I have discovered a bug in the Gingerbread roms program. I typed it in on my BBC Micro exactly as it is shown.

But I received the error message: *Mistake at line 260*. When I examined that line I discovered that the command IF had been left out.

The corrected line is:

```
IF r<1 THEN PRINT ;"Three  
quarters";:RETURN
```

— Matthew Thompson (16),
Kidlington, Oxford.

We're sorry the word was missed. The listings are all well checked before printing but we missed that one.

We're stepping up up our testing to ensure it doesn't happen again.

Notice

If you have any tips for other readers, send them in. If you have any questions about your computer or software just ask us. We'll try to answer them on the Noticeboard.

Let us know what you want to see in future issues. And if we use your letter or ideas we'll send you a *Let's Compute!* baseball hat!

Send your letters to *Let's Compute!* Europa House, Adlington Park, Macclesfield SK10 4NP. Remember to tell us your age.

The second issue of *Let's Compute!* was great. Even better than the first. And that's high praise indeed!

I like the electronic game in The Gadget Shop. We had one at our summer fair, and there's one at the Science Museum in London. I can do all three of them.

The pictures in AI's Gorithms are really sweet. It's amazing what you can do with circles.

The Back to the Future program is really useful. I always want to know what day things are on, whether I've got a piano lesson on my birthday and so on.

The program now does it for me. I don't need to look at the calendar any more.

And what about the football bit? It is probably interesting if you're interested in football. But I'm not.

Finally, I think the competitions are great. Let's have even more!

— Kathryn Price (12), Alfreton, Derbyshire.

Entries for the Alphabet Artist contest are still pouring in. But there's still time for you to send yours before November 30.

The picture of Churchill shown here is by Martin Pegg (13) from Derby. He's just one of this month's five lucky winners who'll be receiving a copy of Art Studio from Impact Software.

This month's other four winners are:

John Pearce (15) from Knaphill, Surrey — a Spitfire

Owen Williams (12), Halstead, Essex — a helicopter

Richard Gubbing (10), Congleton, Cheshire — Fat puss the cat

Gemma Hillman (7), Loughborough, Leics — a dog

Don't forget, there are lots more prizes to give away: A voucher worth £50 for the overall winner to spend as you wish and TWENTY more vouchers worth £5 each for the next 20 best.

Impact are also presenting £100 for the best picture received with a school name on the entry form. You'll find entry forms in the August and September issues.

Winners! Winners! Winners! Winners! Winners! Winners!

Hundreds of you wanted to personalise your computers with cute Computer Critters. But we only had four to give away and they're winging their way to the winners of the contest we printed in the August *Let's Compute!*

Congratulations to these lucky winners: Miriam (8) from Chigwell in Essex, Steaphnie Leack (11) from Lancaster, Jamie Radford (14) from Uplands near Swansea and Jason Cooke (10) from Bromsgrove.

Hard luck losers. But we've even more prizes to give away in this issue of *Let's Compute!* So see if you can win one of those.

board

Many congratulations on what would appear to be an excellent computer magazine for children! It's full of ideas for learning about IT that can be easily transferred to classroom situations.

Would it be possible for us to photocopy some of the material for use in school? Perhaps we could provide you with some field research in return.

I was also wondering if you did any special promotions for schools. I feel that your magazine is one that we could promote in school to the benefit of our own pupils.

– Arnold Marchant, Boldmere Middle School

We've received many letters like this from schools wanting to boost their funds. As always, Let's Compute! does what its readers want.

So, we'll give £1 for each subscription a school gets for Let's Compute! For more details, write to Pete Davidson.

All the material in Let's Compute! is copyright and must not be reproduced without written permission. Any school obtaining more than 10 subscriptions will automatically be given this permission.

Thanks for the offer of field research. We value feedback from all sources. It's only by hearing what children and schools want to see that we can give you exactly what you want.

I have just had an idea for your comic: A high score table for games would be great!

You could ask readers to send in their name, address, computer and the high scores they're reached. Then you could print them. It would give *Let's Compute!* readers something to compete against.

– James Hollis (13), Wakefield, W.Yorks

We'll be printing our first high score table next month. If you would like to see your name on it, just fill in and send us the coupon below. Post it to High Scores, Let's Compute! Europa house, Adlington Park, Macclesfield SK10 4NP.

We'll print the best. By the way, James. You didn't give us your full address. Remember that ALL writers of letters on the noticeboard receive a free baseball hat. Your hat's here waiting: Just send us your address.

I am a *Let's Compute!* Club member and want to take part in the competitions. But I don't want to cut up my copy of the comic.

Can I photocopy or draw the entry form myself?

I find *Let's Compute!* easy to understand. There's only one word for it – BRILLIANT!

– Laura Corney (13), Greenock, Scotland

We don't mind how your entries are sent. But try to keep them about the same size as the ones we print. And make sure you tell us everything that's asked for on the original coupon.

If you want to enter more than one competition you can send them all in one envelope.

Just address it to Let's Compute! Competitions, Europa House, Adlington Park, Macclesfield, SK10 4NP.

I have just received my member's pack. I am very pleased with it, especially the software.

However, I looked at the ruler and decided to memorise which was Ram and which was Rom. On the ruler Rom wears the glasses, but in the first issue of *Let's Compute!* Ram has the spectacles.

Could you please tell me which is which?

– Simon Marwood (12), Richmond, North Yorks.

Ram is the clever one with the glasses. Rom is rather thick, and always hungry. The cartoons are drawn by ace cartoonist Mike Goldberg and are therefore always right in the magazine. But when they were put on the ruler, someone got it wrong.

Mike sent a special cartoon to the person who made the mistake. We're printing it here to help any readers who are at all confused between Rom and Ram.

Witches' Brew

The party season has arrived. And what better way to make a halloween party – or any other – go with a fizz than to prepare an unusual cocktail of drinks?

Here's a program that gives you a few ideas of what you could mix with what.

But once you've created your tasty concoction, what do you call it?

The program itself comes to your rescue. Along with the list of suggested ingredients you also get a name.

As it's one made up by your computer it may look strange. And you may have trouble saying it. So be warned: With some of them you may tie your tongue in knots trying!

Now type it in – and have fun!

