New ITV venture to rival BBC?

ITV will decide at the start of next week whether or not it will go ahead to launch its own ITV micro, a rival for the BBC computer.

The Independent Television Companies Association (ITCA) will meet on Monday, December 12, to decide if it will adopt a machine designed by London-based Transam Computers as its own.

Transam's proposal for the ITV micro is expected to be a Z80-based CP/M machine with 64K Ram, Centronics and RS232 interfaces and built-in disc interface, selling for the same price as the BBC's computer: £399.

The independent television companies are known to have been interested in the idea of an ITV micro for some time — particularly for use in a range of new micro-computing programs they are developing, and in conjunction with ITV's telesoftware plans using its teletext system, Oracle.

A number of ITV companies have expressed concern at the plan. The problem is that the proposed computer represents a new departure for independent television, involving endorsement of a commercial product and a possible conflict of interest with advertisers.

Whether or not ITV decide to go ahead with the plan, Transam still intends to launch the machine. The computer was already under develop-

Bug-Byte loses claim to fame

A SPLIT at Bug-Byte means that the company will lose its claim to the top-selling Spectrum game *Manic Miner*.

Former Bug-Byte employee, Alan Maton, left the company in August to set-up a new software house Software Projects. *Manic Miner* author, Matthew Smith, who has a share in the new company, has revoked Bug-Byte's licence to produce the game, giving it instead to Software Projects.

COMMODORE

BOOKS BY MELBOURNE HOUSE

Here are four great books from Melbourne House to put you in total control of your Commodore 64 and VIC 20. Each is clearly written with step by step instructions, and fully illustrated. Now you can explore the full potential of your Commodore micro with exciting programs, brilliant new games and innovative programming techniques.

VIC 20 Exposed

First time computer owners or experienced programmers — get more out of your VIC 20. Understand all the facilities of your micro and get the maximum potential out of your programs: "VIC 20 Exposed" lets you understand exactly how this versatile home computer works, from BASIC right through to machine language — all in simple, straightforward language.

VIC Innovative Computing

Packed with exciting arcade, strategy and adventure games — these 30 easy to enter programs open a whole new dimension in computer game excitement.

"If you were to ask me which books I would buy, I would take VIC Innovative Comuting"
— Practical Computing

"Good value for money with some fascinating type-it-yourself games. Even those with little experience of programming their VIC 20 should be able to make full use of these listings"
—Educational Comuting

Commodore 64 Games Book

Teach your Commodore 64 every trick in the book. 30 programs ranging from nerve shattering space games such as Galaxy Raid and Earth Defence, to real life adventures including Sea Harrier and Flight Simulator. You can enter them all yourself by simply following the easy to enter listings.

"For a Commodore 64 games enthusiast this book is a must"
— Personal Computer News

Commodore 64 Exposed

The definitive book for the Commodore owner. A complete and comprehensive guide, that clearly explains every function of your Commodore 64, from BASIC to machine language. This book goes far beyond the data provided in the Commodore user's guide. Includes full details on advanced programming, graphics and sound, plus simple demonstration programs that can be entered in minutes.

How to submit articles
Articles which are submitted for publication should not be more than 3,000 words long. The articles, and any accompanying programs, should be original. It is breaking the law of copyright to copy programs out of other magazines and submit them here — so please do not be tempted.

All submissions should be typed and a double space should be left between each line. Please leave wide margins.

Programs should, whenever possible, be computer printed.

We cannot guarantee to return every submitted article or program, so please keep a copy. If you want to have your own program returned you must include a stamped, addressed envelope.

Accuracy
Popular Computing Weekly cannot accept any responsibility for any errors in programs we publish, although we will always try our best to make sure programs work.

Editorial

The runaway success of Coleco's Cabbage Patch Kids in the US should not be too surprising. After all, it is not that long ago that a similar enthusiasm for pet rocks and invisible fish swept the United States.

What is ironic is that Coleco is better known as the manufacturer of the Adam micro. However, with the $700 Adam plagued by production problems, it is the Cabbage Patch Kids that are bringing in the money for Coleco. The company hopes to sell nearly 3m of the plastic dolls by the end of this year for an estimated $46m.

The popularity of the Cabbage Patch Kids appears to be founded on their individuality — no two are alike — and their human-like persona. The idea of adopting the dolls, giving them names and sending them birthday cards, is designed to make them part of the family.

With the US home computer market still in a state of turmoil, it is not inconceivable that Coleco could try the same tactics with its micros. People who are apprehensive about new technology might well feel less threatened by a computer with a personality. Marvin the paranoid android from *The Hitch-hikers Guide to the Galaxy* is a familiar and likeable character precisely because he possesses human flaws to go with "a brain the size of a planet".

Anyone want to adopt a computer?

Next Thursday

You, as the last remaining computer on Earth, must guide the last four scientists to the mothership, avoiding asteroids. Abandon Earth — next week's star game for the unexpanded Vic20 (with joystick) by Mark Manns.

THERE'S NO PRESENT LIKE THE FUTURE.

THE WORLD'S FINEST PROGRAMMING TUTORIAL FOR ONLY £12.95.

Thousands who own, or would like to own home computers have yet to experience the feeling of discovery that comes when you write your own programs. Yet learning programming can be easy.

'Learn Basic' from Logic 3 is the ultimate development of the method first devised at Strathclyde University – a straightforward, easily understood tutorial written by Professor Andrew Colin and Veronica Colin, authors of Britain's best-selling tutorial package.

Using the method tested by university students and used successfully by over 200,000 home computer users, 'Learn Basic' runs on your own computer and explains everything in clear non-American English without jargon or computertalk. In a matter of hours, you will be writing programs that work.

Essentially, 'Learn Basic' and the rest of the 'Learn Computing' Series that will follow soon are designed for people who want to keep abreast of the computer age. For people who realise that understanding computers is the key to future success, at school, at work and as a parent.

Make your future, and your family's future, richer this Christmas.

Get 'Learn Basic' by Logic 3 – two tapes and a full-size manual for Spectrum or Dragon (others soon) at just £12.95.

At that price, it's a gift.

Buy the Logic 3 'Learn Computing' Series at computer shops and major retail stores all over Britain. In case of difficulty, write to Logic 3 in Windsor.

TO: Logic 3 Ltd, Mountbatten House, Victoria Street, Windsor SL4 1HE.

If you would like to know more about using and programming a computer in your home, send this coupon for your free copy of our 16-page explanatory booklet "100 things you wanted to know about computers."

It will help you cut through the jungle of computer jargon, and give you news about software developments – even games. ☐

Or send for our software catalogue (tick either or both) ☐

LOGIC 3

– THE KEY TO THE WORLD OF TOMORROW.

Bug-Byte

Continued from page 1

As of November 28, when the first of Software Projects versions of *Manic Miner* arrived in stores, both companies have been competing for sales of the title. This curious situation will continue until Bug-Byte, unable to manufacture any further copies of the game, runs out of its existing stock.

"We have about 50,000 cassettes which should last us over the Christmas period and into February," said Bug-Byte director Tony Milner.

Commented Matthew: "Bug-Byte are a bit peeved, but I cancelled their licence because it makes more sense for me to licence it to a publishing house in which I have my own share of ownership."

Matthew Smith's decision to switch to Software Projects has other implications for Bug-Byte.

Matthew's follow-up to *Manic Miner*, *Jet-set Willy*, for the Spectrum, will be launched this week by Software Projects, as will *Manic Miner* for the Commodore 64 machine. The company hopes to convert *Jet-set Willy* for the Commodore 64 before Christmas.

In *Jet-set Willy*, the diminutive hero, having made piles of money from digging underneath Surbiton, has joined the jet-set. He now lives in a huge 64-room mansion and frequently holds riotous parties. One night, after just one such debauched occasion, the last guest has just left and Willy prepared for bed, only to be stopped by his housekeeper Maria who insists that he must collect up all the glasses from the various rooms and return them to the kitchen.

Software projects is offering a prize to the first player of the game to correctly identify the number of champagne glasses to be collected. The winner will receive a set of six glasses and a bottle of champagne, together with "a taste of the jet-set life" — a spin around his or her locality in a Jet Ranger helicopter.

On his eighteenth birthday, in February next year, Matthew will become a director of Software Projects, owning a little less than one-third of the company. The other directors are Alan Maton and Tommy Barton, a Liverpool businessman.

So far Bug-Byte has sold 40,000 copies of *Manic Miner* earning Matthew around £10,000 in royalties.

Conversion of Matthew's games to the Commodore 64 for Software Projects is being carried out by Chris Lancaster, author of *Bewitched* published by Imagine.

Software Projects are located at The Bear Brand Complex, Allerton Road, Woolton, Liverpool L25.

ITV venture

Continued from page 1

ment prior to the approach to produce an ITV machine, and it is scheduled to be launched at the *Which Computer?* Show at the NEC in Birmingham in February.

● The new Transam computer is a low-cost development from its existing machine, the Tuscan. The Tuscan is a £1,700 64K C/PM business machine with a built-in twin 5¼-inch floppy disc drives.

First wrist computer from Seiko

JAPANESE manufacturer Seiko has announced what it claims is the world's first wristwatch computer.

The device, which will go on sale in Japan in January, is in three parts: a wrist unit containing 2K Ram and a liquid-crystal display, a miniature keyboard not much bigger than a credit-card which communicates with the wrist unit via a remote electromagnetic link, a a larger A4 paper size controller device.

The controller is used to program the computer using standard Microsoft Basic. Programs up to 2K in size can then be run using the keyboard and display units working independently of the controller unit.

Prices are Y19,000 (£55) for the wrist display, Y6,000 (£18) for the keyboard and Y29,800 (£80) for the controller.

Seiko UK hopes to sell a simplified version of the wristwatch computer in this country in April next year.

Dragon upgraded to 64

DRAGON Data has at last announced its scheme to allow Dragon 32 owners to upgrade to a Dragon 64.

Since April, when the company first announced its intention to offer an upgrade, the cost has doubled and the way the offer will be carried out has changed.

It will now cost Dragon 32 owners £140 to end up with a Dragon 64, and the upgrade, not now in the form of a circuit-board swap, will be a straight part-exchange deal.

From mid-December, registered owners of the Dragon 32 will be able to return their machines to Dragon in Port Talbot and get an £85 discount off a brand new Dragon 64 computer.

A 64K machine is necessary in order to run the OS9 disc-operating system software now being offered by Dragon.

Although the offer is considerably more expensive than originally suggested, and comes six months later than planned, it is more than Sinclair offered ZX81 owners or Commodore gave to Vic20 purchasers.

Coleco adopts a doll

COLECO's continuing difficulties with manufacture of its much-heralded Adam computer may be eased by a controversial toy doll.

Amid reports of faulty Adam machines and serious shortages in the shops for Christmas — less than a third of the 400,000 units originally hoped for will be delivered — Coleco is struggling to cope with the runaway success of its Cabbage Patch Kids toy dolls.

Around 2.5m of the toys will be sold this year, bringing Coleco a much-needed $50m.

The Cabbage Patch Kids have provoked an astonishing reaction from American shoppers with fights breaking out in stores scrabbling for the few remaining toys.

In this country the hysteria has continued with Harrods reporting 200 yard queues of hopeful Cabbage Patch owners waiting to be parted with £24 a head.

The reason for their success is two-fold. First, every Cabbage Patch is different — individually designed by computer to ensure it is unique.

Secondly, no Cabbage Patch is purchased. Every Cabbage Patch Kid delivered from the Babyland General Hospital, complete with an injection of TLC (Tender Loving Care), is waiting to be adopted. Each 'parent' completes adoption papers and names the Kid. On the Patch Kid's first birthday it will receive a card wishing it a fine day from Coleco.

Happy Xmas

THE computer Christmas card has been invented.

Elm Computers are selling a range of three animated seasonal greetings on cassette for the BBC machine.

The Christmas programs are priced at £2.50 each (all three for £7), available from Elm Computers, 59 Bateman Road, East Leake, Loughborough, Leicestershire.

Micro Shows

The *BBC Micro User* Show will be held at the Westminster Exhibition Centre, London SW1, from December 8 to 11. Entry is £3 and £2 and the show is open between 10 am and 6 pm on Thursday, Friday and Saturday, and between 10 am and 4 pm on Sunday.

The *Young Computer* Christmas Fair takes place at the Wembley Conference Centre a week later. Entry to this show is £2.50 and £1.50 and the opening hours are as follows: Thursday, December 15, 10 am to 6 pm; Friday, December 16, 10 to 8; and Saturday and Sunday, December 17 and 18, 10 to 6.

Romik Forth

ROMIK has developed a Forth language package for the Commodore 64.

The new Forth version has over 200 pre-defined command words, has a built-in editor, and is supplied with a 64-page manual. Romik fig-Forth has been written by Brian O'Shaughnessy, is supplied in cassette form and costs £19.99.

High standards

Congratulations. I must say that this is the best weekly (and second only to *Sinclair User* overall) I have ever read and boy I've read a lot. I have read just about every computer magazine at least once and a very small number come even close to your standards — none for as little as 35p.

As for the high score saga, I think you need ask for no proof as no matter what you come up with people could still beat it and other honest people (the majority by far) would not be able to give the required proof even with a legitimate score. At home, we keep a book of high scores for our friends and family and the only proof we demand is that the score is shown to one other witness.

Many magazines (eg, *Computer and Video Games*) have high score spots and ask for no photo of the screen or other proof, but trust the readers. I know there are some pranksters, but we could ignore any totally preposterous scores and put up with any of the stupid minority.

A high score spot would vastly improve this mag, so stop messing and get on with things at your end. Keep up the good work, *guys*.

S Kezik
13 Rutland Close
Kippax
Leeds

Stop and think

I appeal to everyone who will be buying, giving or receiving computer games this Christmas to stop and think before making their choices. I put it to you that encouraging young people to play games, the purpose of which is to kill, bomb, shoot, conquer, destroy and show as much aggression as possible, is as sick as forcing them to watch "video nasties" — in fact, it is sicker, because with computer games they must actively participate.

It is a tragedy that whilst British home micro software leads the world in technical quality, the vast majority of the themes of "games" appear to have been thought up by the minds of mass-murderers to give pleasure to admirers of Adolf Hitler, Jack the Ripper and Attila the Hun. Look through the adverts in this magazine and feel shame.

We have allowed this to happen, and we are all responsible; programmers, advertisers, magazines and shops. We are using the greatest innovations of our age to teach kids that killing is OK. Pick your presents with care. Happy Christmas. Peace and goodwill to all mankind and aliens.

Mel Croucher
Automata

Ant attack

I would like to say sorry to D Claypole about his score of 33,106 on *Ant Attack*, as I have also rescued all 10 victims but in a shorter time which resulted in a score of 41,412. Can anyone beat that?

Bruce Vivers

Carlisle Road
Annan
Dumfriesshire

A budding genius?

Although not wishing to get involved in a personal vendetta with any of your readers, I feel I must reply to Lance Rock's letter (*PCW* 24-30 November).

My first point is that having just attained my 13th birthday, my parents inform me that I should be on a continual ego trip for some years yet. However, being a budding genius, I had not realised this and I must thank them and Mr Rock for bringing this to my attention.

Secondly, not everybody, like Mr Rock, is a mature and avid reader of *PCW*. Unfortunately, there are some young members of the human race who are just becoming involved with computers and software, and also this magazine, and after being asked by several of them where they could buy *Vetpac* and *Trantam*, I felt it necessary for my ego to try to save *PCW*'s publishing team from answering five or six queries on the matter.

Thirdly, not wishing to pry into Lance Rock's private life, I was wondering if he could let us all know who Diane is.

Lastly, but not leastly, I must bless Lance's little cotton socks for taking the time and trouble to read and answer one of my humble letters. Rock on, Lance. Keep up the good work.

Craig Mitchell
28 Kirkstall Road
Hollin
Middleton

PS. If you think this letter is 'a waste of space', perhaps you would consider serialising it in four weekly parts.

Diane, for anyone who does not know, is Diane Davis, our classified executive.

"We're calling him Adam because my dad really wanted a home computer."

Sinclair microdrive

I wonder if you could clarify me on a point which I am sure many readers will be asking themselves. Does the Sinclair Microdrive have an interface by which it can connect to non-Sinclair micros? I am sure many people would be more than willing to have this 'cheap' and versatile little peripheral for use with their own non-Sinclair micros.

I have asked in many computer shops and just received blank stares. I have never come across any advertisements for what I am sure would be a quick-selling interface, and not just for the Spectrum.

Also, do you know of any interfaces for the ZX printer to make it compatible with non-Sinclair micros? This low cost add-on is more than adequate for someone who just wants a printer for program listings.

Patrick McDaid
31 Edge Fold Road
Worsley
Manchester

To the best of my knowledge, no one has produced an interface to link the Microdrive to non-ZX micros . . . yet. I am sure such interfaces will arrive, but not until you can buy the Microdrive in the shops as opposed to mail order.

However, there are a number of companies producing interfaces to link the ZX printer to other micros. Softex Computers of Bournemouth, for example, offer an interface and power supply for £20.95 to enable you to run a Sinclair printer on either the Vic20 or the Commodore 64.

A useful Poke

One of the most useful *Pokes* available on the Spectrum is *Poke 23613, Peek 23730-5*, which disables the Break key after program execution. This *Poke* traps all errors except *'Nonsense in Basic'* and can cause a crash if others like *'Integer out of range'* appear.

To stop people breaking programs whilst loading, the commonly used *Poke 23659,0* will cause a crash if the break keys are pressed — this is because the poke sets the number of lines in the lower half of the screen and error reports cause an irreversible black screen to appear. However, this *Poke* must be used with care, as it will take effect on any attempt to *Cls*. To avoid this, the location must be temporarily reset, eg: *Poke 23659,2:Cls:Poke 23659,0* . . .

Also, I thought I'd let you know of my current high scores: *Penetrator* — 237,650, *Manic Miner* — 497,313 (about 14 times round), *Chuckie Egg* — 437,100.

Finally, can I second the suggestion for a high score table over popular games, with concrete proof such as photographs or several independent witnesses.

- ★ We've probably the best range of software in the North — and we're improving all the time.
- ★ We've a growing range of computers, peripherals, upgrades and books.
- ★ We've the biggest range of Citadel figures for leagues around.
- ★ We've board and adventure games for all ages from TSR, Games Workshop, Avalon Hill, Victory Games, GDW, Yaquinto, etc, etc.

PROGRAMMERS — Assassin Software needs your marketable programs. Give us a call.

PARAMOUNT SOFTWARE

A Registered Trading Name of Workstations Ltd.

VIC 20 16K Expansion.

CHOCABLOC – *A fast moving, pure Machine Code action game, with Chocabloc our hero trying to sort out some Real Cool Choc Bars — until everything goes crazy and the action is on! Arcade standard. Fully featured. Excellent sound and graphics. Keyboard or Joystick.*
£6.50

OUTBACK – *Can you use the very sophistocated defence set-up to beat off the cunning Swagmen ? How long will you survive ? Pure Machine Code action. Fully featured. Superb colour and graphics. Agame A game with a difference. Joystick.*
£5.50

Any VIC 20

VIC 20 8K or 16K Expansion.

