Atari pressure may force Sinclair into PCW launch

BOTH a new Sinclair 128K Spectrum model and Atari's 260ST now look likely to be shown for the first time in the UK at this year's *Personal Computer World* show in September.

Sinclair's 128K micro (see *Popular Computing Weekly*,

May 16) is thought to be priced between £175 and £200 and be based on technology developed in conjunction with Timex US for its TS2000 micro, launched in the US over two years ago.

Atari's 16-bit 260ST model features a built-in disc drive,

is expected to cost around £360 and should be in the shops in October.

The Spectrum 128K will be software compatible with the existing Spectrum and Spectrum Plus models, yet offer a number of additional features.

It has 128K Ram, bank-switched in two blocks, with a facility for further expansion, and is thought to have built-in

three-channel sound using the AY38912 sound chip, three additional display modes including a virtual screen facility, high-resolution display and 64-column text mode, built-in joystick ports and the ability to control an 80-column printer.

The Spectrum 128K is expected to be in the shops in late-September or early October. **cont on page 4 ▶**

Support grows for new 16-bit micros

BOTH COMMODORE and Atari are working hard to ensure that their new 68000-based machines, the Amiga and ST, do not suffer from lack of software at launch.

Commodore-Amiga has announced that around 50 titles

for the Amiga should be available by the end of the year in the US. Some of these will be marketed under the Commodore-Amiga name, but many are in development from third-party software companies. As many of these titles as

possible will be brought to this country for Amiga's UK launch at the beginning of 1986.

Atari, meanwhile, has delivered over 100 development 820STs to software houses, and hopes that up to 80 companies will exhibit ST software at September's **cont. page 4 ▶**

◀ New Amiga

SORCERY PLUS, the enhanced version of Virgin's acclaimed Amstrad title *Sorcery*, will soon be available on disc under the Amsoft Gold label, priced at £13.95.

Sorcery Plus comprises the original *Sorcery*, with extra screens incorporated, and 35 further screens making up a second part to the game.

In the new part, you find yourself in the necromancer's

domain, and must kill him with kindness - surrounding him with hearts found in the screens.

Sorcery Plus is so far the only non US Gold title on Amsoft Gold - the other games scheduled being *Beachhead*, *Raid over Moscow*, *Bruce Lee*, *Zaxxon*, *Buck Rogers*, *Congo Bongo*, *Tapper*, *Spy Hunter* and *Up and Down*.

EDITORIAL

Who, eighteen months ago, would have put money on Amstrad to make a go of its entry into the home micro market?

Lynx and Dragon had gone and Oric was having problems. Sinclair had never looked stronger and Commodore was claiming most of what was left.

Having created the whole micro circus single-handedly four years earlier Sinclair had always forced the pace and when Amstrad announced that its micro would be Z80-based it seemed doomed to failure. The 68000 revolution was just around the corner.

That that revolution didn't happen must also be laid at Sinclair's door. For some reason Sinclair took fright and eighteen months before any of his competitors – and four or five months too soon – he launched the QL. For whatever reason – the hardware design, the operating firmware, the teething troubles – the QL never performed as any Quantum Leap should. And because of that he let in Amstrad, which grasped the opportunity with both hands.

The Spectrum Plus may have been the 'first product of Sinclair The Marketing Company'. But it was also a weak effort. Instead, Sinclair should have launched the machine it now may release this autumn – the Spectrum 128K. All the work had already been done. The Timex 2000 machine – the unsuccessful American version of the Spectrum – had bank-switching required for the 128K, a three-channel sound chip and higher resolution graphics. But instead we got the Spectrum Plus. The mistake was a costly one for Sir Clive.

Now with Sinclair at an all-time low, Amstrad is on a high. So far Amstrad has shied away from meeting Sinclair head-on, but it must now be looking to compete directly with the Spectrum. It wouldn't take much for Amstrad to produce a version of its CPC 464 without monitor or cassette player at a price that Sinclair would now find very hard to match.

For almost a year now, Sinclair has been following rather than leading.

Computer Trade Association Magazine of the Year

Firebird set to enter US market

FIREBIRD, British Telecom's games software publishing arm, may enter the American software market.

"We have conducted extensive research on the US market, and we are looking at the possibility of opening an office in the New York area," said Firebird's Herbert Wright.

If Firebird goes ahead with its plan it will become only the fourth British software company to have a US office. Of the others - Mastertronic, Quicksilver and Softek - only Mastertronic has made any real impact.

Firebird is also to publish games for the new US micros, the Atari 820ST and Commodore Amiga. The company

has begun development of an arcade-style title for the new machines. With the working title of *Star Glider* the game is rather like *Elite* but without the trading aspect and will feature fully three-dimensional images in colour, rather than line vector drawings.

● Meanwhile, the conver-

sions of Ultimate's *Sabre Wulf* and *Knight Lore* for the Commodore 64, for which Firebird licensed the rights earlier this year, are nearly finished. "We are hoping to have them out within this month," confirmed Herbert, "but that's not 100 per cent definite - we want to get Ultimate's seal of approval on the conversion work."

Amiga and ST support

◀ continued from page 1

Personal Computer World show.

The Amiga packages range from entertainment to languages and business packages.

Infocom hopes its Amiga titles will be ready next month, including the *Zork* trilogy, *Suspect*, *Deadlines*, *Planetfall*, *Suspended* and *The Hitchhiker's Guide to the Galaxy*.

Also in the entertainment field, Electronic Arts is converting its range.

Some programs are designed specially to take advantage of the Amiga's graphic and sound capabilities. Cherry Lane Technologies has written *Harmony*, a musical accompaniment package, and has *Scorewriter* a musical score printing package in development for January 1986. *Musicraft* from Everywave will turn the Amiga into a four-voice synthesiser and sequencer when it is launched in October.

The Island Graphics Corporation has produced *Presentationcraft*, a business graphics package intended to be particularly useful for business presentations, *Moviecraft* an animation package, and *Graphicraft* a painting and art program.

However, Amiga software is not going to be cheap. "I would think that prices will be in the region of between \$40 (£30) and \$150 (£110)," said a Commodore-Amiga spokesman.

For the ST machines, Atari is planning a large display at

Amstrad to release comms interface

AMSTRAD is to release an RS232 serial interface add-on for its CPC micros which will enable them to be easily linked up to a modem.

The new peripheral will sell for around £50, and will work on the CPC464, CPC664 and CPC6128.

It will be launched in "a couple of weeks", an Amstrad spokesperson said.

Ocean plans range of business titles

OCEAN is likely to be publishing "cheap and cheerful" business software, says managing director David Ward.

The decision is a departure for the company which - along with its other off-shoots Imagine and US Gold - has so far only published entertainment titles.

"Now that there are retail chains like First Computer around which cater specifi-

cally for business users, there is an opening into the market for us," commented David Ward.

"We'll probably be launching a range of CP/M material first, and then license them in the States," he suggested. Interestingly, he added that he was thinking about CP/M games as well as straight business software - "I see a cross-over," he said.

Relaunch for the Nascom 2

ONE OF the earliest home computers ever to be produced in this country - the Nascom 2 - has been relaunched.

The Nascom was one of the computer industry's first casualties, but the original micro in kit-form first went into production even before the Sinclair ZX80.

Nascom 2 is now being offered in board-form only, al-

though manufacturer Lucas Control Systems is offering additional memory, graphics controllers, and hard and floppy disc controllers as extras.

The basic board costs £310. Details from Lucas at Welton Road, Wedgcock Industrial Estate, Warwick CV34 5PZ (0926 497733).

Atari 260ST and Spectrum 128K

◀ continued from page 1

A Sinclair spokesman denied that any new Sinclair model would be previewed

the *Personal Computer World* show with software houses invited to show their ST software as part of Atari's stand.

Firebird, Ocean, Talent Computer Systems and Metacomco are among the companies planning to accept Atari's invitation.

The list of companies working on ST software now includes Llamasoft, Mirrorsoft, English Software, GST, Intelligent, Microdeal and Softek.

