News Desk

Thorn EMI **imports** from States

THORN EMI's software distribution division has begun a campaign to import American software into the UK.

It has already gained the marketing rights to Californian company HesWare's games, bringing them to Britain for the first time, and it is strongly rumoured that another Californian-based house Electronic Arts is also taking part in negotiations with Thorn EMI.

"Sixteen HesWare games will be released from Thorn EMI shortly," said Thorn's Glen McAllister. "They will include not only games but also educational programs.

"We hope to be marketing over thirty programs of HesWare's range - the next batch will be released in a couple of months.

Not included in the deal are Jeff Minter's games which HesWare market in the US. "The idea is to bring over games which have previously only been available in the States."

However, one of the first Thorn EMI releases is Minnesota Fats' Pool Challenge. which is actually a renamed version of Hustler by Bubble

From your TV to your micro

NOW, after 'computer game of the movie', comes 'computer game of the tv show'

Twentieth Century Fox are selling the computer game rights of two successful series to software houses.

Automan (currently showing on Saturday, 5.05, BBC 1) will be converted into a game by Bug Byte, while the rights to the ITV series The Fall Guy have been sold to a new British software company.

"The deal for Automan gives Bug Byte the rights to sell the game in the UK, Europe and other English speaking countries apart from the US and Canada," said Maggie Corke Twentieth Century Fox's international sales co-ordinator.

"We have to make sure that the finished game shows Automan in his true light, but the type of game Bug Byte produces however, is entirely up to the company.'

Automan is a holographic Tron-like character who can walk through walls and become invisible. Created by a computer programmer in the ty series, he is an ideal candidate for a computer game.

Editorial

By using Microdrives in the QL Sinclair is taking a risk that the machine may never receive proper software support.

Anyone who writes a brilliant program for the QL cannot simply trot off to the nearest duplication plant, run off a few thousand copies and start selling them because Sinclair keeps sole control of Microdrive manufacture and duplication to itself.

The result is as one would expect. So far there are four programs for the QL— the same four as there were at the start. And it is difficult to see how, even with the most ambitious publishing programme, Sinclair alone can provide the depth of software support that will make the QL a success.

The Sinclair name will no doubt help in the UK but in the US the going will be a lot tougher. What American software house is going to put itself out and start negotiating with Sinclair for supplies of Microdrive cartridges when instead it could be writing for the Apple, Commodore or IBM machines — all of which are already established?

All of which is a great pity. If the QL had a single 3 inch Hitachi or 3½ inch Sony disc drive in place of the twin microdrives then the situation would be different. With a Sony drive the QL could even have been compatible to a limited extent with the Apple and Macintosh.

But that would not be in the proper order of things. Sinclair unswervingly pursues its own idiosyncratic path. As a Sinclair spokesman commented last week: "It is not our policy to seek compatibility with other machines."

Sinclair is surely making a mistake. For the US the QL must have a built-in disc drive.

In the UK Sinclair must dramatically lower the cost of blank Microdrive cartridges and quickly open up avenues for their duplication.

Thorn EMI

continued from page 1

Bus, who licensed the game to HesWare to be marketed in the US. Yet *Hustler* will continue to be available in this country through Bubble Bus.

"That is the only one of the games that has been released in this country before," explained Thorn EMI's Lee Richards. "It was included in the deal because we thought it was a particularly good game."

The 16 Hes games are all available on either the Vic 20 and Commodore 64, and conversions for other machines are expected soon. All but two of the programs are produced on Turbo Tapes speed up loading considerably, so that many of the programs can be loaded in around a minute.

TV games

continued from page 1

bought the rights to *The Fall Guy*, which stars Lee Majors, is being set up by Steve and Richard Wilcox. The company is as yet untitled; a competition to select its name will shortly be run in the magazine *Computer and Video Games*.

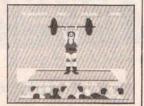

As with Automan, Twentieth Century Fox reserve the right to view the game's artwork and ensure the game is presented in an authentic manner.

"We're planning to concentrate on licensed titles for our games," said Steve Wilcox, "and we are working on others, all US tv series at the moment, which we want to bring out before the end of the year.

"The Fall Guy will be an arcade-style adventure for the Spectrum. We have the rights to the title in the UK and Europe, but not the States, where the title is owned by another company."

Spinning-off video games from tv series and films is becoming a fashionable pastime. In the US Datasoft has licensed the Dallas characters and Atari has recently announced its video game based in the new Spielberg produced film Gremlins. Parkers has recently announced 007 James Bond, based on the successful film series.

The HesWare titles will be pricey. The cassettes range

Recent HesWare release Hes Games

from £9.95 to £14.95 and disc or cartridge versions will be available for some of the programs with prices starting at around £23.00.

Micro use will foil the burglars

COMMODORE 64 and Vic 20 owners can now use their computers to stop their homes being burgled.

Micro Security has produced the Sentinel Home Security system which can connect the computers to standard burglar alarm equipment.

"The system uses an I/O interface unit which connects into the Commodore's user port," said Steve Coaker, Micro Security's managing director

"The computer takes the place of the control panel in an ordinary burglar alarm, but it has the advantage of being able to program the system to do a variety of things, such as delaying the time between a break-in being detected and the alarm sounding, setting an automatic cut-off time for the

The receiver steps in

CARNELL Software has called in the receiver.

The company, set up by Roy Carnell and Stuart Galloway three years ago, has produced acclaimed adventures such as Black Crystal and most recently, Wrath of Magra.

"We were having problems earlier this year," said Roy Carnell, "but hoped that sales of Wrath of Magra would keep us going. Unfortunately we were forced to call in the receiver."

However, the outlook for Carnell's games is hopeful.

"We're currently negotiating with several companies who have shown an interest in taking on our titles," Roy continued. "I am hoping that within

alarm, or simply programming the length of time the alarm sounds for."

The interface unit has two input channels which connect to the intruder detection devices — magnetic reed contact switches on doors and windows, pressure mats and vibration detectors.

It also has six output channels which can be used to control light switches and appliances to make it look as though the house is occupied.

The complete kit including the interface, software on tape or disc, the alarm bells and magnetic reed contacts, costs £104. A pack containing just the interface and software costs £62.45. Both options are available by mail-order only from Micro Security, PO Box 18, Havant, Hants.

Stuart Galloway (top) and Roy Carnell

the next two weeks an arrangement will have been made to keep the games going."

New tape drive storage system

A NEW fast low cost tape drive storage system is soon to be launched for the Commodore 64 and Spectrum micros, with the latter device a direct competitor for the ZX Microdrive.

The system—the Wafadrive—is being manufactured in the US by Astec, a division of BSR, and will be distributed in the UK by Rotronics in High Wycombe.

The UK version of Wafadrive will be a twin tape drive unit each with a maximum. storage capacity of 128K. The individual drive units are larger and more robust than their Sinclair counterpart. The tape cartridges themselves will be available in three sizes, 128K, 64K and 16K, priced at £3.95, £3.65 and £3.45 respectively. The Wafadrive unit also features built-in Centronics and R\$232 interfaces.

In this country Rotronics will be including a free wordprocessor software cartridge with every Wafadrive. Graham Booth, Rotronics's sales manager said, "Hewson Consultants will be writing the Commodore wordprocessor and we are hoping that the Commodore system will be compatable with all the machines including the new Plus/4 and 16.

The Spectrum version will be the first to go on sale though, scheduled for August at £129.95 in major retailers. The Commodore unit will follow in October at £159.95.

QL interest at Earl's Court

LARGE crowds turned up for the Earl's Court Computer Fair last weekend.

The Sinclair stand dominated the show and the QL's on display attracted much interest. The machines appeared without their external Eprom boards and Sinclair is claiming now to be sending out machines to customers in this form.

After Dragon's announcement that it has called in the receiver it was surprising to see the company out in force. Dragon's big stand was rumoured to have been paid for by GEC so the Dragon may yet overcome its latest crisis.

Commodore showed its Plus/4 and C16 machines. The Vic 20 machines on the Commodore stand were outnumbered 15 to 1 by C64s.

Acorn launched its expansion unit for the Electron—the Plus 1. For £59.90 the add-on gives the Electron Centronics printer and joystick interfaces and twin Rom cartridge slots.

On the software side there was little of interest. The one exception was Psion's *Match Point* tennis game for the Spectrum.

Eye of the Star Warrior

Some readers who sent off for our Eye of the Star Warrior tape offer have been experiencing difficulty in getting the program to work. It appears that Line 2190 has on some tapes been corrupted in duplication.

Even though it looks OK, the line should be typed in

again:

2190 DATA "010304050 607122224", "020710222324", "020710222324", "06071324", "020710222324", "06071324", "020405061013222324", "020405061013222324", "060724", "0304222324", "0204060710222324", "030422324", "02030414222324", "02030414222324", "0203041022324", "02030410223324", "03040714222324", "03040714222324", "2324" Tony Bridge

Word-processor packages

Having recently read Malcolm Davidson's review of the QL's word-processor Quill, I found it disturbing the way he assumed that the average reader has a knowledge of expensive business word-processors.

Surely it would have been better to compare Quill with other packages that the readers are more likely to have come across with their own home micros — such as Telewriter, Tasword and Wordcraft.

Malcolm also spent time reviewing features that are not even found in Quill. Surely the space could have been put to better use by telling us how many pages of A4 text can be handled by Quill, and how many characters are displayed on the screen — it may well have 64 or 84 columns, but how many rows?

A picture of the Quill screen in action would have been better than the machine shot you used, too.

Not impressed with the Quill review, I turned to the letters page. There I found Mr Cunningham comparing QDos and Quill with CP/M and Wordstar. A quick look in another magazine revealed that CP/M and Wordstar together cost over £500. Mr Cunningham may have money to throw around, but for that money I can buy a QL with QDos and Quill and still have enough change left over to buy 20 of those expensive microdrive cartridges he complains about.

I agree with the other points he makes, but purely on the grounds of economics, QDos and Quill seem to have the edge.

> A J Pimperton Gosford Coventry

Dead-end clearings

Having spent just over one and a half hours battering at my squidgy keyboard, I have finally completed Ultimate's new Spectrum game Sabre Wulf with a score of 94 per cent and 45720 points.

The four pieces of the medallion can only be found in "dead end" clearings; ie, those with only one entrance/exit. When assembled, they depict a snarling wolf's head. Their location varies from game to game, so it is well worth making a map as you go along like Atic Atac — to keep track

"Did you get the computer?"

of which clearings have been searched.

Gordon Ramsay Higher Polsloe Calthorpe Road Whipton Exeter

Eprom cartridge

It's here! Well that's what you said when you received your QL. Yes, I too am now the proud owner of a Sinclair QL.

The only disappointing thing about the machine is the Eprom cartridge which must be inserted into the Rom slot at the rear of the computer. In a letter which I received with the QL, Sinclair have said, "As soon as the firmware is available in Rom form, we will notify you, so that you can return your QL to us for the Roms to be added to the main board inside the case, leaving the external Rom cartridge slot free".

My question is this: Is it going to cost me more money, and how long will this Rom

exchange take?

Something which a friend of mine noticed was that I received my QL on the same day as the eclipse of the sun (Wednesday May 30). He also pointed out that I need not worry about the Rom exchange as that is unlikely to happen until the next eclipse we encounter.

Finally, I would like to give a plug for the The Hayes Computer Club. Anyone wishing to join, please contact me.

