous objects to avoid and a host of enemies to be destroyed. You are also warned of the moles.

Insight, 177 Higher Parr St, St Helens, Merseyside WA9 1AG

A ton of winners

There were eight differences in our Hewson Consultants Competition. There were 100 winners: R Knowles, Corby; L R Hambleton, Nottingham; B C Steele, West Drayton; Liam McKay, Northumberland; D Russell, Warminster; Rev Peter Wright, Hexham; Matthew Paveley, Greys; Darren Line, Milton Keynes; Garry Bates, Yardley Wood; Shaun Clark, Portsmouth; John Sweeney, Solihull; B Hindmarsh, Washington; A Foxall, Shard End; Dean Slack, Rotherham; Steve Blanks, Guildford; M Payne, Taunton; Robert Middleton, Teignmouth; Paul Oakley, South Benfleet; Alistair Macdonald, Sale; J S Almey, Grimsby; Nick Bell, Glasgow; James Overy, Southend; Graham Persson, Leith; K Chua, Birmingham; Andrew Casson, Dalton in Furness; J Carchrie, Bishopstort; Robert Kay, Ashton U Lyne; Richard Gorodecky, Wembley; Andrew Bird, Derby; Stephen Foy, Barnehurst; A R Perry, West Bromwich; Gerald Edson, Peckham; Steven Tait, Glasgow; B D Everingham, Romford; S P Ansell, Dartford; Andy Stone, Brislington; Anthony Goodhall, Lichfield; Nick Smith, Nuneaton; Mark Pepperrell, Feltham; Alan Hubbard, Leicester; P C Moore, Burbage; G D Young, Harrow; G H Dolderson, Dronfield; Steve Cox, Heanor; Robin Ayres, Cheltenham; J S Robinson, Stevenage; Richard Hirst, Huddersfield; M A Shorter, Grantham; Steven Dean, South Normanton; M J Gough, Hershaw; Lee Goodwin, Stockport; J R W Clayden, Plymouth; John Johnson, Wigan; D C Lincoln, Meenwood; David Marsden, Wigan; Stephen Collinge, Rossendale; D Lloyd, Sittingbourne; Kevin Ryan, Surrey; Peter Boswell, Cardiff; R Jessop, Inverness; Paul Kaylor, Manchester; D Tidley, Newport; Euan Pearson, Kilmarnock; C Wiffen, Gt Dunmow; David Taylor, Huddersfield; Andrew Brownlee, Brentwood; J Howells, Pontypool; M Sanaullah, Balham; M Marrawer, Dartford; Zamir Hyder, Croydon; Ron Sproston, Thirsk; Graeme Smith, Eton; Steven Wardle, Leicester; Paul Patterson, Aberdeen; R Francis, Ramsgate; Kim Yarwood, Hatfield; Barry Atkinson, Darlington; Paul Walden, Chingford; Chris Crane, Trentham; M Graham, Congleton; P Houlton, Windle; L R Wainman, South Shields; M J Hillier, Trowbridge; K Williams, Clevedon; Bo Attrup-Thomsen, Denmark; Kynan Webb, Bournemouth; Maes Rudy, Kasterlee; Stephen Worsnop, Harrogate; G Peacock, Peterborough; J V Froggatt, Verwood; Steven Owen, Anglesey; Claire Marshall, Wigan; Karl Wyer, Nottingham; Stephen Turner, Belvedere; Rachel & Jonathan Moate, Selsdon; M C Poynter, Aldershot; Chris Chouls, Newport; Peter Whelerton, Normanby; A Reid, Sutton; B Johns, Cumbria.

Black box from Opus

COMPETITION

In this week's competition we are offering 100 prizes from English Software. If you own a C64, Atari, BBC, Electron or Amstrad CPC464 then there could be a treat in store for you.

Depending on which computer you own, you will receive one of the following prizes: Colossus Chess 3.0 for all 48K Atari computers (£9.95); one volume of Atari Smash Hits, which is a 32K Atari cassette (£14.95); Henry's House for the C64 (£8.95); Jet Boot Jack for the BBC, Electron and C64 (£7.95) and for the Amstrad (£8.95); Witchswitch for the C64 (£8.95) and Legend of the Knucker-Hole for the C64 (£9.95).

Colossus Chess 3.0 is English Software's latest title and was written by Martin Bryant, a computer chess programmer with seven years' experience. According to English Software, the program has a perfect understanding of all the rules of chess, including underpromotions, the fifty move rule and all draws by repetition. It also handles all the standard mates, including King and two Bishops against King, and the very difficult King Bishop and Knight versus King.

There are three volumes of Atari Smash Hits, each containing five games including some of English Software's most

Jamboree of prizes from English Software

There's something for nearly everyone this week in English Software's competition. All you have to do is unscramble the anagrams

ENGLISH SOFTWARE™

ENGLISH SOFTWARE™

successful titles, for instance Jet Boot Jack, Dan Strikes Back and Diamonds.

Henry's House is a platform game in which you must glide Little Henry around the royal

household to learn the secrets of each room. Jet Boot Jack is also a platform game in which Jack, the space age jogger zips his way through a record pressing plant. Legend of the Knucker-Hole also features Jack. This time he must fight a dragon in order to marry a princess. Witch Switch is an arcade game featuring leprechauns, evil birds with pebbles and monkeys.

If you think you'd like to win

one of these games then put on your thinking cap and try and work out the anagrams. You've got nothing to lose and maybe a lot to win.

Anagrams

roast few

How to enter

Study the list of words. They are anagrams of words connected with computers and English Software. Unscramble the anagrams to find the words.

Write your answers on the coupon in the space provided. Fill in the coupon clearly, writing your full name and address. Print legibly — if you are a winner the coupon will be used as a label on your prize. **Important:** now write your answers on the back of your sealed envelope.

Send your entry to: English Software Competition, Home Computing Weekly, No. 1 Golden Square, London W1R 3AB. Closing date is first post on Friday 22 March, 1985.

You may enter as many times as you wish, but each entry must be on an official coupon — not a copy — and sealed in a separate envelope.

Prizes will arrive from English Software within 28 days of the publication of the results of the competition.

The rules

Entries will not be accepted from employees of Argus Specialist Publications, English Software and Alabaster Passmore & Sons. This restriction also applies to employees' families and agents of the companies.

The How to Enter section forms part of the rules.

Flight Path BBC B £20.30

Storm Software, Newbury Ct,
High St, Gillingham, Dorset

No, it's not another flight simulator to see how many ways you can crash a plane. It's a pleasant way of learning and practising European geography, economics and maths.

The procedure involves choosing your plane (Jumbo, Tristar or Boeing 757), departure and destination and any stops en route and deciding the range and bearing of the flight. Prevailing wind speed and direction may have to be allowed for. Having made your choices, you watch the plane fly across the hi-res map along your chosen flight path.

On landing, you receive a flight report comparing the chosen settings with what they should have been, and a balance sheet to see if the journey was profitable. Landing in a field away from the airport incurs recovery costs. You also pay for fuel, lateness and hire of the plane.

The program is aimed at 10-15 year olds. Overall the instructions are good. My only real criticism is the price. I'd say it's about £12 worth, not over £20. It is on disc.

Identify Europe BBC B £7.95

Kosmos, 1 Pilgrim's Close, Harlington, Dunstable

Europe consists of 27 countries and 17 seas. There, it does have some educational value. I didn't know that until I tried this program.

Like so much educational software, this is interesting and well-structured practice in reproducing information previously committed to memory.

It is in two parts, one tests countries and/or capitals and the other, seas. There is an excellent hi-res map of Europe and the multi-choice test allows you to choose how many guesses are allowed from the alternatives, and how many questions are in

the test. The handling of wrong answers is good. If you answer that Zurich is the capital of Switzerland, you get: 'No, but Zurich is in Switzerland'.

My only criticism is about the demonstration option. Nice to have one, but it's too like the actual test. It waits for an answer, then supplies you with the right answer after a few seconds. It doesn't explain what's happening or demonstrate what happens to a mistake.

But really, the printed instructions are so full that I shouldn't complain.

Time Tutor TI-99/4A £6

Maple Leaf Microware dist by
Stainless Software, 10 Alstone
Rd, Stockport

The documentation for this educational utility is the cassette inlay, containing all necessary operating instructions. The program teaches Time at four levels: o'clock, quarter hours, minutes past and to the hour, and minutes past for the full hour. Each tutorial is followed by a quiz, and the lesson is then re-presented or advanced to the next level.

Graphics are slow but effective, with a tidy display of both analogue and digital representations of time. Clues are given as to the number of digits in an answer, helpful for the child who is unsure.

There is one small fault. The wording of the information provided on-screen is too advanced for the smaller child; at times the level of English employed seemed more suited to a young teenager. All in all, this is very useful for the parent searching for educational software which will make the computer more than just a toy.

up useful information

Quiz Package TI-99/4A £4.95

B Jackson, 21 Rowan Way, New
Balderton, Newark, Notts

This educational utility comes in three parts: a Question and Answer file-maker, a Quiz Master program, and a General Knowledge sample quiz file. The latter is supplied to illustrate what can be obtained.

The Question and Answer file-maker allows you to create your own quiz, or revision test. There can be up to 50 questions and answers, each question a maximum of 52 letters and the answer up to 26 letters.

The sparse documentation warns you not to use one particular character — but fails to specify which one. There is confusion due to inconsistent labelling.

The Quiz Master is used in conjunction with the files, but best use of TI BASIC has not been made, and execution times are extremely slow. Mimicking routines for ACCEPT AT and DISPLAY AT have been used in TI BASIC, but there is a distinct lack of editing control which is exasperating. For this reason, the programs are probably better run under Extended BASIC with its superior facilities

Spelling and Phonics Tutor TI-99/4A £6

Maple Leaf Microware dist by
Stainless Software, 10 Alstone
Rd, Stockport

This is the first program I have discovered to make use of the TEXT-TO-SPEECH facility of the Terminal Emulator II. It provides reading and spelling exercises using words and phrases created with DATA statements.

The pace of speech output can be selected by the student to suit his or her ability. This means the gaps between words are either long or short. The words are all spoken quickly. Reward graphics with scoring provide motivation for the student.