"The S20ST will have a wider range of software than any other micro at launch," claimed Rob Harding of Atari UK.

in September. "We will be showing the QL and its latest software and the Spectrum Plus pack, but I'm not aware of any new products being shown," he said.

Atari's 260ST model, to be shown in this country for the first time at the show, is the company's 256K version of its 68000-based ST range, featuring a built-in 3½ inch disc drive (see *Popular Computing Weekly*, June 4).

The US price for the model has been fixed at \$499.

"We will be showing both the 260ST and our CD Rom player at the show," confirmed Rob Harding, Atari UK's sales and marketing manager.

"We've not yet finally decided which version of the 260ST, the stand alone model or the one with a built-in disc drive, to put out, but I suspect it'll be the built-in drive version that will appear. We're hoping to launch the CD Rom player here before the year end."

Greatest hits tape released by Virgin

VIRGIN is to release a compilation of six best-selling games on one cassette this month, entitled *Now Games*.

"We've taken a leaf out of our record company's sleeve, and produced a sort of software hot hits," explained Nick Alexander, Virgin Games' general manager.

The six titles on *Now Games* are *Brian Bloodaxe* (The Edge), *Lords of Midnight* (Beyond), *Strangeloop* and *Falcon Patrol II* (Virgin),

Virgin boss Nick Alexander

Arabian Nights (Interceptor) and *Everyone's Wally* (Mikro-Gen).

The package will be available for both the Spectrum

and Commodore 64 and will retail for £8.95.

"Quite a few companies are working on compilations at

Strangeloop

the moment," said Nick Alexander. "I think after seeing the success of *Soft Aid*, we were convinced that compilations could be popular, although obviously *Soft Aid* was a special case."

The individual companies will each get royalties on sales of *Now Games*, and Virgin hopes to bring out a series of compilation tapes from various companies embracing various themes.

Budget titles dip below £1

BUDGET software prices are continuing to fall with a new range being released - costing only 99 pence.

Central Solutions has released four titles at that price for the Spectrum.

Crystal Quest is a text-only adventure, *A Tangled Tale* is

a graphic adventure and *Valley of the Dead* and *Devils Descent* are both arcade-style games.

Eleven further text-adventures are planned by Central Solutions for release in August, also at 99 pence, and a QB adventure at £2.99.

Details from Central Solutions, 500 Chesham House, 150 Regent Street, London W1 (01-624 1389).

Super titles for Christmas

BEYOND HAS announced five new titles to be out by Christmas, including the much heralded *Superman*, licensed from US firm First Star.

Superman will be an arcade-style game with the player as Superman fighting against his arch enemy Darkseid. The game will feature sophisticated animation and be released for Commodore, Atari, Amstrad and Spectrum machines.

The other titles include *Nexus*, which is the name of both game and label, launched as a range of titles written by Paul Voysey and

Tayo Olowu, authors of *Psytron* and *Psi Warrior*. *Nexus* is a graphic adventure for the Spectrum and C64.

Iron Heroes, a futuristic gladiator fight by the Shadowfire team Denton Designs, will be on the Monolith label, for the C64 and Spectrum, and *Enigmaforce* and *Eye of the Moon* on Beyond. The latter is the final part of Mike Singleton's *Lords of Midnight* trilogy.

Beyond also hopes to bundle the full trilogy as one package, although the details have yet to be finalised. All the games will cost £9.95.

BORED with the BBC MICRO?

A strong and very successful software house who until now has concentrated on BBC application programs, is expanding to write for the new generation of machines.

We need more machine code programmers to help us, and can offer excellent working conditions. Anyone with experience of machine code (any machine) and is bored with the old machines please contact:

Annoying

I've been reading your magazine for a month now and find the style of your reviews annoying.

Would reviewers kindly remember that we readers are not interested in their opinions, but in their observations from which to formulate our own opinions.

*N Jealous
18 Arthur Street
Cardiff*

It is difficult to make sensible observations about a program without offering some kind of opinion. Personally, I've always felt that the kind of reviews which don't nail their opinions firmly to the mast usually aren't worth reading.

Mental effort

Your magazine has from time to time printed letters deprecating those who use their home computers for playing games. H G Jones' letter (July 25 issue) is a par-

ticularly reprehensible example.

There is nothing inherently unhealthy in playing computer games any more than there is in reading, watching television, listening to music, seeing a film or play: need I go on? All these activities can be entertaining, enlightening and, frequently, educational. Modern computer games have as close an affinity to *Snakes & Ladders*, *Ludo* or *Mousetrap* as does the Post Office Tower to a mud hut. The board games that I know of which require a serious mental effort can be counted on the fingers of both hands. The only skill involved in the games quoted by H Jones is the ability to count from one to six: they are, in fact, games of almost pure chance. Just try to solve a game such as *Knight Lore* with a similar amount of skill!

No, there is nothing clever about punching a few keys to play a game (I press mine, I do not 'punch', 'hit' or 'strike' - the keyboard lasts longer). The cleverness with many computer games, particularly

the modern adventures and arcade adventures, lies in determining the object of pressing the keys, which keys to press and when during the game to press them. I find that playing *Boulder Dash* requires more mental effort than does playing *Reversi*, my favourite board game.

I fail completely to understand why a computer game should be expected to contribute to the computing knowledge of the player. Most are not designed for that purpose, they are designed to entertain and that, I find, they do very well.

I'll stick to zapping ram-paging toilet seats.

*W Thompson
2 Sandon Close
Sandy
Beds*

Extra command

Those readers who possess the Amstrad DD-1 disc drive may be interested to know that I have discovered a sixth CP/M direct console command. The command is 'User N' where N is the num-

"It's a 4M bank-switched machine and I've forgotten which block I put my 48K program in!"

ber of the user that you wish to enter (between 0 and 15).

The DD-1 user manual states that there are only five direct console commands (*Save*, *Dir*, *Era*, *Ren* and *Type*). This undocumented command may be of use to some Amstrad disc users.

High Quality
Microcomputer
Software

CP/M PASCAL

When choosing a compiler, support is crucially important. It is vital to ensure that you will receive technical back-up for the package as quickly as possible. This may prove difficult, if not impossible, when the software was designed in another country and you have no access to the authors. **HiSoft Pascal** is a British product, created and manufactured by ourselves and fully supported by our technical team here in Dunstable. We offer inexpensive upgrades and we are continually extending and improving the compiler.

HiSoft Pascal is available in a wide variety of Z80 CP/M disc formats, is very close to Standard Pascal and comes supplied with a comprehensive and sophisticated full screen editor (ED80) which is specially designed for program development; the editor may be easily configured to suit all displays and also for special keyboards and individual keystroke sequences.

All this for a fully inclusive price of **£39.95!**

High Quality Software at a Fair Price.

HiSoft was founded over four years ago and since then has built up a reputation for the quality of its products and the strength of its support. Our utility and language software is available for most of the home computers currently on the market and we are always developing new products: our latest is **Devpac 80**, a powerful assembly language development package for all Z80 CP/M computers. **Devpac 80** is a macro assembler (GEN80), a configurable full screen editor (ED80) and a super front panel debugger (MON80) all in one integrated package.

Devpac 80 makes Z80 assembly language development a joy to do and is incredible value at only **£39.95** inclusive!

Please feel free to write to us or telephone for immediate despatch of full technical details of all our products - there is so much more than we can say in this small space. Our next product for CP/M-80? Wait and C!

Random race

Program *Pole Position Micro*
Spectrum 48K Price £7.95
Supplier US Gold, Unit 10,
Parkway Industrial Centre,
Heneage Street, Birmingham
B7.

This is another nail in the coffin for those who support the theory that a hit game on one machine will be equally as good once converted to another.

My fears were confirmed by finding the Commodore screen shot on the back of the Spectrum cassette box!

Once loaded, it is soon apparent why. Clearly, this is a sad version of that popular arcade classic that was a hit on the Commodore. All the features of the original are

here, the pre-qualifying phase, the race itself, best times and high score tables, etc, but the quality of the programming leaves a lot to be desired. The movement is jerky and the car has no 'feel' to it. As for the other competitors' cars, apart from suffering severe attribute problems, they just appear at random and are passed with ease, hardly the "nerve shattering danger" that was promised on the inlay.