RF Gavin 15 East Walk Hayes Middlesex

Commercial piracy

I am writing in reaction to the article on GOSH (PCW June 7).

David Kelly does make some very valid points — I myself know of software swapping/home pirating circles that exist within clubs and schools, and I do not for one moment dispute Rod Cousens' claim of the commercial piracy of Quicksilva's Fred.

However, a distinction must be made between piracy for the monetary gain of professional pirates, and piracy through individuals finding software too expensive to buy every tape that they want. Commercial pirates should and must be stamped out, but the "socially acceptable" home pirates are a totally different case. Software houses obviously believe the blame for home taping lies only at the door of the customers. Have they never considered that they could be pricing themselves out of business?

In the article Rod Cousens said that if piracy was stopped, then prices would fall. But, as I see it, if prices dropped first, then home taping would die out because consumers would be more prepared to buy software. I certainly think that £6 to £16 is too expensive for one program.

This may sound naive, but if one software house led the way and cut prices then the others would be forced to follow or else risk being priced out of the

market.

Reducing prices would also hit commercial pirates. Pirating would become less profitable and hopefully the 'professionals' would look for other ways of making their money.

Brickie

Trap the monster and then watch it explode in this game for BBC B by lan Ferguson

This game for the model *Brickie*. The idea of the game is to trap the "Monster" using building bricks until it is completely enclosed and cannot move, whereupon it explodes. This must be done within 60 seconds, or the man explodes.

There are three levels of difficulty — The game must be played either with joystick or with keyboard.

The main part of the program is a Repeat/Until loop using the "Time" pseudo-variable to count up to 60 seconds. The main procedures are as follows:

Procstart: — title page

Proctime: — prints remaining time
Proccheck: — checks if alien is blocked in

Procalien: — alien movement routine Procdeath: — prints exploding charact

prints exploding character and plays rapidly descending scale. It also says

who won.

Movement of the player is via Procleft, -right, -up, and -down. The main variables are XM% and YM% for the player's position, to which are added XM1% and YM1% to make it move. XA% and YA% are used for the allien's position, to which are added XA1% and YA1% for movement.

21-27 JUNE 1984

CES Show report

Chicago top ten

David Kelly looks at the new software on show at CES in Chicago

Looking at the new software on parade at CES it is clear that games still rule the roost.

The predicted upsurge of 'serious' applications packages for home micros has taken place, but to a much lesser extent than expected. The 'zap' game is now well and truly dead and the emphasis is on graphics, cartoon type animation, simulation and adventure games.

And some of the results are breathtaking. In a moment I shall select a personal top ten from the show, but first some of the other highlights.

To start with, the hardware manufacturers. Atari showed its first products from its agreement with Lucasfilm — two titles, Ballblazer and Rescue on Fractalus. Sad to say neither proved to be earth shattering. Atari previewed its latest collaboration with Lucas cohort Steven Spielberg — a game based on the latest Spielberg-produced film, Gremlins.

Finally from Atari, a real weirdy: The Mindlink System. Mindlink is a combined headband and infra-red transmitter linked to a receiver connected to the computer. Using special software a game can be controlled with the headband instead of joystick — just by tensing and relaxing the muscles in the forehead. The system will cost around \$80 and be launched in September.

Attention at the Commodore stand focussed on the hardware — the Plus/4, 16 and the new disc drive and printer. But there were one or two interesting pieces of software on show — most notably *The Hulk* — a joint venture with Scot Adams, Adventure International and Marvel Comics, and *Just Imagine*.

Romox, the electronic software distribution system launched in a blaze of publicity a year ago — and taken up by Prism in the UK — seems to be floundering. After test marketing in 20 stores last October, it still has yet to be launched in final form.

Which brings us to the independent software houses. At first sight the US houses seem much more developed than the British ones. They all had extravagant stands. Electronic Arts, for example - a comparative newcomer to the US scene - had a glittering white edifice with a huge Greek pillared portico. It is only on closer inspection that it becomes obvious that the companies are every bit as disorganized as their UK counterparts. The difference is only that the American houses are all set up with venture capital backing big bucks.

Unlike the British companies, the US houses have for the most part gained their backing at the expense of losing control to the guys in the grey suits.

Looking at the US houses in no particular order:

Infocom was disappointing.
One point of interest, though
— all its titles will shortly be
available for the Apple
Mackintosh.

Sierra announced an agree-

ment with Disney to develop four educational games featuring the Disney characters. First out will be Donald Duck's Bakery for Apple and C64. Then comes Winnie the Pooh Lost in the 100 Acre Woods. The second BC and the Wizard of Id game was on show -Grog's Revenge. Also a clever boxing simulation - Championship Boxing. Choose from 50 boxers to play the computer or a friend. Or, design your own boxer. Set your strategy for each round and watch the outcome, or play each round blow by blow. All for the Apple II and C64. Grog's Revenge also for the Atari, Adam and IBM.

Broderbund showed some first class material and appeared to be one of the more organized of the American houses. Nearly all their material is for the Apple II, though.

Electronic Arts showed a basket ball simulation — Oneon-One — for the Apple with Atari and C64 to follow soon. Financial Cookbook presented a new twist to home finance — DIY recipes for success — for the Apple II, IBM, C64 and Atari.

Spinnaker is spreading into

bookware. Windham Classics
— a new division of the company — has developed graphic
and text adventures based on
classic children's stories —
Swiss Family Robinson, Wizard of Oz, Gulliver's Travels,
Treasure Island and Wind in the
Willows. All will be available
later this year for the Apple II,
Commodore, Atari and IBM
machines.

Yet another new division of Spinnaker is Trillium which is developing software based on science fiction titles by well known authors — either published or soon to be published. These include Rendezvous with Rama by Arthur C Clarke, Fahrenheit 451 by Ray Bradbury and Amazon by Michael Crichton. These titles are on disc for the Apple II and Commodore 64.

Imagic is another company moving into software based on well known works of fiction. it has adventures based on H G Wells' Time Machine R A MacAvoy's Damiano Trilogy set in 15C Italy and Conan Doyle's Sherlock Holmes books. Where the Sherlock Holmes title leaves Melbourne House which has announced a similar idea is not clear. These titles are available in October/ November for the Apple II, IBM and C64.

Parker showed 007 James Bond for the C64 and Atari. Montezuma's Revenge rather like Manic Miner— and Frogger II Three Deep (a C64 cartridge) featuring 'Sega's fearless amphibian!'

Activision's new products were rather disappointing. The company concentrated on getting its Atari titles across to the C64 with 12 titles for the Commodore machine. Activision also announced a distribution and marketing agreement with an interesting Santa Barbara-based house — Gamestar. Gamestar specialises in sport simulations for the C64, Atari and Apple II.

CBS appeared to be making a big push into the software market — good quality material, often with an educational twist

Other companies of interest included Datasoft, HesWare (which sells Jeff Minter's titles in the US), First Star, Mindscape, Creative and Random House (with a range of educa-

CES is not just about computers. The whole field of consumer electronics is represented.

A number of themes are being hotly pursued — stereo video with hi-fi sound is going to be big. Cellular radio is very much in evidence. At least 25 companies demonstrated low-cost transportable satellite receiving stations. One dish was only 18 inches across. Canon showed a video editing machine for home use. Pioneer made a lot of noise with its high quality laser disc video juke box. All the major electronics companies were pushing Compact Disc records for all they are worth. Coleco showed Private Call — a personal telephone for kids which remembers the

numbers of the most important people in your life — it can be locked up, keeping your secrets safe. Robots seemed less interesting this year. Hubot includes a built-in radio and cassette player — for \$3495 (over £2000).

And so to the star of the show. On the Hattori stand, Seiko showed its pocket colour tv. The device features a very high quality true flat-screen liquid crystal display and is about the size of an ordinary paperback. It beats the Sinclair flat screen tv out of sight. it costs \$550 (around £400) but prices are bound to fall. It would appear Sinclair made a mistake to go for a conventional tube in his device. Liquid crystal is better.

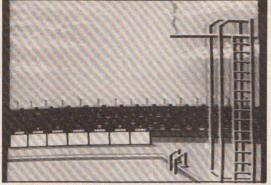

CES Show report

tional titles featuring the Peanuts cartoon characters)

So what about the UK software houses at CES? All in all it was a dismal showing. Only Ouicksilva/Virgin and Mastertronic took stands. Virgin's Falcon Patrol was selected by the CES organisers as one of the top 100 titles at the show. Quicksilva also attempted to hold a press breakfast to launch new titles - but it didn't entirely go as planned. Rod Cousens didn't make it, the video presentation was delayed because the video cassette proved to be incompatible with the recorder and the 1920s bus specially hired to take people from the breakfast to the show broke down.

Aside from QS/Virgin nobody else had the nerve or resources to challenge the US houses. A goodly number of UK people were skulking round the show, though.

And so to my top Ten. 10 The Hulk. Straight in at number 10! This is the first in

Summer Games from Epyx.

things which could be available on the QL, for example.

8 Dinosaur Dig. An educational program from CBS (written by Neosoft). As one buyer at CES commented: "Educational software is great - it just doesn't sell." He may be right, but Dinosaur Dig is a fascination program. It animates each of the dinosaurs, shows how

> they lived and shows maps together with how conditions changed and made them extinct. For the Apple II, IBM and C64, all on disc

7 Dallas Quest. From Datasoft. What can one say? Sue Ellen

and Apple II.

micro. No indication of availability. One of two JVC games which links the JVC BD-7550 video disc player to the computer giving real video footage in a game. You choose the iron and the strength and direction of shot, and then you get to see how you did on a real golf course, with real players and spectators.

pointer towards the sort of

4 Summer Games. From Epyx. Every self-respecting software house showed an Olympics game and this was arguably the best. Summer Games for the C64 features eight different events - including running, pole-vaulting, swimming, diving, shooting and gymnastics. Epyx has been caught somewhat on the hop by recent events and is now having to promote Summer Games as the games the Russians did attend. The flag is definitely in

gram at the show. It allows you to fit together your perfect dwelling from a series of pictorial menues with the help of a joystick. Each piece is selected, coloured and moved into place. Other titles with a similar theme included Epyx's C64 Barbie's Boutique based on the Barbie doll character which you have to dress up and another is Just Imagine from Commodore for the C64 and Plus/4 with a choice of backdrop (jungle, western etc) which you can populate with animals and people. Commodore's title includes trivia, too did you know that the fastest growing animal is the blue whale?

2 The Ugly Duckling. Software Movies has seemingly an entirely new idea here. On the Atari they have cleverly linked a voice/effects track to software running on screen using a synchronisation pulse. What this means is that characters can actually be made to speak, moving their lips in sync with the voice from the other stereo track. The effect is remarkable and is genuinely a step nearer to software movies. The company has it working on the Atari and will shortly announce titles for the C64.

1 Karateka from Broderbund for the Apple II. Tremendous graphics in a great arcade game. This is a martial arts fighting game. A succession of adversaries are sent at you and each must be beaten with the fast reaction punches and kicks

Dallas Quest from Datasoft.

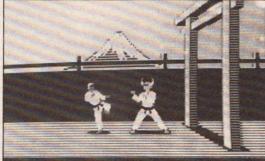

the Questprobe/Scot Adams adventures featuring the Marvel comic book heroes. The Hulk is a graphic adventure released in collaboration with Commodore for the C64 and Plus/4. Nice graphics.