A series of phrases is subsequently tested in a quiz. Questions are shuffled in order to increase effectiveness, unanswered questions re-presented at the end. The quiz doesn't finish until all questions have been correctly answered.

Phrases and words must be incorporated in DATA statements in two forms: those to be displayed, and those to be spoken. While the speech produced is adequate for the American market, it may not be suitable for the UK. There is also a lack of adequate keyboard debouncing, which could be readily provided.

This program needs Terminal Emulator II and Speech Synthesizer.

LET 1985

The LET show ran from February 17-19 at Olympia, London. It's a show which is organised by LET magazine for the computer and software retailing trade, and a number of companies took the opportunity to announce new products. In this feature we bring you the highlights.

David Crane, author of **Activision's** Ghostbusters, made a personal appearance on Sunday. Activision announced 10 new games: UK managing director Geoff Heath described Activision's spring range as 'as innovative as it is diverse'. He went on: 'Both our new company image and our new software lines reflect our overall strategy for 1985 — to broaden our base in the UK and encompass the widest possible market.'

A & F has produced a database generator Alpha Gen to supplement Alpha Beth. With Alpha Gen you can make up your own questions, and if you can create your own database, **A & F** is offering £100 if your version is suitable for publica-

The LET exhibition is usually supported by a good turnout — of both exhibitors and attendants. Here's a rundown of the main points

tion. You can buy Alpha Beth and Alpha Gen separately at £5.75, or as a twin-pack at £9.95.

Also from **A & F**: Orpheus and Uranum Factor for the BBC (£6.90), while Dragon owners haven't been forgotten. Screaming Abdabs, also at £6.90, is an arcade game for the Dragon.

A & F was also showing the follow-up to chart-topping Chuckie Egg. Provisionally called Chuckie Egg 2, it involves the use of real objects as you move from screen to screen. There will be over 100 different screens and after you have carried a girder to this one,

and a brick to that, you will probably be quite tired. Visitors to the show came away with a real surprise in the form of a chocolate egg containing a toy.

Look out for more about this game in future HCWs especially around Easter time.

Argus Press Software was showing the Spectrum version of Alien, as well as Give my Regards to Broad St, for C64 and Atari. Based on Paul McCartney's film of the same name, the game requires careful thought and strategic planning.

Artic announced a new joystick for the Commodore 16, costing £4.95. Also on the cards is a new range of budget-priced

software, at £1.99.

Bubble Bus was presenting a new range of titles. There's Boardello for the MSX, Aquaracer for the Commodore 64 and Wizard's Lair for the Spectrum.

Bug-Byte was promising many new games in the next three months, including Automan for the C64 and Stay Cool for the Spectrum.

Parky and the Yellow Submarine was the star attraction at **CheetahSoft's** stand. Parky is a penguin, and in the first of a planned series of games featuring the CheetahSoft Penguin, he searches for his lost brother on the sea bed. There are 91 screens which must be negotiated, sea creatures to avoid and various objects to collect. Price: £6.95.

Cheetah Marketing, sister company to CheetahSoft, was launching its cassette/data recorder. At £29.95 it has integral DIN socket and could make life easier with the aid of one minor adaptation: instead of pressing both Play and Record you only need to

Kempston new joysticks

depress one Record key.

Talisman on the Spectrum was one of **Games Workshop's** new releases. This fantasy boardgame is either for one or up to four players. Also from Games Workshop: D-Day for both QL and Commodore 64.

D-Day has been upgraded for the QL and includes over 200K of programming and 20K of computer intelligence. QL version costs £24.95, while C64 costs £8.95.

Gremlin was previewing *Supersleuth*, *In Dam Trouble* and *Xargon Wars*, while **Incentive** was exhibiting *Moon Cresta*, reviewed in HCW 100. Players were competing to win the original *Moon Cresta* machine.

Interceptor Micros was showing a large range of games. For the Commodore 64 there were *Front Line*, *Break Fever*, *Bigtop Barney*, *Caverns of Sillach*, *Empire of Karn*, *Exmon* and *Crystal of Carus*. *Halaga* and *Heroes of Karn* are for the Spectrum; *Heroes of Karn* and *Choppr Squad* run on the Amstrad CPC464, while *Villain* is for the VIC-20.

Kempston unveiled a new line of joysticks and interfaces. Top of the range is the *Formula 1*, based on the Pro 5000 series. It is self-centering and has dual fire buttons. Second in the range is the *Formula 2*, with pistol grip, top and base buttons.

The three new interfaces are the *Kempston Joystick* interface, *Pro Joystick Kempston*, *Pro* and *Centronics E*.

Llamasoft was exhibiting *Psychodelia*, while **Melbourne House's** *Hobbit* has now been translated for the MSX and Amstrad. A line-up of arcade games and utilities was being previewed, with the emphasis on the C64.

Micro-Gen's *Everybody's a Wally* made it's debut at the show. This multi-role arcade adventure has you in charge of five main characters. It's happy family time, with four of Wally's friends and relatives helping him in his quest. *Everybody's a Wally* is available on the Spectrum, and C64 and Amstrad CPC464 versions are planned. Price: £9.95.

Mirrorsoft revealed it's conversions of *Mr Men* to Amstrad, MSX and Atari. Also new are a range of educational and arcade games for youngsters.

Ocean was showing it's range of chart hits: *Daley Thompson's Decathlon*, *Gift from the Gods*, *Hunchback II*, *Kong Strikes Back* and *Match Day* were all there.

Orpheus exposed it's first

title for the Spectrum: *Underworld — The Village*. It's a text adventure written using the *Quill*, with 150 locations. Price: £4.95.

Also from **Orpheus — Megabase**, a database for C64 and *Oric/Atmos*. Available on cassette or disc, the program comes together with a comprehensive manual, and costs

£24.95 for the Commodore and £17.95 for the *Oric*.

Protek was exhibiting it's own range of joysticks, as well as a language course for the Amstrad CPC464. Interfaces were reduced in price to £16.95.

Software Communications had *Brian Jacks* promoting his *Superstar Challenge* game, while another point of interest

on the stand was the *Living Body*, which is initially available for the C64, with BBC version to follow.

Taskset had an Amstrad conversion of *Jammin'* and a preview of *Super Pipeline II*, while **Tymac** was showing off *Flyer Fox*, *Gandalf the Sorcerer*, *Type-Sniper*, *Type-Sniper* and *Bio-Defence*. For the most part, these are one-player 3D simulations.