The game may have been good a couple of years back, but nowadays we've all seen the graphics that the Spectrum is capable of (ie, *Chequered Flag*) and this just doesn't do it justice. It's about as entertaining as changing a flat tyre in a storm.

Andy Moss

Time travel

Program *The Amulet* Price £2.50
Micro Commodore 64
Supplier Sentinent Software,
Branch House, 18 Branch
Road, Armley, Leeds LS12
3AQ.

An unusual marketing policy, this - on one side of the tape is the Spectrum version, on the other is the Commodore program. I'm sure we'll see a lot more of this in the future as companies try to economise.

The object of *The Amulet* is to travel through time in an attempt to locate the seven parts of the shattered amulet. With this in mind, you approach a river. On the bank is

a fishing rod. Let's try a spot of fishing. Well, lo and behold! Hooked on the end of the line is a broken, dirty old amulet. After a bit of thinking, you decide to clean it. Before you can say *Popular Computing Weekly*, you are whisked away across the time streams into another distant location and time. How's that for progress?

The Amulet is a traditional, text-only adventure. While the descriptions aren't as detailed and atmospheric as, say, Level Nine's adventures, the author seems to make up for this with plenty of creative flair. On your travels you will come across many weird and wonderful things ranging from giant insects to a farmhouse containing garlic, onions and a book about mon-

Burnt up

Program *Desert Burner Micro*
Spectrum 48K Price £2.50
Supplier Creative Sparks,
Thompson House, 296
Farnborough Road,
Farnborough, Hants.

This is another in the Sparklers budget software range and involves guiding a motorbike along a scrolling road, jumping over lorries, cars, trees and pits, whilst avoiding helicopters which are out to bomb the bike.

Fortunately, on the front of the bike is a fast action cannon which despatches the helicopter with gay abandon.

As the sun in the top right of the screen slowly sinks, day turns into night and the whole process continues, until you finally deliver the mandatory 'secret plans' to a band of freedom fighters.

The trouble with this game is its lack of variety. It becomes boring jumping over the same things all the time.

Even allowing for the £2.50 price, it is a disappointment.

Andy Moss

All at sea

Program *North Sea Bullion Adventure Micro*
Amstrad Price £3.95
Supplier Kuma Computers, Pangbourne, Berks.

I've always thought that a lot of adventure software is overpriced - there are of course exceptions but often the quality of programming and the amount of development time needed fall far below that of the leading arcade games - so it is a

ably entertaining game. The idea is to locate and loot a shipwrecked boat and to do this involves stocking your ship with your choice of equipment, navigating perilous straits etc. Control of movement is via the cursor keys, and whilst there is text input this is largely limited to a very few options.

Although the strategy elements may give it more potential for long-term play than some adventures, the programming has some unnecessary weak points. It desperately needed someone to sit down and play the thing for a while to produce a list of refinements. The instructions are on screen for ages, why no 'press any key' option? The graphics, whilst large and colourful, start to grate when they redraw after every move, even when the picture is the same. The list of things to buy include 'fuel' - type *Buy Fuel*, it says you can't - it's only when you type *Buy Fuel Oil* that it lets you. The game also suffers from over-use of the Random function - too many sudden disasters for my liking.

A few niggles, but not bad for the price.

Tony Kendle

welcome development to see Kuma producing a pair of adventures as the first releases on their budget range.

Shadow of the Bear and *Bullion Adventure* are both written in Basic, both hybrid adventure/strategy games and both written by the same people. I looked at *Bullion Adventure* and found it a reason-

keys. For a change, the adventure doesn't involve lots of monster-bashing, blood and violence (unlike some adventures where you have to kill two orcs before breakfast). The computer also appears to be rather witty and cryptic in places. (For

example, it points out what a wally you look carrying a fishing rod across the desert.) In conclusion, a decent adventure at a very reasonable price.

Tom Hussey

Cartoons

Program *Popeye* **Micro** Spectrum 48K **Price** £5.95 **Supplier** DK Tronics, Unit 2, Shire Hill Industrial Estate, Saffron Walden, Essex.

Did you know that there's a statue to Popeye in the USA, erected by the Spinach Growers of America?

Such is the power of the perennial cartoon jack tar in his constant battle for the heart of Olive Oyl against bullying Bluto.

His computer debut was announced some time ago and now appears from DK Tronics who have taken the arcade adventure path, but instead of tiny figures and lots of platforms they've gone for characters who are almost half the screen tall. Although their movement is more jerky than in *Dun Darach* they boast solid colour and avoid most

attribute problems. It's all very much like watching a cartoon film.

The 'plot' is suitably faithful too. Popeye has to collect hearts which he takes to Olive who kisses him wildly, so increasing his score. There are also keys to unlock doors (but which particular doors?) and spinach (natch!) which revives our hero when he bumps into Bluto or any other enemy who will bob him.

Now the inevitable 'but'. The trade off for the large characters is lack of screen space. There are several levels of depth but no real way of judging which plane Bluto, et al, are in. Collisions are all too frequent and you'll need all your strategically conserved spinach for situations where KOs are inevitable.

So unless I've missed something this plagues an otherwise interesting adaptation of a cartoon character. Arf, Arf!

John Minson

More Willy

Program *Jet Set Willy II* **Micro** Spectrum 48K **Price** £6.95 **Supplier** Software Projects, Bearbrand Complex, Allerton Road, Woolton, Liverpool 25 7SF.

So what have we here? Not just another clone of Manic Matthew's Moneyspinner but the second coming of Surbiton's most famous (subterranean) son, millionaire Miner Willy.

Firstly feelings of *deja vu*,

because far from being an all new game this is in fact an expansion of the indisputable classic. Here they are again, all those jumping, timing and collecting problems we've grown to know and tear our hair at... maybe even beat by this time. But the mansion has been extended to include previously unreachable areas and even a space ship, which is the nearest piece of shuttle cock (and bull) I've seen all week.

Well, it was heaped with praise in its time but the best of the multitude of imitators have actually added to its

charms, so how does *JSW* rate today? I'm pleased to report that it's still as maddeningly addictive as ever. Of course whether the new version is worth purchasing is up to you. The (non-Smith) additions seem neat enough but do they really warrant the purchase of a new game? If you don't already own an

original (where have you been?) or your copy's worn out, I'd say buy. Otherwise there are lots of new, equally worthy programs. Still, there are probably hundreds of you waiting to work out the Pokes for this new version!

John Minson

Body blows

Program *Frank Bruno's Boxing* **Price** £6.95 **Micro** Spectrum 48K **Supplier** Elite Systems Limited, Anchor House, Anchor Road, Aldridge, Walsall, West Midlands.

Mmmf nngrr rgrf... sorry, I'll take my gum shield out! Well, no sooner has your heavyweight reviewer taken on Grenlin's *Rocco*, which went down in two, than a bout with *Frank Bruno* arrives. So it's on with the gloves, seconds out and...

Round one. Elite's man comes out fighting and he's much more versatile. He knows, and uses, head and body blows, left and right, dodges to either side, ducks and, when the opponent is almost dead on his feet, delivers a neat uppercut which knocks him somewhere into the middle of next week.

Round two. He's not looking so good now. In fact the animated graphics are less good than *Rocco* but apart

from the odd confusing aspect they do the job.

Round three. One opponent vanquished but seven more wait to be Loaded using individual access codes. The result is that not only do they look different (unlike *Rocco*) but they also fight differently. The Canadian Crusher is a dumb bruiser but Fling Long Chop from Japan is a niftier character, aiming deadly karate kicks.

The bell. I soon got used to the eight keys used and found the speedy pounding involved most satisfying. With its extra options and variety of fights *Frank Bruno* is current champ.

John Minson

Compilation

Program *Pascal 80* **Price** £39.99 **Micro** Amstrad plus disc and CP/M/Tatung Einstein **Supplier** HiSoft, 180 High Street North, Dunstable LU6 1AT.