9 King's Quest. Another adventure, this time from Sierra. What makes King's Quest special is that it is animated. You move the hero, Sir Grahame, through the adventure using a joystick. There is also text input. Use of the joystick adds another dimension with arcade-like fights and you have to be careful when moving around the screen not to make mistakes like falling into the river. Dozens of locations. Memory problems mean this is only for 128K Apple IIs and the IBM PC. Nevertheless, it is a hires you as the best detective in Texas to find the map of the oil fields so she can gain independence from JR. Great adventure, great graphics. I tried to shoot the cat all that happened was a flag appeared which said 'Bang'. Apple II, Atari, C64, IBM PC. 6 Spy v Spy. An arcade game from First Star, based on the zany Mad comic cartoon strip. The game is for one player against the computer or two players You are trying to escape from the embassy with the plans, money, airline tickets and passport. The snag is, so is the other guy. You can plant bombs behind cupboards and in safes, though, to deter your opponent. Twenty rooms. C64

5 JVC Golf. For the JVC MSX

Karateka from Broderbund. there. Watch out for a rash of Olympics programs in the UK. 3 The House that Jill Built from CBS (written by Joyce Hakansson Associates) for the Apple II and C64 both on disc. Another popular type of pro-

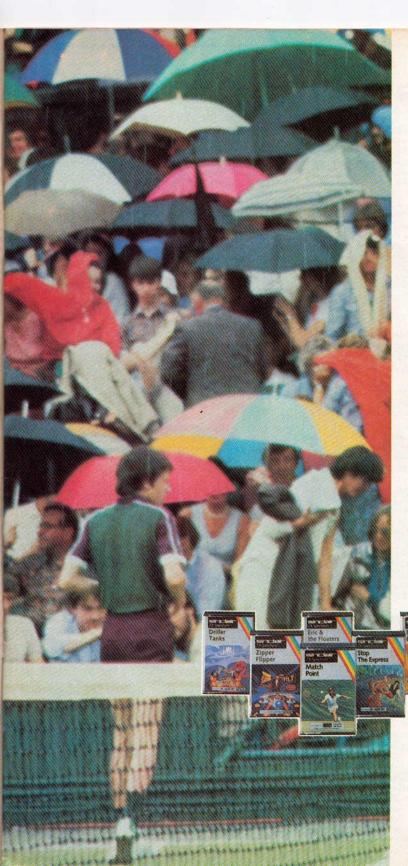

of a kung fu hero. All this with some of the best animation yet seen. A beautiful piece of programming with compelling gameplay. The title is rumoured to have been licenced for the UK machines by Quicksilva.

PREPARE FOR A TEST OF ENDURANCE...

...an Olympiad spectacular from Software STUDIOS

A fine day for tennis on your Spectrum

This is Wimbledon. The home of British tennis, enjoying Britain's fine weather.

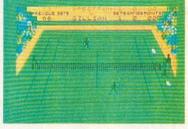

But this summer, things will be different. If rain stops play on court, you'll be able to carry on playing - with Sinclair's 'Match Point'.

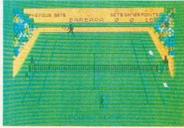

'Match Point' is one of six new, all-action programs for your Spectrum. It lets you play tennis against the computer, a friend, or just sit back and watch an exhibition match.

Enjoy all the features of tennis - backhand and forehand shots, lobs, drop-shots, volleys, a scoreboard...even ball boys are on-call.

But good tennis strokes aren't everything. To win the Match Point Open Championship you'll need skill and tactics.

Luckily, though, you won't have to rely on the weather!

'Match Point' has been developed by Psion, one of the UK's top software houses.

You'll find it alongside Sinclair's other new titles - Stop the Express, Bubble Buster, Zipper Flipper, Eric and the Floaters and Driller Tanks in the shops, today.

At £7.95, it's a real winner!

Selected Sinclair software lines are available from W.H. Smith computer stores, larger branches of Boots, John Menzies, Greens and most other software stockists nationwide.

Sinclair Research Ltd, Camberley (0276) 685311.

Sinclair, ZX and ZX Spectrum are Trade Marks of Sinclair Research Ltd.

Galaxy of stars

Here's your opportunity to have a Planetarium in your own home.

Considering there is no sound involved in this program and the only visual display could be interpreted as "white dots on a blackground": I found Constellation to be one of the most fascinating progams for a computer I have seen. Superior Software's Constellation allows you to view the stars from any point, and at any time on the Earth. You are asked for the latitude and longitude of your position, the month and date and the Greenwich mean time you wish to view. From then on the sky truly is the limit.

Your telescope can be ele-

vate up, down, left and right. It can even zoom in on particlar constellation. If you don't recognise the star formations you are viewing, you can switch to a display where each constellation is shown by letter formation.

Quite honestly, it was the sheer complexity of the program itself that I found most fascinating. Here is a marvelous use of a home computer which doesn't involve fast action or killing or brilliant colour, normally associated with software. It's both educational and absorbing, whilst giving you the opportunity to see "The Sky at Night" at any time.

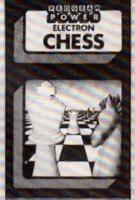

Fred Short

Program Constellation Price £6.95 Micro Electron Supplier Superior Software, Regent House, Skinner Lane, Leeds 7.

Player v player

Program Power have converted their popular version of Chess, for the Electron. This computer version of Chess must rank amongst the best, both for display and playing power. Once the game is loaded you are offered nine options, plus player versus player, player versus computer of computer versus computer. You can analyse your move, choose a fixed time limit after which you forefit your move, continue a game after it has been re-loaded from tape, modify the display colours, choose from nine levels of play (level nine taking up to two hours for the computer to make its move), or replay a previous game. Such options do not allow you to play an expert game of Chess but do put the facilities of the computer to full use, thus making for more enjoyable play.

Personally I find computer

chess both enjoyable and frustrating enjoyable to be able to choose the ability of your opponent but frustrating to find an opponent almost infallible. I am very pleased however, to find a good game of Chess for what is still a relatively new computer to the market.

Fred Short Program Chess Price £7.95 Micro Electron Supplier Micro Power Ltd, 8/8a Regent Street, Chapel Allerton, Leeds LS7 4PE

Cloud of dirt

Slinky is a sort of cousin of Obert.

You have to hop Slinky (which looks like the toy of the same name — a metal coil which can climb up and down steps) around a pile of coloured cubes, the tops of which change colour when Slinky lands on them. Only when all the cubes have changed colour can you go on to the next level.

However, the game is not as simple as that. There is a cloud which can pick Slinky up and unceremoniously drop it off the edge of the cubes, losing you one of your five lives. At some of the higher levels the cubes can change colour back and forth each time Slinky lands on them which makes planning your moves pretty tricky. Later on still other characters appear and the action speeds up making an already quite difficult game almost impossible.

Although the idea of the game is far from new, this is an enjoyable variation which requires both sharp reactions and good planning.

Richard Corfield

of dirt — well that's what it looks like — which occasionally floats across the screen and this causes Slinky problems. A magnet sometimes appears

Program Slinky Price £12.95 (disc) £8.95 (cassette) Micro Commodore 64 Supplier Audiogenic, PO Box 88, Reading, Berks.

Life or death

It is refreshing to see British software on the market for the Atari computers as the Americans seem to have dominated this machine. A new Atari house to appear is System 3 software of London, which has just released a title called Colony 7.

Imagine yourself at the controls of an ADV (armoured defence vehicle) on which is mounted a device capable of delivering instant death to marauding pirates. You are just protecting the colony's food supplies when, all of a sudden, pirates zoom down from the heavens. It is now a matter of life or death to protect the food supplies...

Sounds familiar? The old blast-them-up-with-no-way-towin complex? You guessed it. This game entails no more than dodging bombs (slow ones at that!), blasting aliens (crude player missile graphics) and protecting 24 canisters (12 either side of the screen). On the plus side the background graphics are quite good. Done in Graphics Mode 9, they give a true impression of 3-D.

The game itself, unfortunately, is nothing special. The pirates move too fast to hit (unless you're lucky!) and their bombs fall far too slowly. If you are shot on your last life you have to wait until the pirates have carried off the last of the food cannisters until you are allowed to have another game—an unnecessary and frustrating pause. Also there is no high score feature; only one player is allowed and there are no skill options.

The program itself is only about 6K long, the rest being taken up by the screen data.

All in all I found this game rather uninteresting and would much rather play Xenon Raid, by English Software. However I am sure System 3's obvious graphic-creating talents will be used to better effect.

Gary Radburn Program Colony 7 Price £9.95 Micro Atari 400/800/XL Supplier System 3 Softwaref, 10 Marshalsea Road, London SE1 1HL

Reviews

Freezing

Pengi is an ingenious combination of existing games ideas in which a monster - maze chase (eg. Snapper type game) is mixed in with a (literally) sliding block puzzle. The central character in the game is an agreeable little penguin who having been locked in a freezer attempts to rearrange its contents, namely blocks of ice, whilst avoiding the freezer's other inhabitants, the snow bees. The ice blocks are slid around with the aid of a hefty kick from the penguin, or alternatively may be selectively melted. Actually, given my frenzied activities whilst attempting to out-manoeuvre the bees, indiscriminately melted might be more apt.

The game comprises ele-

ments of skill in controlling the movements of Pengi, and strategy, avoiding the snow bees whilst at the same time trying to line up the special diamond ice blocks. In addition, those seeking gratuitous violence are satisfied by attempting to crush the snow bees beneath the moving blocks of ice, or alternatively, stomping them, having first stunned them using an electrified fence which surrounds the freezer. This too requires activating by means of a swift kick from Pengi.

The games high quality graphics and excellent sound provide a most pleasing overall effect, generally comparable with other versions, eg. Postern's Pengwyn in this respect.

Simon Wilson Program Pengi Price £5.95 Micro BBC Supplier Visions, 1 Billington Street, Liverpool,

Flexible system

uthor is a versatile word processor from Tansoft, written by John Dawson. The program loaded first time, at the fast baud rate, on both the

Atmos and Oric-1, as did all the tape operations within the

It starts with a menu of major commands which cover the three main activities; writing and editing, saving and retrieving, and printing text. Oric's message line at the top of the screen is used by Author

as a reminder of the command in force, what input is expected and how to exit from it. Selection of the major commands is made by using the initial lettter of the command. It may take four or five sessions to master the full capabilities of the editor, but the comprehensive 38 page manual leads you gently into using Author.

I would rather the Move command, which relocates sectrions of text, was a Copy command so that repetitive text may be easily entered. I also found that as a poor typist. frequent switching between Write and Edit modes became

tiresome

The printer installation table, printer macros, and the ability to include printer control codes within the text. makes Author a very flexible system that can cope with any printer capable of being attached to the Oric printer port.

Vic Fielder Program Author Price £14.50 Micro Oric, Atmos Supplier Tansoft, Units 1 & 2, Cam-Techno-Park. bridge Newmarket Road, Cambridge CB5 8PB

Quick sort

The market for Spectrum database programs is a tough one, dominated by Master File, with Vu-File in a good second place. Multifile fails to get near these two programs in any of the areas that really matter

The library case contains the program tape (which I found quite difficult to load) and a blank tape for recording data. There is also a short instruction book. The program is written in Basic, which means that it is very slow at times; sorting the file into order (using "a very

advanced sorting algorithm called 'Quick Sort" takes about two minutes! You are

limited to ten data fields of no more than 19 characters and one display format, and because the program uses fixed length fields in an array (rather than a data compression technique) vou can have no more than 105 records.