COUNTDOWN – *Time is important. Accuracy essential. Courage mandatory. But above all, Nerve is the prime attribute needed for your mission as an agent in the crack S.M.U. A Superb Arcade/Graphical Adventure. Keyboard or Joystick.*
£5.50

MEGAWARZ – *Where does your fantasy go when your mind leaves your body? Megawarz will take you there you can be sure. High resolution, multi-colour graphics. Sprite graphics. Synthysound. Pure Machine Code action. Arcade standard. A magical planetary trip. Keyboard or Joystick.*
£7.50

Commodore 64

Dragon 32

CASTLE OF DOOM
Fully implemented graphical adventure. A compelling and devious plot which retains excitement and interest to the end — if you ever reach the end ! An experience in adventuring not to be missed. It's user freindly too !
£6.50

JOGGER – *Truly a jogger amongst joggers. If you have trotted with the rest, now run with the best. Machine Code action Superlative sound. Creative colour. A quality programme from Paramount. Joystick.*
£5.50
Any VIC 20.

Diver

A new game for 16K and 48K Spectrum by John Durst

You find yourself in an underwater cavern, full of rocky stalactites. Dressed in full diving gear, you are dropped through a shaft into the cavern. Your task is to find — and bring back — the sunken treasure.

You carry a type of sonar: your diving suit changes colour depending on how close you are to the level of the treasure, so that, when your diving suit turns white, you know you must be roughly on the right level — although you cannot see the treasure. When you get quite close to it, you activate a transponder, which lights up a beacon on the treasure.

Moving about (using the Spectrum cursors), you must try and locate the treasure and get your arms round it, before heading for home.

But you don't have things all your own way; there are Sting-rays lurking which will zap you with an electric shock, if you come within range. (You can't see them, either.) They don't do too much damage, but the shock bumps up your heart rate and you use up extra oxygen from your back pack.

Normally, you can't get through the rocks, but in an emergency you can use your blaster (by hitting "*"), which will smash the rock in your immediate vicinity. But this always wakes the sleeping Octopus, who will make a bee-line for you, emitting clouds of black ink! You had better have your route home planned, or he will catch you.

Scores are shown at the end and there's the chance of another try in a different cavern.

Notes

This looks a tediously long program to enter, but it's not quite as bad as it seems. A number of lines are very similar and can be entered using the *Edit* mode to change line numbers and variables, after the first one has been entered.

The following are groups of similar lines: 35,50 70,71,72 85,86 216-219,220-225 230,231,232,233 240,241,242,243 1100-1140,1200-1240 2705,3035 3060,4100.

The cumulative score is *Poked* into *USR"T"* and *USR"U"*, in the User-Defined Graphics. These positions are normally blank (they code for the space between lines of print) and are not lost when the program is Run. It does, of course, mean that you can't use these two graphics. The letters in quotes in lines 215,227,2510,3020 are also UDGs.

Line 15 draws the Diver and the treasure. The main loop of the game is between 215 and 280: it is fairly complicated, so the game isn't very fast. But one can't move fast under water, anyway. ■

TURN YOUR PROGRAMME UPSIDE DOWN

**Now you can add another dimension to your games.
Swap direction, swap functions, confuse your friends.
In fact you can add almost any twist to your games with
Stonechip's Programmable Joystick Interface.**

You can also listen to them with Stonechip's Echo Amplifier.

Programmable Joystick Interface. This also enables any Spectrum software to be used with a joystick, irrespective of which keyboard keys have been chosen for function.

Programming is easy using only a single switch. Switch one way to program and another way to play. No tapes to load or links to worry about — all programming is achieved by hardware. Used with Atari-compatible joysticks. Simply plugs into rear expansion port of ZX-Spectrum. No other connections to make, no additional power supply required.

Echo Amplifier. How would you like to listen to the sound output from your ZX-Spectrum without ear strain? The Stonechip Echo amplifier can do this for you as well as easing the tedium of saving or loading of tapes and enlarging the range of tape recorder compatibility with the computer. The amplifier has volume control over a range adequate for most uses, and a tone control for harsh or mellow sounds. A switched interface removes the need to swap leads during 'SAVE'ing or 'LOAD'ing. Leads are left connected all the time and the desired function is selected on the three position switch by the user. Use of the 'CUE' facility enables an audio cue to precede the program being 'SAVE'd on tape, a decided advantage when searching through a multi-program tape. The Echo simply plugs into the Ear, Mic and Power sockets of the computer and does not require an additional power supply. The expansion port at the rear of the computer is left free for use with other peripherals and the unit is housed in an attractive case custom designed to complement the ZX-Spectrum.

SCOPE

Computer Graphics Language

- ★ A VERY POWERFUL, TRUE MULTITASK LANGUAGE
- ★ AS FAST AS MACHINE CODE
- ★ SIMPLER THAN BASIC

Write Machine Code in a fraction of the time currently required

SCOPE is available from most good quality dealers and selected branches of WHSMITH

For details of how to get your games published commercially contact ISP Marketing

PRICE £11.95

TECHNICAL DETAILS SCOPE is a fully structured multitask language specifically for writing *graphics, animation* and *sound.* Being fully compatible with BASIC it is ideal for writing both arcade and adventure style games. Additionally, with SCOPE present in high memory it can be used as an assembler with SCOPE words as plain language mnemonics. Therefore no knowledge of machine code is required. The language is extremely easy to comprehend and is very powerful indeed providing many features not available from BASIC.

SCOPE HAS TO BE USED TO BE BELIEVED

Power games

***David Kelly** talks to Bob Simpson of Micro Power*

Micro Power, through its software division, Program Power, has been responsible for some of the best-selling games for the BBC computer — *Killer Gorilla* and *Escape from Moonbase Alpha*, to name but two.

Bob Simpson began it all as long ago as 1979 when he was still working as an accountant for a textile company. Having gained some programming experience through his work, he splashed out and bought a Nascom 2. "I noticed that nobody was doing anything on the programming side for the machine," explains Bob.

So, he joined the local Nascom club and decided to have a go. "We began by booking a £30 advertisement in *Practical Computing*."

Next, Bob met John Haig, now Micro Power's technical director. "John had bought an Acorn Atom and written nine or ten programs for it and we got together to sell them."

In July 1981 Bob gave up his job with the textile company and was joined by John — from then on Program Power became a full-time occupation. Carol Simpson also joined the company to handle marketing and distribution.

The combination worked. The number of Atom programs grew, so did the company. Eventually Program Power's Atom catalogue contained over 60 titles. Most successful of these was the *Programmer's Toolbox*. The 4K Eprom added useful Toolkit commands and additional Basic keywords to the Atom machine. The package was wrritten by three of Program Power's by now considerable roster of freelance programmers.

In May 1982 the company applied for, and was granted, an Acorn dealership. This coincided with a move to new premises with a shop unit so that a computer shop could be set up. At this point Micro Power was formed as the retail outlet, with Program Power remaining the software development company.

"We started the shop off with 20 Atoms and some of Acornsoft's titles, as well as our own. It was a bit of a struggle to sell the machines, because the Acorn Atom was already on its way out.

"Then the first BBC machines came in and they sold out almost immediately — we had to wait until September for the next lot which also sold out. "Since then we have sold a hell of a lot of BBC machines."

Recently the company has moved again to larger shop premises and Micro Power now sells the Oric, Dragon and Spectrum, as well as the BBC computer. Last month the Electron was added. Next will be the Memotech computers.

The first BBC software titles from Program Power were out in June 1982.

Eighteen months, and over 50 BBC titles later, the process starts again with the Electron. Program Power has 12 programs out for the new Acorn machine already and has sold 50,000 Electron tapes to W H Smith to sell alongside whatever stocks of Electrons they can lay their hands on.

W H Smith would appear to be confident the Electron will do well. Bob: "They bought from us at a time when they knew they wouldn't get many Electrons this year."

Bob could have warned W H Smith what they were letting themselves in for with the Electron. "In the past we have actually lost money at the shop with late delivery of Acorn products — pre-Christmas orders delivered in March, single disc drives arriving six months after being ordered.

"The most frustrating thing is we never know what is happening. If they *told* us it was going to be six months late we would know where we stood.

"Having said that, I cannot emphasise too much our approval of the Acorn products. When they are there, they are tremendous."

Just how long Micro Power will continue to sell home computers is not certain. "A dealer such as ourselves can offer a wealth of expertise that a high-street chain cannot match, but sales of the Spectrum in the major stores has shown that you don't need that back-up to sell a computer.

"In the same way that people go to a specialist shop to ask the technical questions about hi-fi, only to go down to Comet to buy, they are now beginning to do the same with computers.

"How long we will have an advantage over the big stores is not clear. Smith's, for one, is setting up some shops with bigger computer departments, staffed by people who do know what they are talking about.

"It may well be that in two years time Micro Power will not have a home computer hardware business. Margins on machines like the BBC are very slim and to think of carving it up to be competitive doesn't make sense."

Forseeing problems in competing with the high-street multiples has spurred Micro Power to diversify. The company is shortly to begin selling business micros and it seems likely that other companies in a similar position will also have to make the switch from home to business machines. The smaller retailer of home micros will be forced out by the big chains and when they go, so too will go a valuable source of help and advice.

Although Program Power — the software side — contributes slightly less than half of the £750,000 turnover of the whole company, Bob regards software as the mainstay.

Currently, Program Power has 43 titles for the BBC machine. Last month 15 new titles were added and 17 were removed from the catalogue. The titles discontinued were the older games. Since they were written, the quality of software on the BBC has improved so much that they were no longer considered to be earning their place.

In addition to the 12 titles which have so far been converted for the Electron, 20 more will be out before Christmas. From now on, each new title will appear simultaneously for both the BBC and Electron.

Converting programs from the BBC for the Electron is not always as straightforward as it might appear. *Moon Raider* and *Swoop*, the latter being one of Program Power's top-selling titles, were both written in Mode 2 on the BBC and both have had to be rewritten in Mode 5 for the Electron.

"The main problem with the Electron," says Bob, "is speed. In Mode 2 it runs at about a quarter the speed of the BBC." This has meant making compromises: "Sometimes this means we have had to have smaller characters or reduce the number of shapes on-screen at one time."

Program Power intends to continue to specialise in games software because they sell well. "For any new title now we are looking for minimum sales of 10,000 copies in six months."

Assuming the Electron sells at least half as well as the Spectrum, Bob reckons a top title next year ought to sell between 50,000 and 100,000.

Sales of the Electron itself will clearly depend on how Acorn brings down the price. The BBC machine might well have come down to £300 by now if keeping the price up had not been a condition of Acorn's agreement with the BBC. And Acorn would have sold so many more machines at £300 than £400.

"The Electron has most of the capabilities of the BBC and ought to do well. At the moment I can see no reason why Program Power shouldn't go on strongly for two or three years at least.

"We are looking at the Commodore 64 machine for software next. We will have to work quite hard, though, to establish ourselves as a Commodore 64 software house. It is strange but, even if you have quite a big name in software for one computer, people with other micros don't know you exist." ■

Empire of the Dragon

***Brian Cadge** looks at another batch of software for the Dragon*

We begin this look at the latest Dragon software with a footnote to my review of *Personal Banking System* (*PCW*, 8 September) by Hilton Computer Services. As I said then, the program has a number of programming errors and oversights which might make it less suitable as a serious package. I am now pleased to say that since this review, Hilton has sent me a revised version of the program which seems to be totally error free and much more suited to its task.

Two other packages also came from Hilton to be included in this review, these are *Utilities No. 1* and *Disassembler*. Both are written in machine code and autorun on loading.

Utilities 1 contains three options selected from a menu on the screen. *Cassette Catalogue* will display the name and length of any programs on a cassette as well as "start" and "entry" addresses for binary files. The program also reports any block errors, but not the block number. *Cassette Copy* will automatically copy any standard format Dragon tape up to 22.5K, including protected software — it was only a matter of time before a "Copy-cat" type program was brought out for the Dragon.

The final utility will compress a Basic program removing all spaces and REM lines. Doing this certainly saves you memory (how many programs use all 32K, though?), but you would be advised to keep a normal copy of the program as it becomes difficult to follow and debug once compressed. Three utilities on one tape for only £5 is not bad value at all, I suspect that the *Cassette Copy* routine will sell the tape.

The *Disassembler* from Hilton is a full 6809 disassembler which sits in the top 2K of reserved RAM. Output is either to screen or printer and is fully formatted in Hexidecimal and standard Motorola mnemonics. Little more can be said about a disassembler; this one at £5 is very good value and complements many assembler cartridges on the market very nicely.

Also available from Hilton is a Dragon memory map which lists in more detail than any other I have seen, most of the useful memory locations of the Dragon. It comes in the form of nine A4 photocopied sheets bound by a plastic spine — the price tag is rather high at £5, but dedicated machine code programmers may find it useful.

Yet another file handling program is available from Micro-de-Bug software — *Pro-file* comes on a cassette with a 56-page manual which explains in very great detail how to Create, Delete, Edit, Find, List, Load and Save files using the cassette system. The manual is one of the best of its kind that I have seen — ideal for the absolute novice to computing. Unfortunately, in the copy I have at least, there is no disk support — a disk version or routine would be an obvious advantage to a program of this kind. This piece of software carries the usual high price of "Professional" programs at £10.

After all those utilities, on to lighter things. *Chateau* from Gem software is a "new style" of adventure game. In fact, the usual things apply, you must roam the old Count's Chateau in search of treasures and clues, avoiding booby traps and fighting off the occasional monster, or run away from it as you wish!

The difference is that all communication with the program is via menu selection. I have seen this tried before without much success, but no such problems here; the concept works very well and makes the game particularly suitable for younger users who have difficulty typing in long commands correctly.

The game is a text only adventure, except for a plan which can be called up at any time and which shows your recent movements on the current level. There are

four floors to the chateau, all of which must be visited to gain all four clues. Occasionally, a travel agent appears and randomly moves you to a new location — sometimes this helps, sometimes it hinders. When all clues have been collected there is another section to the game, similar to *Mastermind* where you must guess the correct sequence of numbers. Get past this and you at last get the loot.

As the chateau's locations are randomly generated for each game, it is not possible to map out the locations as in most games of this type, but it does mean that you get a different game each time. As adventures go, this one is very enjoyable to play, with fast and often witty comments from the computer. Whether you like the menu method of entering commands is a matter of taste.

Cable Software's latest talking game is *Baccarat* — the card game. In case you're not familiar with the game it could be described as similar to Pontoon, but the object is to get nine, rather than 21. The high resolution graphics used for the cards are truly excellent, especially in colour; the sound effects are also good, although the only speech heard is "Banco", which is only recognisable as such after reading the instruction sheet. The cassette comes in Cable's usual full colour, mini-video box with a price tag of £8.75.

I have no grumbles about the program itself, but the choice of game is just not suited to a computer. Two cards are dealt by the computer — if the total is more than ten then ten is subtracted, if the total is then less than five another card is dealt, if more than five you have to stand (stick). As you will have gathered, this means there is no participation by the player at all unless he gets five, in which case you choose whether to draw or stand. The software may be good, but the game is very, very boring!

Hornet Software is a new name in the Dragon software market, their first offering is *Wormtube*, this is in fact another US convert from the Tandy Colour Computer. The idea of the game is to control your FTL (Faster Than Light) space craft as it flies down the wormtube created by such speed. Of course, you must avoid the

edges of the tunnel as well as shoot gold nodules which block your way; picking up gold pieces in your ship's jaws also gain extra points.

The scoring mechanism is rather strange, you begin with 3 million points and lose up to 50,000 points each time you crash. The controls are the right joystick to control the ship's movement, the F key to speed up, S to slow down, *Break* freezes the action — a useful feature — and P lets the next player have a go. Up to four players can take part and each can enter their name at the start of the game.

Using a graphics mode not available in Basic gives a black background with all eight colours and a reasonable level of graphics. For an American import, this game seems rather uninspired compared to those brought over by the likes of Microdeal. The packaging doesn't help — just a small instruction sheet. You will probably find the game enjoyable at first, but the novelty soon wears off.

War games are becoming ever more popular these days, especially those based on the original *Risk* board game. *Empire* from Shards Software is the newest. The Dragon Empire is a ruthless, aggressive power, intent on conquering the world through an uncompromising strategy of relentless attacking, says the scenario.

The game, in which you control the defending armies, has eight skill levels and is played entirely on a high resolution colour map of the world. You begin by choosing your territories and allocating armies to each. When this is all done, the Dragon does the same. The war then begins; the display shows a close-up of the area involved as the Dragon makes its first attack. You can follow who's winning at the bottom of the screen. You then have 20 seconds to enter your attack; if victory is yours, you can move between one and nine armies to occupy the territory, you then continue attacking if you wish. There are also neutral armies involved which can be engaged if desired. The ultimate winner of *Empire* is whichever side completely destroys the other first.

The display is one of the game's strongest points — a very good world map with close-ups makes the game semi-educational. A complete war can take an hour or so to play, so this is the ideal game as the winter nights draw in. No joysticks are needed as all input is via a simple keyboard command. At only £7 this is one of the best tapes to come from Shards for a long time.

Finally in this review, to two pieces of software from Microdeal. *Frogger* is the official licensed version by Sega for the Dragon. The game is extremely accurate to the original, with full colour high resolution graphics and sound. Even the music at the start is the same as the original.

You can choose either keyboard or joystick control, fast or slow speed and one or two players. All the favourites are here; the lanes of moving cars and lorries, the snakes, diving turtles, logs, crocodiles and white frogs. However, although the instructions explain how to load and operate the program, they assume everyone knows all

the rules and features of the original Frogger game — a little more information would have been useful.

The game may be freezed or ended at any time, and you can freely change speed and keyboard/joystick control before each game. Bonus frogs are rather hard to come by, but they are occasionally given. The game gets harder the longer you survive and there is a bonus for each screen completed with some suitable and catchy music.

Altogether for £8, this game is fantastic value for money and will keep you amused for a long time to come — a must for all Dragon collections!

If you get jealous of the type of music produced by games like *Frogger* or *The King*, then the *Dragon Composer* from Microdeal is just what you need. This amazing program gives you not one but four channels of sound, each independently controlled with seven octaves, variable tempo and key and an optional *Kaleidoscope* graphics display as the music plays.

Once loaded you enter your music in Data statements from line 3000 onwards in simple note format; eg, *Data G4C3B4A2W*. Then run the program and a menu is displayed to allow loading and saving, testing and compiling or modifications to be made. Each set of notes takes one second to compile and any errors detected are reported. Once this is done and you are happy with the results, you save the music at a position independent machine code program. You can then load this back into your own programs and play the music with *Exec*.

All this is fully documented in a 28-page user manual which comes with the book sized package. Also included on the tape is *Jukebox*, which plays a number of demonstration tunes, including *The Mexican Hat Dance* and *Yellow Rose*. The sound produced by this program really has to be heard to be believed — four voices from a single channel source is a masterpiece of programming! Even though this is twice the price of Microdeal's other software at £15, it is well worth it and deserves the full ten-out-of-ten for value. ■

A routine matter

***Andy Wilson** looks at machine code routines on the ZX81 in the second of a three-part series*

I now intend to discuss the machine code routines themselves. If you feel you do not understand machine code, do not be deterred. Reading on will give you a much clearer idea of how the routines can, and cannot, be used. The code makes extensive use of the ZX81 systems variables, but if you are conversant with Z80 assembly language, it should be possible to convert the routines for use on the Spectrum.

The full assembly language listing is given in listing 6. This was produced using the Artic assembler and, if you own, or have access to one, the code can be entered directly. One thing to note, if you are using a different assembler, is that Artic always puts *Jp 7A3C* at the end of the program. This has been replaced with 3 *Nops* in the hex-dump, in order to keep the line number addresses the same.