Program *Pascal Price* £29.99 **Micro** Amstrad **Supplier** Amsoft, Brentwood House, 169 Kings Road, Brentwood, Essex.

Through CP/M, Amstrad owners have theoretically been given access to at least a dozen attempts at a Pascal compiler including one from HiSoft which wrote the official

Amsoft Pascal.

Aside from the price, what is there to choose between them?

The Pascal 80 implementation is not only cheap for a disc CP/M version, but it is also the closest to the standard, which is probably a good thing for educational use.

On the other hand, for those who are making their first steps up from Basic, Amsoft's Pascal is probably the best bet since you don't have to accommodate the idiosyncrasies of the CP/M disc operating system at the same time. It has also been tailored to make it as easy as possible to achieve similar effects to those available from Basic -

sound, graphics, interrupts etc. While you also get extras like turtle graphic procedures, it is more limited in other areas - notably the file handling which is better on Pascal 80. Only character files can be used and they are accessed serially, not randomly. Graphics and sound are of course not easily available from CP/M, but again HiSoft have provided some predefined routines that expand on the defined core language, eg, *Peek, Poke, Addr*, and some mathematical functions.

Amsoft Pascal stands out for its better hardware interface. Conversely Pascal 80 can be used to produce running CP/M Com files without the need to learn anything about the appropriate Bdos calls for printing to screen, etc.

Amsoft Pascal has a line editor similar to Basic with some additional commands

whilst the excellent *Wordstar*-compatible *ED80*, familiar to users of *Devpac 80*, is provided with the CP/M disc. You can of course use separate editors or word processors if you wish. HiSoft's documentation is of a high standard but tends to be of reference value rather than pampering to the beginner. Amsoft's version is similar but slightly better in that respect.

In both cases you would do well to look for one of the 'teach yourself' books recommended.

If you are looking for an Amstrad version of Pascal either of these packages could be a good choice - the Amsoft version is a bit easier to get to grips with, though.

Tony Kendle

Road runner

Program *The Great American Road Race Micro* Commodore 64 **Price** £9.99 **Supplier** Activision, 15 Harley House, Marylebone Road, London NW1.

At first glance this race game is disappointing, with a seemingly sparse screen display and chunky graphics but, as you progress into the game, it grows into a veritable gem.

The idea is to road race across America from east to west using one of four different routes, planning the quickest way city by city for each. You have to take into account weather conditions,

time of day, rush hour traffic, police speed traps, while keeping a check on petrol and engine revs. Driving is the usual joystick left/right, with up and down for changing gear, and the track is the standard 3D *Pole Position* style layout.

Although the other cars on the road are all rather similar, it doesn't matter as your attention is focused on the changing landscape, day turning into night and the approaching skyline of the cities.

This is where the charm of the game comes into its own as each city has its own landmark, for example San Francisco's Golden Gate Bridge. The times of eight pre-programmed drivers are already fixed and these are

Health risk

Program *St Crippens Micro* Spectrum 48K **Price** £2.50 **Supplier** Creative Sparks, Thompson House, 296 Farnborough Road, Farnborough, Hants.

What a funny game this is. Here you are, cast as a patient interned in the infamous St Crippens hospital after a minor accident.

Your aim is to escape as soon as possible, but of course it is not easy. Not only are you pursued by doctors, nurses, and ambulancemen, but hazards such as bed pans,

ladders and the odd disease, all there to hinder your exodus.

This is basically a *Pac-man*-type maze game but with many different mazes comprising of hospital wards. You have to manoeuvre your little figure around the various beds and furniture, through such obscure places as the 'Tropical Diseases Ward' and 'the games room' etc. A nice touch is, once up to 80% damage, your figure hobbles around on crutches.

The graphics are very simple but nicely drawn and, above all, sometimes funny.

This game is a bundle of fun and great value for money.

Andy Moss

Croak croak

Program *Crystal Frog Micro* Spectrum 48K **Price** £2.99 **Supplier** Sentient Software, Branch House, 18 Branch Road, Armley, Leeds, West Yorkshire LS12 3AQ.

The background to *Crystal Frog* is tense: find the crystal frog, visit all the locations and score 100%.

Well, it is a budget adventure, but neglecting to mention that it's been *Quill*-ed is

rather naughty.

With that off my chest I'm pleased to report that this particular quest doesn't stint on words. From the very first location (a clearing in a grassy field on a summer's day with a cloudless sky with circling birds above) the eye of the imagination is most pleasingly stimulated.

A traditional, not desperately original but atmospheric adventure at a price which won't leave a frog in the throat.

John Minson

your targets to beat. However, new times can be added from tape. Sound is used well and the graphics are smooth and effective. An addictive game with a style all of its own

which lets you tour America from your armchair.

Another winner from Activision.

Andy Moss

SUMMER SALE!

PRINTER OFFERS

TATUNG TP80

We have a limited quantity of these superb printers at a special price. This is a similar model and from the same manufacturer as those sold under various names such as Shinwa, Mannesman Tally, Cosmos etc. The print style is far better than most dot matrix printers in the price range because it uses square needles which give the print a "letter quality" look. It handles both friction and tractor feed. Take a look at these samples of its abilities.

Communicator

Hardware QCom Modem Micro QL
Price £219.85 (Q-Connect plus software £89.95; Q-mod £79.95; Q-call £49.95 - units available separately)
Supplier Tandata Marketing, Albert Road North, Malvern, Worcs (06845 68421)

Sinclair has not had a good year so far but - at long last - there is a communications package available for QL owners who wish to link-up to the outside world.

When OEL went bust a few months ago, the company's planned QL communications unit went out of the window. But Tandata took over the project to the relief of all concerned.

According to Tandata, orders left over from OEL's bankruptcy are being fulfilled and the package is now available to others, direct from Tandata Marketing in Malvern.

Tandata's package actually consists of three separate units: Q-Connect, Q-Call and Q-Mod. Q-Mod is the modem enabling communications at 1200/75 baud

(full duplex) and 1200/1200 baud (half duplex) for QL to QL communications. The 1200/75 baud operation is for accessing databases such as Prestel and VT-100 facilities such as Telecom Gold. Q-Call is an auto-dial/auto-answer unit. Auto-answer is chiefly for QL to QL communications and the automatic transfer of files and other data.

Q-Connect is the key to the system. It is an intelligent interface supported by an extensive software package loaded into the QL by microdrive. Q-Connect operates between 75 and 9600 baud and will support most asynchronous modems - a fact

which should go a long way to satisfying those sceptical of Q-Mod's somewhat limited range of communications. The software is impressive and contains a wide range of features including telephone director, a mailbox menu, a CET telesoftware down-loader, Load/Save facilities, file transmission and data encoding/decoding features.

Q-Call and (if the buyer links Q-Connect to another modem) Q-Mod are optional but, when joined, form a compact unit offering just about all the facilities an up-to-the-minute "off-line" QL owner could wish for, at a total price of just over £200.

Each unit is designed in the QL-style and is made of the same black plastic. The three are linked in a neat stacking system with Q-Connect as the base and joined by vertical bus connectors. My only real criticism is - since the bus connectors are the only thing holding the three units together - there is a real danger of damage from slightly careless handling.

Tandata is actually the second company to put out a QL modem. Modem House has produced Bright Star, an intelligent modem which (for the moment) lacks an auto-dial facility, but has a wider range of communications and costs roughly the same - £179.95. The Q-Com package without Q-Call costs £169.90.

I have not had an opportunity to try the Modem House product so I can't make comparisons, but Tandata's Q-Com device functioned well and makes a very neat-looking addition to your QL.

Tandata has successfully rescued a package originally designed for the computer, and one which offers most owners all they need to link their silent QLs into the world's electronic information pool

Brian Beckett

Drawn out

Hardware Graphics Light Pen Micro Amstrad CPC 464 Price £24.95 Supplier DK'Tronics, Unit 6, Shire Hill Industrial Estate, Saffron Waldon, Essex CB11 3AQ (0799 26350).

Who was it that said that there's a novel inside every one of us, just waiting to be written?

Well, if that's the case then there ought to be a picture inside of each of us, just waiting to be drawn.