Finally, **Vulcan** launched it's range of add-ons. Top of the range is the *Gunshot* joystick, while the *Harrier* is compatible with the BBC. Three interfaces will connect these joysticks to your computer, and the price ranges from £8.95 to £19.95. With these interfaces the *Gunshot* can be used with Spectrum, BBC and Electron.

```

How it works

- 10-110 sprite data
- 120 read post date
- 160-190 initialise sprites
- 210-450 title screens
- 460-470 calculation of time necessary to win
- 480-520 more introduction
- 530-2510 set up screen and sound effects
- 3000-3090 main loop
- 4000-4280 disqualified
- 5000-5220 finished course
- 7000-7040 data statements for x co-ordinates of left post, read by line 120
- 8000-8070 vision display

Hints: Do use the vision display: it is much easier. If you find the game simple or impossible, adjust the x decrement/increment in lines 3005 and 3010, the higher the number, the faster the skier moves. Also the y decrement in line 3060 could be adjusted to change the speed of the posts in the same way. Good luck, and do it for Britain!

Short cuts to character creation

Speed up the creation of
Spectrum characters with this
utility program by Tony
Houlton

Most home computer programmers find that at some stage there is a need to use larger graphics characters built up from a number of individual user defined graphic characters. We may also need to use the same large character, but facing in a different direction. This program will considerably reduce the time and effort needed in calculating the required POKE values.

To illustrate the use of the program we will go through the steps needed to create a 2 x 2 character representing a small aeroplane which can be displayed on the screen facing in four different directions. This involves calculating the DATA for 16 user defined characters; a total of 128 POKE values. Using the program we only need to define two characters with a total of 16 POKE values.

The computer will calculate the rest.

In Fig. 1 you will see half the outline of the aeroplane and the DATA values which must be calculated to generate these characters. These values have been included in the program as lines 9000 and 9010. Also by entering GOTO 8970 in the direct addressing mode, these two characters will be POKEd into the UDG areas 'A' and 'B'.

Since the full character is symmetrical about its longitudinal axis, a reflection in the vertical plane (i.e. the right hand edge of each character) will produce the two characters needed to complete the character. To do this RUN the program and select option 1 from the menu.

When asked for the line number, enter 9000. The old values (i.e. line 9000) will be displayed together with the new DATA values. You will now be asked to choose which graphics character you would like the values POKEd into. Press 'C' and then take the STOP option

when it is offered. Using the DATA still displayed on the screen, enter into the program 9020 DATA .. (the values shown without the final comma). Repeat the process again, but this time using initial line number 9010, character 'D' and program data line 9030.

You have now added two lines of data and should have four characters which can be combined to give the shape shown in Fig. 2.

The procedure is the same for menu options 2 and 3, while option 4 allows you to escape from the program.

To invert the aeroplane RUN, choose option 2, repeat procedure four times using lines 9000, 9010, 9020, and 9030 as initial lines; characters 'E', 'F', 'G' and 'H'; and storing the data in program lines 9040, 9050, 9060 and 9070. The four latest characters can now be combined to produce an aeroplane pointing down the screen.

Finally by RUNNING, choosing option 3, using lines 9000 to 9070 as initial lines, POKING characters 'I' to 'P' and storing the data in program lines 9080 to 9150, you will have the remaining eight characters needed to display the aeroplane facing left and right.

The whole process takes much longer to describe than to perform and half an hour's practice and experimentation should put you in command of a most useful programming aid.

The line numbering has been chosen to occupy an area which will not often be used when writing your own programs.

This means that the program can be loaded before you start to write. You should replace lines 9000 and 9010 with your own data.

If you don't want to delete the program when you have written your own program it is advisable to include a line such as _6999 STOP or 6999 GOTO (the last line number of your program).

An option to record the old and new DATA by means of a printer is also included.

The program can also be used to transform nonsymmetric characters, but you may have to combine a number of reflections and rotations (holding the DATA in intermediate line numbers) before the desired orientation is obtained.

Conversion to other micros
Line 7060 and similar lines set up a perpetual loop until a key is pressed. RESTORE A determines the line from which subsequent data will start to be READ. CODES Address 65308 is the first address of the area in which UDGs are stored on Spectrum. Characters are stored in groups of eight bytes, each group being lettered sequentially from 'A' to 'J'. Spectrum arrays start at 1 rather than 0, as is the case on some micros.

Variables
A number of DATA line from which values of bytes are to be read
F array to hold new DATA values
M array to hold old DATA values
B,C,D,E, transient variables used to hold values during calculations and whose values may change during a calculation
G value of first address in UDG memory of current character
H variable having a value between 0 and 20 used as a pointer to the chosen UDG character. Value is obtained from ASCII number of letter chosen
I,J,K,L counters used in FOR... TO...NEXT loops

How it works
 7000-7110 menu display and option selection
 7120-7220 vertical reflection routine. Each pixel in each row is read, if appropriate value is added to the row total and the final value stored
 7230-7240 prints old and new DATA values to screen
 7250-7330 offers UDG character choice and POKES values into chosen area of memory
 7340-7400 offers printer, STOP and return to menu options (note that lines 7230 to 7400 serve all the menu options)
 7410-7450 horizontal reflection or inversion routine. The values for each row of pixels are re-ordered. Value 1 becomes value 8, value 2 becomes value 7, and so on
 7460-7590 rotation through 90 degrees routine. The first pixel in each row is read; if used an appropriate value is added to the variable C; the final value of C then becomes the value of row 1. The process is repeated for the second pixel in each row and so on till all eight values have been found

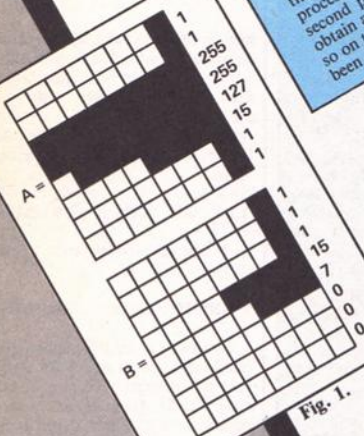

Fig. 1.

PEEKing the Amstrad's ROM

Part five of our in-depth Amstrad programming series by David Ellis shows you how a value can be returned to BASIC from a machine code routine

In my previous article I discussed how parameters could be passed via the new words, to the corresponding machine code routine. In this article we will see how a value can also be returned to BASIC from a machine code routine.

You may have found it isn't possible to take a PEEK at the ROM on the Amstrad. Figure 1 shows why.

The RAM uses up 64K of memory from 0 to &FFFF but the ROM also uses the same addresses as the RAM — from 0 to &3FFF (16K) and &C000 to &FFF (16K). The 32K of ROM therefore 'overlaps' the RAM at the two positions shown. If you take a PEEK at any address, then it is the contents of the RAM which are returned.

The lower ROM contains the firmware routines, whilst the upper ROM contains the BASIC. Up to 252 expansion ROMs can replace the BASIC ROM if needed by means of bank switching. You could therefore have a FORTH ROM, a Pascal ROM etc and switch between these and other upper ROMs as required.

Although the 32K of ROM is physically contained in one ROM, it is treated as though it is two separate ROMs. In normal use, the operating system switches between the lower and upper ROMs as required and this is quite invisible to the user. This is accomplished by providing routines to enable (turn on) and disable (turn off) the upper and lower ROMs separately. These routines are available from a jumpblock as follows:

- 1 &B900 Enable the upper ROM
- 2 &B903 Disable the upper ROM
- 3 &B906 Enable the lower ROM
- 4 &B909 Disable the lower ROM

Taking a PEEK at the ROM is therefore a simple case of enabling the ROM in question,

Listings 1 and 2

Machine code routine to PEEK the lower ROM (LROM)

Address	Mnemonic	Op Codes	Comment
&82D2	CP 2	FE 2	; are there two parameters?
&82D4	RET NZ	C0	; return if not
&82D5	CALL &8295	CD 95 82	; parameter 1 (address) to DE register
			; parameter 2 (ROM% address) to HL
&82D8	CALL &B06	CD 6 B9	; enable the LOWER ROM
&82DB	LD A,(DE)	1A	; load accumulator with the contents of
			; the address pointed to by DE
&82DC	LD (HL),A	77	; store the contents of the accumulator
			; to address pointed to by HL. i.e. to
			; the variable ROM%
&82DD	CALL &B909	CD 9 B9	; disable the LOWER ROM
&82E0	RET	C9	; return from subroutine

Machine code routine to PEEK the upper ROM (UROM)

&82E1	CP 2	FE 2	; comments as for LROM except that
&82E3	RET NZ	C0	; the UPPER ROM is enabled/disabled
&82E4	CALL &8295	CD 95 82	; parameter 1 (address) to DE register
&82E7	CALL &B900	CD 0 B9	; enable UPPER RAM
&82EA	LD A,(DE)	1A	; load accumulator with the contents of
			; the address pointed to by DE
&82EB	LD (HL),A	77	; store the contents of the accumulator
&82EC	CALL &B903	CD 3 B9	; disable the UPPER ROM
&82EF	RET	C9	; return from subroutine

returning the value of the required address, and then disabling the ROM before returning to BASIC.

We will do this by creating two new words — LROM and UROM. Two parameters will need to be passed with these words:

1 The address to 'PEEK' at

2 The address of the variable ROM%

The first address should be in the range of 0 to &3FFF, or &C000 to &FFFF. Addresses within the range &4000 to &BFFF will return the contents of RAM. The variable ROM% (which must be an integer —

hence the %) will be declared first so that an address will exist for it. If this is not done, then an error message will be returned.

Reading an address for the lower ROM will then take the form:

```
I LROM, address,@ROM%
```

and similarly for the upper ROM it will be:

```
I UROM, address,@ROM%
```

Listings 1 and 2 show the machine code routines for these two new words. We first make sure that there are two parameters available, and if so then a CALL is made to the PARAMETER routine. This will place the address we wish to PEEK in the DE register pair, and the address of the variable ROM% in the HL register. The upper or lower ROM is then enabled and the value of the address we require is placed in the variable ROM%. The upper or lower ROM is then disabled,

Listing 3 Basic program to PEEK the lower and upper ROM

```
10 MODE 2:DEFINT a:ROM%=0:PRINT "LOWER ROM"
20 FOR address = 0 TO &3FFF
30 !LROM,address,@ROM%:GOSUB 1000:NEXT
60 PRINT:PRINT:PRINT "---- UPPER ROM ----":PRINT
70 FOR address = &C000 TO &FFFF
80 !UROM,address,@ROM%:GOSUB 1000:NEXT
999 END
1000 IF ROM%>31 AND ROM%<128 THEN PRINT CHR$(ROM%);
1010 IF ROM%>160 THEN PRINT CHR$(ROM%-128);
1020 RETURN
```

PROGRAMMING

40 PRINT ROM% ;: NEXT ADDRESS

The BASIC program in listing 3 is interesting in that it searches both the upper and lower ROMs for ASCII characters between 32 and 127. RUN the program and you should see quite a few interesting words amongst the 'garbage' which is printed out.

Hopefully if you add these

and we return to BASIC. The ROM value is returned by printing ROM%.

For example, to take a look at the first 100 bytes of the lower ROM the following program could be used:

```
10 ROM% = 0 : 'create the variable ROM% first
20 FOR ADDRESS = 0 TO 99
30 I LROM, ADDRESS, @ ROM%
```

two new words to the ones already created (see previous articles if in doubt!) you will be able to disassemble some of the routines in both the upper and lower ROMs. Let HCW know if you find any useful ones as we may be able to put these to good use.

Next week we will continue with some more new words including UROLL, DROLL, MOVE and ZERO.

DO 'T VAT THE PRESS

There are strong reasons to believe the Chancellor of the Exchequer is planning to impose VAT on your magazine. Such a move would turn the clock back 130 years — the last tax on newspapers and journals was repealed in 1855. Since then 'No tax on knowledge' has been a principle agreed by all Governments, even in the darkest days of war. A free Press is a tax-free Press. No Government should be given the power to impose financial pressure on a Press it may not like. Tell your MP to say 'NO' to any tax on reading.

Issued by the Periodical Publishers Association, London

Alan Brack's game for the unexpanded VIC-20 has you taking on all comers in a fast-moving car race. Get set, and we're off!

Power racer

Power Racer 5000 is the name of the black car. You must manoeuvre it past the other racers without crashing.

Use all your skill and keep moving. If you stop for more than three seconds you'll be disqualified.

Whenever 10 laps are completed, you will be able to enter your car in a more difficult race. You have three lives and you score as many points as you can.

This game loads in two parts. Listing one contains instructions and graphics data, while listing two is the main program.

Use key **Z** to move forward, **M** for down and **K** for up.

This program uses all the unexpanded VIC's memory, so take care not to leave unnecessary spaces when typing.

How it works

45-84 sets up main screen
100-200 main program loop
600-620 crash routine
800-850 end of game routine
900-920 disqualified routine

Variables

R,R1 position of your car
X,Y moves all cars
V volume
S,S1,S2,S3 sound
LP lap
SC points
RC race level
C colour
0 to 09 other cars

SUMMERFIELD SOFTWARE

RETURN FROM PARIS

Fly, drive or hitch — Can 003.5 get the secrets home? Use your skills to choose appropriate transport on each stage of the journey.
BBC Disk only **£11.95**

TREASURE HUNT

Work your way around the map and find the two keys to the treasure. Beware, main roads are dangerous. Excellent use of Mode 7 graphics brings map reading skills alive — 2 programs, one uses references, one compass directions.
BBC **£12.00** Disk **£14.00**

TANK TRACKS

Program a tank to reach its base. Beware of minis and the "Edge of the World". Ideal as an introduction to problem solving. Programs consist of three commands — F = forward, L = turn left and R = turn right.
BBC **£9.95** Disk **£11.95**

★ ALL THREE ON DISK **£26.00** ★

EQUATIONS OF LINES: Demonstrates the graphs produced by equations — type in your own equation and see the graph appear.

ED 1 — includes: Think of a Word, Counting On, Pyc Charts, Simple Division.
Each **£6.95** Disk **£9.00**.

All these programs are used in our school — All were written with the Educational user in mind.

Prices inclusive of postage and packing. VAT not included — add 15%. DISCOUNT — 5% Schools. 15% Special Schools.

Summerfield School, 141 Worcester Road, Malvern, Worcs. WR14 1ET.

Number Painter

NOW AVAILABLE ON

THE MSX, AMSTRAD, BBC B

& ACORN ELECTRON

Fun for all the family with this fast moving arcade style game to improve mental arithmetic. Mr Painter can move around the screen at any speed you choose, picking up numbers to make a target number. Watch out for holes in the girders — and don't waste time or you'll get covered in paint!

Number Painter is widely available through High Street Stores, Independent Computer Retailers or direct from A.S.K.

For further information contact:
APPLIED SYSTEMS KNOWLEDGE LIMITED
London House, 68 Upper Richmond Road,
London SW15 2RP. Telephone 01-874 6046.

Is there life after the DTI offer?

Now that the half-price DTI offer to schools has ended, the question is, where will the interest turn now?

Without a doubt Acorn's share of the market, some 82.5% up to last December with one month of the scheme to go, means a future for the BBC computer for a long time to come. Whatever the developments and expansions of the near future, pressure from schools to make the most of their computers will encourage manufacturers to continue developing new ideas.

Security is an obvious problem. Schools haven't had to actively advertise the presence of micros — the DTI has done that. Time to think of a secure computer trolley, or the display of a suitable message when turning on the computer. There is room for a device on a ROM chip that will display the name and address of the school concerned — but not at today's over-inflated prices. This seems an ideal freebie facility for suppliers to use when tempting schools to buy subsequent machines, although the overall price of the BBC looks set to continue falling if sales are to continue.

The great peripheral race is on — disc drives are an obvious target and the market has become much more competitive over the last year. However, many schools are giving thought to a printer as the number one add-on.

Prepare for a full-scale assault on the ears! Music is the target of the month. The computer is seen as an answer to the non-musical teacher's prayers. The in-built sound facilities on the BBC are very versatile. Add the power of Music System from Island Logic, a real snip at £24.95, and children will become instant composers overnight.

John Henderson kicks off a new occasional series, looking at the BBC and education

Music System may seem expensive, but it's a real gem of a package. There are five modes of operation. A full Editor allows children to create their own notation and alter it where necessary. Keyboard provides a piano-like keyboard for use, and Synthesiser allows musical shapes to be created and saved.

The Printer option is self-explanatory, and hard copies are becoming increasingly important in the life of school children — someone always demands to see results on paper!

This option is Epson compatible and it works! So many programs with printer options fail to consider the setting of printers. The battle between the BBC computer and auto-line feed continues. One innovation is the option of a Linker program. This allows up to 10 music files to be linked together. Children could be telling the truth when they come home and claim to have written

a masterpiece.

A suitable collection of sample sounds is also contained in the package, on disc two. This adds to the user-friendly emphasis of this whole package — a must for schools and a real alternative to the perennial recorder and violin.

There has been great interest in the use of word processors to free children from the constraints of writing and allow the creative spirit to take over. The new Wordwise-Plus package will enable schools already familiar with word processing to really go to town. The extra facilities include a sector index to save pieces of text ready for input in a document, a fail-safe reminder of the filenames in use, and a way of removing the markers after use — perhaps the most frustrating aspect of original Wordwise.

Each school obtaining a machine on the DTI scheme also received software from the MEP as a free gift.

Factfile, a simple database program, proved useful for introductory work and many schools will be interested in a new suite of programs under the title Picfile (or Son of Factfile — CUP £15).

This consists of the Factfile program, with suitable amendments and a choice of tape or disc filing systems — someone's thinking of the needs of a busy school. Picfile allows datafiles created on Factfile to be displayed in the form of bar charts or scattergrams, thus extending the flexibility of this program. Also included are three sample datafiles, a Copier option, allowing the transfer of files to and from tape or disc, and a Printer option.

However, the latter falls into the obvious trap and won't work with some popular printers — the line-feed bugs should really be ironed out before these materials are marketed.

Cambridge University Press has started to send out Picfile on a seven-day trial basis. Perhaps it's time to trust schools and bury the piracy argument.

There has been plenty of interest in the full implementations of LOGO available for the BBC, and plenty of criticisms and doubts. The extra facilities available are off-set by the price of these packages, and the time involved in learning how to use them. Many schools are sticking with the less sophisticated versions of LOGO and allowing more children time to develop ideas.

Plans for the computer-age Domesday book are now well under way. School trials are almost complete and material is due in schools this summer.

Meanwhile the PODD craze continues — a sign of the real quality software schools can look forward to in 1985.

Shoot the Rapids C64 £7.95

New Generation, Bath, BA24TD

Have you ever paddled a canoe? Well, the control movement in Shoot the Rapids is fairly true to life. My wrist hurt after half an hour's paddling.

It's this control movement that makes the game stand out. You rock the joystick from side to side like a paddling action. Hold down the fire button and change to backwards paddle. Rock to one side only and paddling one side only turns the canoe. Alternatively you can use the keyboard, and define which keys for left paddle, right paddle and reverse. Actually, I found this easier.

So off you set, being carried downstream by the current, trying to negotiate your way through the slalom gates. Completion with the time limit puts you onto the next river. There are five rivers, with an increasing number of obstacles — rocks, speed boats and beavers, not to mention the river banks. Your objective is to set record times on each course.

It's a good idea, but unfortunately the graphics aren't special and apart from the paddle action, there's nothing to make it outstanding.

B.J.

River Raid MSX £11.99

Activision (UK) Inc, 15 Harley Hse, Marylebone Rd, London NW1 5HE

River Raid is a good arcade game with plenty of action and variety. It's not particularly original, but nonetheless well presented.

On screen is a top view of your plane which travels up a scrolling river. You can accelerate or decelerate and move to left or right. The banking move is a nice touch as the wings dip. Joystick or cursor keys are equally responsive and a few minutes handling soon gives a lot of confidence to cope with the hazards.

There are ships, balloons, helicopters and land based tanks to stop you. Your objective is to

destroy each bridge and go deeper into enemy territory.

When you've loaded the program the options screen allows you to pick your level of difficulty so you need not start at the beginning each time. You can play solo or with another player.

I particularly appreciated the good packaging — sensibly sized, tough vinyl case — with a picture of the screen layout. It saves buying the unexpected.

The only problem is the price. A good game but surely the pricing ought to compare with other versions of the game even though MSX is pretty new?

Fast Frog/ Norbert TI-99/4A £7

Pewterware, dist by Stainless, 10 Alstone Rd, Stockport

There are two programs on this tape. The first is another version of the old favourite, Frogger. This one is for two players: once one player loses a frog, it is the turn of the other.

There are three levels, and the frogs can move in any of the usual joystick directions. As usual you must guide your frog across a road and over a river. An added incentive to swift decision making is the passage of a street-sweeper. Extra points are awarded if you land in a safe haven with the 'P' logo in it.

The second program is worth just about every other program I have ever seen, put together. The aim is simple: guide Norbert from block to block on a pyramid, changing the colour of each as you go.

You must avoid various monsters, and as each pyramid is completed, so a more difficult one takes its place. You have three lives, and a running score and high score are displayed. Occasionally poor sprite coincidence detection permits you some leeway, which actually adds to the enjoyment of the game. Excellent!

This needs Extended BASIC.

Everlasting arcade

Arcade games are still immensely popular so here's a special treat for arcade addicts

Hubert BBC B £5.50

Visions, Strand Hse, Great West Rd, Brentford

No prizes for guessing what this game is about. Call it Hubert or Cubert, it's bounce around the pyramid time again.

This time your man is supposed to be painting the pyramid steps and the standard selection of nasties come bouncing around to splat him. One touch and a step is painted; I wish my home decorating was that easy.

There are eighteen pyramids to paint; then, rather like the Forth Bridge, you go back to the beginning and start again in a never ending frenzy. Mind you, unless you're an expert, you won't get halfway. It's a very harsh version; if you get

squashed about to paint the twenty-eighth step, you have to repaint the other twenty-seven all over again.

With new versions of much imitated arcade games I expect a new twist somewhere. But although it has the expected high-score tables, pause, mute and keyboard or joystick options, there's nothing to make this version outstanding.

The cassette insert offers big money for original game ideas and programs. Andrew Derodra, the author of this one, won't be qualifying for any of it. B.J.

Pitfall II MSX £11.99

Activision (UK) Inc, 15 Harley Hse, Marylebone Rd, London NW1 5HE

A superb game which is difficult to fault. Pitfall Harry, a cartoon-like character, moves through various beautifully arranged scenes featuring caverns, balloons and rivers. Your aim is to collect gold, find the Raj diamond, Harry's niece Rhonda and cat Quickclaw.

What usually annoys me about this type of program is the frequency with which you get killed and have to start again. Not here. As you progress you pass red cross stations. When you touch one of the nasties you are sent back to the last cross you passed. This affects your score and at first I was constantly at zero, but this needn't affect your progress. In fact you never die and you could continue scoring nothing.

A nice tune is played changing occasionally to suit the activity — good atmosphere without being annoying.

Movement is with joystick or cursor keys and spacebar which I found better especially on ladders.

An expensive but impressive game, making full use of colour, sprite graphics and music facilities. Hugely entertaining and relatively low frustration levels without being too easy.

You're 'e for the chop!

You stand to lose your head if you can't guess the word in Bruce Viney's game for the Spectrum. There's colourful animated graphics of both executioner and crowd

It is the French Revolution, and you have been sentenced to savour the delights of Madame Guillotine.

Your only hope of escape is to guess the mystery word, letter by letter, which appears on the wall of the Bastille.

Be warned — you can only have six wrong guesses — then chop!

Written on a Spectrum 48K, the program uses just over 11K, so it will run on either 16K or 48K.

There are liberal sprinklings of REM statements to help understand how it works.

The store of words at lines 200-230 can be expanded to 100 lines by altering line 115 to: LET x=(RND*100)+1.

The program will only accept lower case letters, apart from the normal break-into routines to sneak a look at the words, or enter new ones, so you must remove CAPS LOCK after loading.

How it works

11-74 set up permanent background
79-89 position of crowd faces
100-195 main loop
200-230 word store
300-330 data for funeral march
400-420 data for national anthem