The program does contain a form of security coding, but even a beginner would not find it difficult to penetrate this: the program is not even break protected. There is a Clone function, unique to Multifile, which will-copy a particular data field from one record onto a given number of others; but this does little that could not be achieved using the Copy facilities of Vu-File or Masterfile. There is no microdrive compatibility built in, nor any advice about this in the manual. though the program would be straightforward to convert for microdrive use. Free membership of a users club and a telephone "Hot-Line" don't make up for the deficiencies in the program.

In short, this program is not one I'd recommend: either of the front runners offers better facilities and value for money.

Simon Springett Program Multifile Price £9.95 Micro Spectrum Supplier ISP Marketing, Crown House, 386 High Street, Godalming, Surrey

Potblack

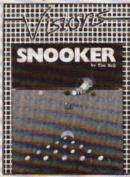

The potential of a computer for playing games would seem to know no bounds. It has become well established as an admirable opponent in Chess. and not quite so well known for such games as Draughts. Othello, and Four-in-a-row.

However, for games requiring a greater degree of physical participation, I was not so sure that the computer had much to offer. Therefore when I saw Vision's Snooker I was not very optimistic

I was mistaken. Having loaded up the tape, two hours later I was hooked. Not, I hasten to add, on playing snooker on a computer; more, learning to use a computer to play a type of snooker - a big difference

I was fascinated how near to the 'real' thing this was and especially how all the colours of the balls could be shown very nearly exact. The cue is replaced by a movable cross. yet the game allows a variety of

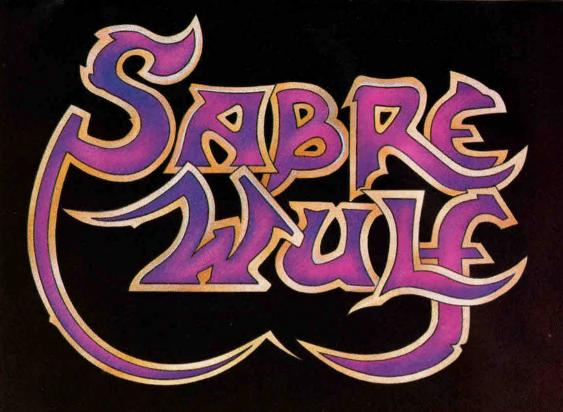

shots, including putting spin on the cue ball and determining the strength of the shot. You

can decide to play solo or with a partner and to have a 15 or 10 ball game

Having been sceptical to begin with, I ended up being fascinated, both by the computer's interpretation of snooker and my own keenness to want to play.

PLASTIE FINE

THE GREEN ASHBY DE LA ZOUCH LEICESTERSHIRE LE6 5JU 

It loads Spectrums four times faster than an ordinary cassette player, uses standard cassette software, and has improved loading reliability. for just £64.95

The new Sprint from Challenge Research will load and save Spectrum programs at four times the speed of conventional cassette players, this even applies to standard program and games cassette software that has been pre-recorded at normal speed. All this plus improved loading reliability is available for just £64.95 inclusive of post, packing, VAT and a 12 month guarantee. The Sprint is dedicated to both the 16K and 48K Spectrum and provides an innovative but inexpensive new concept

Use of the Sprint is simplicity itself:

in cassette tape storage

 Retains the standard Spectrum commands and format.
 Advanced digital circuitry and signal processing improves loading reliability and eliminates volume setting.

 Simply plugs into the Spectrum port – no interface or external power unit is required, it even has it's own expansion slot so that you can still use other peripherals at the same time

 A full 48K program will load or save in 75 seconds rather than five minutes with a conventional cassette recorder.

n electric effect

Alan Went presents a simple program for the 16 or 48K machine that keeps track of gas and electricity bills

T his program was written with two aims in mind, firstly to allow a regular check on the use of electricity and gas within my home, presenting a weekly cost of both items to allow budgeting, and secondly as a demonstration of the way in which a computer can be used to present the same data in various forms.

Gas and electric meter readings are entered for each week, together with any changes in price. The user can then present this information as a Line Graph showing ever week's use, as a Bar Graph showing the use for the current year, or as a week by week list with details of useage cost and % change from previous week or

The program is written as a series of subroutines, so that it can be adapted and altered to suit other uses. The main data is

stored in array B(x,y,z) where: a2x = Week (160 in 48K, 105 in 16K)

x = 1 = Electric

v = 2 = Gas

7 = 1 = Units Used z = 2 = Cost

The last entry position is stored in variable Last, ie, B(LAST, 1, 1) = Units of Electric used in last week entered.

Notes:

Main Menu and Selection. Selection is made by pressing the space key until required option is highlighted and then pressing Enter.

Save Program with Data.

Draw axis and scale accordingly, on entry MAX should hold maximum value to be plotted, this routine will then return 2 variables - SCALE data to be plotted will be multiplied by this figure to ensure plot stays on screen and - APART distance apart points should be plotted to fill x

scale (plotting 1 to LAST).

3000 Plot Line Graph.

4000 Work out average use of Electric and Gas. Print list to screen or printer. Note, in first year shows % change from last week, in subsequent ears % change from previous year.

Input Weekly Meter Readings. Entering a 0 for

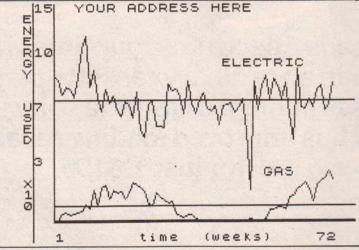

Electric reading will return to main menu. Change Prices. Electric is entered as pence per unit, and gas as pence per Therm and Calorific Value, this is converted to a price per unit. (All figures can be found on the appropriate bill), Figures in Line 9996 for initial settings are the current figures for Eastern Region.

Bar Graph. Shows use and averages for current

year. Re-entry point after break or on loading. Initialise and Clear data. Only used normally on first run.

NB. 16K users must omit all Rems and Line 8015, and change Line 9991 as indicated. To save memory, variable i is used for 1, and t for 2 throughout the

Up to two years data can be entered on the 16K version, and three years on 48K, although this can be increased by altering line 9990 and adding checks for subsequent years, after line 8015.

AN IMPORTANT ADVANCE IN DATA DUPLICATION

'POWER LOAD' CASSETTES FROM DATACLONE

Added security against pirates

Power Load is a software controlled system that makes copying extremely difficult, either by audio or bit copying, or by code breaking. Morcover, conversion routines are altered regularly, permanent deciphering system can be successful.

Very fast loading Loading time on the Commodore C6+ is over three times faster than a normal cassette; Sinclair Spectrum is over twice as fast.

Ultra reliable

Uniquely, Power Load has been designed specifically for high volume production techniques. Power Load cassettes are at least as reliable as standard cassettes, unlike other systems.

Using Power Load, a Commodore
C64 cassette can be reduced from
C30 length to C10 – a substantial
cost saving Available for C64; Spectrum.
(BBC and Electron under development).

The QL Page

Calculating frame

Malcolm Davison concludes his review of the Psion QL packages with a look at Abacus

Of the four QL application packages, the one I enjoy using the most is Abacus. This is a splendid addition to any software library, particularly since it is an integral part of a matching and inter-communicating set of business software.

With an outline knowledge of the use of just eight commands (in addition to the *Print* and *File* commands), the complete novice should be able to create spreadsheets for the majority of applications, without continually referring to the manual.

Psion has added some nice touches — a label feature allows any text entered on the spreadsheet to be used as a column or row identification. Text handling is improved to such an extent that the concept of a spreadsheet being used for just calculation has to be reconsidered. Text sorting, substretch search, justification, comparison, a repeat function to duplicate a character across a number of character positions and data entry make this ideal for tabular information.

The program allows you to key in text that is wider than the column width and will allow the text to run over the number of columns it needs. This is an advantage over Visicalc, which insists that you move the cursor to the next cell before continuing the text entry.

Repetitive layouts

One of the advantages of a spreadsheet over word processors is the ability to alter a layout of text and figures. Areas of text and numbers may be moved, duplicated or deleted, while additional columns or rows of information can easily be added or removed. The Copy command simply moves blocks of cells to a specified location, while Echo continues a theme set in a single cell in a whole row or column. These commands make the creation of repetitive layouts very straightforward. All cell references are automatically updated as the amendments are incorporated - the number of calculations to add a blank column in the middle of a spreadsheet can be large and yet the user is hardly aware of how busy the program can be on the most trivial amendment.

The commands *Unit*, *Justify* and *Grid* give the user a very high degree of control over the final appearance of the spreadsheet. Both text and numbers can be right, centre or left justified simply by specifying the initial letters *R*, *C* or *L*. The only problem is if you right justify or centre headings for neatness you then cannot use them as row or column labels.

The Grid command allows you to add or delete rows or columns and to affect column width over a specified range. The Unit command offers a simple way to offer an useful range of numeric formats.

Accountants will be pleased to have both a percent option, and a pound sign option. For those who deal in thousands of pounds, there is an option to display integers, that is whole numbers with no decimal places. They will also welcome the inclusion of Net Present Value and Internal Rate of Return.

One feature lacking is the facility to execute a series of spreadsheet merges under "program control". Also, corporate planners might want to know what the maximum size of sheet is that the memory

A wide range of functions are offered. You can count, sum, average and find the maximum and the minimum of any range of cells. A number of mathematical and scientific options are catered for, including determining the sum, the square root and the numeric value of a string and turning numeric data to a string. Logarithms, sines, cosines, tangents, the angle in radians from a tangent quotient, converting degrees to radians, finding the value of pi and establishing the sign of a numeric value are also available.

I had fun working out the number of days to Christmas using the *Days* function, which returns the number of days from 1 January 1583, the start of the Gregorian calendar. A month name will be returned using the function *Month*, given a numeric value of one to twelve. When the system clock has been set, you can also establish the time, which can be added to your listing.

For those familiar with programming concepts, the *IF* statement offers a powerful logical analysis option. This further complemented by an option to input data at run-time using *ASKN* or *ASKT*, depending on whether the data is numeric or text. So, a simple turn-key system can be evolved to solve particular problems.

The window feature allows the user to compare the contents of one area of a spreadsheet with another, which might otherwise be off the screen—the two areas can 'pan' along together, or one can remain

in a fixed position. This feature will only allow the cursor to move within one portion of the spreadsheet and is locked out of the other, which is an annoying hindrance.

It was a disappointment to me that you could not protect the cells from inadvertent keyed entry and that there was no facility to remove the grid border from the screen — which by the writer's own efforts can be made redundant through using the text referencing fo cells. The exclusion of the border can then give the casual observer the belief that the application was not even developed on a spreadsheet and just looks like a normal computer data entry screen, and all the neater for the lack of alphabetic and numeric border intrusion.

The Print option allows you to print selected areas of the spreadsheet and also allows you to print out all the formulae. In the latter option, it rationalises all the formulae to a list of munbered alternatives and prints them out in the form:

F26:sum(CI+O)RI-44:CI+OIRI-21)

The column and row references need a little deciphering, and tend to confuse what really is a simple *Sum* command operating

Full help facilities

over a range of cells which might have been printed in the form sum(C8:C10). Since the object of keeping a hard copy of the formulae is to enable you to re-enter them, this presentation only hinders the task. Other spreadsheets on the market show the formulae replacing the data, in situ alongside the text, which is helpful.