I will refer to the routines by the labels used in the assembler listing, starting with *Rept*. This routine uses its own *Stak* to keep track of nested loops. The spare systems variable at *16507* is used to *Point* to the low byte of the current *Stak* address. Rather than pointing to the next free byte, as does the Z80 stack pointer, it points to the current return address.

It works by storing the address from the systems variable *Nxtln* on the *Stak* (ie, the address of the next program line). If the *Stak* is full the error subroutine is called giving error code *R*.

Until works by looking at the repeat flag, or *Rflag*, which is *Poked* from Basic by the line *Poke Until* (condition), giving *1* or *0*. If the condition is true, *Rflag* will be *1* and we just *Return* to Basic after resetting the *Stak Pointer*. If the condition is false, we need to jump back to the appropriate *Repeat* statement. We take the address from the top of the *Stak* and *Poke* it into the systems variable *Nxtln*. Thus, when we return to Basic, the operating system is fooled into continuing from the line after *Repeat*.

If the *Stak* is empty it means there is no outstanding *Repeat*, so we call *Error* with code *U*. *Until* is called from Basic by *Rand Usr Check*, following *Poke Until* (condition).

You will notice that the error codes used are all in the range *N* to *U*. This is achieved by *Poking* a number between *16h* and *1Dh* into *Errnr*, which forces a halt when we return to Basic. *Error* is called with the number in question in the *A* register. We subtract from this *16h*, giving us a number between *0* and *7*.

All of the error messages are 16 characters long, so multiplying this number by 16 and adding the result to the address of the first message gives the address of the start of the message we are interested in. This message is downloaded on to the bottom line of the screen — then we *Return* to Basic, forcing a halt as described earlier. This routine could easily be adapted for use in other machine code programs.

Defp is the routine used to "define" procedures. A procedure that has been defined has the address of its first line stored in the variable used as the name. This means that there is no limit to the amount of procedures it is possible to define.

This part of the routine is simplicity itself. It takes up one instruction, *Ld Bc, (Nxtln)*. This is at the end of the routine and labelled *OK4*. It just puts the address of the next program line into register pair *BC* and, when the *Usr* routine is evaluated in the instruction *Let Name=Usr Defproc*, this address is stored in *Name*.

That's easy enough, but what does the rest of the routine do? The problem is, when we encounter a procedure definition in Basic, we do not want to execute the whole procedure, just store the address and skip the rest. We do this by searching for an *Endproc* instruction, then jumping to the following line.

What the routine actually looks for is the pair of characters, *Usr E*. It goes through the Basic program character by character, until it finds the next *Usr*. It then looks to see if the next character is *D* or *E*. If it is *D*, it assumes this is a *Defproc* statement and gives *Error U*. If it is *E*, we calculate the address of the next line (address of *E+Len"Endproc"+1*), and *Poke* this into *Nxtln* immediately before *Returning* to Basic.

One problem was the floating point representation of numbers used by Sinclair. It might be possible for one of these five-byte numbers to contain the codes for the character pairs we are looking for. This is taken care of by *Calling* the subroutine *Fpnum*, which will be described later.

If we reach the beginning of the display file, *ie, Dfile*, without finding an *Endproc* it is obvious it has been left out and we call *Error* with code *Q*.

In order to prevent any possibility of causing a system crash, we check the address is really the start of a line by making sure it is preceded by a *Newline*, code *76h*. If there are two *Newlines* in a row, then *Endproc* is the last line of the program, giving an *Error T*.

Fpnum is a subroutine used by *Defp* to check that *Usr D* or *Usr E* is not part of a floating point number. Fortunately all floating point numbers are preceded by a byte *7Eh*, so we just need to check the previous four bytes for this character. If we find it, the Zero flag is set to *1*, if not it is reset to *0*. One thing worth noting, which confused

me at first, is that *Djnz* does not set the Zero flag as you might expect.

Pcall — a slight departure from the order of the listing here — uses a *Stak*, identical to that used in *Rept*, to store the address of the next line, so we know where to return on completion of the procedure. Then we use another systems variable, *Dest*, to find the address of the variable containing the procedure address. Note that this should be in the variables area, so if *Dest* is less than *Vars* the variable has not been previously defined (*Dest* will be the address of the *Name* in the *Callproc* statement).

Now comes the tricky bit. As you will remember, we carefully stored the procedure address in the variable *Name*. Unfortunately, it is now in five-byte floating point form and converting this to an integer is not an easy process. The way I have chosen to do it is to transfer the number to the calculator stack, and then use the Rom routine *Unstk* to convert it back to an integer in *BC*.

First, we need to save space on the calculator stack, using another Rom routine *Stkbc*. Note that it does not matter what is in *Bc*, as it will be overwritten anyway. We have already found *Dest*, which points to the byte before the number in the variables area. There is another systems variable *Stkend*, which points to the last byte of the number on the top of the calculator stack. We can now transfer the number to the stack by adding five to the value of *Dest* then using *Lddr*. It is now a simple matter to get the address we want into *BC*.

We now *Poke* this address into *Nxtln* and when we *Return* to Basic, we jump to the first line of the procedure. Just in case we have inadvertently used the procedure name for some other purpose, we check the address is the start of a line as we did in the *Defp* routine.

Endp is a much simpler routine. The main part unstacks the address we stored in the *Pcall* routine, in the same way as we did in *Until*, then *Pokes* it into *Nxtln*. If the *Stak* is empty, there is something wrong.

Normally, the only way Basic can encounter an *Endproc* statement is when the procedure is called, otherwise it is skipped by the *Defproc* statement. Therefore, if the procedure *Stak* is empty, we must have left out a *Defproc*, error *P*. ■

```

A basic concept

***Trevor Toms** continues his six-part series on machine code*

In the next two weeks we'll be looking at the way in which a Basic programmer can "translate" concepts into machine code. This may not be entirely the best way of writing some routines, but at least it gives the relative novice a chance to get going.

First of all, let's look at the machine code equivalent of variables. In Basic, data can be stored for later use by means of the *Let* command:

```
LET item = 27
```

In machine code, you need to consider several aspects before you can write an equivalent command. First of all, there is no inherent way of storing numbers less than −32768 or greater than 65535. Similarly, there is no simple method of storing values which have fractions (eg, *Let item = 1.5*). For mainly the second reason, most machine code routines are concerned with integer arithmetic and leave floating point calculations to Basic where it's much easier to control.

Now you need to decide the limits of the data item you are storing. If it never exceeds 255, you can use a single byte to store it, while larger values will need a word (16 bits, or two bytes) to hold the data. In most cases, you can play safe and always use 16 bits. Data areas can be reserved in assemblers by writing:

```
ITEM: DEFW 0 ;reserve one word
```

Some assemblers let you write:

```
ITEM: DEFS 2 ;reserve two bytes
```

but the second method does not initialise the data, it only reserves the space.

Now that you've got an area put aside, you can save any of the Z80 register pairs by using the instruction:

```
LD (ITEM),HL
```

where *Item* is the name of the data area reserved, and *HL* is the register pair whose current value is to be saved. *HL* can be replaced by *DE*, *BC*, *IX* or *IY*.

So the machine code equivalent of *LET item = 27* becomes:

```
LD HL,27 ;put value 27 into HL
LD (ITEM),HL ;place HL contents into ITEM
```

In order to retrieve the contents of the data area, you write:

```
LD HL,(ITEM)
```

which loads 27 (or whatever) back into *HL* (or *DE*, *BC*, *IX*, *IY*).

Simple stuff, you might say, but how do I use this data item meaningfully? Let's now consider a small example of program which keeps a score, adding in 10 every time a key is pressed. The routine uses a couple of ROM routines, which I'll explain — see listing 1.

First of all, the routine sets data item *Score* to zero (*LD HL, 0* and *LD (Score),HL*). Within the main loop, it uses the ROM routine at address 15D4h to await a key press, but notice that before any I/O routines can be called, a program *must* select the appropriate device to be used. This is important if you intend to use the *RST 10h* output routine for printing — we'll cover this in a later article.

On exit from *Await$ Key*, the corresponding key code is left in register A. Next, the print position is moved to line 10, column 12, by using the ROM "string printing" routine. Notice how *DEFB* commands have been used to declare the *Print at* string. The routine now loads the current value of *Score*, adds 10 to it, then saves it again. Here, another ROM routine is used (at address 1A1Bh) to print the contents of register pair *BC* as a number on the screen. This routine will only handle values from 0-9999 since it is used to print the line numbers when a program is listed.

A check is now made to see if the *Break* key combination is being pressed, giving the user a chance to return to Basic. If not, the entire loop is started again.

I hope that some of the features of this program will have whetted your appetite — I will explore most of these and more in future articles.

So how about arrays? By reserving a

```

larger amount of memory — two bytes for every element of the array — you can set or get the value of any item in the array by using routines such as those shown in listing 2.

The array base address should be preset (here I have used address 0F000h), and register pair *DE* is assumed to hold the element number required. The *Get* routine leaves the current value of this element in *HL*, while the *Set* routine places the value of *HL* into this element. Compare these:

```
DIMz(20)                Z: EQU 0F000H

LET z(2)=27             LD DE,2
                        LD HL,27
                        CALL SET$ITEM

LET score=z(13)         LD DE,13
                        CALL GET$ITEM
                        LD (SCORE),HL
```

You can initialise an entire array by using a routine similar to that shown in listing 3. This example is a machine code equivalent to:

```
10 DIM z(20)
20 FOR x=1 TO 20
30 LET z(x)=x
40 NEXT x
```

A luxury of Basic is that any attempt to use an array element which is "out of bounds" results in an error report 3. This does not occur in machine code unless you specifically write in checks that no item number is out of range — a rather arduous task — so there are probably going to be many occasions when your program will suddenly give spurious values for array data. In these circumstances you should check to see if the element values have gone out of bounds.

Next week, I'll show how you can evaluate expressions such as *Let x=3★b(4)+2* in machine code. ■

MAKE YOUR OWN TV FILMS!

WITH LIVE ANIMATION & MUSIC

SAVE them...

& AMUSE FRIENDS AND FAMILY WHEN YOU PLAY THEM BACK!

new EXCITING!

ORDER: MACRO CONSTRUCTION & ANIMATION CASSETTE MCA £7

- SPECIAL MACRO-PROGRAMMING TECHNIQUES ALLOW YOU TO: -
- CALL-UP ANY MEMBER OF CAST, INCLUDING UFO, HELICOPTER AND A HOST OF 'PERSONNEL' IN A CHOICE OF NEARLY 30 'CALLS!
- MAKE EACH ANY COLOUR - LARGE ONES CAN BE IN TWO COLOURS!
- THEY WALK, RUN, CLIMB & FLY.
- BUILD HOUSES, CHURCHES ETC. IN A FLASH - & ERASE THEM
- UP TO 15 MINS. PER 'FILM', OR MORE IF YOU'RE A GOOD DIRECTOR
- MAKE CHARACTERS 'SPEAK' USING ANNOTATIONS AS IN STRIPS.
- FULL COMPUTER-PROMPTING TO SAVE YOU MAKING ERRORS.
- INSTANT PLAYBACK, EDITING AND DELETING AS YOU GO ALONG!
- MOST COMMANDS ARE A SINGLE KEY-STROKE, WITHOUT 'ENTER'
- COMPOSE YOUR OWN TUNES USING THE SPECIAL THREE-OCTAVE CHROMATIC MUSIC COMPOSER, WHICH ALLOWS YOU TO LISTEN, CORRECT AND EDIT AT EACH NOTE ... IF YOU NEED TO!
- STORE UP TO NINE 99-NOTE TUNES TO 'CALL-UP' AT ANY TIME IN A STORY ... COMPUTER GIVES EACH A NUMBER IN MEMORY
- CHANGE TUNES AT ANY TIME, EVEN WHILST MAKING A 'FILM'.
- YOU CAN EVEN ADD PERSPECTIVE TO BUILDINGS, ROADS ETC.
- NO SPECIAL SKILLS OR COMPUTER KNOWLEDGE NEEDED . . . JUST IMAGINATION!

A display of fireworks

John Scriven and Patrick Hall *present a firework game in the second of a two-part series*

This program, *Firework*, is also based on a simple idea — offering examples of the four rules (add, subtract, multiply and divide). The incentive to do well here is the impressive display after five correct answers.

Each of the graphic routines is held in a procedure, and may be adapted to your own use or copied directly into a different program.

The names given to the procedures should make the supervisor between lines 30-150 self-explanatory. After *Procgraphics* and *Procinit* the *Repeat-Until* loops uses *Procsetup* to draw the rocket on the ground and *Procquestion* to test the child's arithmetic. *Proclaunch* then makes the rocket rise up the screen until it is at the centre.

Two tricks are used to create the impression that the rocket is continuing to travel upwards. First, *Procascent* makes the ground appear to fall away beneath the rocket. Then *Procmoon* moves the moon down the screen. After that the actual firework display is created by *Procburst*. The falling fragments of the rocket are shown moving down the screen and finally *Procfall* enhances the feeling of downward motion by moving the ground back up the screen.

Notes

Procgraphics: Characters 224-238 are redefined by this procedure. Large plus, minus and divide signs are created by 224-226 (*x*, or *Chr$ 88*, is used for the multiplication sign). The rocket's nose and body are built up from *Chr$ 227* and *228*, while *Chr$ 229* and *230* make the fuse. Characters 231-233 form the rocket's exhaust flame and 234-237 are used to build up the composite character moon$ at line 380.

Finally, *Chr$ 238* is used to form the character bomb$, which, like moon$, includes *Chr$ 32* to erase its path automatically on the screen.

Procinit: Line 450 is included in case the child types in a value for the variable 'answer' in *Procquestion* which causes the program to crash. The inclusion of such a line in any initialisation procedure will make a program far less prone to unexpected behaviour from the child using it! Array space is set up for the *x* and *y* co-ordinates of the bombs in *Procburst* by line 460. The procedure also switches off the auto-repeat and defines a suitable envelope for the sound effect of the stars when the rocket explodes.

Procsetup: Here the initial screen display is created with the rocket waiting on the ground with its fuse smouldering. Lines 520-560 select colours and set the flash rate for colour 10, which is used for the flickering end of the fuse. The ground is drawn by using *Vdu 28* and *Cls* at lines *580, 590*. The rocket is drawn by printing *Chr$ 227* and *228* in colour 2 and the *Fornext* loop between lines 650-670 draws the fuse. Finally, line 690 lights the end of the fuse with colour 3.

Procquestion: All the text which appears on the screen is confined to a window set up by using *Vdu 28* at line 730. Note how 760, and subsequent lines, include single apostrophes to space out neatly everything which is printed in the window. Line 770 delays the program with *Procpause*. Here the variable *P* is used to adjust the length of the pause. The questions given to the child are controlled by the *Repeat-Until* loop between lines 780-970. It can be seen that the test continues indefinitely until the child has achieved five correct answers.

Lines 800-840 choose at random whether the question will be addition, subtraction, etc, and also select suitable numbers for each. The routine between 860-960 accepts answers from the child. It can be seen, from the condition at line 950, that if the child types in an incorrect response the same question will be set again. This happens three times before line 960 tells the child what his answer should have been. Line 960 also rewards correct answers with *Procright*.

Procpause: Because different length delays are required by separate parts of the program, the time taken to execute the empty *For-Next* loop at line 1030 is controlled by the value given to the variable *P*. Of course the value of *P* does not always have to be stated before summoning *Procpause* but only when the delay required differs from the last value given to *P*. Note that again *I* has to be declared as a local variable.