1000-1030 prints correctly guessed letter
2000-2095 drops blade; prints out mystery word
3000-3150 introduction routine (used only once)
5000-5050 reprints victim; alters crowd faces
6000-6096 lifts blade
7000-7015 skyline data
8000-8160 redraws guillotine; resets crowd faces
9000-9086 UDG data

Variables

d determines position of blade
r points to appropriate routine for each guess
x random number to select word
c\$ dummy string to store letters correctly guessed
d\$ determines when word is guessed
f\$ crowd faces
g\$ guillotine blade
n\$ letter guessed
q\$ background colours
w\$ word picked from store

Aliard's Tome
C64
£6.99

Romik, 272 Argyll Ave, Slough
SL1 4HE

There are so many adventures around these days that new ones need to be at least a little bit above the average to be worth bothering with. Aliard's Tome is worth bothering with.

The basic theme is not exceptional — the usual castle/dungeon/caves to explore — but there are a few nice twists. Instead of having a limit to the number of items you can carry, each item has a weight. The heavier your total load, the faster your health runs out — much more realistic.

There are only 35 rooms and most you can get to easily. But some of the items you find, can't be used for quite a while. That

gives you clues about what you need to find first, and the flavour of how the adventure will progress. To me, the essential ingredient many adventures lack is a sense of humour; not so here. Examine the skeleton for example.

This is a purely text based adventure. There are no hi-res pictures to soak up memory without providing extra clues to help you progress. It's not earth shattering, but it's worth the effort.

**Tristan and
Isolde**
C64
£8.95

CRL

There are quite a lot of American games on the market and a few Hungarian ones, but this is the first German game I've seen. It's a graphic adventure, translated into English except the names of the rooms, which are still German. This doesn't detract from the playability of the game, it just looks odd.

The instructions sheet was presumably not the final version, as it was rather crudely duplicated and the characters as Kunibert and Kunigunde rather than Tristan and Isolde. The on-screen instructions were more helpful.

Commands are entered by single-key selections from a menu displayed at the side of the screen, which is very unusual. You have to guide Tristan around a castle in search of Isolde, who will then follow him back to the start. There are a few items to pick up along the way, and some monsters to avoid, of course.

As adventures go, this one is easy. Success seems to require luck rather than skill, there being very few puzzles to solve on the way.

M.N.

**David's
Midnight
Magic**
C64
£12.95

Ariolasoft, 72 Westfields Ave,
London SW13 0AU

This is a pinball simulation game for one to four players. On loading the game you select the appropriate number of players and away you go. No joystick is required you use the keyboard; the logo key for the left flippers and the shift key for the right.

There are suitable sound effects as the ball whizzes around hitting targets and rebounding off cushions. The table occupies one half of the screen and the score the other half. I didn't find the graphics very clear and prefer other versions of this game.

There are many ways of scoring points and collecting bonuses. If you don't worry about why you have scored but concentrate on belting the ball and stopping it disappearing down the bottom slot you will enjoy this. As you become more skilled you can change the plunger spring tension via the function keys to gain extra control.

At the end there is a high score board. The instructions say this is automatically saved to disc, but I found my disc kept crashing at this stage after a lot of head banging so I have reservations about the quality of the programming.

This needs a disc drive. L.C.

**Weird and
wonderful**

**A pageful of adventures to
really get you thinking. See if
our reviewers could cope**

**The Witch's
Cauldron**
48K Spectrum
£6.95

Mikro-Gen, 44 The Broadway,
Bracknell, Bucks

Wicked Witch Hazel has punished you by turning you into a toad, but has allowed you to keep your human mind in order to seek out spells and concoct potions to regain human form.

You are imprisoned in her lair on the island of Molvagn with evil Mochtuper to guard you. This adventure has a vocabulary of 300 words and 100 different locations.

After death you can restart without reLOADing; hurra! The redesigned character set is very easy to read and each location is colourfully and clearly illustrated.

Starting on the couch in the Parlour, I managed to collect a sheet of music, gold ring, magic mirror, some soot — which turns you into a bat, eaten by Mochtuper — read messages written in the dust and mirror and drink Whiskey. But it was all Irish to me, as I continually ended up in a mousehole — in a mousetrap, unable to answer the mouse's riddle, so he ate me!

**Cadcam
Warrior**
C64
£9.95

Tasket, 13 High St, Bridlington
YO16 4PR

This should put a stop to the software writers' competition to see who's game has most screens. It's not worth trying to beat 8192.

All the screens are different, but then, like snowflakes, they're basically the same. Each is two sides of a metallic plate, part of the inside of a cryo unit of a CADCAM machine. The sides are connected by holes through which the droid you control nips to dodge fireballs or chase the variety of marauding nasties that he must destroy to reach the next screen.

Although it's basically a shoot-em-up game, there is an adventure element to it. To get to the last screen you either go via the other 8191, or, by mapping the layout, take short cuts.

The game comes complete with a booklet giving a lecture on CADCAM and a preamble to the game scenario, both interesting but superfluous. I'm not a megazapper myself, but those of my acquaintance who nip twice round Attack of the Mutant Camels before breakfast were unimpressed. A landmark in screen numbers perhaps, but not one of the greats.

Commodore Special

**We've got a
light pen and a
logic circuit
analyser for
you this week**

Light Pen C64 £28

Stack Computer Services, Free-post, Bootle, Merseyside L20 0AB

The light pen has always been an invaluable aid to computer aided design. It is also of value as an aid in education and for drawing and computer art. Thanks to the 64's hardware, the pen simply plugs into joystick port one and the co-ordinates of a point on the screen is obtained by interrogating two registers.

The pen comes with two cassettes. The first contains 10 games and the second a suite of routines for the creation of high resolution designs.

The pen comes with an excellent handbook which gives detailed information on how the pen operates and how to program it. The pen will operate in two modes of resolution. First it will identify eight by eight blocks of pixels (i.e. normal characters) giving a resolution of 25 rows of 40 characters.

Secondly, it will recognise individual pixels giving a resolution of 320 by 200. The games supplied use the low resolution mode. The operation of the pen is simple. You point it at the selected area of screen and touch two metal contacts. When the contacts are closed, the software interrogates the

relevant registers and the co-ordinates of the pen tip obtained.

The games supplied included Othello, Draughts, Life and a crossword generator. The standard of the games was generally average and they are more of value as sources of idea than as games. The high resolution package, on the other hand, is first class. Using the software you can draw lines, circles, quadrilaterals or draw freehand on two screens.

There is also a wide range of commands including fill, invert, zoom, pen averaging, merging screens and put (for copying areas), which enable you to produce complex designs and pictures. A routine for producing hard copies is a welcome addition.

Stack is clearly keen to push the computer aided design capabilities of the pen and supplies electrical and architectural templates as an aid. I can certainly imagine the average user wanting such an aid to help plan furniture, but I can't quite see the 64 as a real CAD computer.

This is an excellent product, which is good value even if you leave out the 10 games, which came free. The hardware is well made and the instructions first rate.

Digital Lab C64 — disc

Digital Lab is a well thought out program which allows you to analyse logic circuits you construct on the screen. The manual which accompanies the disc is very clearly written for the end user and is printed on high quality paper.

A spreadsheet type of approach is adopted to the building up of the logic circuits. This sheet consists of 99 rows and 99 columns. To build up a circuit is very simple. You move the cursor to the required position on the spreadsheet and press RETURN to freeze on to this cell.

Pressing return also activates the menu cursor. The menu consists of various logic elements, e.g., a two input AND gate, an inverter, links and junctions etc. You move to the symbol required and press RETURN again and a copy of the symbol will immediately appear in your chosen cell. You repeat this process, moving around the spreadsheet adding in symbols and links as you go.

The program has inbuilt validity checks which prevent you creating impossible connections as you go along. For example, a device having three outputs cannot be immediately followed by one having a single input. You have

to specify by means of the link symbols where each of the outputs go.

However, the purpose of the program is to analyse the circuit you have constructed. You have the facility to label every input and every output using letters of the alphabet, i.e. A, B, C, etc. The program then carries out a logic analysis and displays a truth table for your circuit. This truth table is displayed in a window superimposed over your circuit and when the truth table is large you can scroll it, if necessary, independently of the circuit.

Finally, disc handling routines allow you to save your circuit to disc as a file, rename or delete it.

I can't fault this program or the 57-page manual. The program never crashed and it always behaved as expected. The manual contains several keystroke-by-keystroke worked examples. It was very clearly written and in working through it I did not encounter any printing errors.

I can only think of ways of extending the facilities. I would have liked a print out option which would allow the circuit and truth table to be dumped to a printer, ideally with options for non-Commodore printers.

Choplifter C64 £12.95

Ariolasoft, 72 Westfields Ave,
London SW13 0AU

This is a rescue mission game. You fly your helicopter to rescue 64 hostages and airlift them back to base.

The graphics and animation are good. You control your helicopter with the joystick and move it across the landscape. When you see some of the hostages running around you then set about arranging a careful touchdown. While you are down you need to keep a lookout for tanks.

The hostages behave realistically, running around in all directions, converging onto the helicopter when it lands. When you have collected 16 you must

fly back to base.

In addition to the tank you will encounter jet fighters who use air-to-air missiles. There are also air mines which home in on you. All in all it's quite a mission. Fortunately you have three lives.

The screen displays the number of hostages, killed, on board the helicopter, and returned to base. I liked playing this. Deciding where to land and outwitting the tanks gave a certain satisfaction. However, my copy kept on crashing out and resetting the computer which was annoying.

L.C.

Software Star 48K Spectrum £6.95

Addictive Games

The object of the game sounds original; you are the head of a software company, just starting out with one program.

Your aim is to get one product to the top of the charts, and make a profit. But the software market is highly competitive, and the going is tough.

If Addictive was to play with this program, they'd fail at an early stage. This bright idea is just a business simulation program, and a poor simulation at that.

Several decisions you make are quite trivial. Are your advertisements honest, or a 'hype'? Do you provide your workers with an incentive, or discipline (yes or no)? There are some real

decisions: how much advertising, when to start developing new software, and when to launch it, but the trivial stuff gave the impression that, as an entrepreneur the player doesn't have any real control.

There are too few graphics, just page after page of questions, and figures; the only slight excitement being the rise of your game up the software charts.

Heathrow International Air Traffic Control 48K Spectrum £7.95

Hewson Consultants, Hewson Hse, 56B Milton Trading Estate, Milton, Abingdon, Oxon

A must for any aspiring Air Traffic Controller, this program is beyond those whose main computer interest is games. For a start, you must understand bearings and assimilate the complicated instructions contained in a small twenty page booklet.

After LOADING, a menu appears offering seven levels of play and a demonstration. By watching this repeatedly, in conjunction with the booklet, the instructions needed to land the aircraft can be learnt. Then it's suggested that Basic Vectoring (Level One) be tried.

The major part of the screen has the radar display, with the three or four holding stacks with circling aircraft, and in the centre are the runways with, at either end, the ten miles of centrelines. At screen right is the stack display for the aircraft showing altitude, heading and speed. The top displays your radio communications and any responses made.

I'm sure that, with plenty of practice, one would master the problems of landing the aircraft safely before the thirty minutes time limit's up.

Stimulating simulations

If you like to see how the experts do things then here's a page of simulations for you

Superchess 3.5 48K Spectrum £9.95

CP Software, 2 Gleebe Rd, Uxbridge, Middx

CP Software has always produced the best Spectrum chess programs. The latest version of the marvellous Superchess programs continues this trend. Not only does this program play a powerful game, but it offers a wide range of features.

For microdrive owners, one of the most attractive is the ability to save the program on microdrive, directly through a menu option. You can also ask the computer for advice on a move, or force it to play your move for you. If you believe you are being too badly slaughtered, then you

can handicap your opponent by forcing the computer to move without thinking more about it. You can even change player positions, leaving it to sort out your mess, while you play from it's strong position!

The screen display is rather plain and unimaginative, but there is so much going for this program that such a slight blemish can easily be overlooked.

Zaga Mission C64 £7.95 tape

Anirog

Sorry Anirog, I don't like this one. I know the graphics are brilliant and the idea has been successfully implemented by other companies. I just didn't enjoy it.

The mission is to fly your helicopter through a maze of walls and security doors once haywire to reach the next refuelling pad, and so on until your destination. The walls have arches, tunnels and holes that must have been the work of a team of horribly demented brickies.

The 3D effect is superb but it takes getting used to. I flew more by the height gauge and watching the shadow than by watching the copter. Watching the helicopter often resulted in crashing on what looked like a clear path. No doubt I could learn, but handling the helicopter was slow and stodgy so I couldn't summon up the enthusiasm. I couldn't watch the red and white bricks for long without getting eye-ache in any case.

Perhaps I'm unfair; you might love Zaga Mission. I'd say it's a 'try before you buy' game. B.J.