Full help facilities on all aspects of the program are available, after a short delay to access the Microdrives. The documentation is adequate, with worked examples, but for a spreadsheet of this power one might expect more detail.

I was a little perturbed when I succeeded in crashing Abacus. I had created a dotted line over a number of columns, using the Echo command, and had issued a command to Rubout when the program bombed out. This should obviously not happen and is indicative that there is at least one bug still in the program. To put this in perspective, it was only one occasion in many hours of successful and trouble-free use. Data entry, on-screen cursor movement and the option to go directly to a specified location work very well, but moving the cursor downward beyond the current cell display causes a considerable delay in re-creating the screen.

The best features of Microsoft's Multiplan, Sorcim's Supercalc and Visicorp's Advanced Visicalc seem to have been recognised and the familiar '/ found in many spreadsheets has happily gone. My overall feeling is that Abacus is an excellent spreadsheet. I just wonder why Psion didn't go all the way to making this the spreadsheet of the decade!

INPUT

The leading home computer software publication has vacancies for

* EXPERIENCED PROGRAMMERS * WRITERS or EDITORS

who have detailed knowledge of one or more of these machines

Sinclair Spectrum, Commodore 64, BBCB or Dragon 32

Candidates must be able to work to tight deadlines under pressure.

Vacancies are for full-time staff or freelance contributors

Please apply in writing, enclosing a CV to Jennie Otway-Norwood

Dragon

The right note

Mark Harrison presents a short program to turn the Dragon into a musical organ

his program produces a tremolo sound of two different notes in a minute fraction of a second. In addition, the note is

maintained for as long as the key is depressed.

I am a keen musician and I recently

bought a musical box, but it played all the wrong chords. To get round this problem on the Dragon, I have added the facility for a minor version of each major chord where necessary

The left arrow switches to the major scale while the right arrow switches to the minor scale. The keys on the second row (1 to @) represent the notes C to G.

DUCKWORTH HOME COMPUTING

THE ADVENTURER'S COMPANION Mike and Peter Gerrard

How do I survive the pale bulbous eyes? How do I get past the troll? Where is the Pirate's Chest? How do I escape the Goblin's Dungeon?

In response to these and hundreds of other questions sent in to magazines by frustrated adventurers, here is a complete guide to playing four of the most popular adventures on home micros today: The Hobbit, Colossal Cave Adventure, Adventureland and Pirate Adventure. The book provides a solution to every problem you will meet, and is designed to enable you to look up the answer without giving away anything of the rest of the adventure. It also includes complete maps for all four adventures. \$3.98

THE ADVENTURER'S NOTEBOOK Mike Gerrard

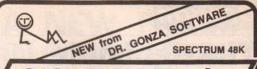

This book is for both beginners and regular adventure players. It explains what an adventure game is, gives a history of adventure games, includes hints on how to play games more successfully and a list of recommended adventures. The main part of the book consists of a series of maps with space for your notes on verbs, nouns, locations, how to pass obstacles – everything the keen adventurer needs in order to keep all those scribbled sheets and notes together in one book. £3.35

Mike and Peter Gerrard are regular contributors to Which Micro? and Personal Computer News. Peter Gerrard is the author of many titles in the Duckworth Home Computing list, including the Exploring Adventures series, and contributes to Popular Computing Weekly, Commodore Horizons and Micro Adventurer.

CASH-PLANNER

THE PROFESSIONAL PLANNER ANYONE CAN USE Designed by a Chartered Accountant

- * Perfectly programmed to produce FAST BUDGETS & CASHFLOWS for the year ahead
- * Many labour saving features including ROLL FORWARD by changing the START-MONTH
- Find out FAST if you can afford the holiday in Spain or payments on a new car
- * CASH-PLANNER's number-entry system and displays are a delight
- * FORGET fussy spreadsheets and complex manuals — machine code sound and colour and superb onscreen instructions guide you along
- * CASH-PLANNER makes the reallife money game irresistible
- A minimum of typing-in, plus really easy updating will make this your favourite planning assistant.

Commodore 64

A contrary view

Robert Morgan shows how to determine the inverse of any 3*3 matrix

This program should be useful for anyone studying A-level maths. The program calculates the inverse of any 3°3 matrix, providing the inverse exists. The program shows how two dimensional arrays can be used to simulate matrices on a

computer. The inverse is calculated using the co-factor, adjoint method.

The program displays all the matrices in a readable way, as they would appear on paper. The program only requires the matrix to be entered at the beginning, in the way it would be written down.

Notes

100—445 Entering and checking matrix. Initialisation 450—600 Calculating & displaying co-factor matrix 610—650 Check matrix has determinant: if so determinant is calculated

700—820 Calculate & display adjoint matrix 830—950 Display inverse of matrix

The program is written in standard Basic and should be easily converted to other micros.

COURSEWINNER

The Punters Computer Program

COURSEWINNER allows you to use the power of your computer to get the edge on the bookmaker.

 COURSEWINNER contains a database full of detailed information on all English and Scottish flat courses.
 The ten leading jockeys and trainers, and effect of the draw is detailed for each course.

This information can be displayed on the screen at any tim

The program analyses these factors combined with the results
of the last three outings, starting price and weight carried.

COURSEWINNER is simple and quick to use, yet very powerful.

Boxed with detailed instruction booklet.

Price £12.50 all inclusive IMMEDIATE DISPATCH (RETURN OF POST)

Available for: SPECTRUM (48K), BBC (B), COMMODORE 64, DRAGON, APPLE II/IIe, ATARI (48K).

POOLSWINNER

The Ultimate Pools Prediction Program

- POOLSWINNER is the most sophisticated pools prediction aid ever produced. It comes complete with its own massive database.
- Can be used for Scoredraws, Draws, Aways and Homes.
 The database contains over 20000 matches (10 years league football). It updates automatically as results come in.
- The precise prediction formula can be set by the user. This
 allows development of your own unique method.
- Package is complete with program, database and detailed instruction booklet.

Price £15.00 all inclusive IMMEDIATE DISPATCH (RETURN OF POST)
Available for SPECTRUM (48K), ZX81 (16K), BBC (B), COMMODORE 64, DRAGON,
APPLE II/IIe, ATARI (48K).

Available from dealers or direct (return of post) from:

ATTENTION! ATTENTION! ALL COMMODORE USERS!

Do you use tapes? Are you sick and tired of waiting for your programs to be Loaded/Saved from/on the tape? Then you need a TORNADO!! Tornado allows you to Save/Load/Verify your Basic/machine code programs faster than a CBM 1541 disk drive does!! Due to popular demand! Tornado now comes with new and more powerful commands plus extra instructions to assist you in making fast versions of your existing machine code/Basic programs. Tornado is available on tape for CBM 64 and 8K+ Vic 20.

Do your Run/Stop and Restore keys often fail? Do you want to come out of those crashes?! Or get into those unbreakable programs?! Then what are you waiting for, get yourself a

BREAKER!! Reset switch and let your computer know who is the boss!! Breaker can be connected to your machine in seconds, no soldering. Included with the Breaker reset switch is extra backup software on tape. Breaker is now available for any CBM 64 or Vic 20.

Available for CBM 64 and the Vic 20 now is the

ROM-FILE which contains a complete disassembly of CBM 64/Vic 20 Rom with comments! As well as a complete description of all 6502/6510 instructions and addressing modes + a complete listing of a machine code monitor and more!

The Key To Success!

Now, with the new Stonechip Spectrum Keyboard, the user has no worry of damaging the Spectrum itself as improved designing enables it to fit the case perfectly.

Assembling the case is simple as it consists of two halves, the top half containing the keyboard, with a small printed circuit board, attached by ribbon cable, plugging into the rear of the Spectrum. The lower half fits precisely around the Spectrum, thus preventing any risk of damaging through movement.

Your Sinclair guarantee need not be invalidated since the Spectrum does not require removal from its case.

THE MAIN FEATURES OF THE KEYBOARD ARE:

- ☐ No modifications to Spectrum necessary as it connects via rear port.
- ☐ Full-length space bar.
- ☐ Built-in 'Echo' amplifier and tape interface.
- ☐ RESET keys remove the need to disconnect power supply lead.
- ☐ Single key 'DELETE'.
- ☐ Single key 'Extended Mode' selection (ie one key replaces the CAPS SHIFT and SYMBOL SHIFT function).
- ☐ Fully compatible with Interface 1 and most peripherals.

Stonechip Electronics, Unit 9, The Brook Industrial Estate, Deadbrook Lane, Aldershot, Hants. Telephone: (0252) 333361

Extender unit available to use with Interface 2 and Kempston Joystick Interface. £2.50.

House Of Usher

3 NEW TURBO 64 GAMES £6.95 EACH

House of Usher

Dare you enter the House of Usher. Behind each locked door of this nine room mansion a different style of arcade action awaits you.

Petch

ETC

The wonder penguin is engaged in a desperate search for diamonds hidden in a maze of ice cubes, harassed and chased by his arch enemies Snowball and Snowbox. His chances of survival are slim. Six levels of skill with two player option.

Ice Hunter

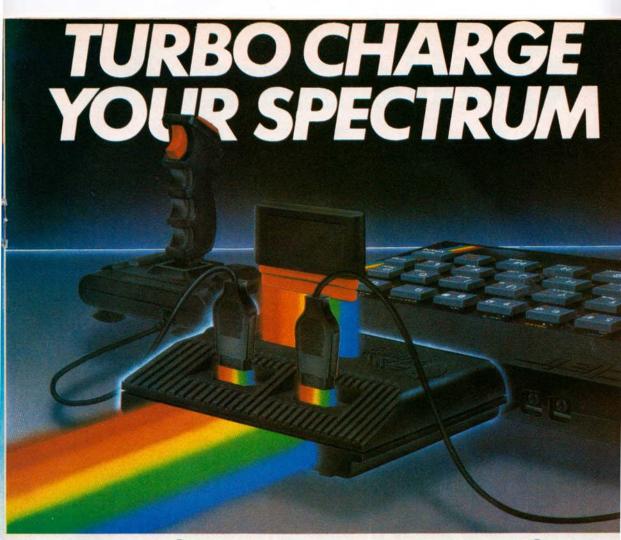

Ice hunter needs special ice blocks to build an igloo unaffected by the arctic sun. He has found the source of the blocks in a multi level cavern, but can he outwit the grim inhabitants—the dragons—sea lions and vicious birds and float the blocks down the river to construct his dream home Six levels and two player option.

Open Forum

Open Forum is for you to publish your programs and ideas. Take care that the listings you send in are all bug-free. Your documentation should start with a general description of the program and what it does and then give some detail of how the program is constructed.

Sound FX

on Spectrum

The Spectrum is not renowned for its good sound facilities. Compared with the four

voices of the BBC computer the one voice sound seems rather crude. However, some very spectacular sound effects can be programmed in machine code. The listing below consists of several sound programs (and one graphics program) all of which

can be relocated anywhere in Ram by just changing the Usr address. Each program is held in a separate data statement (lines 100-160).

The programs themselves repeatedly calls the Beep Rom routine to produce the sound effects. It is possible to change the initial value of the HL and DE register to change the initial pitch and duration of the

FAST LOADING ON THE COMMODORE 64

HYPERSAV

IS THE QUICKEST AND MOST VERSATILE FAST LOADER YOU CAN BUY - BAR NONE!