Is YOUR machine here?

```

THE FINAL FRONT-EAR

LAST MONTH, THE "USELESS-S-ENTERPRISE-ALLOWANCE" CREW WERE SEPARATED WHEN A TERRIFIC EXPLOSION SNAPPED THE BRIDGE FROM THE ENGINES...

-AND SO THE INTREPID CREW PARK AT THE ALWAYS HANDY NEARBY ENGLISH SPEAKING PLANET...

I TRIED TO WARN YOU CAPTAIN!

NEVER MIND MR. SHOCK. AT LEAST MY MEGA-BURGER TASTED BETTER WITH SAUCE ON IT!

WE'LL NEED SOME MORE ROOFING-FELT THOUGH...

RIGH! COMPUTER-GIVE ME VISUALS!

OH NO!! THE COMPUTERS HAD IT!

RIGHT.-WE'LL HAVE TO BEAM DOWN TO THE PLANET AND BUY ANOTHER.

WE'LL NEED IT TO GET BACK TO THE OTHER HALF OF THE SHIP!

DOWN ON THE PLANET

HEY, A RUBBER PLANET!

NO-CLEAR OFF THIS IS A KIDS' BOUNCING CASTLE!

SHOP ARE OVER THERE!

O.K. WE'LL TAKE THE ONE WITH THE RUBBER KEYS!

OH NO

A WISE CHOICE SIR-I'LL WRAP IT UP.

NO! NO!

ELECTRUM

JACKOOL W

ONLY 50,000 LEFT

VICTOR THIRTY

IS THAT THING READY YET-I'M STARVING AND WE'RE LIGHT-YEARS FROM A DUCKMONALDS RESTAURANT?!

IT'S THE KEYS CAPTAIN-THEY'RE MELTING TOGETHER

DONE!...

WELL DONE MR. SHOCK!

...BUT I THINK THERE'S A SMALL PROBLEM...

FULL WARPED SPEED ENSIGN...

..ER, DIM?!

LET'S FIND THE OTHER HALF OF THIS SHIP-AFTER WE'VE EATEN OF COURSE!

BUT!!~

TELL ME ABOUT THOSE RUBBER KEYS MR SHOCK...

WILL THE CREW REACH THE OTHER HALF OF THE SHIP-BOUNCE BACK NEXT MONTH!

This super AMIGA (with lots of extras) can be yours

YOU could be one of the first people to own the very latest sensation from Commodore – the top selling Amiga 500 with an **EXTRA 512k memory booster**.

That turns it into powerful 1Mb machine. It will introduce the wonders of the Amiga to many thousands of new users during the next few months.

For the package, **Class of the 90's – First Steps** – comes complete with a host of valuable extras:

- **ProWrite 2.5** – a word-processor that includes colour and graphics to let you to design you own pages
- **D-Print II** – a creative paint package
- **D-Print** – a design program for you to make your own greetings cards and posters
- **InfoFile** – a database where you can store information and pictures
- **MusicMouse** – start learning to make wonderful music
- **Logo** – your very own version
- **Talking Turtle** – you can program your Amiga whatever age you are
- **Let's Spell at Home** – helps you to spell by using pictures
- **BBC Emulator** – use it to run the BBC Micro versions of programs in *Let's Compute!*

PLUS

- **A video to teach you how to set up your new Amiga, use the programs and what to do next.**

The monitor in the picture is not included in the prize. The computer will work with an ordinary television

WHAT TO DO

We are looking for the person who can make the most words out of the letters in these two:

COMMODORE AMIGA

Write down all the words you find on a separate piece of paper. Then attach it to the entry form and send it to *Let's Compute!* before October 31.

**Worth
£599**

Dept. LCAO, C/o Northwood House, North Street, Leeds LS7 2AA

24-hour HOTLINE: 0532-436300

Make cheques payable to SOFTWARE BARGAINS

BBC BASIC WITH ROM & RAM

TRY THIS EXAMPLE

```
10 CLS
20 A = INKEY(50)
30 PRINT "ROM ";
40 A = INKEY(50)
50 PRINT "EATS ";
60 A = INKEY(50)
70 PRINT "LOADS"
80 A = INKEY(50)
90 GOTO 10
```

NOW THEN, TYPE IN
DELETE 20,80

TO REMOVE PARTS OF A PROGRAM
USE DELETE FOLLOWED BY A LINE
NUMBER, A COMMA AND ANOTHER
LINE NUMBER
TYPING IN DELETE 20,80 AND THEN
PRESSING RETURN WILL REMOVE
ALL LINES BETWEEN 20 AND 80
INCLUDING 20 AND 80

THAT WILL LEAVE LINES 10 AND 90
HERE'S ANOTHER NEW COMMAND FOR
YOU ROM. IT'S CALLED RND WHICH IS AN
ABBREVIATION OF RANDOM

ADD LINES

```
20 A = GET
30 PRINT RND(6)
80 A = GET
```

YES RND WILL RANDOMLY
SELECT A WHOLE NUMBER BETWEEN
ONE AND THE NUMBER YOU
PLACE IN THE BRACKETS

PRINT RND(1) WILL SELECT A FRACTION
BETWEEN 0 AND 1

OUTSIDE

ADD LINE 40 PRINT RND(6)
FOR TWO DICE RDM

TYPE NEW. NOW, TRY THIS:

```
10 PRINT "WHAT IS "; RND(10);
20 PRINT "TIMES "; RND(10)
30 PRINT "YOU HAVE 10 SECS TO ANSWER"
40 A = INKEY(1000)
50 PRINT "TIME'S UP!"
```

BETTER, LET A VARIABLE HOLD THE
VALUE OF THE SELECTED RANDOM NUMBER

```
10 A = RND(10)
20 B = RND(10)
30 PRINT "WHAT IS "; A; " x "; B
40 PRINT "YOU HAVE 10 SECS TO ANSWER"
50 A = INKEY(1000)
60 PRINT "DID YOU GET "; A * B; "?"
```

YOU SHOULD GET A LOAD OF
NONSENSE WITH THIS EXAMPLE.
TYPE NEW AND TYPE IN:

```
10 PRINT CHR$(RND(26)+64);
20 GOTO 10
```

EXPLANATION

CHR\$(RND(26)+64)

SELECT A RANDOM NUMBER
BETWEEN 1 AND 26 AND ADD 64 TO
IT. THIS WILL GIVE RANDOM NUMBERS
BETWEEN 65 AND 90 - THE ASCII
NUMBERS OF THE ALPHABET A TO Z

YOU CAN USE THIS IN ANOTHER FUN PROGRAM
TYPE NEW, PRESS RETURN. NOW TYPE IN:

```
10 G = GET
20 CLS
30 PRINT "FIND LETTER ";
40 PRINT CHR$(RND(26)+64)
50 A$ = INKEY$(200)
60 GOTO 20
```

I'D LIKE TO KEEP SOME
OF THESE PROGRAMS RAM.
CAN IT BE DONE? - OR WHAT?

YOU CAN SAVE A PROGRAM
ONTO CASSETTE TAPE, OR, IF
YOU'RE LUCKY, ONTO A FLOPPY
DISC. WE'VE GOT TAPES ROM.

PRESS ESCAPE, NOW, PICK A NAME TO CALL YOUR PROGRAM. LET'S CALL THIS **DICE**. TO SAVE IT, TYPE **SAVE "DICE"** THEN PRESS RETURN.

ON SCREEN
RECORD then **RETURN**

WHEN YOU WANT THE PROGRAM BACK LATER ON, YOU SIMPLY **LOAD** IT IN. TYPE **NEW**. REWIND YOUR TAPE TO THE BEGINNING OF THE PROGRAM. TYPE **LOAD "DICE"** AND PRESS RETURN

YOU MAY CALL A PROGRAM WHATEVER YOU LIKE WITH A MAXIMUM OF **10** LETTERS FOR TAPE SAVING, AND A MAXIMUM OF **7** LETTERS FOR DISCS

Examples:

- SAVE "ROMBO"
- SAVE "ACEONE"
- SAVE "DICE2"
- SAVE "RUBBISH"
- SAVE "THEWHALE"
- SAVE "MONEY"

WRONG! YOU CAN'T HAVE SPACES
 → SAVE "THE WHALE"

RIGHT! ALL DONE THIS MONTH ROM. JUST REMEMBER

I'M OFF DOWN THE PRECINCT—THERE'S A NEW 'KYLIE MANURE' SINGLE OUT... WANT ANYTHING BEFORE I GO?

NOT AGAIN!

T C G a d g e t S H O P

The program and computer terms used in this article relate to Acorn micros. Readers with an Amstrad CPC, Commodore 64/128, Spectrum, Atari ST or Amiga who order a Gadget Shop pack will be sent complete instructions appropriate to their machines.

STOP THIEF !!!

Gadget Shop proprietor Mike Cook shows how his computer is linked to the outside world – to keep out unwanted visitors

There are lots of ways of making burglar alarms. In the Gadget Shop this month we'll see how to turn your computer into an electronic watchdog.

And you needn't stop at burglar alarms. The switches we're going to use can just as easily perform other jobs. Such as keeping a check on the position of a model train. Or as the keyboard of a musical instrument.

The link to your computer is through a connector strip. Remember we made one at the start of this series. Let's see what else we will need.

Using this type of connector our computer can only detect if something is switched on or off. What we have to do is to get our intruder to do this with some form of invisible switch.

A reed switch is ideal. It uses two contacts sealed in a glass envelope. When we bring a magnet close to it the contacts move together and complete the circuit.

All we need do is mount a magnet on a door and a reed switch on the door frame. These must be placed so that when the door is closed the magnet is next to the switch. The magnet pulls the two contacts together and the switch is ON.

When the door is opened the magnet moves away and the reed switch opens. Our computer will spot this happening and raise the alarm.

If you are connecting your alarm to the User Port of an Acorn machine you have eight inputs and can monitor up to eight doors or windows at the same time. If you connect it to the joystick port of another micro you have five inputs.

In fact you can alarm any number of doors or windows by just chaining the switches together. In this way you'll know when one is open. But not which one.

Other uses for the switches

If you want to monitor the position of a model train put the reed switch near the track and the magnet on the train. The switch will close as the train passes over it.

Or you can make a simple musical instrument by mounting eight switches in a row. If you connect them to your micro and write a short program you can play tunes by waving a magnet over the switches.

There are lots more uses for this type of switch. For example you could design an electronic game.

Let us know if you make anything unusual from these switches – there will be a prize for the brightest idea.

Which switch do you need?

On offer this month are three different types of reed switch and magnet. They're all mounted in white PVC cases and fixed in place with screws or nails.

The surface mounting set can be used for windows as well as doors. The two recessed sets – one large and one small – are best for doors. The diagram shows how to wire them up and the photographs show them fitted.

You can connect several different switches to one computer. Just copy the wiring diagram for each one.

Any unused inputs should be wired directly to the earth connection.

The listing given is for a BBC Micro. It is a simple program to monitor the switches and raise the alarm. You can use it as a basis for your own routines.

Remember to make the modifications shown below if you are using an Electron or Archimedes.

Modifications for the Spectrum, CPC, Atari ST and Amiga are supplied with Gadget Shop Pack 2 – remember to state which computer you are using.

Alarming a door on Pin 0 and two on Pin 1

```

10 MODE 7
20 PRINT "The Gadget Shop Intruder Al
rm"
30 REPEAT
40 CX=1
50 PRINT TAB(0,4)
60 AX=?&FE60
70 FOR BX=0 TO 7
80 IF (CX AND AX)=0 THEN PRINT "Locati
on ";BX;" is safe";SPC(10) ELSE PRINT "In
truder at location ";BX
90 CX=CX*2
100 NEXT BX
110 IF AX<>0 THEN SOUND 1,-15,20,1:SOU
ND 1,-15,100,1
120 UNTIL FALSE
    
```

BBC listing – see text for other computers

WARNING

Keep the magnets in the contact sets away from your discs. Magnetic fields can damage programs stored on them.

The three types of contact you can get from The Gadget Shop

IS THIS YOUR COMPUTER?

BBC Micro: Use the program above.

Archimedes and BBC A3000: You need an i/o podule. The program also needs to be changed.

Replace Line 60 with:

```
SYS "05 Byte",150,&60 TO ,,AX
```

Note that the two commas after the TO are essential.

Electron: You need a Plus One and User Port expansion – available from Pres (0276 72046). The game and program work as they are described above except that the memory location

which is accessed by the User Port is &FCB0. So wherever you see &FE60 in the program you use &FCB0

Spectrum: You need an Interface 1 and the gadget connects to the joystick port*.

Amstrad CPC, Commodore 64/128, Amiga and ST: The gadget connects to the joystick port*.

* The full assembly instructions are in Gadget Shop Pack 2. The short Basic routine to operate the gadget will be supplied when you order it.

ROM'S BROWN SAUCE

NEXT MONTH

Make a gadget that tests how good you are at shaking a sauce bottle!

Why ever should you want to do that?

Well it could turn out to be a super electronic game!

Find out what it's all about in *Let's Compute!* next month.

ORDER FORM

Pack 2 – Reed switch sets

This contains all the bits you need to make your burglar alarm except for the connector cable. This is still available, and you can also use this order form to get one.

- Surface mounting reed switch plus resistor £2.60
- Recessed round type plus resistor £2.70
- Recessed square type plus resistor £2.60

You'll also need Pack 1 – the User Port connector cable:

- 20 way IDC plug, length of 20 way ribbon cable, 12 way chock block, cardboard base, 2 foam sticky pads PLUS 2 spare connectors and a resistor£1.99
- As above but with IDC plug ready connected ...£2.49
- As above but with connector for Master Compact in place of IDC plug ... £3.99
- As above but with connector for joystick port of Spectrum, Amstrad CPC, Commodore 64/128, ST or Amiga in place of IDC plug. Basic program and instructions will also be supplied ... £3.99

Please state your type of computer:

THE PROGRAM DOCTOR

There's always a better way of doing things, and here's another program just waiting to be operated on. Our resident micro medic diagnoses several shortfalls.

Remember all those games programs where, having lost all your lives all too quickly, the micro offers you a chance to play the game again? Well, that's what the program at the top of the page does. It prints out a simple message until you press N to finish.

Recognise the standard question:

Do you want to finish?(Y/N)

Actually all that happens is that line 40 tests whether Y was pressed. If it wasn't it RUNs the program again. If you pressed any other key - including a small y - the program ends.

But we can do a much better job. The second program shows how.

Here are improvements that have been made:

- You should always test for lower case letters as well as capitals - y as well as Y. That's what the OR is doing in the new Line 40.

- It's also polite to let the user know that the program has ended. So Line 50 is there to round things off.

Those are the programming changes. But you might notice something else - put in to make the program easier to read.

It now starts with two lines of REMs. These don't affect the way it runs, but they act as a useful signpost. They

tell you things like which version of the program it is and so on. Still, things could be even better. At the moment, any key except Y or y will repeat the program, despite the fact we've asked for a yes or no answer (Y/N).

There is one way round this. Just add another IF ... THEN. Put in the following line and you've got a much more friendly program:

```
45 IF k$<>"N" OR k$<>"n" THEN GOTO 30
```

All right, the main part of the program does nothing except print a bit of text. But the point is that WHATEVER someone types it is dealt with properly now.

The program caters for every input so there can be no freak happenings when someone presses X, say. And that's what makes a more polished job.

These routines will work - with the small changes listed - on most home micros. But there are more elegant ways of doing the same thing.

The snag is that you need to use different commands for different micros.

For example, on the BBC Micro you can use the command INSTR as part of your check for which letter was pressed.

On Page 9 of the August issue of *Let's Compute!* the green part of the listing shows this.

If you can write a super sophisticated bit of program to check for a Y/N reply on your micro, let us see it.

We'll pin the best to the Noticeboard and send the author a baseball cap.

This is the original program:

```
10 PRINT "This is all the program does."  
20 PRINT "Do you want to finish?(Y/N)"  
30 k$=GET$  
40 IF k$<>"Y" THEN RUN
```

How the Doc altered it:

```
1 REM ### Program Doctor ###  
2 REM ### Version Two ###  
10 PRINT "This is all the program does."  
20 PRINT "Do you want to finish?(Y/N)"  
30 k$=GET$  
40 IF k$<>"Y" OR k$<>"y" THEN RUN  
50 PRINT "Goodbye then"
```

IS YOUR MACHINE HERE?

Electron/BBC/Archimedes

The programs work as shown

CPC/PC (GW-Basic)

Replace k\$=GET\$ with:

```
k$="":WHILE k$="":k$=INKEYS:WEND
```

Commodore 64/128

Enter the program in capitals

Replace k\$=GET\$ with:

```
GET k$:IF k$="" THEN GOTO 30
```

Spectrum

Select 48k mode

Replace k\$=GET\$ with:

```
k$=INKEYS:IF k$="" THEN GOTO 30
```

Amiga and Atari ST

Use Amos or Stos

Replace k\$=GET\$ with k\$=INPUT(1)

*Do you think YOU'VE written a program that can't be improved?
Then send it along to the Program Doctor. He LOVES a challenge!*

Here's a whole load of presents dropping in!

Software giants US Gold and Ocean have got together this month to offer a deluge of goodies. And they're **ONLY** for readers of **Let's Compute!**

There are 185 prizes to be won in this great prize bonanza:

- Pens ★
- Badges ★
- T Shirts ★
- Balloons ★
- Keyholders ★
- Baseball caps ★

PLUS, for those winners who have a CPC, C64, Atari ST, Amiga or Spectrum, there are 10 copies of Ocean's superb **Midnight Resistance**

National Curriculum Attainment Targets covered

This program covers loads of those science attainment targets that all young scientists are working towards on the National Curriculum:

Target	Title	Levels
AT1	Exploration of Science	2,3,4,5,6 and 7
AT10	Forces	2,3 and particularly 6
AT13	Energy	3 and particularly 6
AT17	The Nature of Science	5

Try this!

See if you can find how to balance the system so that the car goes neither up nor down. Don't just find one case - see if you can find a pattern in what happens.

If you do well you should be able to say what the result will be no matter what weights and sizes are involved.

Incidentally, it's a good idea to work with a friend so that you can talk over your theories and swap ideas.

HOW A COMPUTER WORKS

Part 2

It's IN

The brain of a computer is called the CPU - which stands for Central Processing Unit. But before it can start working things out for us we need to put some facts and figures into it.

So this month let's look at how information gets from the outside world into our miniature electronic world. This is usually done using a keyboard.

The technical term for what you feed into a computer is data. And the keyboard is only one of many things we can use.

It can be done in many other ways.

You may have a mouse or a joystick. When you're using them you're also feeding information into the computer - just as when you're using a keyboard. They're all input devices.

You can use a connector called a Midi interface to link a musical instrument to your computer. The instrument is then an input device for the computer.

And there are still more - tracker balls, light pens and scanners.

They all have one thing in common: They take information and turn it into electrical signals which represent numbers.

On the very first computers the only way to feed data in was through a row of switches. Turning them on and off in certain patterns sent information to the CPU. Now computers are much easier to use. They are said to be more user friendly.

But if you think the old idea of switches has been replaced by the keyboard think again. For this is still only a lot of switches - pressing a key just turns on a few at a time.

A keyboard is a rather slow way of getting data into your computer. It's much faster if you use a tape recorder or disc drive.

These take data that has been stored as a magnetic pattern and change it into electrical pulses.

The CPU can read these pulses and carries out the coded instructions that they make up. Whether it's just a single letter or a complete game, the data reaches the CPU in pulses.

What it does with them will be revealed in the next month's *Let's Compute!*

INPUT DEVICES

Keyboard

Pressing a key sends a coded number to the CPU. For example, the letter A is sent as the number 65. Each key has a different number - called its Ascii code - between 0 and 255.

Joystick

Most joysticks contain five switches - one for each direction and one for fire. Whenever a switch is activated it sends a number to the CPU. Diagonal movements are detected if the numbers add up to the same as two single movements.

INPUT time

BINARY BITS

We count in Tens and Units. It works well - we can use our fingers (and thumbs) to count on.

But a computer works with switches and electrical pulses. They're either on or off, there or not there.

It's as if a computer has to count using only two fingers. So it uses Twos and Units.

Just like the way we count has a name - the decimal system - so the computer's way also has a name. It's called the binary system and it uses just 0 and 1.

When a switch is off it's called 0. When it's on it's 1.

Here are the numbers from one to seven using binary numbers:

1 10 11 100 101 110 111

It looks impossible to understand, but it's really easy.

Suppose you were told to count up to seven weeks using just zeros and ones.

All you have to do is count in weeks, fortnights and months. The table below shows how you can think of it.

So now you can already count up to seven in binary. In next month's *Let's Compute!* we'll go further along this clever road of counting.

months	fortnights	weeks
		1
	1	0
	1	1
1	0	0
1	0	1
1	1	0
1	1	1

So 1 = 1 week
 So 10 = 2 weeks
 So 11 = 3 weeks
 So 100 = 4 weeks
 So 101 = 5 weeks
 So 110 = 6 weeks
 So 111 = 7 weeks

Counting up to 7 in binary

Mouse

A lot of computers now have a mouse as well as a keyboard.

It just converts movement in any direction into pulses which are decoded by the CPU.

Scanner

A scanner converts a picture on paper into an electronic image. As the scanner passes over the picture small electronic switches turn on and off depending on whether light or dark areas are detected.

NEXT MONTH: We look at how the CPU does its tricks!

Save £10 on the CRAZIEST SOFTWARE ever!

You can be one of the first to own one!

IT'S SO UNIQUE THAT...

- It will work on ANY computer
- ANYONE can use it
- It needs NO instructions
- It is TOTALLY friendly

But this is more than a piece of software, it's THE very latest computer add-on . . .

It's a Computer Critter!

There are four types of Critter – a rabbit, bear, bulldog and dragon. Each has a furry head, arms and legs – and the dragon even has a tail. These attach to your computer by strips of velcro to become your machine's cuddly guard and friend.

Now you can adopt your own Computer Critter – with this special, money-saving offer from Let's Compute!

Their shop price is £25 each. But we'll send you one for just £15 – a saving of £10!

These colourful, furry computer add-ons are beautifully made. They can be fixed to your monitor in seconds.

They're all set to become the next big computer craze. Certainly you can expect to see a big invasion of them this Christmas.

But they're waiting for good homes NOW!

So the sooner you send off the coupon the sooner you'll have one standing guard over YOUR computer!

Please send Computer Critter(s) at £15 each

My choice: Rabbit Bear Bulldog Dragon

Introducing...

The Games Gang

Charlie's Cheats!

Did you know that there is a built-in cheat for CPC *Treasure Island Dizzy*? At the title screen hold down A P C and SPACE until Dizzy appears. If you then press C during the game and use Z X K and M you can move from screen to screen. When you get to a screen you like press space and off you go.

Castle of Adventure

Watch out for Mirrorsoft's *Cadaver*. It's a role-playing game with a difference. Everything's joystick controlled so there's no need for boring typing in.

You play a bounty-hunting dwarf searching a mysterious castle. It's stuffed with treasure, gripping puzzles and magical beasts.

Solve all the problems and you might get to kill the Necromancer and become exceedingly rich.

It's been programmed by the famous Bitmap Brothers. They're the team behind *Speedball* and *Xenon 2*. Due out shortly for the Atari ST and Amiga.

Budget Bonanza

Your pocket money doesn't stretch to full-price software very often? Don't despair – there are plenty of good budget games on the market. Some of the best are re-releases of old full-price classics.

Among the best of this month's bunch are Encore's *Ace* and *Ace 2* (£2.99). These two brilliant flight sims are rolled into one for the Spectrum, C64 and CPC.

Conflict (£4.99), is a playable intro to wargaming. It's out on Virgin Mastertronic's 16-Blitz label for the PC, Amiga and Atari ST.

Pam's Passwords

Peter's Patch

Matt Browne from Potters Bar has come up with a poke for Alternative's Microball (BBC Micro and Electron). This blocks off all the holes so that the ball can't be lost.

Just put your tape in the recorder and type the following:

```
LOAD "PINBALL"
160 CLS:PAGE=&1200
RUN
LOAD "LOADER"
2007 FOR A=&7C98 TO &7CDF:?A=127:NEXT
2008 FOR A=&6AB0 TO &6ABF:?A=126:NEXT
2009 FOR A=&6BC8 TO &6BD7:?A=126:NEXT
RUN
```

BACK TO THE FUTURE 2

The eagerly awaited Back to the Future 2 (Mirrorsoft £14.99, disc) is now available for CPC owners. The gameplay is not bad. But the mono graphics in the main part of the game disappoint.

It's nearly a year since Fighter Bomber, first appeared on the PC. Now it's made it to the CPC screen on a £19.99 disc from Activision.

It features well produced 3D graphics and mission objectives. A worthy successor to that old CPC favourite, After Burner.

Do watch out though - some CPC owners may have a problem. The protection on the disc version prevents it from loading on some machines.

COWABUNGA!

Are you a Turtle Maniac?

Is there anyone out there who isn't a fan of Leonardo, Raphael, Donatello and Michelangelo?

Those pizza-loving heroes in a half-shell are about to make their computer in a game from Image Works.

First on the shelves will be the

PC and Amiga versions. Others will follow except for BBC and Archimedes users. Seems like they'll be missing out.

Teenage Mutant Hero Turtles is bound to be one of the hottest releases this Christmas. So get saving. Cowabunga!

PIPEMANIA

Pam and her minions have been working hard on Empire's addictive puzzle game Pipemania. Here's the full list of passwords for the Amiga and C64. Can anyone help with the others?

Amiga

Level 5: GRIP
Level 9: TICK
Level 13: DOCK
Level 17: OOZE
Level 21: BLOB
Level 25: BALL
Level 29: WILD

C64

Level 5: HAHA
Level 9: GRIN
Level 13: REAP
Level 17: SEED
Level 21: GROW
Level 25: TALL
Level 29: YALI

NEVRYON

Are you a follower of Fourth Dimension's Nevryon? Here are the Archimedes passwords as discovered by James Marshall and David Horner from Tollerton:

Level 3: MIRADOR
Level 5: ISENGARD
Level 7: KRYNN

Mathew Elliot from Royston has supplied the passwords for the BBC Micro version:

Level 3: ARCHIE
Level 5: STEREO
Level 7: REBEL

COLLECTION TIMES
9:00 AM
1:00 PM

If you've got any hints, pokes or cheats you'd like us to print send them in to us at Let's Compute! Europa House, Adlington Park, Macclesfield SK10 4NP.

**Think you know a lot
about pop music?
Here's a program
to test you out.**

TINA'S

If you fancy being a quizmaster - now's your chance!

Clever Tina Turtle has devised a Pop Quiz you can play on your computer. And she's made it easy for you to change it into any type of quiz you like.

After you've typed in the program and RUN it you'll be asked 10 questions. Get one right and you move on to the next.

If you get one wrong, you'll be given the right answer before you move on to the next question. Note that as the data is all in capitals you must answer in capitals.

Once you've answered all 10 questions you're given your score and a message.

At the moment there are two messages - printed by Lines 190 and 200. You can easily change them or - by inserting more similar lines - add messages of your own.

If you want to add more questions change Line 330 to say how many there are in all. Then add more lines similar to those already at 350 to 440 at the end of the program.

Start numbering the extra DATA statements at Line 450.

Obviously, if you wish you can change all the data at the end of the program and put anything you want there. Geography, history, trivial pursuit - any type of question will do. Don't forget that if you change the type of quiz you'll also have to alter lines 100 and 120. This simple quiz has many uses. If you come up with any novel questions and answers let us see them. There will be a prize for any DATA lines we pin to the noticeboard.

TEST