```

This is a bat and ball-type game for the BBC B. The idea is to stop the ball reaching the bottom of the screen by rebounding it against the three walls with your blue bat. One point is scored each time you hit the ball, and your present score and number of lives are displayed at the top of the screen. You start off with five lives and a high score routine is included.

How it works

0-5 titles
 10-20 set MODE
 30 speed up auto-repeat
 40 remove flashing cursor
 50-130 define graphics
 140 redefine logical colour
 150 set background
 160 title page
 170-350 set up screen
 360-550 move ball, make re-bounds
 560-590 move bat
 600-610 put score and lives at top of screen
 620 return loop
 630-670 end of game routine
 680 stop auto-repeat
 690-700 another go?
 710-800 return to title page

Variables

The world of sprites

Have fun playing around with sprites on your Commodore 64. Iain Murray explains all

One of the best features of the Commodore 64 is its sprite graphics facility. Sprites (also known as movable object blocks or MOB's) are large user-defined characters which can be moved around very easily from BASIC.

The normal method of using 'sprites' on other machines is to plot each point of the object one at a time, until the whole object is built up. This takes up a lot of processor time, and can usually only be done in machine code. Also, as the sprites are really on the text screen, each 8 x 8 square can normally only have one colour, and this can lead to odd effects when two of these 'pseudo-sprites' meet one another, and usually existing text or pictures are destroyed by the new graphics.

The 64, however, has a separate video chip to do all the work for you, and it can move sprites around virtually instantaneously, and also offers extra sprite-handling facilities. The 64's sprites are not part of the text screen, and can be moved and coloured completely independently. Individual sprites can be programmed to pass behind or in front of the layer of text and each other. Colours, too, are improved on the 64: sprites can have up to three colours, plus the background, and these can be different to the text colours used, which can also have the three colours per square, so up to seven colours can appear in any 8 x 8 square on the screen.

An unexpected bonus of this graphical wizardry is that it uses up no more of the computer's BASIC memory. Up to eight sprites can appear on the screen at once, though any amount of sprite data may be defined in memory for use later.

The location of the data is generally unimportant (if it doesn't interfere with anything else) as a simple pointer tells the video chip where to look for each sprite. These pointers are located at memory addresses 2040 to 2047 for sprites 0-7 respectively. The number in these locations is one-sixty-fourth of the actual start address of the sprite data. Hence if your sprite data begins at 704, the value of the sprite pointer will be $704/64 = 11$.

More than one of the pointers may point to the same data area, e.g. all pointers could be set to 11, resulting in eight

identical sprites on the screen. The sprites have a screen priority, dependent on their number, though they can individually be set to pass behind or in front of the text layer. Hence 3D effects are very easy to create.

The sprite data itself consists of 63 consecutive bytes of memory. Each bit of this (eight per byte) can either be 'on' or 'off' (zero or one), and this pattern corresponds to the pixels of the sprite which are to be lit or not, e.g. if location 704 contained, say, 99, the first byte of the sprite would be:

make sure the program you use can print out the sprite data to the screen or a printer.

As mentioned earlier, the sprite memory location pointers are at locations 2040 to 2047, and give the start location of the sprite data. The other sprite functions are controlled from a block of memory starting at 53248 up to 53294. From BASIC, this block is usually accessed by setting a variable, often SS or V, to 53248 and adding on the required amount for the other locations. This is the method employed in the following descriptions.

This gives us directly the pixel pattern of the sprite on the screen — bits 'on' will appear as the sprite colour, while those 'off' will seem transparent, allowing the background colour to show through holes in the sprite. These bytes of pixels are arranged in three columns of bytes with 21 bytes in each column, giving a sprite with 24 x 21 pixels.

For normal BASIC programs, the sprite data is stored in DATA statements, and it is POKEd into memory at the start of the program ready to be manipulated as required.

Obviously, with a complicated sprite, the data may take a while to calculate from a sketch, but a number of sprite creator programs have been published. These allow you to see the sprite on the screen as you create it, and you aren't concerned with the numbers at all. However, if you plan to use the sprite in another program,

Other graphics modes also have data storage in this memory area, but we will only look at those concerned with sprites at the moment:

V - V + 15: X and Y co-ordinates for sprites 0-7. These registers contain the X and Y co-ordinates of the sprites, with respect to an origin in the top left of the screen. There is a border around the screen, and hence sprites can move off screen under this border, like a picture behind a frame. The actual co-ordinates of the visible part of the screen are as follows:

X=24, Y=50 X=344, Y=50
X=24, Y=250 X=344, Y=250

Hence any part of a sprite outside this range will be partly obscured by the screen border.

V + 16: X co-ordinate most significant bit (MSB). As values

up to only 255 are possible in memory locations, another register is needed to fully specify the C co-ordinate. This is at V + 16, and for each bit set in this register, the corresponding sprite will appear on the right hand part of the screen, e.g. to put sprite 0 at X=300 and Y=200, type:

POKE V+16,1:POKE V,300-255:POKE V+1,200

V + 32, V + 33: Normal screen background and border colours are in this data block (53280, 53281). Colours are given by the numbers 0-15 (0-black, 1-white, 2-red, etc).

V + 39 - V + 46: These registers contain the colours of sprites 0-7 respectively. The numbers of the colours are as for the screen and border colours.

V + 21: Sprite enable register. Bits 0-7 are enabled (visible) or not. Hence, to see a sprite, it's bit in this register must be set to a '1' e.g. to turn on sprite 6, type POKE V+21,64 (as 2 to

the power 6 is 64).

V + 24, V + 29: Vertical and horizontal expansion. As with the sprite enable register, each bit of these registers corresponds to a particular sprite, but in these registers a set bit indicates that a sprite will be double its normal size in that direction, and hence gives four possible sprite dimensions (small, large, long, tall).

V + 27: Background priority. Normally, sprites will pass in front of the text on the screen, but setting the appropriate bit in this register will cause the sprites to pass behind the text layer.

V + 30, V + 31: These locations cannot be POKEd to, but by PEEKing at them will give sprite collision details. Bits set in V+30 indicate that the corresponding sprite is in collision with another sprite. Similarly, bits set in V+31 indicate a collision between that

The world of sprites

sprite and a text character on the screen.

These registers do not affect the movement of the sprites, but make collision detection easy (only those parts of the sprite which are visible will collide at all!).

V+28: Sprite multicolour select. Normal sprites are all one colour, but setting the relevant bit in this register will put a sprite into multicolour mode. Now the sprite data is read by the computer in bit pairs — pairs of pixels on the screen. If both are empty, then those pixels are invisible as before. If only the left hand pixel is on then BOTH pixels will be the sprite colour as before.

If only the right hand pixel is on then both will be sprite multicolour 1 (this colour is at location V+37), and if both are on then they will both be sprite multicolour 2 (at V+38). These colours are defined as for the screen colours, but unlike the sprite colour registers, these two colours are common to all multicolour sprites. Multicolour mode allows quite detailed sprites to be built up.

These are the facilities available on the 64 to manipulate the sprite picture blocks. A good deal of fun can be had from playing around with sprites.

It's easy to complain about advertisements. But which ones?

Every week millions of advertisements appear in print, on posters or in the cinema.

Most of them comply with the rules contained in the British Code of Advertising Practice.

But some of them break the rules and warrant your complaints.

If you're not sure about which ones they are, however, drop us a line and we'll send you an abridged copy of the Advertising Code.

Then, if an advertisement bothers you, you'll be justified in bothering us.

The Advertising Standards Authority. ✓
If an advertisement is wrong, we're here to put it right.