Once HYPERSAVED, your cassette programs will independently reload

over ten times the normal rate. No more tedious waiting!! A 40K program will load in under 80 seconds, compared with 131/2 minutes at standard rate! This is faster than the Commodore Disk Drive! Look at these features

- * EIGHT additional Basic commands
- * FULLY independent loading
- AUTOSTART facility for both Basic and machine code programs * SPECIAL features - Hypersave works with all program types

Hypersave is supplied with full instructions to easily convert your exist-

ing programs to load at HYPERSPEED. HYPERSAVE leaves you in full control — it resides at the very top of memory, and its routines may be called at any time. Powerful additional

aids are provided:

- * HYPERSAVE and verify up to 48K continuous ram even hidden
- * HYPERSAVE and verify the Basic program currently in memory * Save any block of RAM (including hidden RAM) at standard rate

PLUS!! FREE with every order. A guide to cassette saving and loading on the Commodore 64, containing much previously unpublished SECRET! Information.

Hpersave has features which no competitor can boast. Our many satisfied customers have demonstrated that this is an essential utility for all Commodore 64 owners.

Details of a special offer with each order. Inclusive price, Hypersave plus Secrets! — Cassette £7.50 icn. P&P

Fast Despatch guaranteed. SAE full details to:

21-27 JUNE 1984 37

Solve this puzzle and you stand to win an Epson HX-20 personal computer.

It's simple-if you know how.

The trick is to produce a computer game or puzzle that's challenging, stimulating and original enough to convince a panel of well-known computing personalities that you deserve a little something extra.

Extra, in fact, to the reward of seeing your game published in *The Times Book of Computer Puzzles & Games for the Commodore 64*, or *The Times Book of Computer Puzzles & Games for the Sinclair Spectrum.*

We're offering two First Prizes of an Epson HX-20 portable computer, five Second Prizes of a Maplin modem, and all other authors whose programs are included will earn a £10 W.H. Smith gift voucher.

This is more than a chance to win a handsome prize—it's also an opportunity to make a name for yourself in games software. These two prestigious books will publish the authors' names alongside their programs.

You may already have a game up your sleeve. Or this may be the stimulus to get cracking on that masterpiece you always knew you could write. Either way, we must receive your submission by July 30th.

What you should send

Send us the program listing, written in BASIC (not machine code), preferably on a cassette.

Include a short synopsis of the object of the game or puzzle, a brief description of what should happen when the program is run and an indication of the level of difficulty.

All entries will be acknowledged, and must be received by July 30th. Those entries included in the books will carry the names of the authors and remain their copyright.

Please send your entry to: The Times Book of Computer Puzzles & Games c/o Newtech Publishing Limited 8 Forge Court, Reading Road, Yateley Camberley, Surrey GU17 7RX.

These two books will be published by Times Books and Sidgwick & Jackson on 31st October 1984.

Microradio

Portable station

Microradio has recently devoted a great deal of time to software and, to keep the balance, this week and next week will deal with hardware. A very special and highly desirable piece of hardware. The Tandy TRS-80 Model 100 portable computer.

Mr V Moore of the Tandy Corporation, Tameway Tower, Bridge Street, Walsall, West Midlands, kindly loaned Microradio their new Model 100 in order to explore the possibilities of using the machine in Radio Computing. This is obviously an aspect that is close to their heart, because Tandy are also a supplier of radio equipment and aerials, etc.

Although the Model 100 is a portable computer, its facilities are not limited. In fact, there are very few home computers around that can match its power. But, a machine like this comes into its own when it's out and about. One of the things about operating a portable station on top of a mountain, either during a contest or just for the sheer fun of operating, is the tedium involved in keeping a note of the log. I was quite prepared to write a program for the Model 100 to do this for me. No need. In the software that comes in Rom is a program called Address. This is a database where names and callsigns can be entered and referred to immediately.

The next most useful thing

to have in a contest is a 'duper' program. That is a program into which I can enter the callsign of a station to see if he has been contacted before, ie, a duplicate. As the Model 100 has a very good Microsoft Basic in Rom, this was no real problem. Once the program has been written, it remains resident in the computer. So does the information entered. The machine has a cassette interface, but I never needed to use it once. The machine on loan was a 32K.

Another facility available is the inbuilt word processor called *Text*. I am using it now to write the column and, to be perfectly honest, I don't know how I'll get on without it. Have to start saving the £645 that the Model 100 costs.

When one is out on a mountain, there is always a chance of dropping the thing. I must admit that I didn't test this aspect of the Model 100 for ob-

vious reasons, but I'm assured that it is a very rugged machine.

So far, I've covered the data processing aspect of computing for radio users as far as the Model 100 is concerned. Next week, I'll cover the interfacing and special unit that can be attached to it so that direct radio communications can be made.

At this point I must mention an urgent plea from Dave West G4SHQ of 129 Old Stoke Road, Aylesbury, Bucks, HP21 8DG, who would very much like to hear from Memotech 500/512 users interested in radio.

Test of time

When you pay for a program how do you decide what is worth buying? Do you go by the reviews, the packaging, the reputation to the company, the recommendation of friends or because you have seen the game in action somewhere? The problem with the first three at least is that the quality of computer software is progressing by leaps and bounds. How can we predict the life span of a game or be sure that it's really worth buying several months after its initial launch? This is especially true of the long staying programs, such as the apparently evergreen Football Manager, which sometimes reappear on different computers months or even years after their original release. Occasionally therefore, I intend to look back at some of the great games that have been released to see how they have stood the test of time.

For the next couple of issues I'm going to concentrate on the range of cassettes offered by Ocean. Although rarely given the critical acclaim of the likes of Ultimate or Matthew Smith, Ocean have had an outstanding run of success with one or two of their releases appearing in every software chart for many mouths. Although they have a collection of lesser known games hidden in their past, doubtless scrappy versions of Frogger and Centipede amongst them, Ocean first made a real impact on the software scene with their release of the more ambitious Kong.

Donkey Kong was possibly the first reasonably complex multi-screen arcade game to be transferred to the Spectrum. As is the way with unoriginal games, many software companies issued versions at the same time but in the charts Ocean won hands down. Kong remained in the Spectrum top ten for many months. The success was based on reasonably slick pixel scrolling graphics (the exception rather than the rule at the time) and a faithful reproduction of most of the elements of the original. This was a formula that Ocean have improved and built upon since.

However, looked at in retrospect Kong is a rather dated program, I don't think Ocean themselves would deny that a definitive version for the Spectrum is yet to appear, indeed if Ocean were to do it again they would spend a lot more time on the graphics if nothing else. The biggest disappointment is the small stick man size of Mario and I am waiting with interest for the Atarisoft version to see what they can do. Still with a likely cost of £15 I don't think Ocean's sales department will lose much sleep.

The next release from Ocean was Mr Wimpey, based on Burgertime, and fully reviewed in an earlier issue of PCW. This program gave the first clue of the sheer quality of the copies that Ocean were to produce and remains one of my favourite games. Realising the goldmine of this formula, Mr Wimpey was soon released for other micros namely the CBM 64 and BBC. As is to be expected the graphics in the Commodore version are slightly better than in the Spectrum as is the sound, although unfortunately the opportunity for adding a full musical soundtrack has not been taken up.

By the time Hunchback was released, the customers were waiting with bated breath and it leaped into the number one spot. In many ways this is the epitome of Ocean's art - as perfect a copy as you could ever hope to achieve on the Spectrum. The Commodore version is better still, due to the inclusion of the wonderful opening screens where Quasimodo hops along the bottom of the wall - something that would be difficult to achieve on the Sinclair machine because of the colour resolution pro-

Next week I will continue this look at the more recent games released by Ocean including some original games.

Tony Bridge's Adventure Corner

Phases of the moon

News this week of two long-awaited adventures. The first is from Carnell Software. At last, Wrath of Magra has begun to be shipped to the first of 10,000 advance customers.

The price of £12.95 seems very fair, including as it does, three large programs in a stout box, with an instruction booklet, and on top of all this, the 158-page Book of Shadows. In writing this, Stuart Galloway and Roy Carnell have expanded on the Legend of the Third Continent which was started in Volcanic Dungeon and continued in The Black Crystal.

The book makes exciting and involved reading, with stunning illustrations by Emmanuel, and is required reading if you wish to play the adventure to full effect. The later part of the book includes ingredients for spells which you will have to make up during your struggles against the evil forces. There is also a Grimoire of Fantastic Monsters that you will meet in the mines beneath the Black Mountains, as well as a glossary of Enchanted Treasures.

Wrath of Magra is in three episodes. The first part is taken up with your search for equipment, treasures and spell ingredients. The customary adventure format is followed, with the location being shown in graphics, and text scrolling up beneath the picture. On the right of the screen is a table of important information which remains on-screen during all three episodes. It includes details of your strength, both physical and spiritual, the number of wounds you have sustained in combat, and the time, which is an important variable in Magra.

Passing time is also represented by a display of the phases of the moon — you'll need to keep an eye on these all the time you're playing. The pictures at each location also reflect the time of day.

After the first part of the adventure, the player can move on to the mines beneath the Black Mountains, where spells can be cast and one or ten monsters fought, while building up faith for the third and hardest

part

The latter episodes will be familiar to devotees of *Volcanic Dungeon*, and as in that program, maps are supplied to help the player around the caves and chasms of Magra's Kingdom.

The package is impressive, and the game is a good one which will keep the player occupied for many weeks. Graphics are very quickly drawn, the routines being written in compact machine-code, though the text processing is rather slow. The wrong part of this has been speeded-up—that is, key "auto-repeat" is set to ultra-fast, and I found myself having to backspace far

However, Wrath of Magra can be heartily recommended; and there is even a competition for four Enterprise computers with colour TV! — and a pile of colour TVs waiting for the runner-ups. Not only this, but the player gets several examples of the Carnell Spelling Errors!

too often to delete mis-typed letters.

The other important adventure release this month, and one which should last for several more months, is *Lords Of Midnight*, from Beyond Software. This package, too, is enhanced by excellent documentation.

red a technique called "Landscaping", his term for the graphics used. As your character walks around the land of Midnight, the landscape changes constantly, just as if you were actually walking through the countryside — to achieve this, no less than 32,000 different panoramic views have been created. You, the player, may choose to control any one, or all, of four characters.

The game is a graphic adventure, and is a little similar to Valhalla. There are no puzzles to be pondered over — only four main commands have to be mastered: Look will display the scene as it looks to the character you are controlling, and movement is accomplished by the usual N, S, etc. Move will keep the players going in the present direction. While the graphics are on-screen, there is only a small space available for information to the player, and the Think command clears the screen to allow more detailed data about the player's character to be shown.

Choose, the final command, presents the player with a list of special options not available with the other comands. These options will reflect the basic personality of the character being controlled; thus, a

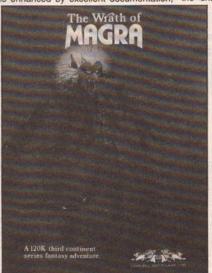

cowardly character is unlikely to be able to perform brave deeds, although they may occasionally be offered.

The mechanics of the game are rational — that is, movement through a forest will be slower than across a plain. Castles may offer shelter or harbour enemies and mountains will prove exhausting to cross. There are many other such features dotted about the landscape, and each will possess its own unique properties. Although there are several items to be picked up, each of which may be of help in the Quest, the basic premise of the adventure is combat with the enemy armies.