The problem is, of course, while most of us can write - although the spelling might not be too good - drawing is another matter completely. Artistic ability seems often almost inversely proportional to programming skill.

Maybe DK'Tronics' new light pen for the Amstrad could be the answer.

Light pens work using the principle that each part of the TV screen is refreshed (or up-dated if you like) every 1/25th of a second - a ridiculously long time for a microprocessor. The processor calculates the time from the start of a new TV scan to the time the scan reaches and triggers the 'pen' sensor pointed at the screen. By calculating the time interval the micro can work out exactly

where on the screen you are pointing. If you want to do something like drawing, then you are thrown on the mercy of the accompanying software and documentation. DK'Tronics seems though to have done a pretty good job with this package.

The light pen plugs into an interface that itself slots into the disc drive port of the Amstrad. Don't worry, though - there is a piggy-back port on the back that supports a disc drive (if you have one) and a DK'Tronics speech unit at the same time.

The first thing to do is load the software. This takes about four and a half

minutes, but the cassette is totally unprotected, so it can be transferred to disc without too much bother.

You are now ready to start. The program works by moving through a series of menu windows which start with Save/Load screen options, and go on through

calibration of the pen to the actual graphics options - a total of eight in all. You soon get used to 'the system', but to help, the documentation provides a small flow diagram... a nice touch.

The basic Draw functions support ten colours with four drawing widths, plus an air-brush effect - more than enough for most dabbling. Slightly more advanced features include 'rubber banding' for drawing complex shapes, fills, circle and rectangle commands, copy and shrink options, plus text handling. A 'scratch pad' facility is useful, which allows you to create detailed drawings, and then reduce them down and use them on your opus.

So far so good, and the documentation takes you through the program one step at a time.

The last few pages of the manual give listings for dumping screens to DMP 1 or Epson compatible printers, with detailed advice on adapting them for other printers. Also, it gives valuable help on how to use Saved screens and/or the light pen in programs of your own. It's a pity that you have to type these routines in yourself though.

If you want an artistic dabble on your Amstrad, then this is for you. But don't expect the level of detail and quality obtainable from a graphics tablet.

John Cook

POWERFUL UTILITIES

FOR YOUR SINCLAIR SPECTRUM

MAKE THE MOST OF YOUR MICRODRIVE WITH

INTERFACE III

THE IMPOSSIBLE HAS BEEN DONE

It is true that this fantastic new peripheral will transfer every program available on microdrive. Yes every one. Yet, believe it or not, it is so easy to use that we are training out part of (C)IVE to use it. Any-one capable of loading and saving a BASIC program can transfer really awkward programs to microdrive.

Just look at these features...

- Consists of hardware and software (software on microdrive cartridge).
- Transfers all programs available on microdrive.
- Very, very, easy to use. (If C)IVE can do it we're sure you can.)
- All programs reLOAD and RUN once transferred.
- Makes a 'snapshot' of any stage of a program. (Saved as a screen.)
- Transfer can be actuated at any stage allowing 'customised' versions.
- Will also save to tape. (Normal speed load once saved.)
- Programs will reLOAD independently of the 'interface'.

IF YOU HAVE A MICRODRIVE YOU MUST HAVE INTERFACE III

ONLY £39.95 Inc. P&P

DOUBLER MK.II

After amazing success on the CBM 64 we introduced 'Doublor' on the Spectrum. Now we have improved it and have a 'Mark II' version which has already satisfied hundreds of users. Requires the use of two cassette decks and has proved capable of 100% success with all types of loader regardless of length and speed.

ONLY £14.95

AMSTRAD

'SPEDMASTER' allows you to make a fast loading back up of your software at a choice of ALL speeds. Incorporates a rubber roller and approved BASIC option. Works on SAVV normal Amstrad loaders.

ONLY £7.95

'DISCMASTER' allows you to transfer most protected software onto disc. The process is automatic and will work with multi part programs. Supplied on disc.

ONLY £12.95

B.B.C.

TAPE TO DISC UTILITY The 'TD ROM' is the most powerful utility of its type. It will transfer the vast majority of protected software onto your own disc. It is VERY easy to use and full screen reporting is provided.

Two versions are available, the normal Acorn D25 version plus one suitable for C)IVE's D25/D26.

ONLY £18.95

DATA RECORDER

A dedicated data recorder designed for use on the CBM 64 or VIC-20. Specification as C2N but with pause button. Model available for the PLUS4 or 16 at same price.

SATISFACTION GUARANTEED. ONLY £29.95

FOR YOUR COMMODORE 64

NEW DISC DIRECTOR NEW V3.0

this NEW VERSION OF 'D.D.' has once again proved it as the leading copyutility package for the 1541 user. As well as general improvements, plus the addition of more useful utilities, two important new programs have been added.

'THE EVESHAM RUBBER' A first on the UK market. A true rubber (byte for byte) copier. Copies ALL DOS errors automatically. This includes errors 20-29 etc. plus non standard errors like full stacks, extra tracks, non standard sync, resummed tracks etc. No knowledge is required at all. It just 'rubbers away' and produces a perfect copy. Yet it only takes 5-10 minutes. Has copied all discs tested (except those). A class above anything else available.

'FAST FILE COPIER' An incredibly handy selective file copier that LOADS and SAVES at five times normal speed sources useful? Too use. As well as these programs 17 other useful utilities are included. An essential purchase.

ONLY £29.95

Customers with earlier versions may return them along with £9.95 for 'V3.0'.

NEW 'QUICKDISC' - NEW CARTRIDGE

plugged into your 64 and your 1541 will play just to perform. Unbeatable value. Includes the following:

Fast LOAD and SAVE (lower to five times fast speed). Will LOAD most protected software. Uses no memory area. can be switched in and out from the keyboard.

Fast Format takes just 10 seconds.

Fast Backup copies an entire disc in four minutes (see protected software).

Fast File Copier (selective).

Improved DOS commands (DOS-V) users for easy use of the disc drive, e.g. SRETRN will LOAD and display a directory without converting BASIC. SMART BUSTOP will LOAD '0' - 'A' etc. etc. Very useful.

Incorporates Centronics a printer software (also sold with CBM graphics capability. Works with Commodore Connect).

A RESET button is fitted.

Now the price. No less £49.95, it's not even half that much. Can you afford to be without 'QUICKDISC'?

ONLY £19.95

No internal connections needed and unlike most similar products it is compatible with printers and second drives.

3M SCOTCH DISCS
Lifetime guarantee Box of Ten
SS/DD: £16.00 DS/DD: £23.00

DOUBLER

The amazing cassette port adaptor for the 64 is still keeping to 100% record. Consider

of hardware and special software. Requires the use of two data recorders. Tests have proved conclusively that 'Doublor' can be 100% successful even with fast loaders. They say it couldn't be done.

ONLY £12.95

STILL POPULAR

'DISC' Still the best tape to disc utility for normal speed loading tapes. Simple to use but rarely beaten.

ONLY £9.95

'FASTBACK' Converts most slow loading tapes to 'turbo' load single and multi part. Very easy to use.

ONLY £9.95

'BIG MOUTH' A superb aid to speech synthesis program that is great fun to use. Unlimited vocabulary.

ONLY £7.95

'COMMODORE CONNECTION'

Software and cable for connecting any Commodore type computer to the 64. Or vice with 'QUICKDISC'.

ONLY £17.95

'AZIMUTH 3000'

Allows you to check and re-align your data recorder tape against 'Scotchcode' programs.

ONLY £8.95

'THE ANATOMY OF THE 1541'

Get to grips with your 1541 with this very detailed book. Includes a full 100CM disassembly.

ONLY £8.95

All prices include P&P and VAT. Send cheque, Postal Order of Credit Card No. Credit Card orders accepted by phone. Callers welcome. Wide range of goods stocked. Trade enquiries welcome. European orders sent price as advertised. Outside Europe £2.00 for airmail. Mail order to Evesham Shop please.