Procright: This rewards correct answers by first increasing the value of 'score' at line 1070 and then shortening the fuse. To do this the text window is restored to the whole screen by *Vdu 26* at line 1110. Line

```

1120 then overprints the end of the fuse with *Chr$ 230 + Chr$ 32*, thus decreasing its length whilst still leaving its flickering end. Line 1130 re-establishes the text window before the current score is printed as a prompt.

Proclaunch: Before the rocket is launched, the text window is completely removed by line 1200. The final part of the fuse is removed at 1220. Then the rocket's sound effect is switched on by line 1240. Motion up the screen is created by the *For-Next* loop between lines 1260-1440. The rocket's nose is printed by line 1300. Its body is printed by lines 1330 and 1350. Each line is preceded by a conditional statement which adjusts the background colour to match ground or sky.

The rest of the loop deals with the rocket's exhaust. Note that the colour of the exhaust is changed from green/magenta to black/white when it is no longer seen against the ground. This is controlled by line 1380. Finally, line 1450 increases the size of the rocket exhaust.

Procascent: The rocket never rises beyond mid-screen. However, the illusion of further upwards travel is produced by the *For-Next* loop between lines 1500-1530. Here line 1510 successively removes whole lines of the ground in a way which simulates the view which would be seen from the rocket itself. The final strip of ground is deleted by using the text window at lines 1540, 1550.

Procmoon: Further animation is produced in this procedure by moving the composite character, moon$, down the screen using the *For-Next* loop between lines 1610-1640. The final position of moon$ is erased by lines 1650, 1660.

Procburst: Line 1720 explodes the rocket by turning off its sound and clearing the screen. Lines 1730-1780 select suitable colours and sounds and immediately the two nested *For-Next* loops between lines 1800-1930 create the starburst explosion on the screen. The co-ordinates chosen for *Print Tab* between 1830-1910 build up a large symmetrical pattern. This display continues for six seconds and is then replaced by five randomly located bombs which burst on the screen at co-ordinates determined by the loop between 1950-1980. The nested *For-Next* loops between 2100-2150 let the bombs fall gently down the screen until line 2160 clears the display completely.

Procfall: This procedure is the reverse of *Procascent*. The text window at line 2220 places the first strip of green ground at the bottom of the screen and then the *For-Next* loop from 2240-2270 builds up the rest in a way that suggests a gradual fall back to earth. The intention is that the eye is following imaginary debris from the explosion. Finally, exactly the same amount of green is present at the bottom of the screen as was there originally and the ground is ready for another rocket, and another five questions. ■

This is an extract from *Programming for Education on the BBC computer* by John Scriven and Patrick Hall and published by Sunshine Books.

AGF

PROGRAMMABLE JOYSTICK INTERFACE

for

Spectrum

or ZX81

ONLY 32.95 +£1.00pp

MICRODRIVE COMPATIBLE

ABOUT OUR INTERFACE

The AGF Programmable Joystick Interface is a unique design offering the use of any Atari-compatible joystick with absolutely all software, whether it is cassette or ROM cartridge, with the Sinclair Spectrum or ZX81.

The hardware programmable interface requires no additional software and accurately replicates the keys of the computer in a manner which is responsive to absolutely *ALL* key reading methods, both BASIC and Machine Code.

The interface does not interfere with key operation and can therefore be used simultaneously with the keyboard.

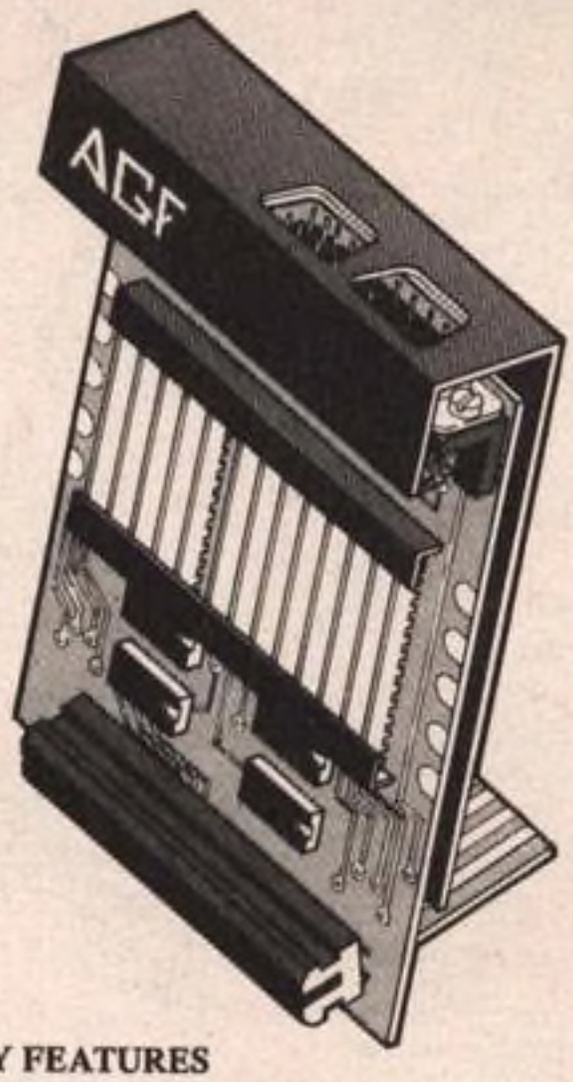
There is no need to remove the interface once fitted as the rear extension connector will accommodate further expansion, i.e printers or RAM packs etc. This important feature avoids excessive wear to the expansion port.

The key replication principle pioneered by AGF means that your own programs can use eight directional joystick movement by utilising simple key reading BASIC.

Two joystick sockets are provided which share the same keys, for use with the majority of two player games. Several interfaces may be used on the same computer for multiple joystick applications.

The interface is programmed by a two digit code, which is looked up on a programming chart supplied, for each direction and firing button. The two numbers are then selected on a pair of leads which are clipped onto appropriately numbered strips on the interface.

Once configured this can be marked on a Quick Reference Programming Card for storing with the game. As the programming is *not* power dependent the interface retains the last configuration made and can be immediately used when next switched on.



KEY FEATURES

- ★ Programmable design gives TOTAL software support.
- ★ Accepts Atari, Competition Pro, Wico, Starfighter, Quick Shot, Le Stick etc.
- ★ Rear extension connector for all other add-ons.
- ★ Free demo program and instructions.

PACKAGE CONTENTS SUPPLIED

- Programmable Interface Module as illustrated, complete with clip-on programming leads.
- Self adhesive programming chart detailing how to define which key is simulated by UP, DOWN, LEFT, RIGHT, and FIRE. This can be fixed on to the case of your computer or if preferred the protective backing can be left on. The chart is made of a very durable reverse printed plastic and is extremely easy to read.
- One pack of ten Quick Reference Programming Cards for at-a-glance setting to your games requirements. The card allows you to mark the configuration in an easy to read fashion with space to record the software title and company name.
- Video Graffiti demonstration program which is written totally in BASIC to illustrate how all eight directions and fire can be read. This is also a useful high resolution drawing program.
- 12 months guarantee and full written instructions.

JOYSTICKS

CONTROLLERS

NEW RELEASES FOR CHRISTMAS FOR THE DRAGON 32

OASIS SOFTWARE

MIND GAMES COMPENDIUM

Chess, Dominoes, Backgammon, Invader Cube and Othello. More than £30 of software for just **£19·95**

BASIC COMPILER

SPRINT

Convert your BASIC programs into pure smooth 6809 machine code with 'SPRINT' - the fastest complete integer compiler on the market.

SPRINT will handle all the DRAGON'S sound and graphics commands, FOR-NEXT loops, arrays strings - the lot! In fact, so that you can compile even bigger BASIC programs, SPRINT will compile your program straight from tape!

If you think £14·95 sounds too cheap to believe, go along to your local dealer and ask for a demo before you buy.

ALL OASIS PRICES INCLUDE VAT AND P&P AND EVERY OASIS PRODUCT IS PROMPTLY DESPATCHED AND INCLUDES A LIFETIME GUARANTEE.

If your local dealer does not stock these products then let us know his address and we will contact him.

More than fun and games!

FIRST STEPS with the Mr. Men

by Primer Educational Software

The ever-popular Mr. Men help prepare young children for reading with four simple and absorbing games designed to exercise essential skills as well as entertain.

An easy-to-use, colour-coded key guide is included with an illustrated introductory book, featuring the Mr. Men. For ages 4 to 8 years. Available now on cassette for the BBC B (Spectrum 48K and Electron versions coming shortly.) **£8.95**

QUICK THINKING!

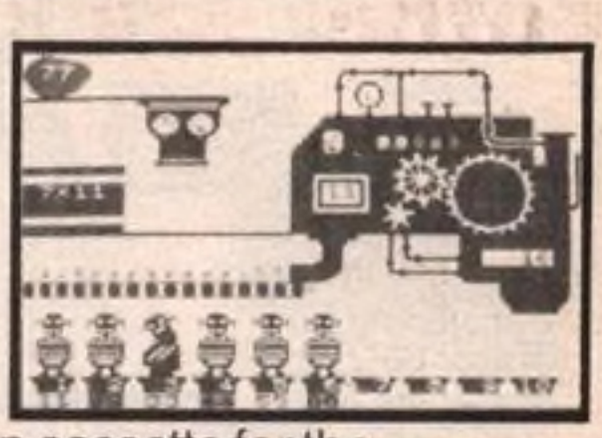
by Widgit Software

Two mind-stretching, space-age games to test mental arithmetic and nimble fingers.

In **Sum Vaders** alien robots invade the earth. Only quick thinking and fast reactions can prevent them. Several levels of difficulty and a two-player game with a handicap option make Sum Vaders equally testing for all family members, from 8 years to adult.

Robot Tables challenges the young player to make a series of perfect robots.

Knowing your multiplication tables is the key to controlling the robot-making machine. With a learning mode and a testing mode, Robot Tables is a fun way for early learners, and more advanced children, to master an important and often neglected skill.



Available now on cassette for the Spectrum 48K and Commodore 64 (BBC B and Electron versions coming shortly). **£6.95**

CAESAR THE CAT

by Andromeda Software

Meet Caesar, a cheeky young cat on duty in a well-stocked larder. He's kept busy chasing a gang of hungry mice eating the family's food. Playing against the clock, you guide Caesar along crowded shelves to pounce on the mice.

A fast, colourful, all-action, arcade-style game with catchy music and a best-score record. Challenging for high-scoring arcade addicts as well as great fun to play for the novice.

Available on cassette for the Commodore 64 **£8.95**

Prices include VAT and post and packaging.
MIRRORSOFT programs are available from selected branches of W.H. Smith and Boots, and other leading software stockists.
Trade enquiries welcome: phone 01-822 3580.

Another brick in the wall

***Les Allan** presents his own version of the classic arcade game* Breakout

Breakout for the Commodore 64, a revival of the classic arcade game, employs user defined graphics to replace the character set and construct the walls. Sprite graphics are used to create the title page and control the movement of the bat and ball.

Two machine code routines are used to construct each of the two walls, one for the title page and the other for the walls used in the game itself. Movement of the bat and ball is also by machine code.

You are given four balls with which you have to dislodge bricks from the wall by repeatedly hitting the ball with your bat. Points are given for each section of the wall that is destroyed and an extra ball is awarded for each wall that is broken through.

A score table routine is provided at the end of each game which lists the ten top scores against their names.

Variables

A	read data
J	value returned by joystick
T	general purpose
X	ball x
Y	ball y
Z	pointer for score table position
BA	balls left
BX	bat x
BY	bat y
BZ	sprite to character conversion
DX	ball increment x
DY	ball increment y

PROGRAMMING AIDS AND LANGUAGES FROM . . . Audiogenic LTD

FOR COMMODORE VIC-20 AND 64!

VP052 BUTI PLUS - £39.95 - Basic Programming Aid Commands PLUS Machine Code Monitor PLUS 3K Expansion! Basic aids include - APPEND, AUTO, DELETE, DUMP, EDIT, FIND, HELP, RENUMBER, REPEAT, STEP, TRACE, UNNEW, VIC, and DEC to HEX. Monitor Commands - ASSEMBLE, DISASSEMBLE, CENTRONICS, FILL, GO, MEMORY, HUNT, REGISTER, PRINTED DISASSEMBLE, LOAD, QUICK EXECUTE, WALK CODE, SAVE, TRANSFER, EXIT.

VP074 MONITOR VIC - £19.95 - Monitor on its own. Commands as above.

SS074 MONITOR 64 - £29.95 - 64 version. Commands as above.

VP078 MIKRO ASSEMBLER - £48.95 - Cartridge Assembler program for the VIC - Includes 3K extra memory. Write your machine language source code on Basic Lines which can be manipulated using the included toolkit commands. MIKRO uses standard MOS mnemonics, and features ASSEMBLER and DISASSEMBLER, plus TIM monitor commands, and special hi-res, sound, and joystick extensions.

SS076 FORTH 64 - £29.95 - Audiogenic Forth is very fast because it compiles right down to machine code, and very compact because it uses special screen compression routines. Audiogenic Forth contains a dictionary of over 200 Forth words, but the great thing about Forth is that you can define your own commands! Audiogenic Forth gives you full error messages (instead of codes), a full scrolling screen editor, and a comprehensive manual.

VP076 FORTH VIC - £24.95 - As above, but includes special VIC colour and sound commands. This version must be used in a motherboard with 8K+ expansion.

VP076/M FORTH VIC (with memory) - £39.95 - As VP076, but includes 3K expansion built-in so that you don't need a motherboard and expansion.

Notes

14 clear screen: dimension arrays
16 video chip start address: screen black
18 generate A$ (simulate PRINT AT)
20 generate strings for score table
22 screen message during data transfer
24 clear sound chip
26 volume to maximum
28 set up waveform and note for voice 1
30 set up waveform and note for voice 3
36 reserve memory
38 turn off keyscan interrupt timer
40 switch in character
42 read complete character set from ROM to RAM
44 switch in I/O
46 restart keyscan interrupt timer
52 clear variables
54 redefine @-Z
58 redefine 0-9
66 define BREAKOUT, bat and ball
74 set up machine code routine
76 error trap checks for correct data entry
82 set character pointer to 14336: extended background to light blue: title page machine code routine
84-90 text for title page
92 expand sprites in x and y
94-108 define shape, location and colour of sprite
110 switch in sprites 1 to 8
112 print in author's name
114 clear variables
116-122 switch in extended background (port 2)
124-128 start game if joystick used or recycle title
130 sprites to standard size
136 clear screen: set variables
142 machine code routine to set screen for game
148 define start of bat and ball
150-152 print balls left and score
154 start position and ball colour
156 start position and bat colour
158 clear msb of screen and sprite to character detection: sprites 1 and 2 on
164 ball increment
166 reverse direction if outside range
168-170 bat increment
172 clear sound chip
174 locate bat and ball position in RAM
176 machine code routine to move bat and ball
178 check for bat and ball hit: turn on voice 3
180 check for bat and ball miss
182 check for balls left
184 check for BREAKOUT
186 check for ball to wall hit
188 cal. character location of sprite and error trap routine for space
190 demolish wall
192 if ball on way up then reverse direction
194 turn on voice 1
196 print score: clear sprite to character detection
198 return to start of sequence
204 clear screen: colour cyan
206 turn off sprites 1 and 2
208-210 check position for current score
212 clear keyboard buffer
214-218 input for player's name
220 reduce length to 11 if greater than 11
222-224 reduce length to last character
226 if score less than lowest then print score table
228 rearrange score table position
234 enter current score to table
240-248 print score table
250 clear variables
252-254 flash joystick
256 check for joystick
258 repeat flash sequence if no joystick or less than 50 repeats
260 screen black: goto title page
268-514 data for character set and sprites
520-564 data for machine code

Master your ZX Microdrive

programs, machine code and networking by Andrew Pennell

Master your ZX Microdrive contains all the information you will ever need to use the ZX Microdrive to the full. Clearly explained, with many examples, it is equally suitable for the relative newcomer to BASIC through to the experienced machine code programmer.

ISBN 0 946408 19 X

Andrew Pennell has also included a full database file handling program to let you put the ZX Microdrive to practical use with your Sinclair Spectrum.

Look out for the Sunshine range in W.H. Smith's, Boots, John Menzies, other leading retail chains and through our national network of book shops and specialist stores. Dealer Enquiries: 01-437 4343

We can normally deliver in 4/5 days.

Turn your CBM64 into a sophisticated synthesiser, a piano, violin, organ, guitar or harpsichord. Woodwind, drums or cymbals and play along with your own or any of the preset rhythms.

You can compose pieces of music note by note, produce explosions, birdsong, trains, thunder, flying saucers and hundreds of other special sound effects for use in your own programs.

All this and an unbelievable range of special features:
4 Wave Forms: Triangle Wave, Saw Tooth Wave, Square Wave, White Noise. Glissando, Pitchbend, Modulation, Layering, Tempo Control, Pretab, Envelope Shaping, Synchronisation, Full Editing, Record, Playback Save, Transfer, 3 Voices, 6 Preset Rhythms and 2 User-Defined Rhythms. Full screen, easy to read, display of effects. Full, easy to follow instruction manual included.

Supplied in box with extensive manual.

QUICKSILVA

All games marketed exclusively by Quicksilva Ltd.

Other great games for the Commodore 64 include: **PURPLE TURTLES** – Go Turtle bobbing with the cutest Turtles ever seen! **£7.95** ● **AQUAPLANE** – Ski through Marine Maniacs and other Aquatic obstacles **£7.95** ● **RING OF POWER** – Search through the kingdom for the Mystical Ring **£9.95** ● **QUINTIC WARRIOR** – Stand alone against the sinister Crabman and other mangled mutants! **£7.95.**

Shards SOFTWARE

CHRISTMAS CATALOGUE

Shards SOFTW. RE

NEW RELEASES

JERICHO ROAD (Spectrum 48K): Full featured educational adventure set in biblical times. Explore southern Israel, meeting people and visiting places from the pages of the Bible. Ideal family Christmas present. **£5.75**.

HOOKED! (Dragon 32): Entertaining graphical fishing game for 1 or 2 players. Suitable for all ages. Many levels of play, with optional joysticks. **£5.75**.

MONSTER MATHS (Dragon 32): Maths education for 8-14-year-olds. Menu driven, with five functions and nine levels of difficulty. **£6.95**.

SCIENCE 1 (BBC B): Physics education for 11-16-year-olds. Covers, lenses, mirrors, balances, meters and thermometers. With full documentation. **£6.95**.

EMPIRE (BBC B): Exciting strategy game for all ages. With eight difficulty levels. Save the world from the evil Empire! **£6.95**.

ALSO AVAILABLE

DRAGON 32: Pettigrew's Diary (£7.95). "I have nothing but praise for this unorthodox adventure". *Micro Adventurer*, Empire (£6.95). "An extremely good game . . . Highly recommended". *PCN* November 17, 1983. Quiz Pack (£3.95), Infant Pack (£3.95), Junior Pack (£3.95), Puzzler (£6.95), Family Programs (£6.95), Fun and Games (£6.95), Live and Learn (£6.95), City Defence (£5.75), Fun to Learn (£6.95).

BBC B: Fun to Learn (£6.95), Monster Maths (£6.95).

LYNX: Grid Attack (£4.95).

SEE US AT THE WEMBLEY CHRISTMAS FAIR, December 15-18, STAND 259.

AVAILABLE NOW FROM SELECTED BRANCHES OF BOOTS AND ALL GOOD STOCKISTS
or send cheque/PO to **SHARDS SOFTWARE, 189 ETON ROAD, ILFORD, ESSEX IG1 2UQ**

Problem. *Simulating an aircraft on a small microcomputer and depicting the 3-D world outside through the eyes of the pilot.*

Problem. *Turning the Spectrum's numerical abilities into powerful verbal skills combined with a huge vocabulary.*

PSION HAVE BIG PROBLEMS.

Problem. *Evaluating complex algorithms to provide sufficient depth of analysis in a short time.*

Problem. *Integrating cartoon-quality graphics with the realism of the ski-slope.*

Problem. *Creating cartoon-quality graphics in an entertaining and varied game.*

Problem. *Providing complex, sophisticated data handling through easy-to-use commands.*

Problem. *Modelling in 3-D on a small micro – performing some 7.5 million calculations for one hidden line drawing.*

Problem. *Balancing the number of strategic factors required with a complex series of rules for a classic game.*

Psion have bigger, more ambitious software ideas for your Sinclair Spectrum. So naturally, our software is more of a problem to design.

Happily, we have all the right programming skills to match. In fact, Psion have one of the most advanced microcomputer software design facilities in the world. (Ask anyone who's seen a VAX 11/750 computer!)

That's why we can create the best software programs you'll ever see on a Sinclair Spectrum. (Remember – our 'Horizons' cassette was selected to introduce you to the Spectrum's capabilities.)

In all, there are 12 challenging titles, published exclusively under the Sinclair label. You can see the quality of eight of them alongside!

In addition, you can defend Earth from Space Raiders . . . destroy Planetoids . . . use VU-CALC in your business . . . even stroll in the park with Hungry Horace! And the Psion range is growing all the time – watch out for our latest program, 'Chequered Flag'.

Psion programs for the Spectrum:

- Flight Simulation (48K)
- Chess (48K)
- Space Raiders
- Planetoids
- VU-CALC
- VU-FILE
- VU-3D (48K)
- Hungry Horace
- Horace and The Spiders
- Horace Goes Skiing
- Backgammon
- Computer SCRABBLE® (48K)

'Horace' series produced in conjunction with Melbourne House
SCRABBLE® trademark and copyright licensed by Scrabble Schutzrechte und Handels Gmbh – A J W Spear and Sons PLC subsidiary

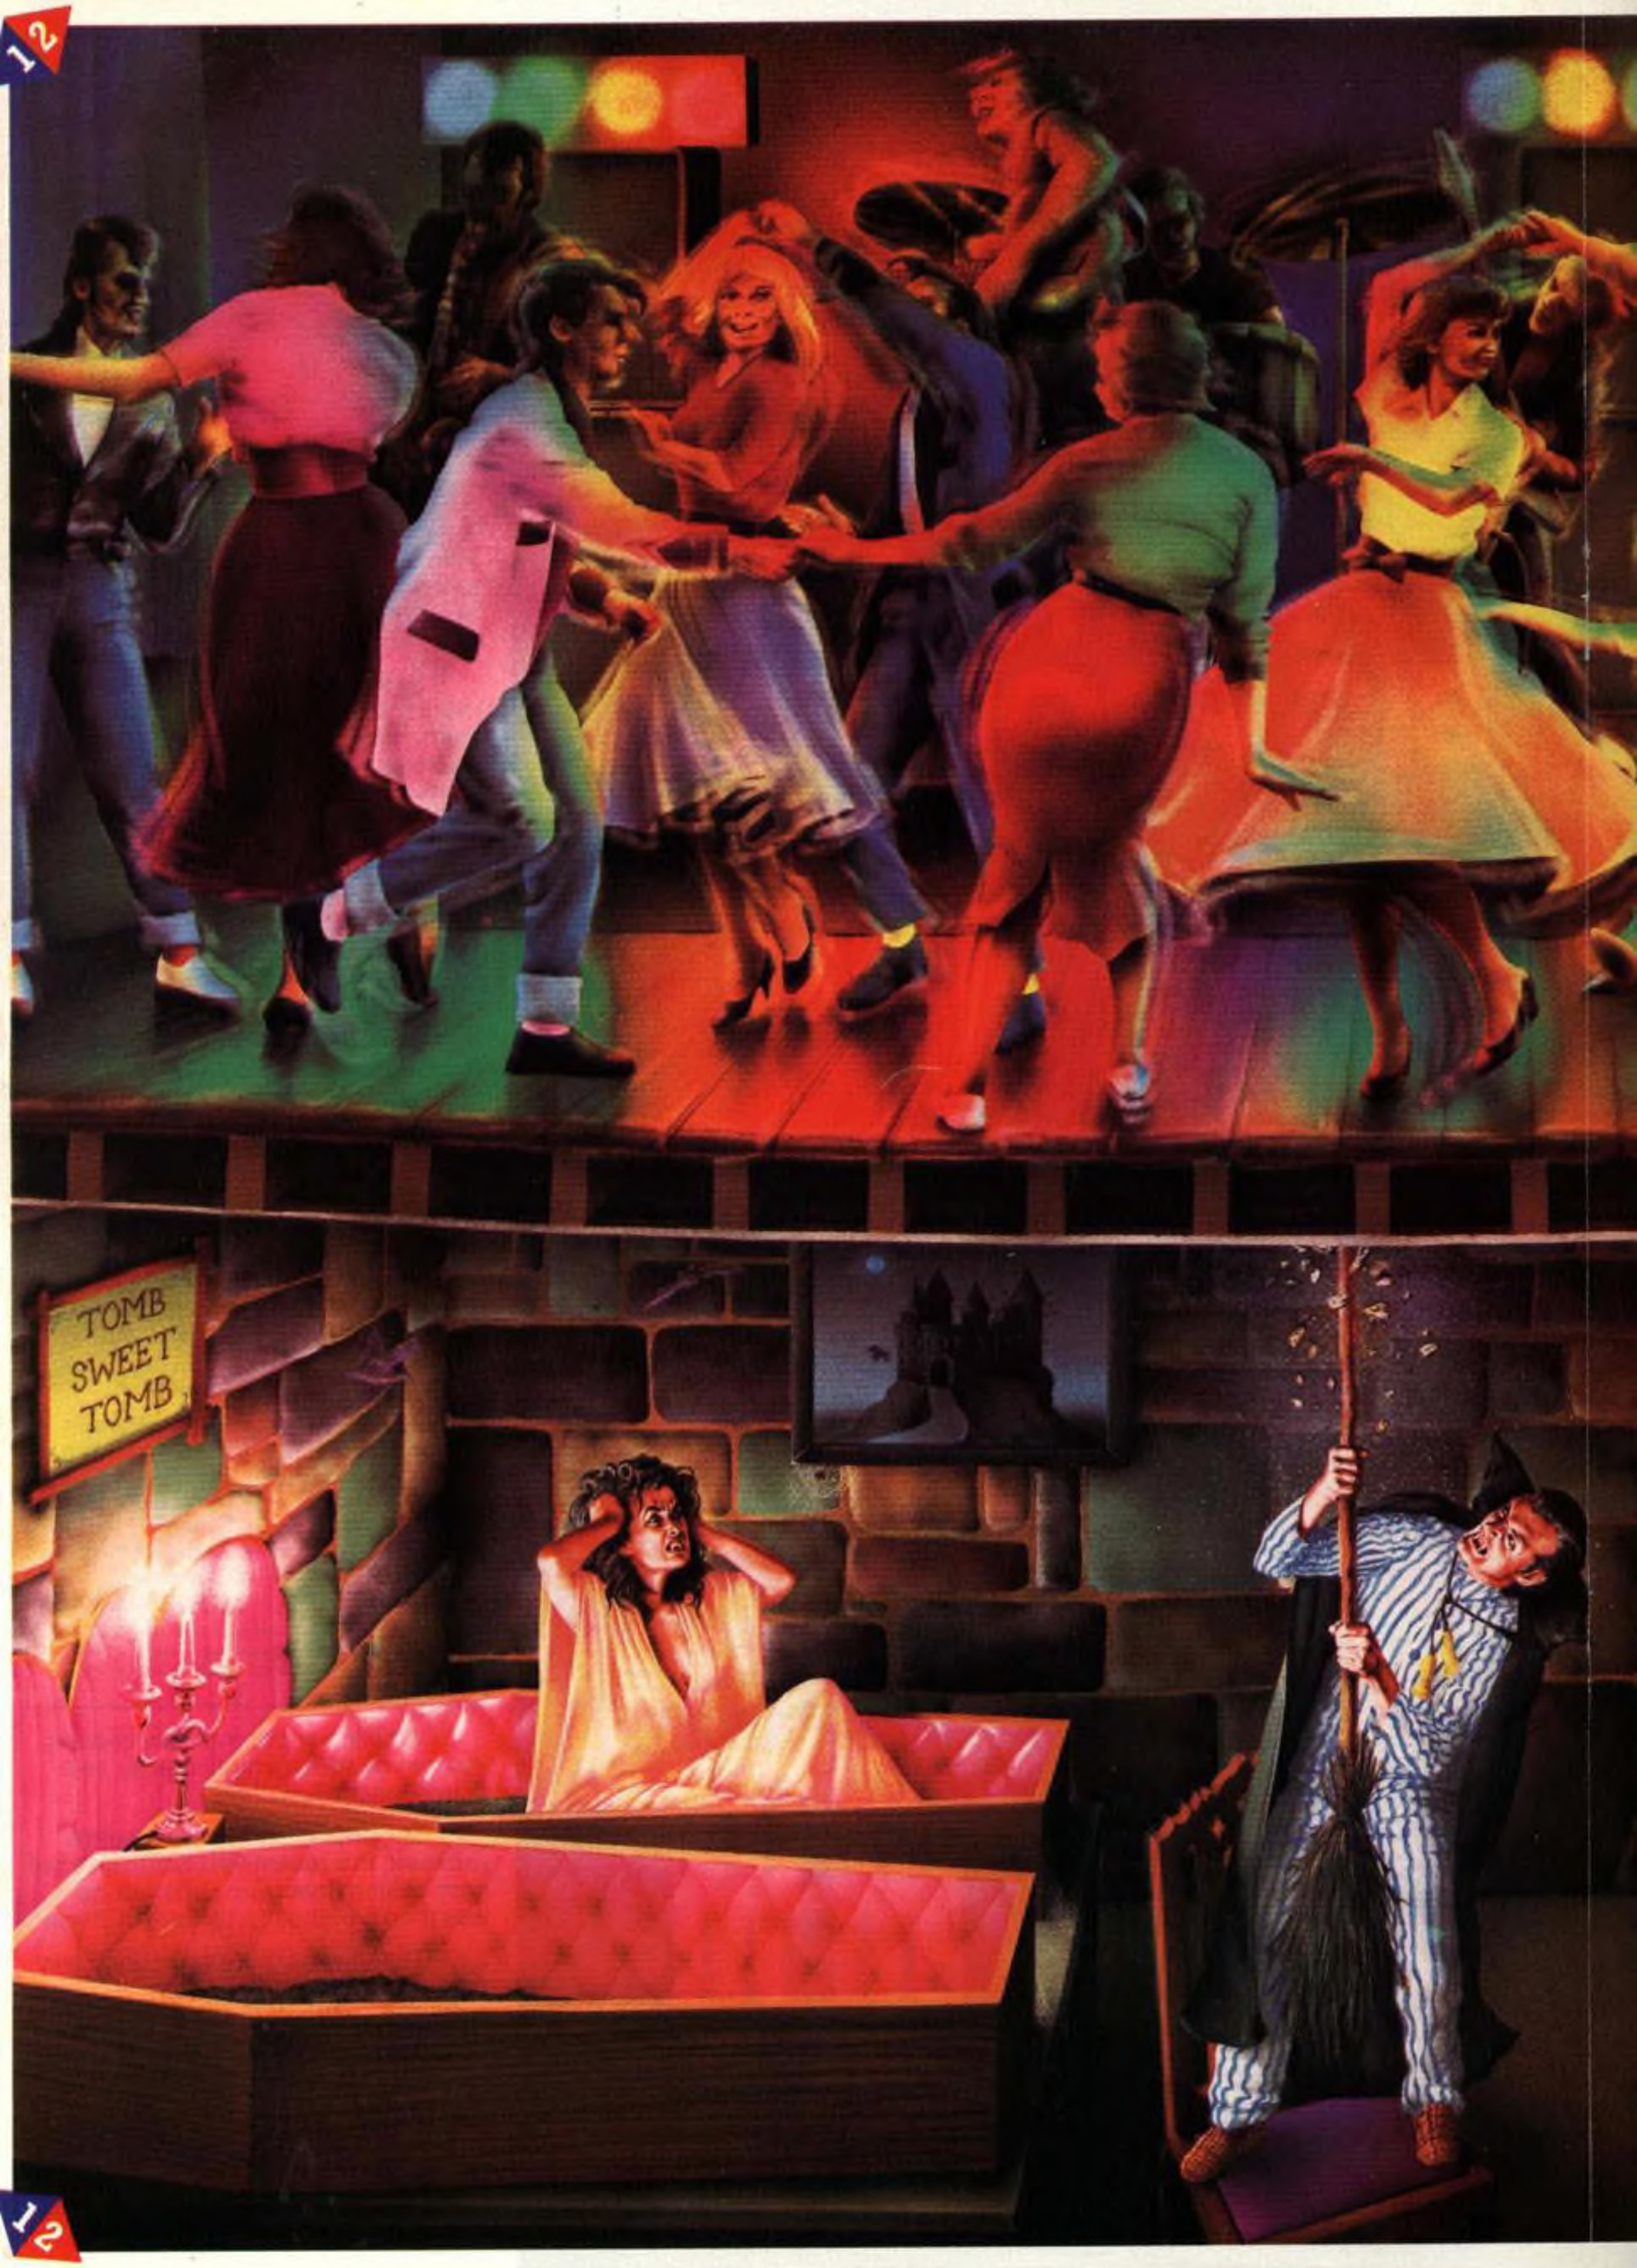
Whichever program you choose, you can be sure it's high-quality, and action-packed.

The popularity of our cassettes proves it. In a recent WH Smith chart of best-selling Spectrum software, no less than 7 of the top 12 were by Psion.

That means there's one good way to choose the best Spectrum software . . .

Just look for the Psion symbol on the cover of the cassette.

PSION



TOMB
SWEET
TOMB

Once you've got to grips with the Rock 'n' Roll game, flip-over and get your teeth into Dracula.

New K-tel Doublesiders are great fun and great value which ever way round you look at them.

For only £6.95 you don't just get one top quality computer game, you get two.

When you've finished playing one side simply flip it over (just like a music cassette) and move off on a second totally different, equally gripping game.