```

GAMES MAGIC!

For the
Electron,
Archimedes,
and BBC
only

More objects means more fun. Our ace artist Mike Goldberg continues building his mega game

The last two month's listings gave you a basic game with monsters, a few objects to collect and hyperspace. If you've typed them in you're now ready to add this month's features.

So what's new? Well, to start with you'll find the baddies laying bombs at random intervals. March into one and you'll die!

But if a baddie touches a bomb it only moves to another part of the screen. So beware! It could move right in front of you.

Another object added by this listing is a twin symbol. If a baddy moves over this it creates two clones of itself. You could end up with as many as 12 monsters.

The idea is to reach these objects before the baddies. There's also £ symbols which give you a bonus when you collect them.

And watch out for the yellow OFF switch. Run over it and the baddies will grind to a standstill for a few seconds.

The final new object is the thumbs-up sign. When you run over one all the bombs disappear.

Before adding the new features to your existing program you need to renumber it. How you do this is explained on the right. Then just type in the listing and your program will be modified automatically.

The lines printed in red are new ones. Blue indicates lines altered. And if you type in the line numbers shown in orange these old lines will be removed.

The green areas show you all the new procedures and the REM lines explain what they do.

When you've made these changes save the game using a different name to the one you used before.

Your game will now have all the extra features we've described. Enjoy playing until next month when we'll show how to give your game a final polish.

Renumbering last month's program

Here's how to renumber last month's program ready to enter this month's extra bits:

- **LOAD** last month's program
- Type **RENUMBER** and press Return
- **SAVE** the renumbered program (use a different name)
- Type **DELETE 10,1840** and press Return so you're left with just the DATA lines.
- Type **RENUMBER 8000**, (note the comma) and press Return. This renumbers the data lines so they can stay at the end of the program.
- Save the data lines to tape or disc using the following commands:

```
*SPOOL DATA
LIST
```

After the lines have listed key:

```
*SPOOL
```

- **LOAD** the renumbered program that you saved a few minutes ago.
- Delete the existing data lines by typing **DELETE 1850**, (note the comma).
- Put the renumbered data lines (the ones you saved using *SPOOL) on the end of the program by entering:

```
*EXEC DATA
```