The Grand Elf has only seen a "super-demo" so far, which doesn't include the whole game, but the graphics are superb, with heraldic devices being shown onscreen for each character, and a beautiful Olde-English script. It's

obviously going to be an outstanding success. The Wrath of Magra and Lords of Midnight, with their exciting packaging and epic scenarious, are going to make this summer a very busy one!

This series of articles is designed for novice and experienced Adventurers alike. Each week Tony Bridge will be looking at different Adventures and advising you on some of the problems and pitfalls you can expect to encounter. So, if you have an Adventure you want reviewed, or if you are stuck in an Adventure and cannot progress any further write to: Tony Bridge, Adventure Corner, Popular Computing Weekly, 12-13. Little Newport Street, London WC2R 3LD.

as in all Beyond programs, which takes the form of a 30-page booklet. This is in two parts — the instructions and 19 pages from *The Book Of Midnight*. As with *Magra*, this sets the scene for the game.

The novel is part of a "novel" prizel A copy may be taken on a printer of each screen along the way to the defeat of Doomdark, and the first player to achieve this feat may have his screen copies incorporated into the first-ever computer-generated novel.

Midnight is written by Mike Singleton, a well-known figure on the British Play-by-Mail scene, and author of several games for Postern. In this adventure, he has pionee-

AT LAST!

A RANGE OF QUALITY ARCADE GAMES FOR THE SHARP MZ700

HUNCHY. A first for the Sharp! £5.95
Rescue Esmerelda from the castle via 8 screens of action-packed fun.

TWIN PACKS — Two fast m/c games for the price of one.

PACK I: U.F.O./NOUGHTS & CROSSES U.F.O.— Prevent the invasion of earth by alien beings; the game features a high-score table and becomes faster as your score increases.

NOUGHTS & CROSSES — Standard game for two people but very fast.

PACK II: STARGATE/AIR ATTACK

STARGATE — Defend the Stargate and prevent the

enemy entering your galaxy.

AIR ATTACK — With a World War I biplane, blast your way through five levels to the 21st century.

PACK III: MAZEMAN/SAUCER SIMON £6.50
MAZEMAN — Faster than Pacman and with many nasty
modifications. Beat the ghost to the fruit and open the
second maze.

SAUCER SIMON — Communicate with an alien craft by copying a series of colour tones. Up to 40 sequential tones and seven levels of difficulty.

Peek & Poke

AMSTRAD MONITOR

Paul Smith of Cheam, Surrey writes:

My problems may seem a little strange since they concern the new Amstrad computer which has yet to be launched, but I hope from the information available about it you can help me.

1) What size is its monitor? 2) May other computers work with its monitor?

3) Can the Amstrad work with

conventional T.V's

4) What is Amstrad's address? I hope that you found the review of the new Amstrad computers in the April 25th issue useful. Although this machine is not yet launched it does seem destined for a good future in the UK market.

It has a 14" monitor which is an integral part of the machine. As far as I know there are no plans to sell the Amstrad computers without the monitors. It is therefore unlikely that you would want to interface it to a standard TV set, although you could if you needed to. For further information on this range of computers you should write to: Amstrad Consumer Electronics, Brentwood House, 169 Kings Road, Brentwood Essex CM1 4EF.

COLOURED CIRCLES

Kevin Whitley, of Pendine Park, Gwersyllt writes:

About three months ago I bought a Sinclair Spectrum 48K computer. Can you tell me how to colour in

circles quickly without using User-defined graphics?

The lack of a Fill command on the Spectrum is one of the most annoving features of the machine. The most common method of achieving a solid circle in Basic is to either draw a number of circles (raising the radius by 1 each time until the correct size is reached), or to Poke the appropriate bytes in the attributes file with the required Paper colour.

Games which employ static pictures, such as the Hobbit, use machine code routines to achieve the rapid filling that you have no doubt seen.

My advice to you would be to look for a book containing a machine code Fill routine such as Supercharge Your Spectrum published by Melbourne House

DIFFERENT **SCREENS**

Ian Deacon of Thurmaston. Leicester writes:

I am right in the middle of writing a program which features 20 different screens, each of which needs 4 UDG's to build up that particular brand of alien, this is a total of 80 in all. Then I need a further 45 UDG's for explosions, backgrounds etc. This is a total of 125 UDG's.

My problem is that the Spectrum only supports 21. I have heard that it is possible to have 55 different sets of UDG's in memory at once, by Pokeing them into different areas of memory, then by Pokeing to that address you can switch between any of your sets, thus allowing up to 1155 UDG's in memory at any one time. As I only need 125 this should present no problems, but how do I go about Pokeing in these characters and then switching between them? Finally, how much memory would 15 UDG's roughly take up?

Let me answer your questions in reverse order. Each UDG takes up 8 bytes of memory, one byte for each row of pixels defined. Therefore, 15 UDG's would take up 120 bytes of memory.

The method of setting up an User Defined Graphic on the Spectrum is well known, what is less well known is the method of extending the UDG facility in the way you require.

As you require a total of 125 UDG's, you will need to reserve 1000 bytes of memory to store them in. You do this by using Clear, as you would if you were using a machine code subroutine. To set up your UDG's you follow the same procedure as normal, except that the bounds of the For ... Next loop refer to the memory locations in which you are going to store the graphic characters, ie, if you are going to store your UDG's in locations 63000 to 63999. Then the code might look like this

For i = 6300 TO 6399; Read a: Pore i.a: Next i

This assumes that you have your UDG's defined in Data statements in the normal way. Then when you want to use one of your graphic sets you would like Poke 23675 and 23676 with the start address of the particular set you wanted. eg, set 1 would be at address 63000, set 2 at address 63168 (if there were 21 of them), and so on. In your case you will need to organise your graphic sets carefully as you will still only be able to access 21 UDG's at any one time. Best of luck with the game.

OUT OF SERVICE

J Van Hecke of Eeklo, Belgium writes:

I have recently purchased a Simon's Basic package for my CBM64. I am quite pleased with it, but I discovered that some programs, particularly those containing machine code, do not work when the package is plugged in. I wonder whether there is any way of taking the package out of service without having to remove it every time, since frequent removal and refitting won't do the cartridge contacts any good.

The only answer I can give is no. It seems a common feature of cartridge Rom software, interfaces, and sideways Roms that there are almost always problems associated with running machine code programs. This is normally because the programmer has used a piece of memory. reserved for the interface, or superseded by the extra Rom. I am afraid that you will have to keep on removing your cartridge when you want to play these games.

PRICE REDUCTION

Ian Davies of Sutton Coldfield writes:

I have owned a Dragon 32 of for some time, and am now intending to buy either an Electron or a BBC 'B'.

I have heard that these machines are to be reduced in price, to £130 and £250 respecitvely. Do you know if this is true? Secondly, will I be able to use the same printer on the Acorn machine that I do now with my Dragon?

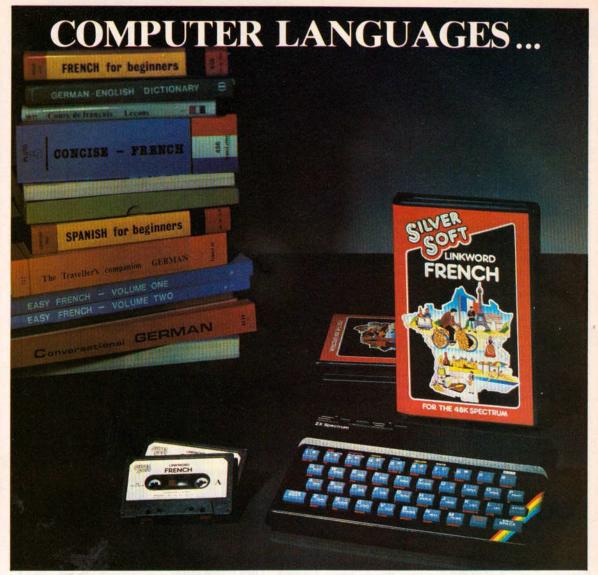

I haven't heard of the price Adrop you mention. I don't think such a cut is likely to occur soon . . . but that probably means it will happen the day after this is published.

The amount of advertising that Acorn are giving to the Electron does not indicate an immediate price drop is in

prospect.

You will be able to connect a printer to the Model B. Tandy printers are compatible with both the Dragon and the BBC 'B'. The Electron itself has no printer interface, but Acorn has announced its Plus-1 addon unit for the Electron - it includes a Centronics interface. Acorn says it is available now: price £59.90.

is there anything about your computer you don't understand, and which everyone else seems to take for granted? Whatever your problem Peek it to Phil Rogers and every week he will Poke back as many answers as he can. The address is Peek & Poke, PCW, 12-13 Little Newport Street, London WC2R 3LD.

Imagine a ferret in a hardware shop

Not something you'd forget. That's how the Linkword System helps you remember that the Spanish for "hardware shop" is "ferreteria".

You'll remember that the French for "fish" is "poisson" by imagining poisoning your pet fish.

Using Linkword you'll learn over 350 words in only 10 hours, that's a quarter of the time it would normally take. Enough for holidays, business trips abroad or help with homework. Start from scratch, and it's amazing how quickly you learn a basic grammar and vocabulary.

Silversoft Ltd, London House, 271/273 King St, London W6 9LZ

Linkword courses in French, German and Spanish are now available from Silversoft for the 48K Spectrum home computer, and there are more to come soon.

They're the biggest thing in languages since the Tower of Babel.

New Releases

CUP FINAL

You may have seen Commodore's International Soccer cartridge in which you get to play a fairly convincing game of football. The program 'lit' the man who was currently under joystick control.

The same thing has been achieved on the Spectrum by

Artic Software, although the graphics are obviously not the equal of the Commodore game.

World Cup Football allows you to pick your team (from a choice of 40 international sides) and play the world cup final — either against the machine or another player.

There are some nice touches—continuous football type
music and cheering fans
amongst other things. You can
also play out the rounds of the
cup and lead up to the final
match; the cup itself is presented at the end, of course.
Within the limitations of Spectrum graphics, an excellent
game.

VERB, NOUN

Mosaic's Bookware is a great idea — mixing books and adventure games so that the latteris enhanced by the former, both by clues contained in the book and by a greater sense of provided by the extra detail it

can hold, has to be a good idea.

But I don't think Mosaic have really cracked it yet — the adventures are simply not good enough. The latest release illustrates this well; The Width of the World is a neat package consisting of the book of that name and an adventure that is a kind of 'sequel' to the story.

The adventure game is described as 'dramatic' and 'illustrated' — in fact, it is simple verb noun entry with very simple graphics apparently drawn in Basic – people familar with Hobbit, Valhalla or even Knight's Quest will find it pretty silly.

Maybe it's intended for young kids and is deliberately simple, if so I can only suggest that the kids are unlikely to thank Mosaic. It appears that

nearly all the program is written in Basic as I discovered by judiciously pressing a few keys.

Program The Width of the World

Price £9.95 Micro Spectrum Supplier Mosaic P.

Mosaic Publishing 187 Upper Street London N1 1RQ

REPRESSIVE

Could this be the beginning of a new age of puritanism, can guilt and misery once more be rearing their repressive heads? God knows. But we're getting lots of programs featuring hell and demons these days. Most recently a program called Mr Mephisto from a new company called Euro-Byte.