Take your choice. Already there are five Doublesiders to choose from — three suitable for the ZX Spectrum and two for the Commodore Vic 20 — and there are more to come.

So hurry to the shops now and see for yourself how K-tel Doublesiders really do give you twice the fun with two on one.

1 **It's Only Rock 'n' Roll** Can you become a superstar? A Rock 'n' Roll idol...Or are you just another has been?

You've got a lot of energy, a bit of money and a great future. But can you stay the course, stand the heartbreaking disappointments, fraud, scandal, even arrest? Can you capture the hearts and wallets of the public and become a Rock 'n' Roll idol?

2 **Tomb Of Dracula** Darkness is falling...The vampires are hungry...You can't go back...Your only chance of survival lies ahead.

The walls are cold and clammy. With each step you remember the horrors ahead; ghouls, zombies and pits of choking slime. In your hand you have but seven silver stakes with which to defend yourself...Dare you face the ultimate evil...and win.

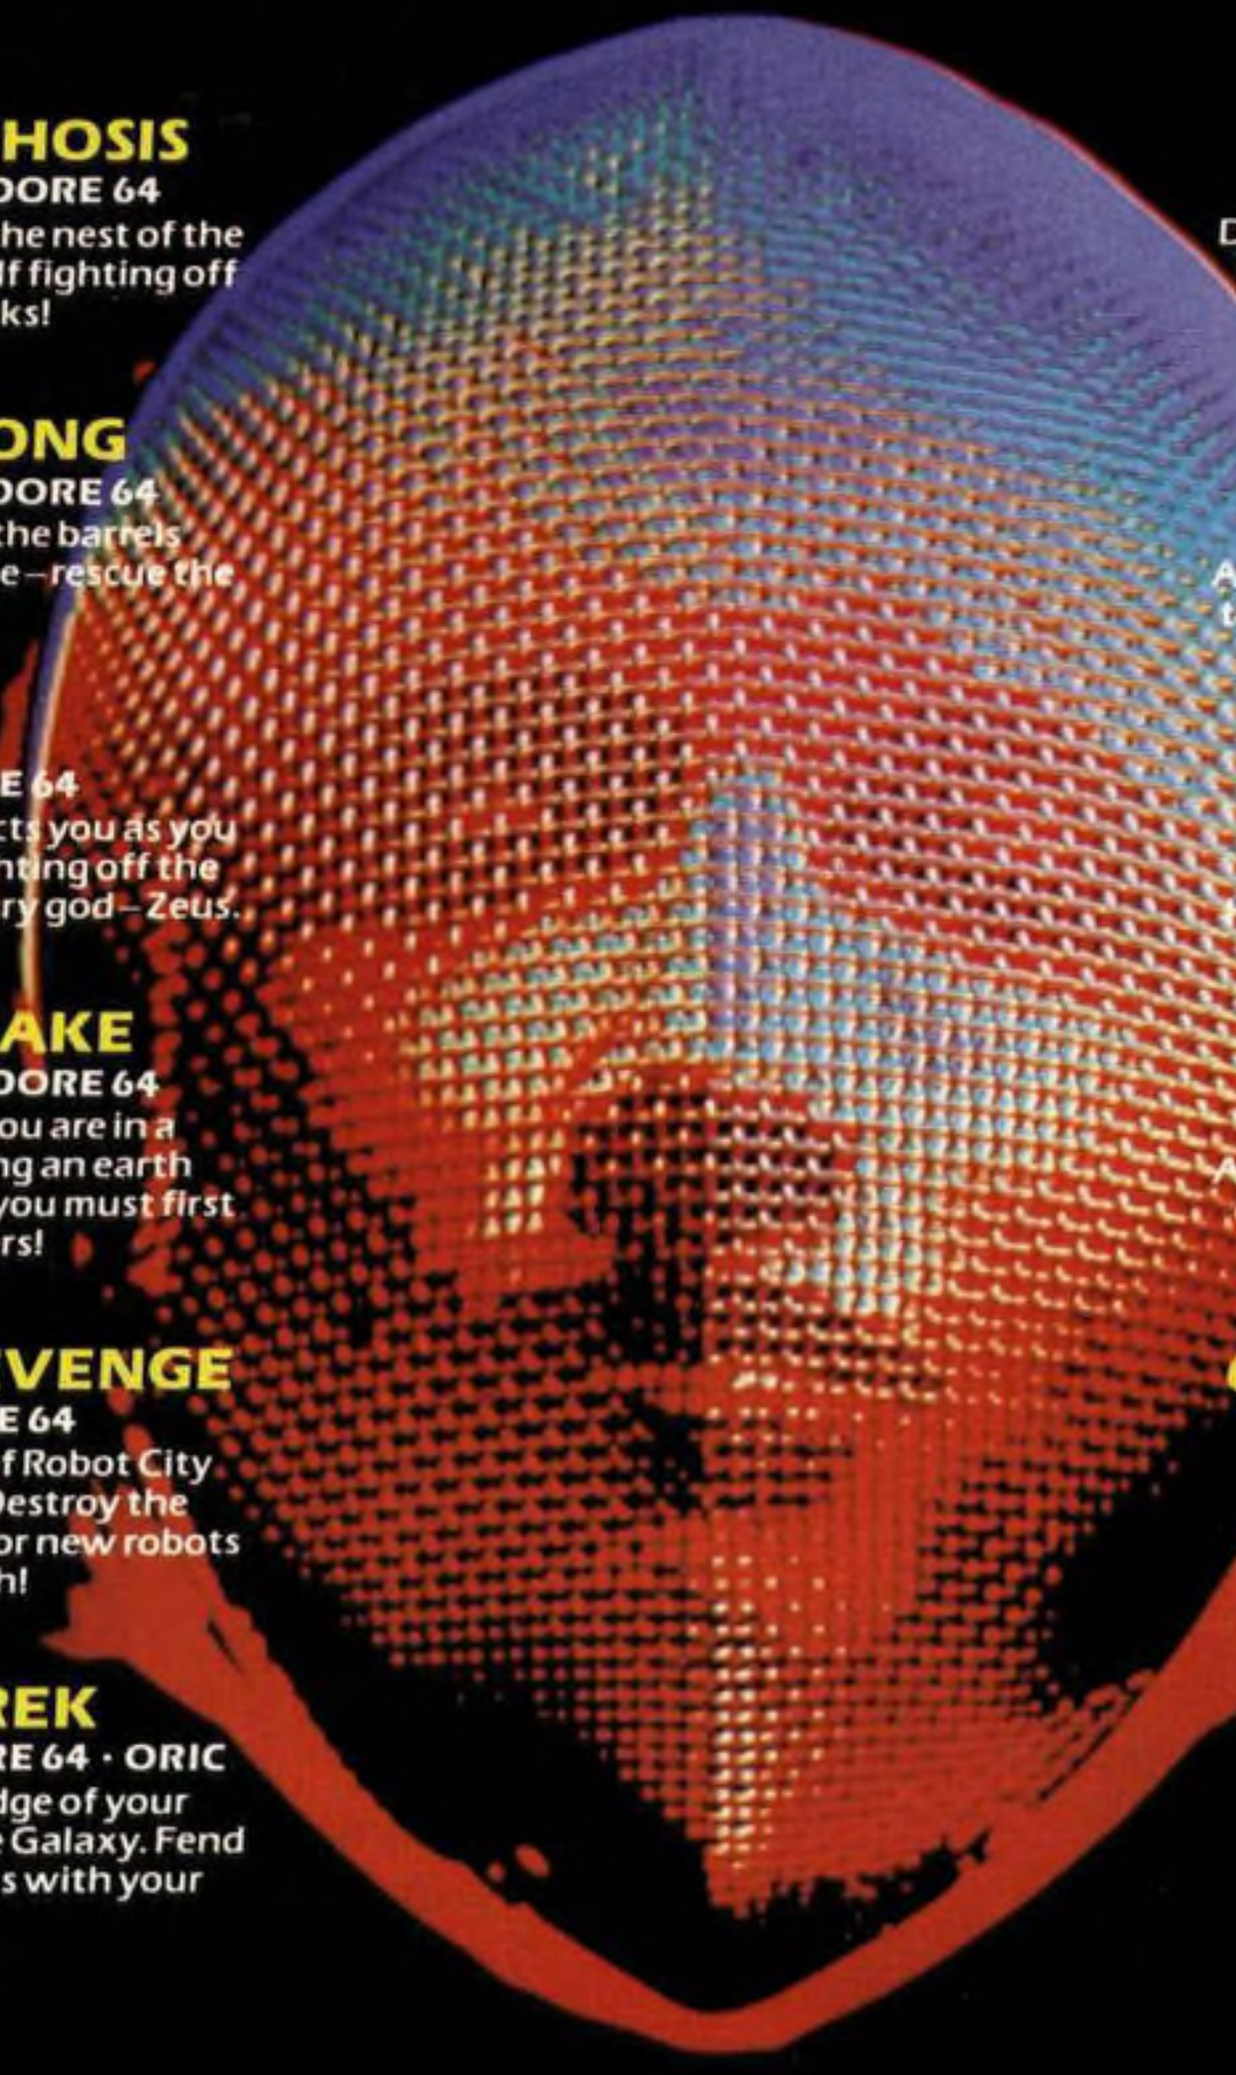
K-TEL DOUBLESIDERS

Only £6.95. EACH

Twice the fun with two on one.

MOGUL

THE HOTWARE PEOPLE



METAMORPHOSIS
VIC 20 · COMMODORE 64
You have stumbled into the nest of the Cyglorx and find yourself fighting off the Robot Tanks!
£7.95

KONGO KONG
VIC 20 · COMMODORE 64
Climb ladders, avoid the barrels thrown by the Crazy Ape – rescue the Damsel.
£6.95

ZEUS
COMMODORE 64
Your Cone of Cold protects you as you become the Wizard fighting off the Thunderbolts of the angry god – Zeus.
£6.95

EARTHQUAKE
VIC 20 · COMMODORE 64
A great adventure, you are in a shopping centre during an earth quake. To save yourself you must first help the others!
£6.95

CREATORS REVENGE
COMMODORE 64
Penetrate the depths of Robot City and kill the Creator. Destroy the robots – but watch out for new robots as they hatch!
£7.95

SUPER TREK
VIC 20 · COMMODORE 64 · ORIC
Commanding the bridge of your Starship, you explore the Galaxy. Fend off the Klingon attacks with your Phasers.
£6.95

Making a statement

Chris Woods presents a short machine code routine to abbreviate statement words

A time-saving facility which is available on some computers is the ability to abbreviate statement words, eg: *L* for *List*.

This short machine code routine makes it possible on the Dragon. The program uses the fact that every time the processor reads a statement, it jumps to location 377. This usually contains an RTS instruction so the processor returns to wherever it came from. Therefore, by changing the contents of location 377, we can make it jump anywhere in memory.

When it jumps to location 377, Accumulator A holds the code of the instruction it is reading, unless the instruction does not exist, in which case it holds the ASCII code of the first character in the word.

So, all we have to do is recognise the character code and change it to the code of the statement we want it to represent. (The instruction codes can be found in *PCW*, Vol 2 No 42.)

The Basic loader program is in listing 1 and the assembly version is in listing 2. Listing 1 will, when typed in the Run, poke in the machine code and execute it. Once the machine code program has been executed, the Basic program is no longer needed.

To use it, just type in the appropriate letter (see figure 1). In the case of instructions such as *Audio*, where more than one word is needed, type the other word as normal, eg: *A On (Audio On)*. .

The abbreviations may be used in a program as well as direct commands. Listing 3 shows an example program. ■

TASWORD TWO THE WORD PROCESSOR

48K SPECTRUM

64 CHARACTERS PER LINE ON THE SCREEN AND TO PRINTERS!
MICRODRIVE COMPATIBLE — instructions supplied

TASWORD TWO The Word Processor

Your Spectrum becomes a **professional** word processor with TASWORD TWO. TASWORD TWO gives you an amazing **64 characters per line** on your screen. This is ideal for standard A4 paper and TASWORD TWO prints your text just as it appears on your screen.

Tasword Two drives the following interfaces:

Cobra RS232 I/O Port
Euroelectronics Interface
Hilderbay Interface
Sinclair ZX Interface 1
Kempston Interface
Morex Interface
Tasman Interface

The same program drives these interfaces. A short easy to follow set of instructions takes you through setting up your Tasword Two to drive the interface you have or choose to buy.

Tasword Two also drives the ZX printer.

£13·90 fully inclusive mail order price.

TASWORD TWO TUTOR

TASWORD TWO comes complete with a manual and a cassette. The cassette contains your TASWORD TWO **and** TASWORD TWO TUTOR. This teaches you word processing using TASWORD TWO. Whether you have serious applications or simply want to learn about word processing, TASWORD TWO and TASWORD TWO TUTOR make it easy and enjoyable.

TASWORD TWO £2 Demonstration Cassette

See for yourself the powerful features of TASWORD TWO. Send just £2 for the Tasword Two demonstration cassette. A voucher is included which gives you £1 off the price of TASWORD TWO.

TASWIDE – 64 characters per line!

A machine code utility program, TASWIDE **doubles** the information that your own programs can display. Make a simple change to your print statements and your output appears on the screen at 64 characters per line instead of the normal 32. Both print sizes can be mixed on the screen. 16K and 48K versions supplied on the same cassette.

£5·50 fully inclusive mail order price

TASMAN PRINTER INTERFACE

Plug into your Spectrum and drive any printer fitted with the Centronics standard parallel interface. Supplied complete with ribbon cable, connectors, and driving software. The cassette includes LLIST, LPRINT, and **text** screen copy software for **all** centronics printers **and** fast machine code high resolution screen copy software for Epson, Star, Seikosha, and Tandy Colour Graphic (in colour!) printers. Send s.a.e for sample print-outs and full list of printers supported by screen software.

£45 fully inclusive mail order price

All prices include VAT and post and packaging.

OPEN FORUM

Open Forum is for you to publish your programs and ideas. Take care that the listings you send in are all bug-free. Your documentation should start with a general description of the program and what it does and then give some detail of how the program is constructed. We will pay the _Program of the Week_ double our new fee of £6 for each program published.

Forest Race

on Spectrum

In this game you must steer your way down a road through a forest. The screen scrolls upwards as the game progresses and the road gets thinner making the game harder.

If you lose three lives the inevitable funeral march plays. This game is compatible with the Kempston Joystick.

Program notes

0-999	Main program.
2000-2499	Prints next line of trees, road scrolls one line.
2500	Crash routine.
5000-5040	Lost routine.
6000-6040	You won.
8000-9050	Data lines.
9500-9990	Sets up the graphics.
9994-9999	Save and verify.

Variables

Lives =	Number of lives left.
Score =	Score.
d =	No of places for car to be printed along top.
a =	No of places along road to be printed.
a$ =	Graphic of car.

SPECTRUM EXTENDED BASIC

—IMPROVE YOUR PROGRAMMING —EASE DE-BUGGING
—HELPS YOU ADD STRUCTURE TO YOUR PROGRAMS

The ten additional BASIC commands provided by Spectrum Extended Basic are considered an essential aid for most programming applications, so much so that many of these commands are standard features on other Basics.

The program is compact, occupying less than 5K memory, is user friendly—requiring only a two keyentry—and incorporates syntax checking.

The program commands are used and entered just like normal Basic keywords, the program operates bytrapping your usual keyboard input and testing for any of the ten additionalcommands.

The extra commands available are:

- AUTO auto line number, start and interval definable.
- CLOCK ON/OFF 12 hour clock, displayed on screen.
- DELETE Basic line/block delete.
- EXAMINE reads tape headers and displays information.
- FIND find specified string in Basic program.
- MEMORY displays memory status.
- RENUMBER full line renumber with GOSUBs and GOTOs
- SCROLL ON/OFF continuous scrolling.
- TRACE ON/OFF slows program execution, displays line and statement currently executed.
- VARIABLES displays variable names and contents.

48K Spectrum Extended Spectrum—£9.95

Also available at Boots, W.H. Smith and all good computer shops.
DELIVERY: Send SAE for Catalogue.
UK—prices include VAT and postage & packing.
EUROPE—add 80p per program
ALL OTHER PLACES—for air mail add £2 for the first program and 50p for each subsequent program. Surface delivery add 80p per program.

NEW RELEASES FOR CHRISTMAS

OH MUMMY!! Your party of archaeologists enter the pyramid in search of the mummies of the pharaoh's household. There are five burial chambers containing treasure, secret scrolls, keys, royal mummies and some nasty surprises. To pass from one chamber to the next, you must find the key and royal mummy, but beware, you may uncover a guardian, who will chase your group to avenge your desecration!! A Machine Code game for those with nerves of steel and great courage.

Price (LYNX) **£7.95**
Price (ZX81 and SPECTRUM) **£4.95**

TANK ATTACK. A machine code game for 1/2 players, defending supplies against computer controlled tanks. This game will stretch your reflexes to the limit as you battle with the enemy tanks. They won't be able to shoot back until they have supplies, but when they do, look out!! Joysticks required.

Price (BBC-B OS 1.0+) **£7.95**

SPANNERMAN. Pete the Plumber has his work cut out! He's stuck in the boiler room and the pipes are leaking! Unless he can fix the leaks and stop the water rising he'll meet with a watery doom. To make matters worse, all sorts of nasties keep coming out of the woodwork!! A fantastic machine code game, that stretches you and your Lynx to the limit!!

Price (LYNX) **£7.95**

UTIL 1. Two very useful programs for your BBC-B. Both tested on OS 1.0 and above. **Character Define** gives you a very comprehensive and simple way to quickly create all manner of user defined characters. **Envelope Editor** will enable you to unravel the complexities of the Sound and Envelope commands, so that you can produce exactly the sound you require. The ship!! In SUB CHASE you must depth charge the wolf pack.

Price (BBC-B OS 1.0+) **£9.95**

CHRISTMAS SPECIAL OFFER (mail order only for DRAGON 32). Choose any three of the following titles for £15.90. A saving of £7.95

GAMES PACK I	GAMES PACK II	GAMES PACK III
ALIEN BLITZ	GOLF	SPACE MISSION

All prices include postage and packing. All cassettes despatched within 48 hours of receipt of order. Access orders welcome.

Forest Race
by Peter Brown

Planet Invader

on Vic20

Yet another invader game. This one uses user defined graphics. One of the invaders will require two hits to be destroyed. Each one you kill will be replaced by a faster one. Use space bar to fire.

Program notes

1-6	Set up characters.
10-15	Set up screen.
19-24	Move invader check for fire.
40-43	Explode alien.
50	Explodes missile.
60	Sets variables.
80	Game over.

HIRE SPECTRUM SOFTWARE

CHOOSE FROM OUR VAST RANGE

FREE 20 page CATALOGUE with full details of our range of over 180 different programs for the ZX SPECTRUM. All hired with the consent of the publishers. Whether you prefer to ZAP aliens, get lost in an adventure game, EDUCATE your children, CALCULATE the family finances or COMPILE machine code programs WE HAVE THE RIGHT TAPES FOR YOU TO HIRE.

FAST SERVICE

We stock several manufacturers original copies of each tape, and can normally despatch your tapes the day we receive your order, and we always use first class post.

LOWEST PRICES

We believe our prices are the lowest of any library, yet we offer the LARGEST range of titles. TWO WEEKS HIRE OF ANY TAPE COSTS JUST 80p (plus 40p p&p).

FREE TAPE HIRE

For a limited period, we will send your first tape (your choice) FREE, so join our library now. You can't afford NOT to!!! If you've tried another library and are wary of our claims send a stamp and we'll gladly send you a copy of our catalogue - we're confident you'll join when you see it!!!

NATIONAL SOFTWARE LIBRARY

200 Mulgrave Road,
Cheam, Surrey SM2 6JT

I enclose cheque for £6.00 for LIFE MEMBERSHIP and I understand that my first tape hire will be FREE. If, within 28 days, I'm not delighted with your service you'll refund my membership fee.

NEW

For use with DRAGON 32 COMPUTER

The complete speech synthesis system

SPEECH SYNTHESIS MODULE
for the Dragon 32 computer

- Fully cased module plugs into cartridge port
- Unlimited vocabulary, using allophone-type, dedicated speech chip
- Approximately 250 words predefined; accessed by entering word required
- Complete control using five new BASIC commands
- Speech can easily be incorporated into existing BASIC programs
- Up to 40 words spoken from one command; speech can occur simultaneously with graphics
- **£37.95** inclusive

Also available: SOUND EXTENSION MODULE for use with the Dragon computer — provides facility to play chords and harmonies over five octaves — easy to use via BASIC — built-in sound effects — music and graphics can occur simultaneously — two I/O ports — user manual — ONLY **£34.95** inclusive

ACCESS/Cheque/PO to:

J.C.B. (MICROSYSTEMS)

29 Southbourne Road, Bournemouth, BH6 5AE
Tel: (0202) 423973

Write or phone for further details

ADVENTURE GAMES

48K SINCLAIR ZX SPECTRUM

You are a Knight of Camelot, searching for Merlin's lost treasure. On your way you will discover the Witches' Tower, rescue a Princess held by the wicked Wizard of Trill. **£5.95**

You discover the entrance to an ancient pyramid blocked by a rock. Once inside, you discover fire rooms, ice rooms and other traps set by the builders to protect the Pharaoh. **£4.95**

A rope above a rock fissure is the only way into this Magic Mountain, or is it? Legends tell of vast stores of treasure but also of poisonous spiders, lizards and magic at work. **£4.95**

You are Spectrasses, battling in the arena with Gorgon, whose stare can turn you to stone. To recover the lost chalice, you must also win a swordfight with Grang, inside his cave. **£4.95**

To find the Black Planet you need 7 pieces of the key each hidden on different planets, and requiring different puzzles to be solved. On the journey, you fight off the pirates who get steadily more desparate. **£5.95**

Send SAE for full list.

Four Stroke Engine

on Dragon 32

This gives an accurate simulation of a four-stroke engine. The animation is achieved by the repeated printing of various strings of colour.

Program notes

1-10	Text
20-160	Set up the colour strings. The rest of the program prints these strings of colour each of which represents 1 strip of the cylinder block.

Be Spoilt For Choice...

Why not be spoilt for choice this Christmas and avoid all the usual rush, hassle and frustration of present buying. By visiting the first Your Computer Christmas Fair (December 15-18) you can be sure of seeing a truly vast range of microcomputer products, all under one roof at the Wembley Conference Centre, the most modern and comfortable exhibition venue in the country.

Whether you're interested in choosing a micro for home management, child education or games playing, you can see everything demonstrated at the show, with all your questions answered by expert sales staff from the manufacturers, dealers and software houses. Huge amounts of software and hardware, add-ons like joysticks and printers, plus a special Sinclair Village, will be at the show.

There's never been a better way to shop for micro computer presents. So wrap up your Christmas gift worries at the Your Computer Christmas Fair.

Wembley Conference Centre December 15-18, 1983

Opening times are from 10 am to 6 pm every day except Friday – Special late night 8 pm closing.

Shark

on BBC

This is a program to help young children learn their tables. A picture is drawn of a man and a shark. You are asked 10 questions. Every time you get a question wrong the shark gets closer to the man, five wrong answers and the man gets eaten.

Program notes

100-160	Main program loop
170-210	Graphics characters
220-270	Instructions
280-390	Sets up screen
400-450	Procedure for correct answer
460-540	Procedure for wrong answer
550-680	Was man eaten?

POOLSWINNER

THE ULTIMATE POOLS PREDICTION PROGRAM

PREDICTS Not just SCOREDRAWS, but NOSCORES, AWAYS and HOMES

IT WORKS We **guarantee** the program performs significantly better than chance

ADAPTABLE "Poolswinner" allows the precise prediction formula to be set by the user — you can develop and test your own unique method. Probabilities are given on **every** fixture — choose as many or as few selections as you wish

EASY TO USE Fully menu driven, with detailed instruction booklet

DATABASE The program comes complete with the largest database available — over 20,000 matches. The database automatically updates as results come in

APPLE, BBC (B), COMMODORE 64, DRAGON, SPECTRUM (48K), ZX81 (16K)

£15 (all inclusive)

We produce databases for those developing their own prediction program. Two years results £7.50. Five years results £12.50

Available from dealers, or direct (return of post) from . . .

RUNESOFT

presents

ORIC 1

RUNEPACK 1: by M R Chambers.
A collection of six programs for all the family for the 16/48K Oric 1.

1. Codebreaker
2. UXB
3. Tick-Tack-Toe
4. Hangman
5. Windmills
6. Biorhythms

Great Value at **£6.95**.

SPECTRUM 48K

SPECTREALM: by J A Slack.
Can you help Spectria survive 100 years under your government policies . . . buy power stations . . . factories . . . fuel . . . and food plus many more assets to help Spectria become a world super power. For one or two players, at only **£6.95**.

Send cheques/PO to:
Runesoft, Charnwood House, 67 Lower Parliament Street, Nottingham NG1 3BB

Both cassettes are beautifully packaged with gold blocked, black leather effect inlay cards and instruction leaflet.

available soon

DRAGONIA — Dragon 32
PARADOX — Spectrum 48K

Trade enquiries welcome.

Hold

on Spectrum

This program provides a hold/copy feature. The program uses the Spectrum interrupts, as in Bill Longley's program on page 33, vol. 2, no. 24 of *PCW*. After typing in and saving on tape, the program should be run. *Randomise Usr* 65120 should be entered to start the routine, and your program can then be loaded. To hold the program simply press *Caps lock* and H, and S to restart. Pressing *Caps lock* and C copies the current screen display by calling the ROM copy routine at address 3756.

This program was written for the 48K Spectrum. To use the routine on a 16K Spectrum, change the *For-Next* loop to FOR g = 32339 TO 32395, and the second byte of code from 9 to 40. Also, if the program crashes, try removing any peripherals (excluding printer).

Microradio

GW6JJN

Ideas forum

This column is a forum for your ideas as well as mine and a place where information is to be shared and the great cause of Microradio sustained. To this end I will deal with some of your input to the column.

I have received a letter from SP Electronics of 48 Linby Road, Hucknall, Notts, who tell me how wonderful the Microradio column is. They then mention the fact that they are amateur radio and computer dealers who offer servicing on a range of equipment including radio equipment, Sinclair, Dragon and BBC computers. Since I have a lot of letters from people asking about RTTY equipment for their micros, it is nice to hear from a source.

SP stock a program suite for RTTY on the BBC and are working on one for the Sinclair and Dragon range. In addition, they stock a range of programs for the radio amateur which I will happily review if they care to show them to me. I would also like to review their RTTY system, all I need is a BBC computer and the software . . . this is asking a lot, still, one can dream. Their phone number is Nottingham 640377. Good on yer, Mick, Hilary and Rob.

Many of you are interested in RTTY and I have touched upon this subject in past issues. I hope to review some equipment when I can lay my hands on some. If any of you run RTTY with a micro, please send me details of the system you use and the micro concerned. I would be pleased to learn how well or how badly it works. Anyone who has a system of their own, or market a system for RTTY, I would be happy to give it a review. Lots of people are interested. Not least me.

Some weeks ago I mentioned Ramtop whose address is The School, Wellingborough, Northants NN8 2BX (please send a SAE if you write to them). This is a very good users group for radio computing enthusiasts. They offer a monthly newsletter which contains some unbelievable goodies, as does the Sinclair Users Group (SAE to Sinclair Amateur Radio Users Group, 3 Red House Lane, Leiston, Suffolk IP16 4JZ). Programs for Sinclair radio enthusiasts are regularly contributed and this answers the question that I am constantly asked, 'Where do I get the programs?' The latest Ramtop newsletter contains morse and RTTY programs to type in for the BBC computer as well as the TRS80 which is well supported. So now you know.