- **LIST** the program to check that the main part is numbered from 10 to 1840 and the data is from 8000 upwards. If it is, **SAVE** it. If not, try again - taking care to follow these instructions exactly.

```

Subscribe at the same

Here's YOUR chance to become a member of the most exclusive club in computing – and save money too!

If you become a founder subscriber to *Let's Compute!* by using the form below, you can also join the Club for just £3 (saving £2).

As soon as we've registered your name we'll send you a giant package of gifts to help you make the most of your computer.

In addition to your own Gold Membership Card you'll also receive lots of software on an action-packed disc or tape (don't forget to state which you require), PLUS ● notepad, ruler, pencil and rubber ● stickers ● stylish hat and badge ● an incredible £200 worth of money-saving vouchers!

And that's not all! As a club member you'll be entitled to take part in exclusive competitions and special events with super prizes.

Make sure YOU don't miss out. Fill in the form below and send it today!

(Should you prefer to buy Let's Compute! from your newsagent each month, you can still join the Club by paying the normal joining fee of £5. You can do this by filling in the appropriate part of the form below.)

Don't let your pack get away!

YES PLEASE!
Tick as required.

- 3101 Send me the next 12 issues of *Let's Compute* for the special introductory price of £12 (including postage and packing).
- 3102 I'd also like to become a founder member of the *Let's Compute!* Club for the special price of £3 (instead of the regular £5) – so please send me the bumper Club pack with my first issue.
- 3103 I'll order *Let's Compute!* from my newsagent, but I'd still like to join the Club and receive my bumper member's pack for £5.

I wish to pay by:

- Cheque payable to Database Publications
- Credit card No:

Exp. date /

Please send my software in this format:

- 3050 Compact/Archi/Eik (3.5" disc)
- 3051 BBC/Eik (5.25" 40 T)
- 3052 BBC/Eik (5.25" 80 T)
- 3053 BBC/Eik (tape)
- 3055 Amiga (disc)
- 3056 CPC (disc)
- 3057 CPC (tape)
- 3060 Spectrum (tape)
- 3061 Spectrum (disc)
- 3062 C64/128 (disc)
- 3063 C64/128 (tape)
- 3054 ST (disc)
- 3058 PC (5.25")
- 3059 PC (3.5")

Your own logo disc or tape for £1!

KNOT LOGGO?

**Oh
yes
it is!**

Here's another program written in the turtle's favourite language, Logo. Unlike the knot patterns in previous issues of *Let's Compute!* this one draws a REAL knot.

It creates a Highwayman's Hitch. That's the kind of knot used for tying up horses or boats.

It was sent in by Neil Melville (10) of Maidstone, Kent. Uses only very simple commands.

But it shows how, with just one or two of the Logo instructions and a bit of patience you can create real diagrams.

To try this program out yourself you first need to run the Logo Language.

If you haven't got it and you're using an Acorn computer the *Let's Compute!* Turtle Logo is an ideal starting point - see the offer on the left.

Then just type in the instructions and watch the knot draw move by move. If you already know how to define procedures you can put all the instructions in one. Then you can call it every time you want to draw the knot.

If you don't know how to define procedures, keep reading Logo Lowdown. You soon will.

If you can draw a knot - or anything else - in Logo let us see it. Send us a listing if you have a printer and also send us the program on tape or disc. Also, let us know which version of Logo you used.

Send it to *Let's Compute!* Adlington Park, Macclesfield SK10 4NP. There's a super *Let's Compute!* baseball cap for the writer of every one we print.

Turtle graphics is a vital part of any Logo program. And that's what Turtle Logo is. Specially written for the Electron, BBC Micro and Archimedes series, it is on the tape or disc that comes with the *Let's Compute!* Club bumper pack.

You can find out how to join the Club on Page 32 - and about all the other goodies you can get with it.

However, if you only want Turtle Logo we'll send it to you for just £1 if you complete and return the coupon below

ORDER FORM

Please send me the *Let's Compute!* Turtle Logo. I enclose cheque, postal order or stamps the value of £1.

(Only suitable for Electron, BBC Micro or Archimedes series.)

LOGO LOWDOWN

BY MICHAEL NOELS

I WONDER WHAT LOGO 'HIGH UP' WOULD BE LIKE?!

★ ○ **TURTLE PROFILE** ○ ★

TURBO TURTLE
- RACER!

FACTS:
 HEIGHT: VERY LOW
 EYES: FRONT
 HAIR: BLOWN OFF!
 CLOTHES: ALL FIBREGLASS

LIKES: BURNING RUBBER
DISLIKES: SLOW-COACHES!
FAVOURITE FOOD: PETROL
HOBBIES: SKIDDING

TURBO SAYS:
 "CAN'T STICK AROUND TOO MUCH - I MIGHT BURN OUT MY CLUTCH - BYE"

THE RT 60 JUST TWISTS OUR TRIANGLE OVER BY A SIXTH OF A TURN

$\frac{1}{6}$ OF A TURN

JUST SO LONG AS THEY DON'T TWIST TURTLES!

ENTER
CS RT 60
REPEAT 3 [FD 200 RT 120]
TO SEE THIS. AND TRY TO NOTICE WHICH WAY
THE TURTLE ENDS UP FACING

I STILL DON'T GET WHAT'S ON THE BOARD!?

REPEAT 6 [RT 60 REPEAT 3 [FD 200 RT 120]]

WELL, WE KNOW THAT
RT 60 REPEAT 3 [FD 200 RT 120]
GIVES US A TILTED TRIANGLE.
LET'S WRITE TRIANGLE INSTEAD

SO WHAT'S ON THE BOARD IS REALLY

REPEAT 6 [TRIANGLE]

THAT'S EASY MISS, JUST DRAW SIX TRIANGLES...

... AND TILT EACH NEW ONE BY A SIXTH OF A TURN

REPEAT 6 [TRIANGLE]

ISN'T THAT A SIXAGON?

NEARLY, TERRY. IT'S A HEXAGON

DID HE SAY SIX GUN?

WHY CAN'T WE JUST USE TRIANGLE INSTEAD OF
RT 60 REPEAT 3 [FD 200 RT 120]

WE CAN. WE GIVE THE COMPUTER A TURTLE ORDER USING TO

WHAT'S A TURTLE ORDER?

ANYTHING BUT TURTLE SOUP!

ENTER ON YOUR MICRO:

```
? TO TRIANGLE
> RT 60
> REPEAT 3 [FD 200 RT 120]
> END
```

TRY IT. YOU'RE BEING TEACHER NOW TELLING THE TURTLE WHAT TRIANGLE MEANS

WE DON'T NEED TO TYPE IN ? OR > THE MICRO DOES IT FOR US

TO TRIANGLE: TEACHES THE TURTLE ORDER TRIANGLE

WHENEVER YOU GIVE THE ORDER OR COMMAND **TRIANGLE** THE TURTLE DOES WHAT YOU HAVE TAUGHT IT.

```
RT 60
REPEAT 3 [FD 200 RT 120]
```

THESE ARE THE COMMANDS YOU WANT THE TURTLE TO DO WHEN IT SEES THE TURTLE ORDER **TRIANGLE**

END

: THIS TELLS THE TURTLE THAT'S THE **END** OF THIS SERIES OF COMMANDS

PROVE THE TURTLE DOES WHAT IT'S TOLD BY ENTERING:

CS TRIANGLE

THEN ENTER:

TRIANGLE

AND AGAIN:

TRIANGLE

AND ANOTHER:

TRIANGLE

SEE WHAT'S HAPPENING?

NOW TRY:

```
CS REPEAT 6 [TRIANGLE]
```

CAN YOU DO THE SAME THING WITH SQUARES?

LET'S TRY GIVE A TURTLE ORDER WITH:

```
TO SQUARE
FD 200
RT 90
FD 200
RT 90
FD 200
RT 90
FD 200
RT 90
END
```

MISS, YOU CAN DO IT MUCH BETTER WITH

```
TO SQUARE
REPEAT 4 [FD 200 RT 90]
END
```

AND HOW DID YOU DO THIS TOMMY?

EASY MISS! I USED

```
CS REPEAT 4 [RT 90 SQUARE]
```

HE JUST LOOKS LIKE A BLOCKHEAD!

LOOK WHAT HAPPENED WHEN I TILTED IT LIKE THE TRIANGLE:

```
CS REPEAT 6 [RT 60 SQUARE]
```

WELL DONE TERESA I NOTICE YOU HAD TO REPEAT IT MORE TIMES TO "GET ROUND THE CIRCLE" WHAT HAPPENS IF YOU TILT EACH SQUARE BY 45° OR 30°?

NEXT MONTH WE SUPERCHARGE OUR TURTLE ORDERS

'Design a Turtle' Challenge

THE WINNER!

Let's Compute!
Competition Winner
NEIL GIGGINS

"Design a Turtle"
THE GREEN MACHINE!
DESIGNED BY NEIL GIGGINS 1990

The turtle invasion has ended! Over the last couple of months the *Let's Compute!* office has been flooded out with the creatures – all because ace artist Mike Goldberg challenged you to design a Supa Turbo Turtle.

● Pictured left is the winner – a magnificent effort from Neil Giggins (13) from Towcester, Northants. Mike's worked his magic on Neil's design and produced the stunning painting above. It will be given a fab frame before being handed over to Neil.

● Among its many features are a 300,000 decibel siren to warn animals out of the way, an arm to rub off splatted flies and a laser to blast non-moving objects to smithereens. This six wheel drive creature with spiked tyres has been designed to reach incredibly high speeds.

● The five runners-up whose turtles are pictured opposite will each receive *Let's Compute!* baseball caps.

There's another Mike Goldberg challenge on Page 43!

Mijas Software

The New Issue of
'A Book on C' by
Berry And
Meekings
£11 inclusive.

Small C System £69 (Inclusive of VAT p&p)

Use the Mijas Small C System on the BBC B or MASTER series computers for games, educational and industrial software. Small C programs run up to 12 times faster than in BASIC. Your code is highly portable and can be recompiled to run on the ARCHIMEDES or R140 using the Acorn ANSI C compiler (not supplied) and on many other machines. You can also use the power of the ARCHIMEDES for the rapid development and test of BBC B or MASTER programs. Manuals and post sales support included.

This Small C System produces stand-alone programs with up to 40K of code in ROM and/or MAIN memory. Libraries, extendable by the user, provide memory allocation, multi-mode graphics, file handling, i/o formatting, string handling, and system calls. Full assembler interface.

The system includes the V3.0 Small C compiler & Libraries*, Optimiser, Assembler, Linker, Source-Level Debug, and SHELL. SOURCE CODE is supplied for the compiler and all libraries. Using the MAKE facility and editable makefiles, C code is automatically compiled to assembler source, assembled and then linked with the minimum necessary library code.

Available for the MASTER series Computers, BBC B+ or B with sideways ram, and ARCHIMEDES. Software supplied on 80T double sided 5.25" or 3.5" ADFS or DFS disk. The ADFS disk contains the SHELL source code. The system is also available for other hardware configurations, including systems for the Mitsubishi MELPS processors, please write for details.

Laser Typesetting Program £23 inclusive

Low cost DTP for any BBC B, MASTER or ARCHIMEDES. Requires an HP Deskjet or Laserjet printer or emulation. Use for letters, booklets, forms and manuals with rules and shading, full multi-font justification, in single or multi-column. Fast printing using the printer's internal fonts. ADFS or DFS disk with rom image, £23 inclusive of vat, p&p. Eprom (avoids the need for sideways ram on BBC B) £7 extra.

Please state your computer system when ordering from:-
MIJAS SOFTWARE, Winchester Rd. Micheldever,
Winchester, Hants SO21 3DG. Tel 0962 89 352.
Official orders, ACCESS and VISA Welcome

*Includes original Small C code supplied at the cost of distribution.

Leave £10 in a piggy bank and a year later you'll still have £10. But put it in a bank account and in the same time it could have grown by an extra 70p.

Pennies from Heaven

This program teaches your computer how to work out your bank interest.

And shows you how that nestegg will grow and grow.

How much you can make depends on two things: The present interest rate - which can change at any time. And how long you leave your money in the bank.

To find out how much interest you're earning just answer the simple questions your computer will ask you. Have your bank book in front of you. You'll need to tell the computer about each time you put money in or took some out.

First you'll be asked to give the date you did this. Type it in as three numbers, separated by commas.

So, November 5 this year would be entered as:

5,11,90

Then you need to say how much you put in or took out. If you took money out, put a minus (-) in front of the number you type in.

Next, tell the program what the interest rate was at the time. You're then asked if you want to enter any more. You can reply Y or N.

If you answer Y you'll get the same questions again. Like this, you can make as many entries as are in your bank book. If you answer N you'll be asked for today's date.

Once you've typed this in, you'll be told what interest you're now due.

```

10 REM Interest
20 REM by Ken Hughes
30 REM (c)Let's Compute!
40 DIM D(100)
50 DIM M(100)
60 DIM Y(100)
70 DIM C(100)
80 DIM R(100)

 Batman The Movie £24.95
 New Zealand Story £24.95
 Interceptor £24.95
 Deluxe Paint II £49.95
TOTAL RRP: £549.78
 Less Pack Saving: £150.78
PACK PRICE: £399.00

£399 INC VAT

AMIGA 2000

For the more serious or professional applications user, Commodore have a selection of systems based around the expandable Amiga 2000, at prices from £1295+VAT. The A2000 features a full 1Mb RAM (expandable to 9Mb), 9 system expansion slots, plus IBM compatibility with the use of PC-XT or PC-AT bridgeboards. Complete and return the coupon, putting a tick in the A2000 box, for details of A2000 computer systems.

£1295
+VAT= £1489.25

FLIGHT OF FANTASY

Flight of Fantasy is the very latest Amiga 500 pack from Commodore, featuring BRAND NEW software releases, to make this the most spectacular A500 pack ever! The pack features the Amiga 500 computer with mouse controller and TV modulator, as well as four top software titles. These include the following:

DELUXE PAINT II:
 The high quality graphics program that set the standard for other Amiga art packages. Deluxe Paint II includes powerful, easy to use tools that bring out the artist in you. Create masterpieces, presentations, 3D perspectives or just doodle.

ESCAPE / ROBOT MONSTERS:
 Here's something completely different - a science fiction story with comic book style graphics. Our heroes Jake and Duke are on the Planet X rescuing Humans who have been captured by the Robot Monsters and forced to create an evil Robot Army to DESTROY EARTH! Jake and Duke fight their way through hordes of evil Robots to help the Humans escape.

RAINBOW ISLANDS:
 Slip on your magic shoes, practise throwing a rainbow and you're ready to go island hopping. From the island of Doh to Monster Island, you will encounter Doh himself, stinging insects, lethal combat machines, mechanical assaults, the formidable beings of legend and folklore. Finally enter the world of darkness and its inhabitants.

F29 RETALIATOR:
 The ultimate in flight simulation with a choice of two aircraft and four battle environments with dozens of different tactical missions. Aerial combat, strategic bombings, interactive ground based battles, seagoing carriers... the list of features is endless. Real time cockpit displays, including 'true radar' enhance the realistic feel of this stunning simulation.

PACK INCLUDES:
 A500 Computer & Mouse £399.99
 A520 TV Modulator £24.99
 Deluxe Paint II £49.95
 Escape/Robot Monsters £19.99
 Rainbow Islands £24.95
 F29 Retaliator £24.95
TOTAL RRP: £544.82
 Less Pack Saving: £145.82
PACK PRICE: £399.00