OVERSEAS ORDERS PLEASE ADD £1 PER TAPE

Due to expansion, Firebird Software has two new vacancies

DESIGNER

with a high turnover of new products, Firebird Software has a continued requirement for new ideas and designs for packaging and advertising. You will originate these, and liaise with design studios, artists and printers during production.

You will have a portfolio of previous work demonstrating a high ability of creative thought and a capacity to produce rough a/w. A thorough understanding of commercial a/w to print processes is required, as is a management capability to source and supervise freelance artists and present proper components and instructions to printers.

EXPORT SALES CLERK

reporting to the Sales Manager, you will be responsible for the research, communications and controls necessary to export effectively throughout Europe. Duties include extraction of statistics from market research, investigating potential overseas markets, commissioning translations and arranging print, occasional visits abroad and communicating with overseas customers. You will need to be fluent in two European languages, other than English, including Spanish or Italian.

For both of the above vacancies, send letter and c.v. to:

Tony Rainbird
Firebird Software
Wellington House, Upper St. Martins Lane,
London WC2H 9DL

Firebird and the Firebird logo are trademarks of British Telecommunication plc

You can do it!

You don't have to have a wet towel wrapped round your head and a bottle of aspirin at your side to learn to program your Commodore 64 in machine code — there is an alternative method. By concentrating on simple concepts, and by explaining every step carefully, with plenty of examples, David Lawrence and Mark England show it to you in their book **Beginning Machine Code on the Commodore 64**.

Although it can be difficult to become fully proficient in machine code programming, each instruction, in itself, is relatively simple to understand. The authors are careful to bring out this in their approach, showing clearly and carefully what each instruction does and how it is used. Then, when you feel more confident as a machine code programmer, you can begin to construct more and more adventurous routines from a collection of the simple individual instructions.

David Lawrence and Mark England are experienced machine code programmers on the Commodore 64, being authors of **Machine Code Graphics and Sound for the Commodore 64** and **The Commodore 64 Machine Code Master**, but not so experienced that they have forgotten the pitfalls and confusing points that await the beginner.

So, if you are ready to take your first steps into the world of machine code programming on the C64, this is the book for you.

Please send me _____ copies of Beginning Machine Code on the Commodore 64 at £6.95 plus 60p p&p each.

I enclose a cheque/postal order for £ _____ payable to Scot Books

Please charge my Visa/Access card no. _____

valid from _____ expires end: _____

Name: _____

Address: _____

Send to: Sunshine Books, 12-13 Little Newport Street, London WC2H 7PP.

Trapper

It's you against the Evil Kraalian on the CBM 64 -
written by R Beaven

Trapperr runs on a Commodore 64 with a joystick in Port One. The idea of the game being to trap the Evil Kraalian.

At the start of the game, a random maze is drawn, then the Kraalian appears, followed by a green man which you control.

The Kraalian will immediately bound around the maze in a berserk fashion - you must manoeuvre him into a three sided box, closing the gap with yourself. He then dies, and you are presented with

another, harder maze... this must be finished within a time limit, of course! Good luck!

Program Notes

Line No

10 - 54 Display title screen
55 - 57 Accept input
58 Read UDG data
59 Define Char 32 as space
60 Read UDG number data
61 Character data
70 - 151 Draw boxes round screen
205 - 215 Fill screen randomly with boxes

260 - 280 Display Kraalian
290 - 295 Display Player
300 Update time
310 - 385 Update Kraalian position
1000 Endgame check
1001 - 1030 New direction
1050 Choose random loop entry point
1070 - 1110 Direction choosing loop
5000 - 5070 Sound effect routine
6000 - 6040 Joystick input
6100 - 6420 Player movement
7000 - 7025 Completed level routine
8000 - 8060 End game

Getting a word in edgeways

More text compression techniques from the keyboard of Jeff Tullin

This week sees the publication of the Microsoft type 'squash' computer. As it stands, it won't run directly on any computer! It is written in such a way as to simply suggest what you should actually type. The syntax for representing Hex numbers, for instance, varies from machine to machine. So too does the command which lowers the 'Top Of Memory' pointer to allow machine code to be assembled safely above it. Even *Peek* and *Poke* can vary between micros, so it is up to you to arrange the program to suit your machine. This should not prove too hard. The 'dictionary' supplied here is smaller than last week's simply to save space, and you may wish to refer to the last section for a wider explanation.

Once the compactor has run (and this can take a long time - my latest game took over three hours to compress), the program will print some addresses on the screen, such as:-

```
Dictionary from &5200 TO &524C
Text occupies &524C TO &xyy
Compressed by something %
```

BBC users, at least, can save the database as a block of memory by the command `*save "text" 5200 xyy`, and then disregard the compactor program entirely thereafter, and just `*LOAD` in the block as required. What is important is to keep a record of the address of the start of the dictionary and the text.

But now on to the expander routines. This week, just the theory. We have already replaced common words and phrases by single numbers. What we need to do now is examine the compressed string, byte by byte, and print out normal letters unchanged, but replace the 'special' bytes by the correct keywords. So, in effect, what we must do is tell the computer: "In future, if you come across the code value of 136, instead of printing it, print the word 'HELLO' (or whatever). The same goes for code 137. If this code appears, print 'GOODBYE'." - and so on. Working through a list of codes like 65, 136, 66, 137, 67, the computer might thus print out: 'A HELLO B GOODBYE C'.

In addition, our expander routine will also begin a new line when it encounters a '#' symbol, and again when it finds a full stop. The full stop will itself signal that the next lower case letter should be made into a capital letter as the beginning of a sentence.

Figure 2 is the main flowchart for the expander, slightly simplified for clarity. For completeness, figure 1 is a flowchart for the small subroutine which will handle adding the capital letters required from time to time. Next week, the final program.

Wide vocabulary

Part Two of ZX! Basic written for the 48K Spectrum
by Stewart Nichols

This week, more instructions... and more code. Remember, instructions on how to type in the code for Parts One and Two were in last week's issue. For those with numb fingers, copies can be obtained from me on tape at £3.00 each. Write c/o 82 Lays Drive, Keynsham, Bristol, BS18 2LE.

Instructions

IMx,y - (Move)

Move from current plot position to coordinates x,y plotting a line or unplotting as specified by the value of *Over*. Values of x and y can be from 0 to 255. Note that ZX! Basic pixel grid is used.

For example: 10 IE 20 IP0.88 30 FOR A=1 TO 285 40 IMA, 88 + 80*SIN(A/64*PI) 50 Next A 60 Pause 0 will plot a sine wave with a continuous line instead of the more usual series of dots that the normal *Plot* command will give.

IN"test",x,y,h,w - (New print)

This command will print text anywhere on the ZX! Basic pixel grid at any height and width combinations within the limits below. Text will wrap around the screen if it is too big to fit in one screen width/height.

"text" - any string of characters code 32 to 127, or any string expression resulting in characters code 32 to 127.

x,y - pixel co ordinate of the otp left hand corner of the first character generator in Rom but may be set to any character generator set in Ram.

h - height of characters in character squares (1 to 32)

w - width of characters in character squares (1 to 24)

IDa - (Overall change)

Change the screen attributes to that set by value a. This does not change the current attributes for printing etc. For example 10 Print Ink 2;Paper 5; "Hello" 20 !048 will print Hello using red ink and cyan paper then change this to black ink and yellow paper.

IPx,y - (Plot)

Plot the pixel x,y. As the Spectrum *Plot* with colours but using the ZX! Basic 255 x 255 pixel grid.