Ramtop is the group for all micros and Sarug is the Sinclair group. Both are affiliated to each other. These are non-profit making groups there to serve the computing radio enthusiast, just like Microradio.

Keep the input coming. I am still trying to answer all the letters and I'll get round to everyone sooner or later, so have no fear. See you soon. ■

Ray Barry GW6 JJN

This series of articles is designed for radio and microcomputer enthusiasts alike. If you have any queries that you want answered, hints and tips to share, or topics that you would like to see covered, write to: Ray Berry, Microradio, *Popular Computing Weekly*, 12-13 Little Newport Street, London WC2R 3LD.

SOFTWARE FOR SPECTRUM AND ZX81

OUR POLICY

We aim to create programs which you will keep on using until your computer wears out. You won't find our programs in the top ten and you will look in vain for colour adverts and fancy packaging. Nevertheless we have built up a solid following of discerning users in all parts of the world. Read the reviews of our programs if you can find them. We have been consistently praised for quality, originality and value for money.

WHAT DO YOU GET?

The bulk of our cassettes are now made by the factory which produced the Horizons tape. Programs are recorded twice and carry on the reverse side an audio narrative to supplement the operating instructions. Where appropriate, cassettes are accompanied by a comprehensive and clearly written instruction manual.

48K SPECTRUM

"Day of the Match" £5.00

Fascinating and realistic simulation of an entire football season. Name your own teams if you wish (English league provided on cassette). Rate each team from one to nine in various success categories such as attack, defence, manager, etc. Watch the season unfold. Includes knock-out cup option.

"Ball by Ball" £5.00

Simulates a test match series or one day international series. Set up your own teams and pool of players (England v Australia provided). Rate each player's capabilities as batsman and bowler on a one to nine scale for qualities such as talent, effort, etc. Pick your teams and play the match. Electronic scoreboard shows progress of a match. Full supporting score card and series averages.

"Superplan Generator" £12.00

Spreadsheet type program with variable column width and variable number of columns. Lets you sacrifice columns you don't need to get more lines.

"Superplan Pack 1". Business Applications £7.00

Ready made applications programs for sales day book, purchase day book, cash book and petty cash book.

"Superplan Pack 2". Home computing £7.00

Ready made applications programs for home budgeting, nutrition tables, car running costs and bank statements.

"Superview" £5.00

Simple but effective information display. Up to 42 pages of text and low-res graphics. Access pages on demand or run in perpetual 'slide-show' mode. Full facilities to create your own pages and build up an information library on cassette.

16K SPECTRUM

"Superdraw" £5.00

Create full colour high-res pictures and store them on cassette for use as titles or background screens in other programs. Or just have fun doodling and build up a cassette library of your creations. Slide show option allows you to review pictures stored on cassette.

16K ZX81

Here is a selection of titles still available for ZX81. Send sae for illustrated catalogue. These are the ZX81 equivalents of the Spectrum programs described above. Although similar in concept the specifications fall short of the descriptions given for the Spectrum.

"FOOTBALL-LEAGUE"	Forerunner of "Day of the Match"	£4.00
"TEST-MATCH"	Forerunner of "Ball by Ball"	£4.00
"VIDEO-PLAN"	Forerunner of "Superplan"	£7.00
"VIDEO-AD"	Forerunner of "Superview"	£7.00
"VIDEO-SKETCH"	Forerunner of "Superdraw"	£7.00

Many independent computer shops now stock our products but we continue to supply by mail order on an off-the-shelf, immediate delivery basis. Prices include VAT, post and packing in UK. Add a bit for postage if you live in Outer Mongolia. (Note: "Day of the Match" not available until late October 1983.)

NEW

LIGHT CYCLES *by Martin Thomas* **BBC/B** **£7.50**

A fast reaction game for the fleet of hand and mind. Can you surround the enemy with your light trace and make them crash? The better you are, the more cunning the enemy become and they increase in number and speed. Extra features introduced to challenge the high scorer. An absorbing game with excellent graphics, sound and scoreboard. Keyboard.

NEW

SCAN *by Colin Llewellyn* **BBC/B** **£7.50**

An addictive card-based game with superb graphics. The player uses his skill and judgement to place 25 of his 26 cards on a 5 × 5 grid in positions which equal or are greater than the value of the computer's cards. The problem is that the computer only discloses its cards after the player has moved, and which card is it not going to play? Progressive levels of play will tax your skill. No sound. Keyboard.

ALL PRICES ARE FULLY INCLUSIVE

Please make cheques or POs payable to PAEAN Systems

PAEAN are hunting for high quality, imaginative and exciting programs for the BBC Micro to market in the UK and overseas.

If you have written an original games, educational or business program which you believe has commercial potential, send a cassette to PAEAN Systems and if we agree with you, we will offer you a contract. Don't forget to include your name, address and telephone number.

Still to be won:

A £50 note for the first response which correctly interprets the hidden significance of the PAEAN Logo.

Hall of fame

I have had several queries on the subject of the Scott Adams Adventures from frustrated Adventurers. The first Adventure in the series is *Adventureland*, in which 13 Treasures have to be found. Russell Buglass has located 12 of them, but is having a lot of difficulty with the last.

I think you may be looking for a necklace, Russell, and the only clue I can give you comes direct from Scott Adams himself, who is not known for his frankness! *Alladin was here??? Good the lamp!* If the Dragon is still asleep, use the mirror for a clue.

Number 2 is *Pirate Adventure*, which is also the subject of the Graphic Adventure we looked at at the start of this week's Corner and it is causing David Shepherdson some problems. When struggling to open the Pirate's Chest, some weird heiroglyphics appeared — *Psbl* and *Did*. I'm not quite sure how they were displayed, but David asks if anyone else has experienced the same bug (if bug it be!). Incidentally, David, if you're still having trouble with the chest, try pulling the nails!

It is *The Count*, however, which is causing the most problems. This is Adventure No. 5 in the series, and Philip Rayner's letter is typical. Only 64 moves are allowed, before sun sets, and Dracula comes for you. . .

Philip has done quite a bit of exploring, and has found, among other places, a Crypt, which seems to be a dead end — what use is the room, he asks. If there is a sign there, it might be an idea to read it, and note who wrote it.

This might also be an idea worth trying by Mr McBrealy of Cobham. He wants some help, but didn't tell me exactly where he was having trouble. He also points out that, in reply to a reader whose letter I quoted some weeks ago (*PCW*, 29 September-5 October), the program does not recognise *Roof*, but rather takes the first three letters and understands them as *Room*.

He also says that he cannot find any stairs as he keeps typing *Go stairs*. It might be worth trying *Climb stairs* in these circumstances, as the Adams Adventures quite often respond to this command rather than *Go* or *Up*. Another idea would be to go outside the Castle and *Examine* it — you never know!

Mr R Dickenson of Worksop suggests that *Stairs* may be recognised by the program as *Stake* — good thinking. Incidentally, Mr Dickenson, like many other people, is having trouble keeping his cigarettes overnight — try finding a dusty old place where Dracula cannot go!

James Haluch, from the Isle of Arran, and Alex Wood from Barking both find trouble with the angry crowd outside the gate of the Castle — can anyone help them get past? Alex asks: what can you possibly do with daisies, and is there a flag on the flag pole? James would also like to know how to open the coffin. Remember the oven, James!

Finally, Mr Creswell, from Catford, in London, says that, when committing suicide by jumping from the bedroom window (that's what it says here!), he noticed, on the way down, a dark window. I think the best way to get there, Mr Creswell, is to remember how escapes are sometimes made — and there must be some sheets on the bed!

Browsing through one of the monthly's a couple of weeks ago, I came across a couple of references to an Adventure I had not previously heard of. The Adventure in question is *Hell's Temple*, written by Kenema Associates for the 48K Oric. Apart from a brief, but glowing mention elsewhere in the magazine, a letter appeared in the correspondence column, from the Hell's Temple Fan Club, of all things. No sooner had I decided to ask readers for a mini-review, than through the letterbox popped the very same, from the Fan Club! The Doppel-Ganger is the President of the outfit, and writes:

"*Hell's Temple* is the best Adventure for the Oric-1 computer . . . even better than *The Hobbit*! For one thing, it is original, being a mixture of strategy and luck: Strategy, in deciding which way to go, which monsters to fight, and generally what to do, and luck, in what objects you find to increase your Wealth, Strength and Spell-Power . . . and also if you have the misfortune to fall down a Pit! (Hang on, this sounds a bit like . . . TB.)

"It's basically in the 'Dungeons' style (Ah, that was it — but I thought this was, unlike *The Hobbit*, original? TB), and although there are no problems to be solved, a game can last for hours, weeks or even months, before you slay the great Morrigan (something I haven't done yet, and I'm President of the Fan Club!).

"Besides all that you have high-resolution graphics and 76 monsters in several different types."

Unless this is an elaborate hoax, you Oric Adventurers might find this worth looking for, if you are also a D & D'er.

Before getting on to another Hobbit Hall of Fame, another update — this time on the subject of high scores in Artic's *Inca Curse*, which I mentioned some time ago. In the same postbag, I received three letters from high scorers. The first was Bruce Gavin (who is only eight — there's a great Adventuring career ahead of you!), who managed 9400 points.

Mr T D Frost wrote to inform me that in fact the highest possible score is 9950. In the same post came a letter from Billy McMillan, who assures me that 9990 is possible, the scoring reverting to 0 after this point. I've come nowhere near these exalted figures myself, so we will have to accept their comments — unless you know better.

On to HHOF:

Craig Stevenson with scores of between 75 percent and 59 percent.

Christopher John Fox, who is having trouble with Hewson's *Quest Adventure*. Your score of 85 (rating beginner) is a bit better than my Cave Crawler!

Steve Ellis, with 65 percent.

Simon Clark, Antony Minchin and Paul Gailey, with 62.5 percent.

Mark Bryan Nelson, who unfortunately didn't ask the program for his score.

Graham Andrew, with 89 percent.

C J Fox, who sent me a polaroid shot of the last message.

J C Wilkinson, with 52.5 percent and 65 percent.

Andrew Broome with 70 percent.

Simon Stokes and Philip Carter.

Andrew Warrington, who points out that reading the book is essential to solving the Adventure. He also says that none of the bugs mentioned in The Corner so far appear to affect his copy. There may well be a de-bugged version around, Andrew, but I have not seen anything from Melbourne House to confirm that.

G W Ballinger, who also mentions more Hobbitbugs — I'll go through them at a later date.

Dave Wood, with a low score of 35 percent.

Ian Moyse.

Mr and Mrs Carl Bozicek.

Simon Newell and Gavin Burrell, in three and a half hours, would you believe!

Chris and Andrew Taylor (who has also scored 1726 points playing *Hall of the Things*).

Mr X (he or she didn't give me a name), of Marple in Stockport. He or she managed to kill Smaug himself, which is unusual.

But I'm still waiting for the first BBC, Oric, or Commodore owner to complete *The Hobbit*!

That's it for this week, now answer this question: *Does a Zinger have to Zing with a ZORKestra*? ■

This series of articles is designed for novice and experienced Adventurers alike. Each week Tony Bridge will be looking at different Adventures and advising you on some of the problems and pitfalls you can expect to encounter. So, if you have an Adventure you want reviewed, or if you are stuck in an Adventure and cannot progress any further, write to: Tony Bridge, Adventure Corner, *Popular Computing Weekly*, 12-13 Little Newport Street, London WC2R 3LD.

SUNSHINE

Mastercode Assembler

for the Commodore 64

Full Commodore 64 Assembler/Disassembler

£14.95 inc VAT

Mastercode is a substantial and complex program of use to anyone interested in writing machine code on the Commodore 64. Its features include:

- ☐ Machinecode monitor
- ☐ File Editor
- ☐ Disassembler
- ☐ Assembler

Mastercode is a full two pass assembler. It accepts labels, variables and equations within assembly language programs. It is possible to store programs anywhere in memory, even in parts occupied by the Assembler. Programs can be saved to either tape or disc.

The Machine Code Monitor includes:

■ OUTPUT OF MEMORY TO SCREEN OR PRINTER ■ MODIFICATION OF MEMORY ■ EXECUTION OF MACHINE CODE PROGRAMS ■ SAVING OF MACHINE CODE FILES ON TO TAPE OR DISC ■ LOADING OF MACHINE CODE FILES FROM TAPE OR DISC ■ STEP BY STEP TRACING OF THE EXECUTION OF A MACHINE CODE PROGRAM, INCLUDING DISPLAY OF REGISTER CONTENTS.

The Disassembler will translate into assembly language the contents of any area of memory, whether the 64's ROM or a user program. Output may be sent either to the screen or a printer.

The File Editor includes:

■ ENTRY OF NUMBERED LINES OF ASSEMBLY LANGUAGE INSTRUCTIONS ■ LISTING, INDIVIDUALLY OR IN BLOCKS, OF PREVIOUSLY ENTERED LINES ■ DELETION, INDIVIDUALLY OR IN BLOCKS, OF EXISTING LINES ■ RENUMBERING OF EXISTING LINES ■ SAVING OF ASSEMBLY LANGUAGE FILES TO TAPE OR DISC ■ LOADING OF ASSEMBLY LANGUAGE FILES FROM TAPE OR DISC ■ ADDITION OF A BLOCK OF MEMORY SPECIFIED BY THE USER TO THE USER'S ASSEMBLY PROGRAM

The Assembler allows the translation of assembly language programs into machine code with full error checking, labelling and a range of assembler directives.

LOOK OUT FOR THE SUNSHINE RANGE IN W.H. SMITH'S, BOOTS, JOHN MENZIES, OTHER LEADING RETAIL CHAINS AND THROUGH OUR NATIONAL NETWORK OF BOOK SHOPS AND SPECIALIST STORES.

Please send me Commodore 64 Mastercode Assembler @ £14.95 inc VAT. I enclose cheque/postal order for £ made payable to Sunshine: 12/13 Little Newport Street, London WC2R 3LD.
Or telephone your order through Access/Mastercard on 01-437 4343

AMATEUR RADIO

Ian Henderson of Sussex Road, Dagenham, writes:

Q I have a Dragon 32. My brother is interested in amateur Radio (he hopes to take his test soon), can the Dragon be used in his new hobby?

A We already have a column running in *Popular Computing Weekly* for enthusiasts like your brother. However, the only program that I know of that probably might interest him is one for decoding RTTY. It decodes audio signals that are fed from the users receiver (Short Wave or VHF) directly into the cassette input on the Dragon. The program comes in a cassette version which costs £12 or a *Rom* cartridge version which costs £21. Both can be obtained from M. Kerry, 22 Grosvenor Road, Seaford, Sussex.

WHAT IS A ULA

L. Geach of Great Missenden, writes:

Q I was going to buy a Dragon 32, but a friend has told me that it does not have a ULA, and that this is a disadvantage. Is this true? What is a ULA?

A It will work as well as a Spectrum or BBC, or any other computer that has a ULA. The Dragon uses a pair of Parallel Interface adapter chips (6821 PIAs). Without going into complex electronics the difference between the two is that a ULA is customised, whereas the PIAs are off the shelf. In practice this means that there are more limitations when a PIA is used, and the actual way of handling the various input and output systems of the computer is different.

A ULA is an Uncommitted Logic Array, or a Universal Logic Array. Essentially it is a chip that can be set up to act as the designer wants, of course this makes it more flexible. It does though, also bring some problems. The BBC and the Spectrum have both had ULA problems. In the Spectrum the main function of the ULA is to handle the screen, and some other input and output routines. As readers of *Popular Computing Weekly* know, an Issue 3 Spectrum with a new ULA has been bought out to solve problems of incompatability between the Spectrum and some domestic television sets.

Before a ULA has been set to a specific specification it is 'uncommitted'. Once it has been set and is configured to a particular format it cannot be changed and is said to be 'universal'.

SPECTRUM PRINTER

Thomas Youger of Stretford, Manchester, writes:

Q I want to get a printer for my ZX Spectrum, which uses proper size paper. I have £250 at the most, and at the moment it will be some time before I can get an Interface 1, which I know can be used with a printer. Interface 2 seems to have the same type of ports as the Interface 1, though it uses them for joysticks. Do I need to wait for Interface 1 or do I just need Interface 2? What does Interface 2 do exactly?

A I have printers covered in quite a lot of detail. There seems, though, to be some confusion about the role of Interface 1 and Interface 2. Unfortunately, although they both have the same design of D port, that does not mean that they are compatible. The D design is standard and each manufacturer uses it as he wishes.

A lot of people wonder why Interface 2 is necessary at all. It should have been easy to add the single chip in Interface 2 to Interface 1. Whereas the Interface 1 seems an excellent buy and well worth the wait, I think that many people will find Interface 2 very limiting. The expansion port on the back is only capable of taking a ZX Printer, and no other interface that I know of. The *Rom* slot is mapped into just 16K, the 16K used by the *Rom*. Thus only games and utilities that use less than 16K can be used. Additionally because it is mapped into the *Rom* space, useful utilities like Tasword, the word processor cannot be put into cartridge — exactly the sort of program you might want to put on it, but the program would overwrite the Basic in cartridge form.

TUNING UP

John Davies of Birkdale Avenue, Bispham, Blackpool, Lancashire, writes:

Q I am having a problem designing a guitar tuning program for my Spectrum. Originally I was going to simply match a tone from my computer with a guitar note. To improve on this, and to help people who are tone deaf, I was wondering if it is at all possible to use machine code to provide a display — I know that Basic would be too slow. My idea is to compare the guitar tone to the Spectrum, with a meter or something similar. If hardware is required could you publish a circuit diagram?

A This would take a dedicated article to answer properly. The main problem is finding a satisfactory way of reading the sound output from the guitar. Essentially what you are trying to do is turn your Spectrum into an oscilliscope, and even the Spectrum has its limits. You would need something like an A/D converter (analogue to digital). This would have to take a reading of the pitch over a measured time, say one millisecond, it would then take time to process this information. If you repeated this operation for about a second, you would then have about 500 values to even out and display on the screen. If you wanted to display the information, then besides allowing time to process the information in the A/D converter, further time would have to be allowed to maintain the screen display. Every fiftieth of a second the processor stops whatever else it is doing and makes sure that the screen is displaying the correct information. There are also interrupts every fiftieth of a second to refresh the *Ram*. In effect you would probably only get about 250 values a second.

As someone who is tone deaf then I can appreciate anyone trying to help, but you might find it easier in the end to just get the Spectrum to play a BEEP at the right note for a certain length of time.

MEMORY EXPANSION

Peter Fewester of Victory Road, Wisbeach, Cambridgeshire, writes:

Q I have an unexpanded Vic20, and like many owners of this machine I am considering getting a memory expansion for it. What mystifies me is why should anyone buy a fixed memory expansion, when switchable memory expansions are available that will do the job of three separate memory units.