ASA Ltd, Dept 2 Brook House, Torrington Place, London WC1E 7HN

This space is donated in the interests of high standards of advertising.

Thrusta C64 £5.95

Software Projects, Beardbrand Complex, Allerton Rd, Woolton, Liverpool L25 7SF

This is a simple arcade game. You are on the planet Spectra with your spaceship, Thrusta 1, and you push boulders off platforms to squash the monsters hatching out of the eggs at the bottom of the screen, while avoiding the lethal guards. There are eight monsters to a screen, and about 10 different screens, all with the same pattern of platforms but different monsters and guards.

I thought at first that the game had a serious bug, because the guards appeared and the eggs started hatching, but there was no sign of my spaceship. However, when I pressed Return

the game re-started complete with a spaceship, which was a great relief.

It's quite good, but not particularly difficult, so it's more suitable for fumble-fisted amateurs than arcade aces. You start off with three lives and earn another for every three screens you complete, which is enough to keep an expert going until terminal boredom sets in. If you find a lot of arcade games too difficult though, take a look at this one. **M.N.**

value for money	60%

Perils of Bear George C64 £6.95

Cheetah Soft, 24 Ray St, London EC1

George is a cute little bear. He wanders through an orchard under your control, tilting his head up occasionally to eat one of the apples which are falling from the trees. A squirrel dodges about above him, dropping nuts on his head which stun him and prevent him from moving for a few seconds.

Just when you are beginning to get the hang of catching apples, winter comes and George has to make his way across the snow to a cave to hibernate, avoiding skiers and other hazards as he does so. Then it's back to the orchard again.

This game has very attractive graphics, and I liked the music — Teddy Bear's Picnic, of course — but that doesn't alter the fact that it is essentially boring. Catching apples is not a very exciting activity; it's not easy to do, and the rewards when you succeed are not sufficient to justify the effort involved.

The delays while you wait for George to recover consciousness after being hit by a nut or a skier add to the tedium, and I really can't recommend this one. **M.N.**

Cuthbert and the Tombs of Doom C16 £6.95

Microdeal, 41 Truro Rd, St Austell, Cornwall

'In the year 6502 BC Jesmon Hys of Nodion discovered ye ancient tombs of Ledromica.' Cuthbert, who has found this ancient manuscript has decided to enter the tombs in an attempt to reach the Temple of Ra, if he is successful he will become the high priest of Ra and therefore virtually invincible!

Before Cuthbert can attain this goal he must negotiate about 200 chambers filled with nasty beasts such as Ghostly Ghouls, Beastly Bats and Sadistic Saxaphones. These teleport into the chamber which Cuthbert is exploring and if they touch him it can be fatal. Ra has given Cuthbert the power to zap these nasties, but only in a horizontal direction.

The game has a number of other features, and these make it so good that it is more complex than usual for a C16 game.

The graphics are the best I've seen on the C16 so far and the movement is very fast while still smooth.

I found it very enjoyable to play and also quite difficult, it will take me a long time to finish this one. If you have seen this on the C64 and liked it, then rush out and buy this version, because it's just as good. Quite an achievement!

Mix 'em up

Take your pick from this mixed bag of programs

Heathrow International Air Traffic Control Amstrad CPC464 £7.95

Hewson Consultants, 56B Milton Trading Est, Milton, Abingdon, Oxon

This fascinating simulation encompasses the problems associated with the work of an air traffic controller.

Two locations are offered, each having eight levels of difficulty.

The objective is to land ten aircraft within a set time limit. A full report based on your performance is given at the end.

Your responsibility is only for planes that are landing, though avoidance of outgoing traffic is essential!

The main display is a radar scan depicting the location and altitude of incoming aircraft. The runways and approach flight paths are shown at the centre.

On the right of the display are listed all the various parameters and their values for each plane. Each type needs to be landed within its individual limits, approach speed and altitudes being critical.

Each plane needs to be Localised on its approach to the Glide Path, then Established before acquiring Final Approach for a safe landing.

Accompanying the cassette is a comprehensive instruction booklet, which is easily understood. **D.H.**

value for money	90%

Colossus Chess 48K Atari £9.95

English Software, 50 Newton St, Piccadilly, Manchester M1 2EA
Colossus Chess is a formidable chess program and probably rates as one of the best of its kind.

It contains an opening 'book' of approximately 3000 moves which allows Colossus to consider the vital starting moves and hence play an intelligent and aggressive opening. Coupled with its ability to consider over 450 moves per second, it is hardly surprising that it has an estimated British Chess Federation rating of 150 (1800 ELO) and has consistently beaten such opponents as White Knight II, Cyrus IS and Sargon III.

All required data can be quickly entered via the cursor and return keys. The level of play is dictated by the amount of time the computer is allowed to consider its move. This can be from one second to several hours.

Colossus allows you to set up the board for a problem, run through a completed game or take back any of the previous 120 moves. It will also demonstrate your best move. You can also stop it's thinking to force it to use the best move already thought out. Colossus is also capable of recognising most situations and countering aggressively.

Truthfully it is the best computer chess I have ever seen and I recommend it to any Atari owner as the best chess available for this machine, beginners and experts alike. **A.K.**

Brain stretching!

This is a computerised version of the familiar game of Simon. The computer will play a sequence of musical notes and display coloured blocks on the screen. You must try to repeat the sequence using the keys: R, Y, C, B.

Each time you complete the sequence, you will score one point and the length of the sequence will increase by one. To make life more difficult, you must complete the sequence before you run out of time. Your time limit is determined by the difficulty level, which you can choose at the start of the game.

Hints on conversion

This game uses many of the features peculiar to Commodore machines and conversion to anything other than the Commodore or VIC-20 would necessitate completely rewriting the program.

Commodore 64 owners might find the following hints useful.

- 1 SCNCLR is used to clear the screen
- 2 DO... LOOP UNTIL loops must be replaced with a conditional GOTO jump
- 3 The sound commands must be POKEd in

How it works

- 40 selects text/graphics mode and disables the shift Commodore key
- 50-70 titles
- 80-100 set messages
- 110-150 instructions
- 160-180 wait for space bar and randomise program
- 190 clear screen
- 200-240 select difficulty level
- 250-320 main control loop
- 330-360 display correct sequence
- 370-380 give score
- 390-430 run program again
- 440-520 select random box/sound
- 530-670 display sequence
- 680-800 your turn to try sequence
- 810-1090 display graphics blocks and make sound

Variables

SC score
 BS sequence of notes
 ZX length of sequence
 A,AS random number and letter
 CS substring of BS
 MS(x) holds messages
 ES,ZS,X,AC,XX,XY general variables
 TT time limit

Use your powers of memory in this Simon-type game by HCW regular Steve Lucas. It's for both the C16 and plus4

QL Bookware

One more thing. None of the books make clear the following sequence: *If* drives empty and power off *then* switch on. Insert Psion or other cartridge in drive 1 (left). *If* drives inactive *then* press RESET. *If* display = TV *then* press F2 *else* press F1. The QL will then look for a program called 'boot' (or 'Boot', for that matter) on the cartridge in drive 1. If successful, it will LOAD and RUN it; this will start QUILL, ABACUS, EASEL, ARCHIVE or any other package. All clear now, so on to the books.

Sinclair QL User Guide by Lionel Fleetwood, £7.50 from Sigma Press, aroused my hopes as I opened it. The contents are well sub-divided and offer different entry points for different levels of readership; I was also delighted to find an index. No, this is not the manual you get with the QL in spite of the identical title.

Those are all the good things I can say about this book. It is riddled with mistakes, and few of these can be printers' errors. The author includes many so-called keywords which don't exist in SuperBASIC, such as LGO, INVERSE and CAT. He fails to state whether certain words should be used in SuperBASIC or ARCHIVE, and gives many examples in which proper words are used wrongly.

In several cases his recommended sequences of key-presses have the wrong or no effect. He is confused about the use of printers with EASEL (but so are several other authors). The charitable view is that this book was written with aid of a pre-production QL; it is certainly inapplicable to either the 'PM' version with 'dongle' or the 'JM' version without. Score one out of ten, a definite one to avoid.

Desk-Top Computing with the Sinclair QL by Barry Miles,

If you're new to the QL, you may like to introduce yourself to the machine with the help of the written word. This week Colin Wilton-Davies looks at introductory books

£6.95 from Hutchinson, is one of a series from this publisher. Most of the book is taken up with a description of the Psion software. This is quite easy to read, but it is descriptive rather than instructive. A few more examples and a lot less chat and photographs would have pleased me better. SuperBASIC is covered in a way which is adequate for reference by a user but not for learning by a newcomer. The method used is to give an alphabetical list of keywords with fairly full comments and short examples. Not much to say about this book — you'll see why in a minute! Score five out of ten (yes, there's an index).

There are probably two main reasons for buying a book which will introduce you to a computer. One is that you are seriously thinking about getting the machine, and would like more information than the advertisement or brochure has to offer; you may also hope for a non-partisan view. The second is that you have just

unpacked your new machine and find that the manual is not only enormous, but has no index.

I have therefore chosen to review three books this week, which I think try to satisfy these approaches to the QL. One of the great features of the QL is the bundled software which comes with it, and no introduction to this machine should fail to cover the suite of Psion programs. For this reason, I have classed a book sub-titled *A Guide to the Sinclair QL* in another category.

Reading these three books, which must be intended for people who are newcomers to the QL, if not to computing itself, I am dismayed to find common misconceptions about Microdrives. Some of these are serious enough to corrupt data and programs on the cartridges, so I feel I must precede the reviews by stating two Golden Rules for Microdrivers on the lines of 'clunk-click every trip': 1 Don't power on or off with a cartridge in any Microdrive

2 Don't reset when a Microdrive is running

These are the laws of the Medes and the Persians, but it is not necessary to extend them further. If you neglect them, you will swiftly corrupt something which may take many days to replace. On the other hand, I have never found any harm arising either from resetting with a cartridge in a *stationary* drive or from cautiously pulling out a cartridge from a drive which won't stop running. In the latter instance, you may well get an incompletely saved file, but not corrupt files.