IQ"test" - (64 column print)

This command is similar to the Spectrum *Print* and ZX! Basic *!T* command but prints at 64 columns per line. This command also supports the following sub commands: (Note Semicolons)

IQChr\$3; - will clear all 24 screen lines and reset the 'print at' position to 0,0. *IQChr\$4*; - will scroll *Up* the screen by one character line. *IQChr\$5*; - will scroll *Down* the screen by one character line. *IQChr\$6*; - will print at the next *Tab* position. There are eight tabs in 64 column printing. *IQChr\$8*; - move current print position left one position (and scroll the screen down if at 0,0). *IQChr\$9*; - move current print position right one position (and scroll the screen up if at 23,63). *IQChr\$10*; - move current print position up one line (and scroll the screen down if at line 0). *IQChr\$11*;

- move current print position down one line (and scroll the screen up if at line 23). *IQChr\$12*; - delete character behind present print position and backspace to that position. If at position 0,0; then scroll the screen down and move current print position to 0,63. *IQChr\$13*; - newline. *IQChr\$16* to *21* as *Ink* to *Over* in normal *Print* but *Inverse* has no effect. *IQChr\$22* or *IQAT* line,column; allows line and column values of 0 to 255 but values above 23,63; will wrap around the screen. *IQChr\$23* or *IQTAB* allows values of 0 to 255 (but see *IQAT*). *IQChr\$24* - to *IQChr\$31* are new graphics characters not available from the keyboard.

64 column printing uses a new character generator which starts at address 51880 for *Chr Code 24*. This character generator is automatically selected when using *IQ* (and reset to its original value afterwards).

IR - (Lprint at 64 characters per line)

This command is similar to *Lprint* and prints to the ZX printer and similar printers at 64 characters per line. The following extra commands are also available.

IRChr\$1;ls;le; - will copy the screen from line start to line end. Line start (*ls*) and line end (*le*) must be in the range 0 to 23. Note that semicolons must be used.

IRChr\$3; clear the printer buffer without lprinting contents. *IRChr\$6*; or *IR*, gives 8 tab settings. *IRChr\$24* to *31* lprint new graphics characters.

Other codes 8 to 12 are similar to *IQ* codes but alter lprint positions.

!Ssa, sb, fa, fb - (sound effect)

This command can be used to produce thousands of different sound effects. Experiment with different values of *sa*, *sb*, *fa*, and *fb* but keep values low until you are able to determine the sound produced. Certain values will make sound continue for hours with no way of stopping it. Use same value for *sa*, *fa* and for *sb*, *fb* for single tone.

sa 0 to 65538 start value of parameter one
fa 0 to 65538 finish value of parameter one
sb 0 to 65538 start value of parameter two
fb 0 to 65538 finish value of parameter two
Use the command in a For Next loop for best effect. For example 10 For A=1 to 100 20 !S50,A,A,40 30 Next A.

!T"text"

This command is the same as the Spectrum *Print* command but allows printing on lines 22 and 23, has 4 *Tab* stops, backspace error corrected, no *Scroll?* prompt, *Chr\$9* corrected. Values of line and column from 0 to 255

```

```

are accepted but values above 23,31; will wrap around the screen.

Do not use local colours when printing on lines 22 and 23 as an OUT OF SCREEN error may occur.

U - (Up)

Up scroll the whole screen one character line with attributes.

IWo,n - (Swap attributes)

Swap screen attributes old (o) with new (n) values 0 to 255.

For example 10 !V56,32 will swap all Ink 0; Paper 7 with Ink 0; Paper 4

IWcs,ls,cw,lh,rs,d - (Window roll/scroll)

Pixel roll or scroll a window in any direction left, right, up or down. The command will move the window by one pixel without attributes.

cs - is the column start value (0 to 31) left hand column.

ls - is the pixel line start value (0 to 191) top line.

cw - is the window width in character columns (1 to 32)

lh - is the window height in pixel lines (2 to

192)

rs - defines Roll or Scroll. 0 is Scroll; 1 is Roll.
d - defines the direction of movement. 0 is left; 1 is right; 2 is up; 3 is down. Note that **cs+cw** must be less than 33.

For example to Roll the whole screen up by five pixels, type 10 For A=1 TO 5 20 !W0,0,32,192,1,2 30 Next A.

!Xn - (Trace On)

This is a trace command that allows you to slow the execution of ZX! Basic by *n/50* secs delay between statements. (A value of 0 will single statement step on a key press). The command executed is indicated at 21,0 with a display of [Line:Statement]. A useful command when de-bugging ZX! Basic.

!Y - (Trace Off)

Turn off the Trace set by the !X command.

!Zn

The last of the ! commands. This command disables or enables the Break keys. !Z0 will enable the Break keys. !Z>0 will disable the Break keys.

Do not use this command until you are happy with the running of your program and you

have saved a copy of it, as there is no way of returning to ZX! Basic unless you have an 'End Program' option which enables the Break keys.

Extra Commands

Because ZX! Basic allows plotting over the whole screen but *Point* will only detect a pixel on the 255 x 175 Spectrum Basic grid, the following routine has been added to point the ZX! Basic screen (255 x 255).

Poke 65362,x co-ordinate

Poke 65363,y co-ordinate

Let variable = USR 64984

This will return a value of 0 or 1 depending on the state of the pixel. Values of y from 192 to 255 will return a value of 0.

Spectrum Screen\$(line,column) will only detect characters from Space to Copyright (32 to 127). ZX! Basic has a routine to detect UDG's as well as codes 32 to 127.

Poke 65360,line

Poke 65361,column

Let string variable = Chr\$ Usr 64982

Next week, more code plus a demo program.

THE GREAT AMERICAN CROSS-COUNTRY ROAD RACE

"I vote for Road Race. It's a tough choice. But I'd have to say that Road Race is now the best racing game on the market."

MILWAUKEE JOURNAL

"Cannonball Run on the small screen. This is one fun game. Activision have done it up right with sharp graphics and excellent play value to produce the most entertaining racing game ever for a home computer."

OREGONIAN

NEED WE SAY MORE?

Type righter

The final part of the QL input routine written by Jonathan Prestidge

Shown below is (as Listing One) a sample program. Although it is not a fully fledged program it shows one easy way of implementing the routine in a practical application. Having said that, however, it isn't a bad start to an address data base if you're thinking of writing one.

The first part of the program, Line 130, sets up the error window (which would replace the need for Line 1010 in the main listing). This is where error messages will appear during the running of the program if the user makes a mistake. You can position the error window anywhere on the screen you want to suit your program and have the ink, paper, and character size as you like too, just by altering Line 130. The channel of the error window is set to three by the variable *Echan* but if you want to use Channel three, for a printer say, simply change the '3' for a spare channel number and the error window channel will automatically be changed throughout the routines.

The next thing that the program does is to lay out all the prompts on the screen. Each prompt is next to where the corresponding input will take place, as if a whole blank record were displayed on the screen. This lets the user know what's coming up next, and where he or she can expect the cursor to appear as they input one field after another. Then, since the user can see what input is next, he or she can take full advantage of the QL's type-ahead buffer.

In the 'Set-up variables' section (Lines 170 to 230) the necessary format information for the input command on Line 260, is set up in four arrays. This allows the *Input At* command to be referenced easily by a variable. In the sample program, the command is referenced by the loop '*Fields*'. If you are writing a program from scratch this is probably the easiest way to use the routine - it makes formats easy to de-bug too since they're all together at the top of the program and by adding formats, qualifiers, etc, to the arrays and upping the '*Num Fields*' variable, you can add fields without ever having to worry about Lines 250 to 330 of the program. Of course, there will be exceptions to this where you want special processing for specific fields or some validation that the routine can't handle; even then there's quite a neat way of doing that, with a '*Select On Fields*' statement (see the QL User Guide under KEYWORDS page 83).

I've utilised the '*FI*' and *Esc* key (with Lines 280 to 300), *FI* being a 'back one field' key and the *Escape* key as (yes you guessed it!) *Escape*. The back one field effect is obtained by first checking *Stat\$*

to see if it equals '*FI*', then if it does, one is subtracted from the reference variable (ie, '*Fields*') and the processing is sent back to Line 260. The previously input field is then redisplayed and can be altered, deleted, etc, and re-entered. The actual information from the previous field is recovered for this alteration from *File\$ (Fields)* which is stored away after every input by Line 270. The effect of the *Escape* key is achieved by Line 300, which simply stops the program when

'Esc' is detected in *Stat\$*.

It's worth using this program as a guinea pig, trying out anything you're not sure about - always the best way of getting used to a routine. I hope you'll find it useful and easy to program with; and by the way, don't forget to keep a back-up copy of the routine, because typing it in once was enough for me too!