A It is very much a question of timing and market forces. If a company think they can sell a simple expansion for the same price as a switchable unit then they will, it will be cheaper to make. However, as with the question of price, market forces are such that with the growth in the Vic market that occurred until the advent of the Commodore 64, companies who were later onto the market had to offer more facilities in order to gain a market share.
I would advise that all other things being equal, you would be much better advised to choose a switchable option.

Is there anything about your computer you don't understand, and which everyone else seems to take for granted? Whatever your problem *Peek* it to Ian Beardsmore and every week he will *Poke* back as many answers as he can. The address is *Peek & Poke, PCW*, 12-13 Little Newport Street, London WC2R 3LD.

LYNX LYNX LYNX LYNX LYNX LYNX LYNX LYNX LYNX

REAL ARCADE ACTION — NOT JUST PRETTY BOXES

£6.95 VOODOO TREASURE ISLAND. A fast game that demands courage, skill and a resolute will to survive. 48K and 96K.

£6.95 SPACE INVADERS. Fast and deadly real-time arcade action with full colour and sound. The most fantastic reproduction of the most successful arcade game ever in 100 percent Machine Code. 48K and 96K.

Both games fully extend the excellent colour, resolution and sound of the Lynx to its maximum and the action is the fastest you will ever see on your Lynx.

***£6.95 HOME ACCOUNTS SYSTEM.** Co-ordinate your income for a complete year. 48K.

***£6.95 TELEPHONE AND ADDRESS DATABASE.** Stores limitless number of entries. Query facility will find details when only part of the entry is known. Super fast search. 48K.

RAD SYSTEMS

AT LAST — FOR THE BBC MICRO

A high performance compiler at a down-to-earth price. This BASIC compiler will turn your BASIC program into super-fast 6502 Machine Code at a touch of a button, and produce a program which will run about 40 times faster than the original BASIC programm. The compiler handles over 50 BASIC keywords, 26 integer variables and full integer arithmetic. The machine code produced is suitable for many applications — games, utilities and real-time processing. The program is supplied on cassette with extensive documentation for BBC Model B with 1.2 O.S.

Send cheques/POs made payable to S. Parker for £14.95 to:

INTELLIVISION VIDEO GAME plus six cartridges, all in perfect condition, worth over £200. Accept £120. Tel: 0424 441469.

FIDELITY mini century chess computer with advanced cast, £42+. Tel: Hornchurch 57881 after 6 pm.

SPECTRUM SOFTWARE, swap or sell. Arcadia, Spectrus, Space Raiders and many more. Tel: 01-789 5728.

SWORD MS COMPUTER plus Basic 1 cartridge, three months old, hardly used, with Sprite Graphics, three voice sounds unit plus excellent basic features, easily expandable, £135 ono. Tel: 01-660 3813.

Tread The Path of Adventure with ..... GILSOFT

FOR THE 48K SPECTRUM

MAGIC CASTLE £5.95

Try to rescue the princess from the castle, but beware of booby traps and vampires! A gripping adventure for the 48K Spectrum.

THE QUILL £14.95

THE QUILL is a major new utility written in machine code which allows even the novice programmer to produce high-speed machine code adventures of superior quality to many available at the moment without any knowledge of machine code whatsoever. Using a menu selection system you may create well over 200 locations, describe them and connect routes between them. You may then fill them with objects and problems of your choice. Having tested your adventure you may alter and experiment with any section with the greatest of ease . A part formed adventure may be saved to tape for later completion. When you have done so *THE QUILL* will allow you to produce a copy of your adventure which will run independently of the main *QUILL* editor, so that you may give copies away to your friends.
THE QUILL is provided with a detailed tutorial manual which covers every aspect of its use in writing adventures. For the 48K Spectrum

DIAMOND TRAIL £5.95

Recover the Sinclive diamond after a daring robbery. First you must overcome many problems in a city fraught with danger and intrigue. This is our latest adventure for the 48K Spectrum.

TIMELINE & TASKS £5.95

A superb 16K adventure in which you must locate your time machine to return to the present. Plus a collection of mind stimulating puzzles.

Our Software is now available from many computer shops nationwide, or direct from us by post or telephone.

SAE for full details of our range.

Dealer enquires welcome.

BEST-SELLING

Few people can have been left in any doubt that *Popular Computing Weekly* as a whole, and Tony Bridge in particular, thought *Halls of the Things* by Crystal Computing was a pretty wonderful program.

The follow-up to that program has now been issued, not by Crystal, but by Puffin Books. Called *The Warlock of Firetop Mountain*, it is based on the best-selling children's adventure book of the same name.

This program is designed in much the same format as the *Halls of the Things*. A maze is randomly generated by the computer and you move a little figure around it opening doors, looking in chests and fighting baddies. The range of commands available, as well as some of the themes, owe a debt to adventures but the action is all arcade.

Setting the maze in the labyrinth from the book beneath Firetop Mountain is a nice way of linking the two elements of book and program.

The game is fast and furious. The only criticism I would make is that it is a bit similar to *Halls of the Things* — still, at £5.50, it's good value. You can also buy the program in a package together with the book for £6.95 and, as such, it could solve a Christmas present difficulty.

It will be interesting to see how many bookshops stock the program/book package.

Program *The Warlock of Firetop Mountain*
Price *£6.95*
Micro *Spectrum 48K*
Supplier *Penguin Books*
536 King's Road
London SW10 0UH

SOPHISTICATED

Password is a sophisticated machine code utility program for the Dragon 32.

Fundamentally a disassembler, it also allows you to create and debug your own routines. It is the mode of execution of the instructions that is really unusual. Each instruction is executed, in sequence, line by line through the routine. The program uses multi-screens and has a printer dump facility for those that have a printer.

A leaflet detailing the various commands available from *Password* is included and the whole package looks very useful. Some previous experience with machine code programming would be helpful, though, to get the most out of the program.

Program *Password*
Price *£6.00*
Micro *Dragon 32*
Supplier *B Franklin*
4 Church Circle
Farnborough
Hants

MULTI-SCREEN

Ultima Zone is to the Oric what *Penetrator* was to the Spectrum — just about the most sophisticated, multi-screen kill-the-aliens attack game ever.

It would be ludicrous to describe the plot, if that is what it has. Suffice to say that if you destroy one nasty thing, you can be sure that something else even nastier will take its place.

Later stages in the game feature obstacles to be avoided, as well as (of course) yet more and more aliens. As is usual with Oric programs, there are two versions of the game on the tape, one saved fast and the other slow. Is there anyone out there who bothers with the slow version? It cannot be thrilling sitting around for 20 minutes waiting for a program to load.

Program *Ultima Zone*
Price *£8.50*
Micro *Oric 1*
Supplier *Tansoft*
Units 1 and 2
Techno Park
Newmarket Road
Cambridge

MANIPULATE

If you have the *Hisoft* or *Picturesque* assemblers then you could find the *Spectrum Screen Editor* very useful.

The purpose of the program is to enable you to manipulate source code in very much the same way as a word-processor manipulates text.

This means that, for example, blocks of code can be moved, a four-way cursor allows for all the assembler code to be manipulated, and a search facility means any given string can be inserted, deleted or replaced.

The program comes with a manual explaining the main features and commands — it's not for novices though.

Program *Spectrum Screen Editor*
Price *£5.00*
Micro *Spectrum*
Supplier *K R Sheppard*
76 Harmanswater Road
Bracknell RG12 3NY

BELEAGUERED

Choplifter is a game whose reputation has produced substantial sales in this country. Audiogenic has now released it on the Commodore 64 and it is graphically superb.

You control a helicopter and must use it to rescue beleaguered troops trapped in a building behind enemy lines.

Under joystick control you guide your helicopter through the enemy territory and attempt to save as many commandos as possible. It's exciting stuff and technically the game is superb.

Just one problem though — it is available only on cartridge, priced at £29.95. Why is this? Commodore manages to sell its Rom software at under £10.

Program *Choplifter*
Price *£29.95*
Micro *Commodore 64*

A CUT ABOVE

Sinclair has just released a range of educational programs in conjunction with Macmillan, the educational publishers.

Whilst some of the programs are not far removed from the normal drill/routine exercises (albeit with some imaginative graphics), others are definitely a cut above the norm.

Survival caters for the older pupil and aims to teach the main ideas of the theory of evolution in an interesting way. Using high-resolution graphics, the program enables you to choose what kind of animal you'd like to be, each with its own strengths and weaknesses, and then makes you face the dangers that animal would face. The object of the program: survival.

You must decide what your animal must do to survive (within its limitations) and in doing so learn some Darwinian theory. Quite fascinating. It's a pity that one of the options isn't to be a human

being, that could be riveting. Neiszche eat your heart out!

Program *Survival*

Surrey GU15 3PS

DEBUGGING

Moder 80 is a cheap and effective assembler/disassembler for the Lynx computer — one of only a few such packages for the machine.

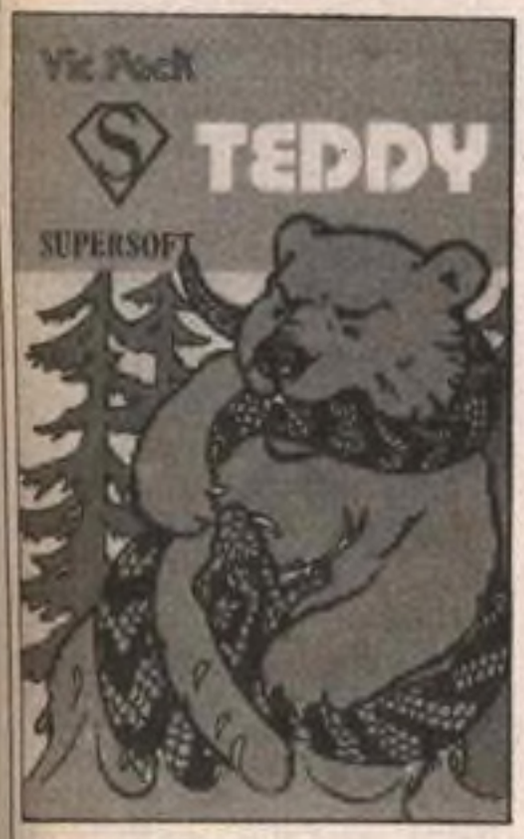
The program is in machine code which means that it will not interfere with existing Basic programs and also makes it easy to call machine code routines from those programs.

The program has all the essential features of this type of system: it can handle the complete Z80 instruction set and all the *Ascii* characters; it will dump to screen, printer or tape; and it has a set of error messages to help with debugging.

The main commands of the program are listed in the fold-out insert that comes with the cassette.

Program *Moder 80*
Price *£6.95*
Micro *Lynx*
Supplier *Seven Stars*
15 Gloucester Avenue
London NW1 7AU

SNAKE EATER



Teddy is a machine code arcade style game for the Vic20 with a bizarre plot. The rather unpleasant theme is that Teddy has to eat all the snakes in his wood.

Teddy, it seems, is having all his picnic basket food eaten by Lake snakes. Eschewing diplomacy, Teddy sees eating the snakes as the only answer.

There is though, a right and wrong way to eat a snake — a posterior munch will kill it immediately, head-on it's Teddy who will be the dinner. Snakes bitten in the middle merely break in two, doubling Teddy's problems.

Other features in the game include various objects that appear randomly, some of which Teddy can eat for further points. It's funny, but somehow I never associated Teddies with nasty things like eating snakes.

OLD FAITHFUL

As Commodore 64 software supply clicks into ever higher gears, the major arcade games are starting to be covered.

In fact, the 64 is technically advanced enough to allow more or less perfect imitations of the arcade hits of a couple of years back — ignoring legal considerations, of course — so you should be able to have your very own *Pacman* or *Galaxians* at home, complete in every detail.

Solar Software has just released both of these old faithfuls on cassette.

Munch Man has all the features of the original *Pacman* complete with bonus fruits, two-player options, and bonus munchers. The game, for anyone out there who may have been asleep for five years, involves steering your muncher around a maze eating dots. Four ghosts chase you and your only defences are your ability to duck and dodge the ghosts and four power pills located in each corner, which will enable you to temporarily munch the ghosts.

Of such things megabucks are made.

Program *Munch Man 64*
Price *£7.95*
Micro *Commodore 64*
Supplier *Solar Software*
51 Meadowcroft

ON-SCREEN

Griffin Software have launched a range of educational packages for the BBC and Spectrum that look a cut above the usual standard of such software.

For one thing, all the programs are nicely packaged in large colourful boxes. For another, much effort has gone into the on-screen presentation using large well-defined letters and graphics.

Wordspell contains 116 separate word tests although you can alter the range and difficulty of the words tested by adding your own lists.

Other programs in the series teach sets, multiplication, division and tables.

The BBC programs are priced at £9.95 and the Spectrum ones sell for £7.99.

Program *Wordspell*
Price *£7.99*
Micro *Spectrum*
Supplier *Griffin Software*
Frederick Street
Birmingham B1 3HP

HIGH SEAS

Pirate is an adventure game aimed at younger children. It features graphics with animation and sound rather than the incomprehensible connundrums beloved of more adult text adventures.

The game is divided into two sections. Part 1 places you on the high seas battling it out with other ships and steering your way through scattered islands to the shore. In this section you may find hidden treasures, but you must keep clear of the rocks and reefs.

There's more treasure to be found in Part 2. This is set on dry land — you must solve various mysteries and collect valuable jewels. Aside from your own wits, your only real help may come from the ship's mysterious, lucky black cat.

Program *Pirate*
Price *£9.25*
Micro *BBC B/Spectrum 48K*
Supplier *Chalksoft*
37 Willowslea Road
Worcester WR3 7QP

INTER-RELATED

Runelord is an adventure game for the Oric 1. It is the first module of a planned series of releases to enable you to build a collection of interrelated adventures.

The game is very much in the *Dungeons* and *Dragons* mould, with the option of choosing and developing the main features of your character. Parts of the game are illustrated with maps and drawings.

Modular Concept Peripherals — authors of the game — plan to produce later sections incorporating speech using the MCP Speech Synthesizer and the Runelord Speech chip.

It sounds like bliss for the hardened adventurer or wargames player. Enough information to get you started is contained inside the cassette box, but you are largely on your own.

Program *Runelord*
Price *£7.50*
Micro *Oric 1*
Supplier *Modular Concept Peripherals*
13 High Street
Clydach
Swansea

Book Ends

HONEST

Well, at least *Megabucks from your Microcomputer* is honest. The book's one aim: to explain how, directly or indirectly, you can make money from computers.

At £3.35 for a book of only 66 text pages with large drawings I think that what we have here is an example of recursion. The book exemplifies its own principles perfectly.

Book *Megabucks from your Microcomputer*
Price *£3.35*
Micro *General*
Supplier *Prentice/Hall International 66 Wood Lane End Hemel Hempstead Herts HP2 4RG*

USEFUL

For anyone with a BBC and a disc drive, *The BBC Microcomputer Disk Companion* looks like the only book you'll need to get the most out of your system.

The book describes how discs work, and how to configure existing equipment to run with the BBC micro. Different sections deal with disc handling and disc commands.

The book also includes a number of programs to use with your disc drive, some involving assembly language. A useful book.

Book *The BBC Microcomputer Disk Companion*
Price *£7.95*
Micro *BBC (+Disk)*
Supplier *Prentice/Hall International 66 Wood Lane End Hemel Hempstead Herts HP2 4RG*

PRACTICAL

Sometimes justifying the fact that you have just spent a couple of hundred pounds on what looks like a small box with typewriter keys on it can be difficult. "But what *use* is it?" cry all your relatives in unison.

A book that might help you answer the question is *Using Your Home Computer* by Garth W. P. Davies. It contains nothing but practical ideas for "real" uses you might find for your micro.

The book trys to show you how to think about using a computer for specific tasks rather than actually giving you programs to type in.

A little paperback book, but rather thin — 80 text pages for £3.50.

Book *Using Your Home Computer*
Price *£3.50*

Replacement person

Do you know what robots are?

Apart from many other things, a "robot" is a set of traffic lights in South Africa. When traffic lights were first introduced into this country, they too were called "robots".

A robot in this sense is a straight replacement person — here it is replacing a police officer on point duty.

Are all robots replacement persons?

Nolan Bushnell, the designer of the first video game, *Pong*, has invented a robot called Topo — is Topo really a robot? Bushnell's firm is called Androbot, and a spokesperson for Androbot (UK) claims, or the press release says, a robot is basically a computer on wheels plus some software, so anyone with a home computer of reasonable power already owns the first half of a robot.

Topo the robot — so we discover — is essentially another computer-driven device, and one which is only capable of movement. Topo, thus, is as much a robot as the Jessop turtle or the BBC buggy which are used in schools. Neither the turtle nor the buggy are robots, so the implication is that Topo is not a robot either.

Are remote control cars, planes, and boats robots? Most people would say not. Just because the machine is driven by a computer under a program, this does not suddenly make turtles, buggies or Topo into robots. They are "simple" machines.

A "simple" machine is an extension to the human: eg, an aeroplane or a power drill. The direction of the machine is under the immediate control of a human, though there may be aspects which operate without human intervention.

A machine which operates without any human intervention (such as a Jaquard loom, a cardsorter, or an automatic press) is the next stage of the development of machines. An "automatic" machine is not, however, a robot.

There are those who are willing to argue that any automatic machine is effectively a simple robot, but such argument seems to contradict commonsense — or at least my commonsense. There seems to be something missing from a machine to fill bottles, something I feel should be there for a robot.

I think there are three main aspects to a robot: machine, power, control.

Machine: any robot must consist of machinery and in this a robot is no different from any other machine — a robot is a machine.

Power: for any machine to work there must be a power source, but, as before, this does not differentiate the robot from any other gadget.

Control: the operations of the machinery have to be controlled, and it is the form of control which differentiates the robot from the simple or automatic machine.

In a robot the control of the workings of the robot have to be programmed. By programmed I mean "not human directed" and I do not mean "repetitive". For example, a computer program is programmed, but it is not always repetitive.

A computer program can produce novel results and often the novelty derives from the response to differing inputs. It is a poor computer game which always repeats itself, independently of the users responses. It is a poor robot (but a typical automatic machine) which cannot accommodate to some change in the relevant environment.

It is a poor industrial robot/welder which, when the metal to be welded is akimbo, welds thin air. A robot has to respond to the environment and thus has to have ways of sensing that environment.

To sense the (relevant) environment requires some "intelligence" in the sensing mechanisms. To use that information derived from the environment, requires "intelligence" in the control program. It has to be a control program, and it has to be performed by a computer, as no other device with those kinds of abilities exists.

Once we talk about computers and intelligence we are in familiar territory . . . ■

Boris Allan

Puzzle

Three digits

Puzzle No 85

Egbert was thinking of an unusual number which is the answer to this puzzle.

It has three digits. The sum of the first power of the first digit, plus the second power of the second digit, plus the third power of the third digit gives the number back again.

1st 2nd 3rd

If Egbert had been in an obliging mood he would have been thinking of 175 because $175 = 1^1 + 7^2 + 5^3$, and then we would have printed both the question and the answer at the same time, making the puzzle a trifle easier than usual.

Unfortunately he wasn't. Which number, or numbers, might he have been thinking of?

Solution to Puzzle No 80

The program assigns each firework price to the array *A*(5). Every possible combination of five fireworks is then selected, and if the total cost is equal to exactly one pound, the result is printed.