Plotwise, it's a case of Dante eat your heart out — you are trying to ascend to heaven and as we all know this is fraught with difficulties. These take the form of hoards of devils and other denizons of the underworld that run about pushing you off the escalators, that are your passport to heaven, into the fires of hell — I thought it was supposed to be your moral worth that determined that

The way out of each level is a ring or other object you must reach at the top of the screen, grasp it and a doorway may open. There are several screens of purgatorial action and a gothic sound track. Not only good fun but undoubtedly full of moral lessons for us all.

Mr Mephisto £6.95

HIGH ENERGY ORCHIDS

Ultimate has now released Sabre Wulf, its follow up to Atic Atak — a follow up for more than historical reasons — the game continues in the same vein of mixing arcade and adventures.

However, there is one significant difference between Sabre Wulf and all the games that have preceded it from Ultimate — it comes in a special box and costs £9.95. Being an Ultimate game ensures that it's going to be slick and graphically superb, but is it worth the extra monev?

Although it comes with a fold out glossy booklet, Sabre Wulf features the usual veil of silence over what the hell you're supposed to do in the game beyond the general information that you should collect four pieces of an amulet and find the exit.

A few clues may be deduced from the lengthy 'features' list indicating all the wonderful things the game contains since some of these are 'blue super high energy orchids' and 'white cure orchids' you can guess the orchids are not just there for decoration.

The layout of the game is a leafy, tropical maze over dozens of screens. You move an explorer through the maze, picking up all kinds of useful objects and fighting off/running away from animals which bounce, slither, creep and, in the case of Hippos and Rhinos, charge at you without the slightest provocation. The graphics both for the maze and the animals are excellent.

After playing the game all weekend, I came to the conclusion that the orchids, which I had been avoiding, are actually helpful to get through bits of maze very quickly without being beset by beasts – I also discovered there is essentially only one route to get anywhere in the maze. My Maximum score was 16%.

Sabre Wulf is extremely impressive, possibly even Ultimate's most impressive game. I don't think that it's £4,45 better (the difference between the price of this and of previous games), but then Ultimate could always argue that by the industry standards those games were cheap anyway. Curiously enough, for people into trivial details, it has the worst loader screen of any Ultimate gamelet that one slip through the net, eh lads? Oh yes - see how long it takes you to find out how to get extra lives. See you in the Underworld.

QUICK RESPONSE

The idea of Spanish software may sound pretty strange but it could be that if you're a Spectrum owner you'll find yourself buying some pretty soon. A Spanish company called Ventematic is planning to distri-

bute games for the Spectrum (and other machines) in this country.

For some doubtless highly jingoistic reason this idea did not, at first, fill me with much enthusiasm. In fact, the games are very good, featuring all the current trappings of large sprites, pixel movement, etc.

Escalador Loco – which I suppose will get its name changed to Mad Climber or something over here – has graphics of almost Ultimate quality and the quick response game to end all quick response games.

You control a man who is climbing up the side of a building — large graphics, the man is about a third of a screen tall. You move him left arm, right arm, feet up, left, right, trying to get him to the top of the building. This is difficult because various angry bearded men (actually they look like Tony Bridge) appear at the windows and drop flower pots on you; additionally, and possibly even more painfully, window shutters occasionally drop

on your hands. The end result of this is you plummet back to the begining again. It is horribly addictive.

Program Price Micro Supplier Escalador Loco £5.95 Spectrum Various suppliers

BUDGET

Account Book is a personal finance program for the Oric or Atmos machines. It enables you to keep, update and analyse personal financial records — up to 33 accounts can be used at any one time.

Although such programs tend to be much of a muchness, this one does have a few extra features — a budget facility enables you to compare your spending against a planned model (a depressing experience) both as a total and as a percentage.

Account Book £12.50 Oric Softbacks PO Box 257 Watford WD1 3Q

PLASMA BOLTS

In support of those people who still love their ZX81 and won't trade it in for another machine no matter what, here is good news in the form of another independent supplier still issuing software for it.

Unicorn Software has just released Climber — an arcade game requiring 16K. Basically, what you do is climb, avoiding guardian droids and plasma bolts whilst collecting power batons.

The game has some nice touches like a key redefine that lets you save your new choice of keys and an option to radically change the speed and difficulty of the game.

LINE GRAPHICS

Another version of the classic Battlezone game for the Spectrum. This time from Realtime Software whose 3D Tank Duel is one of the best variants I've seen.

The simple idea of the game is to move your tank around a bleak landscape shooting enemy tanks and occasional UFOs; obviously the enemy tanks are going to shoot back.

What makes the game special is the way all objects are drawn in 3D using line graphics — this gives a real sense of perspective and depth — you can sneak up behind an enemy tank or hide behind an object. Mainly you blast away, but as you get more skillful so tactics play a more and more important part in the game. If you want a version of Battlezone for the Spectrum, at the moment this looks like the one to buy.

Tank Duel £5.50 Spectrum Realtime Software Prospect House 32 Sovereign Street Leeds LS1 4BJ

COLOURCODE

Finsbury Computers are a new company (to me anyway) doing software for a range of computers. Astrocode for the Spectrum is, in fact, a disguised version of Mastermind.

The disguise takes the form of a little scenario which explains that what you are really doing is seeking the four colour

MUSIC BUFFS

Pop Quiz is a computer game based on Stuart Henry's well known program on Radio Luxembourg in which you have

to answer pop questions and try to guess the notes of a mystery tune.

Obviously, there are no great programming feats in this one — the only real effort involved must have been compiling (and typing in) the hundreds of questions available. Still, it is good fun for pop music buffs and a section of the profits go to fight Multiple Sclerosis.

PSEUDO ARRAYS

DISC FILING

Graphic Advenutres for the Spectrum 48K is a book consisting almost entirely of listings. More than that, since this is graphic adventures we're talking about it's a book consisting almost entirely of vast

That being said, I think these look like programs that might produce games which are worth playing, many of them have machine code subroutines to speed up the response times and the length suggests that they won't be too easy to solve.

In all there are seven complete programs with names like Nightmare Park and 3D Maze; supposedly each one illustrates a different programming technique like pseudo arrays or memory saving anyway, if you like adventure listings this will do fine.

Book

Getting More from your BBC and Electron Computers is one of those books you read right after the 'simple basic on' but before the 'introduction to machine code on'. It's a nebulous area for books and they can vary widely between the diabolical and the very good. Fortunately, this belongs in the latter camp.

The book is packed with detailed information about everything from multiscreen graphics to disc filing and databases. The book is also liberally scattered with useful programs and exercises. Book Getting More from

A fab review

Having written a few books, and having had some of them reviewed, I am interested in how reviews are carried out.

As a reader of book reviews, I have noticed an increasing tendency to perform "front and back" (fab) reviews. Fab reviews are those reviews which are obviously written on the basis of the (so called) reviewer reading the front pages, the back pages, and possibly the odd bit

Exactly the same procedure may be followed with software — one quick look at the title screen and on to the next.

The pressures on reviewers to perform fab reviews are great. In many circumstances it seems that the quality of the review does not count, for what is really important is the need to fill space in the magazine, and/or to produce the review in as little time as possible.

n general, there are two main styles of rethe first type merely gives the reader an addition of what the author and publisher is in the book, while the second type are to give a considered evaluation of the of a book. We can term the first style the review and the second style as the

Popular Computing Weekly, for example, the New Releases and book reviews are unattributed (that is, the reader does not know who work the review). Such use of anonymous reviews is perfectly acceptable for outline reviews, but once an outline review becomes a critical review the reviewer should be named.

fill read a critical review of a piece of software or a book, and I do not know who wrote the review, how can I ever build up a picture of the

reviewer. One is always trying to find a reviewer with whom one consistently agrees.

with whom one consistently agrees.

Having had a go at *Popular Computing Weekly* for its unattributed reviews, it is only fair to examine other computer magazines which fair no better.

Fab reviews are usually very light on the actual content of any book being reviewed and large on irrelevant comment, with the addition of the odd quote to add a touch of respectability.

With a fab review, the first thing to remember as a reviewer is that you talk in generalities as much as possible, with particular emphasis on life, the universe, and everything. Taking a random sample:

Review 1: "However, perplexed by the quantity of ****** books winging into the office . . ."

Review 2: "Hardly a week goes by without another great book from "" whacking onto the doormat "

A useful fab ploy is to accuse the book of being a "formula" book, which is an interesting accusation seeing that the whole concept of a fab review involves writing to a formula.

Review 3: "...we compared the chapter headings with another in the series ..."

Review 3: "[this book] follows """'s traditional format by having plenty of listings for you to hack in ..."

And it's not just books. Magazine software reviews are often just as shallow.

Without wishing to be unkind, anybody could have written that review in five to ten minutes, not having seen the book before. Look at some reviews for yourself and work out to what extent they are fab.

The point that I am trying to make from all this is that any reviewer is being asked to put an opinion into print where others will invest it with some significance.

And as such the reviewer has a responsibility to both the readers and the company whose product is under scrutiny to take the time to do the thing justice.

People are obviously going to be influenced by any comments — favourable or not. Otherwise what is the point of the whole exercise?

An uncaring review can be very damaging to the reputation of a company whose product has been too lightly considered.

Boris Allan

Puzzle No 112

Arlene, Darlene and Marlene were this week's contestants in the general knowledge quiz show. Each contestant was asked 20 questions and at the end of the programme the scoreboard showed the amount that each had won.

| Shorted the difficult that eden has morn | |
|--|------|
| Arlene | £466 |
| Darlene | £481 |
| | £202 |

At the beginning of the program they were each given a balance of £100. Thereafter every easy question that they answered correctly won them £24, and every difficult question won £30. But, if they got an answer wrong, £15 was deducted.

From the final scores can you say how many of each type of question were answered correctly, and how many wrong answers each competitor gave?

Solution to Puzzle 107

The problem involves finding hexadecimal numbers that consist of the same digits — though differently arranged — as their decimal equivalents. As a fair proportion of 'hex' numbers contain letters, which need not be considered, the program takes those hex numbers which consist only of digits and converts them to their decimal counterparts. The results are then compared to determine if the same digits are present.

10 LET H = 10 20 LET HS = STRS H 30 LET D = 0 40 LET POWER = LEN (HS) -1 50 FOR F = 1 TO LEN (HS) 60 LET D = D + ((VAL(MIDS(HS,F.1)) + 16 POWER) 70 POWER = POWER -1 80 NEXT F 90 LET DS = STRS (D) 100 IF LEN (HS) <> LEN (DS) GOTO 220 110 LET PD = 1 120 LET SD = 0 130 LET PH = 1 140 LET SH = 0 150 FOR Q = 1 TO LEN (DS) T60 LET PD = PD * VAL (MIDS(DS,Q.1)) 170 LET SD = SD + VAL (MIDS(DS,Q.1)) 180 LET PH = PH * VAL (MIDS(HS,Q.1)) 190 LET SH = SH + VAL (MIDS(HS,Q.1)) 200 NEXT Q 210 IF PD = PH AND SD = SH THEN PRINT DS,HS 220 LET H = H + 1 230 GOTO 20

This reveals — apart from the single digit numbers 1 to 9 — two other possible sets of figures: 371 decimal which is equivalent to 173 hex and 913 decimal which is equivalent to 391 hex.

Winner of Puzzle No 107

The winner is DJA Carr, Setterfield Road, Margate, Kent, who receives £10.

Rules

If the puzzle can be sensibly solved using a computer then the winner will have included a listing of the program used to find the correct answer. The closing date for entries to Puzzle No 112 is July 6.

The Hackers