Introducing the Sinclair QL by Garry Marshall, £6.95 from Hutchinson, is from the same series as the above book, and covers almost exactly the same ground! I find this very strange indeed. The review of the Psion software is more concise, and no less readable, but examples of use are even fewer. SuperBASIC has a very similar annotated list of keywords as Miles's book, but the list is at least preceded by a short introductory chapter. This does start the absolute beginner at the shallow end; what a shame that the first command used is 'LET', which is redundant in SuperBASIC. There is an index, so score is five and a half out of ten.

Why would anyone want to publish two books at once which are so nearly identical? Certainly nobody should buy both. On looking through the programming examples in the SuperBASIC sections of the two books, I found many which were identical both to each other and to those in the User Guide which came with my QL. Shock, horror, scandal! Did the series editor bribe Nigel Searle to write the forewords so that Sinclair wouldn't sue for breach of copyright?

HOME COMPUTING WEEKLY

Title: The Urgently Needed Parent's Guide to Computers
Author: Brian Williams and Richard Tingey
Published by: Addison-Wesley
Price: £9.95
Reportedly, everything you need to know about computers.

Title: Microcosm
Author: Hal Gashtan
Published by: Lazy Summer
Price: £6.95
Highly illustrated puzzle book. Win £1000 and a trip to the States by Concorde.

this caused the mains function box to trip and thus resulted in loss of power.

I wasn't very popular for a few minutes as the computer stopped working. The trip was switched on and as far as we could see, no harm had been done. When the game finished it became clear that something had happened. The screen was full of different coloured squares all flickering about.

On trying to enter another program we found it wouldn't work properly and what came up on the screen was in black and white, we had lost the colour. Fortunately the TV channels appeared OK, but not quite as perfect as they should be. Somehow the computer channels on the set had done a bunk and no way could we get them back. We had the computer changed and everything is back to normal.

I have never seen any warnings on TV sets about this trouble occurring, and would like to take this opportunity to warn people.

D J Osborne, Maidstone

Fred's Fan

With reference to your reviews in your December issue, I was surprised to find a so-called review on a game just released by Software Projects under the Supersavers label, called Fred's Fan Factory.

I would have thought that you would have the responsibility to your readers of being objective in your reviews, so what went wrong with this one? Your D.M. requires a bit of instruction on how to do a proper unbiased review of programs, like first of all finding out all the facts before putting pen to paper and possibly spending more than two minutes on a program.

As far as his comments on instructions — well! Software houses get it wrong too sometimes, and I know there's no excuse for instructions being missing, and under these circumstances how can a review be done at all, if you didn't know what the object of the game is? What about a phone call to Software Projects? After all they sent the game to you in good faith.

To help D.M. get the best out of the game, the

instructions and description are as follows:

There are a total of five screens. In order to progress to the next screen, four balloon men must escape through the top row of each screen, via the escape hatch. The hatch will only open when the balloon men have collected jewels to the value of the screen level times two, eg two jewels screen one. No jewels have to be collected on screen two.

Hidden jewels increase your score if found.

The object of the game is to reach and conquer screen five. Beware of the spinning knives, fireballs, sparks and explosives.

I hope these instructions help.

Pat Norris, Worthing

Thanks for your help, Pat. However, our reviewers are instructed to treat the software as if they'd bought it over the counter, and if there are no instructions, then that must be commented on.

Our reviewers have nearly all been working for us from issue one, so they have a wealth of experience. You must remember that software reviews are a person's opinion on something, and as such are entirely subjective.

You're just as likely to disagree with a film or book review as you are a software review, and it's all very healthy. We don't claim to give the definitive view on anything — but what is a fair comment on the product as the reader finds it.

Top 20 teaser

Why does the Gallup software chart continue to list the VIC-20 and Atari, but not the Oric/Atmos?

Take for example the week ending January 15. There was no Atari software in the top 20, and Hunchback at number 20 was the only VIC-20 software to feature.

But Football Manager (number five) and Manic Miner (number eight) are both produced for the Oric/Atmos, and so incidentally is Hunchback, making three chart positions, which is more even than the Electron!

The Oric/Atmos might have faults, but as a games machine it's second to none, and we're talking

about games software. Isn't it time that the Oric/Atmos was given it's rightful place?

Brian Peters, Leeds

We have to be selective, obviously, about which computers we include in the Gallup software chart, and the reality is that all the other computers have larger user bases than the Oric/Atmos. However, we do still feature listings and software reviews for this computer, so we do continue to support it in other ways.

Key facts

I'm relying to Simon Chell's letter, HCW 97. I couldn't agree more about the Spectrum Plus keyboard. It is supposed to be professional — well the Texas has a proper professional keyboard.

Simon Chell has already pointed out that there are stacks of American games being imported and if Sir Clive could see the amount of hardware for the TI-99/4A he would faint!

If any TI owners haven't seen Parco Electric's range of both software and hardware they don't know what they're missing.

Adam Checkley, Edmonton

Brotherly love

Firstly, let me say how pleasing it is to see a computing magazine as informative as yours at such a reasonable price. It makes a change from some of the magazines on the market which claim to help all micro users, but quite frankly leave me totally bewildered and a lot lighter in the pocket!

I've written to you — in fact the first time I've written to any magazine — to air a couple of points which have been bugging me for some time.

Why is it that in these days of enlightenment people still feel it's necessary to slag off every other computer in favour of their own? OK, pride in ownership is all very well, and I would be the first to admit that my own trusty VIC-20 has been outclassed with the likes of the C64, but surely we're all part of the same computing fraternity now and it's a case of not what you've got but how you use it.

For myself, I'm hoping

— if and when ERNIE coughs up! — to acquire a C64, but even if I should have that good fortune, I'd still be hanging on to my old VIC.

The point of all this is that it's about time we all pulled together instead of forming our own little cliques. In this instance I would like to say a big congratulations to Christopher McRobb for his Helping Hand.

Now for a moan at the manufacturers. Let me say straight off that I'm no hardware expert, and that this is more of a layman's request than a technical demand. Why is it that when major manufacturers bring out a new model, they rarely show any thought for previous customers with their older models?

An immediate case which springs to mind is the Commodore range. Would it not be advantageous — and more than likely more profitable — for the manufacturers concerned to either design newer models with at least some form of compatibility with existing models or offer, in one form or another, an update kit or service possibly along the lines of an updated BASIC ROM chip or cartridge.

Not only would this have the effect of increasing the companies' income, but the software houses would also benefit with the sales of software previously incompatible with single manufacturer hardware. It seems to make sound sense when you consider that people who are first time buyers would go for the newer model anyway rather than an (almost) obsolete model for update, and those who already own the model would no doubt delight to see their meagre 3.5K increase to a majestic 64K.

Of course exactly how practical this idea is I can't honestly say, as my knowledge of micro internals can be written on the back of a postage stamp, but there again I'm not getting paid for marketing this sort of thing to the ever increasing mass of micro buyers in the UK.

Anyway, as I've probably taken up a fair amount of your usable RAM on letters, let me finally say to Alex Sonny and A P Prochomos from HCW, thanks for supporting the VIC, but take note of my first point!

Nige Kerr, Argyll

Good point

I must object to Alex Sonny's letter in HCW 97. All computers have their advantages and disadvantages. It's not fair to say one is better than the other. The VIC-20 has good graphics and keyboard, while the BBC has good sound and BASIC, and the Spectrum has excellent software support.

Marcus Knight, W Sussex

Going gone

A big thanks for being the best value for money game on the market. It's interesting from cover to cover and is of special value to VIC-20 owners — of whom I am one — because you support them so well with your listings. Please keep on putting them in. I buy it every week but have only one gripe.

The listings for the VIC-20 sometimes are so faint that I can't read them, or are you fading them out to match the production of the VIC-20?

J A Sheppard, Balham

TI terror?

In all respects I consider myself a patient man, but after reading Mike Curtis's letter (HCW 85), it was the last straw! The letter carried the title Worst Game Ever, and was about a game called Pole Position for the Spectrum, for which he paid £15, for a game written in BASIC.

Mike wrote: "I have seen better games for the TI-99/4A." Well, here's a reply to that big-headed remark. The TI-99/4A is a 16K machine and the Spectrum referred to in this letter is a 48K machine. The Texas is capable of some very sophisticated graphics, but this cannot be accomplished with 16K, so the Spectrum's graphics should be three times better than on the TI, but they're not.

By the way, has anyone else noticed that most of these comments come from Spectrum owners? I think this is because they feel the TI is a threat to their machine.

K J Macaulay, Isle of Lewis

Software

WD Software For the QL:—

Utilities (3rd ed) (base £5.50)

View 60-file DIRectory on one screen, one-key LOAD, COPY or print 60 files with one key
(allows for namesakes). Multiple FORMATting to prevent corruption by stretching of
tape. TOOLkit to give dated, numbered modules in program development. PRUNE old
files to release space (one key DELETES a file). Full instructions in QUILL file. Use up to 6
EXTRA MICRODRIVES (add on your Spectrum ones)!

WD Morse Tutor (base £4)

Specification as for Spectrum, but no speech (hurry up, Currah!)

Ref QL (1st ed) (base £1)

100+ useful QL references in an ARCHIVE file.

For the 48K Spectrum:—

WD Morse Tutor (base £4)

From absolute beginner to beyond RYA and Amateur Radio receiving. Adjustable pitch.
Set speed to your test level (4-19 wpm). Learn code with single characters, progress from
groups with wide inter-character spaces to random sentences; decrease spacing to normal.
Write down what you hear, then CHECK on Screen or Printer or LISTEN to phonetic
TALKBACK from Currah MicroSpeech if fitted. Also own message, random figures,
letters or mixed. 16K version on special request (no speech, only 5 sentences instead of 100).

Tradewind (base £4 — was £5!)

Sailing/trading strategy game with graphic surprises.

Jersey Quest (base £4 — was £5!)

Text adventure with Bergerac and the Dragon.

Prices

Spectrum Cassettes — base price only

QL or Spectrum Microdrives — £2.00/cartridge plus base price

See your name in lights! Well, in HCW at least

We publish a large number of program listings for all popular home computers. If you think you can write programs of a similar or even better standard than those you see in this issue, why not let us have a look at them.

Programs should be accompanied by full details of how they work, what they do, and variables, with hints on conversion if possible. This should be typed, double spaced, on A4 paper and enclosed with the program on cassette. Please use the coupon printed in HCW and follow the instructions given there.

We look forward to hearing from you.