```
10 DIM A(5) 20 LET A(1) = 12 30 LET A(2) = 14 40
LET A(3) = 18 50 LET A(4) = 32 60 LET A(5) = 48 70
FOR B = 1 TO 5 80 FOR C = B TO 5 90 FOR D = C
TO 5 100 FOR E = D TO 5 110 FOR F = E TO 5 120
LET T = A(B) + A(C) + A(D) + A (E) + A(E) + A(F)
130 IF T = 100 THEN PRINT A(B);" ";A(C);" ";A(D);"
";A(E);" ";A(F) 140 NEXT F 150 NEXT E 160 NEXT D
170 NEXT C 180 NEXT B
```

This prints out three sets of values, but only one includes the price of a *Golden Waterfall* and only one the price of a *Depth Charge*.

Therefore, the fireworks chosen by each of the group were:

Jamie — 3 Golden Waterfalls, 2 Mine of Serpents.

Sue — 2 Golden Waterfalls, 2 Krakatoa Cascades, 1 Depth Charge

Ben — 1 Krakatoa Cascade, 3 Fairy Fireglows, 1 Mine of Serpents.

Winner of Puzzle No 80

The winner is: G L Godman, Shuthonger, Tewkesbury, who receives £10.

DEAR AUTOMATA, PLEASE RUSH ME THE FOLLOWING .....

"THE PIMAN'S CHRISTMAS STOCKING", including "THE PIMAN'S GREATEST HITS" STEREO L.P CASSETTE, THE PIMAN 1984 CARTOON CALENDAR BOOK plus THE PIMAN'S OWN BLANK C20 COMPUTER CASSETTE. £5 ○