If typing it in is all too much for you, I can supply a copy of both programs in microdrive for the princely sum of £4.50. Write to me at 17 Highfield Drive, Sutton Coldfield, West Midlands.

Last week Part Two of the SuperBasic listing was incomplete - our apologies. This week, Listing Two is the whole of the second part of the routine... honest.

```

Get your dots and dashes sorted out with this offering from **Bob Baxter**

Morse Code has proved essential for world communications. From the early Telegraph to DX working, the Samuel Morse code provides us with a format which is quite easy to learn and an international standard for communicating over long or short distances. Where once communications or signals were restricted to a 'line of sight' only, Morse started us on a road where civilisation began to talk over short and then long distances. The fate of nations and the history of the world has been changed due to Samuel Morse and the simplicity and reliability of the *Didah* language.

This program has been developed primarily as a learning tool for those wishing to sit for their Post Office Amateur Radio Licence. The British Morse test is 12 groups/min whilst the Americans subject their novices to only 5 g/m. With this in mind, the program has a variable speed menu which should suit the very beginner and the more experienced.

Option seven is not used in this program. It is included to facilitate the further expansion of a routine for hardware interface to a transmitter.

Although the program has been timed using a stopwatch for the 12 and 18 groups, the X variable may be adjusted to suit if the program or routines are modified in any way. Likewise the Tone and Volume controls may be adjusted accordingly. The Duration of the sound may also be adjusted, although care should be taken that the duration does not exceed that of the fastest group's time periods of the pulses. Experimenting with Envelope shaping may prove interesting here.

Program Notes

Line No	
10-100	Initial Setup
120-230	Titles
250-400	Main Menu
420-550	Adjustment Menu
570-660	Volume Adjustment
680-750	Speed Adjustment
770-890	Tone Adjustment
910-960	Tone Sounder
980-1020	Time/Delay Counter
1040-1250	Selection & Printout
1270-1300	Random Letters
1320-1350	Random Numbers
1370-1400	Random Procedures
1420-1450	Mixed Groups
1470-1600	Keyboard Output
1620-1630	Transmission Interface (not used)
1650-1720	Instructions
1740-2110	Morse Table
2130-2190	Data Bank

Variables

Char	Ascii Character
Grp	Groups 1-36
Tn	Tone Level
Dur	Sound Duration
Vol	Volume Level

Sp	Output Speed
Cv	Character Value
Ds	Data Store Pointer
Gc	Cabbage Collection
X	Time Variable
Dc	Data Character
P	Delay Period
D	Delay Counter

If you don't want to wear your fingers out typing, I can supply tape copies for £2.75, including postage. Write to me at PO Box 17, Burnham-on-Sea, Somerset.

Mouse + cheese

Here's an intriguing little story for those of you struggling to finish *Finders Keepers*. John Watson of Rochdale writes: "My young son has been playing the game for weeks but try as he may he was unable to finish with more than 88%. In an effort to help I used this small program that reveals the alphanumeric characters hidden in the code.

```
10 CLEAR 24200
20 LOAD ""CODE 24201
30 FOR F = 24201 TO 65367
40 IF PEEK F 32 THEN GO TO 70
50 IF PEEK F 127 THEN GO TO 70
60 PRINT CHR$ PEEK F;
70 NEXT F
80 STOP
```

"To our surprise we came across a mouse and later on a very fat mouse. We already had the cheese and as you know in this game certain objects combine to form other objects. 1 mouse + 1 cheese = 1 very fat mouse, or so logic would suggest. But after looking very hard we never found the fabled mouse! A letter to Mastertronic was required. They replied promptly but sadness befell the assembled throng... No mouse. According to Mastertronic 88% is the maximum score and not even a skinny mouse exists.

"However, it states in the instructions that the Knight has two options:

- 1) Collect as much as possible and then escape; and
- 2) Return to the King and join the Knights of the Polygon Table (with hints of the hand of a fair princess).

"But as it stands only the options to escape with the loot exists. Not only no mouse, but no fame and even worse no princess! It looks like a case of the 'Faulty End' or even the 'Forgotten End'.

"Anyway here are some hints:

- 1) Philosophers stone + iron bar = gold bar;
- 2) Cutty Sark + empty bottle = ship in bottle;
- 3) Spark of life + pile of mud = mud monster;
- 4) Broken sword + blacksmith = excalibur; and
- 5) Drop charcoal, sulphur and saltpetre at the feet of the puss without boots - it forms gunpowder which can be used to remove the cat if you light it with the magic flame."

Well, thanks for the letter John, even if it is bad news to players looking for that elusive final 12%. Nevertheless it is one of the best cheap games available, in fact exceptional value for money, and the economics of the thing must make it impossible for them to get involved in prolonged efforts to correct a major bug. Such problems can take an age to solve, for instance it's taken nearly a year for *Swords and Sorcery* from PSS to be sorted out after the first adverts appeared.

Now then lets get on with some more of your hints and tips left over from the arcade special. Graham Robinson of Durham has sent this. "After reading your column for many months I decided to try and find a game which nobody had reported tampering with (an awesome task) but finally I found it, Quicksilver's *Astro Blaster*. I found a neat way of returning to Basic was built in. Load the tape as usual - play game to get a high score. After the writing inviting you to enter your name has finished press 'T'. then type either *Poke* 27422,0 for infinite lives or

Poke 26396, x for x lives. Then *Goto* 40 to start program."

Graeme Foster has a tip for the ancient *Orbiter* by Silversoft - after game-over appears press *Caps Shift* then *Break*. Then type *Edit* and change a=26712 to a=26716 to give you 256 lives and 256 smart bombs.

Here are some tips that arrived without a name for the Commodore. Unfortunately no details are given on how to get them in. I have to repeat that I don't possibly have the time, or the software come to that, to test out every one of these things and fill in the gaps. Despite that, I know that a lot of you have no trouble getting these Pokes in and they're therefore worth printing. Can I ask that anyone who has details on how to get into these games to send them in so that using the pokes will be easier for beginners. Anyway, you can always use the dodge of resetting the computer by touching Pins 6 and 2 of the user port, or buy a breaker switch which is a small plug-in utility that does the same thing.

Here are the pokes. *Manic Miner*: *Poke* 16419, screen and *Poke* 16424, lives; *Attack of the Mutant Camels*: *Poke* 11639,255 and *Sys* 4096 to start; *Motor Mania*: *Poke* 8646,255 and *Sys* 8000; *Guardian*: *Poke* 21050,169 *Poke* 21051,0 *Poke* 21052,234 *Poke* 21053,234 *Poke* 21054,234 and *Sys* 24765; *Antipital*: *Poke* 22743,57 *Poke* 22744,57 and *Sys* 16384; *Gryphon*: *Poke* 7313,169 *Poke* 7314,0 *Poke* 7314,234 and *Sys* 5200 then press *Run/Stop* - also try *Sys* 5000.

Andrew Donaldson of Walton-on-Thames has written with a plea for help, prompted by the abilities of the hackers who write in to the column - "Can anyone help me to get into Artic Computing's *Voice Chess* so that I can get it to print out moves on a printer other than the ZX. With my Manganese Tally and ZX1 print interface I can get screen dumps of the board and piece positions but the program crashes when I try to print the table of moves." I know this isn't the usual area we deal with, but if any hacker fancies a challenge to their abilities then I can put you in contact with Andrew.

I've also had several pleas for help with Micropower's *Castle Quest* on the BBC - such as this from Waseem Asghar of Leyton. "What do you do with the wand after you've killed off the witch?"

I know that some of our readers finished this program ages ago, and I would greatly appreciate it if any of you could let me have a complete run down of the solution to answer these specific questions.

Finally this week, Robin Williams of Blackheath wonders if he is the first to finish Superior Software's *Repton* (a sort of enhanced *Boulderdash*) on June 8. He recommends it as an excellent game for any Beeb owner and has given us the screen passwords: *A* Screen One; *B* Chameleon; *C* Terrapin; *D* Sidewinder; *E* Gecko; *F* Python; *G* Salamander; *H* Iguana; *I* Cuttlefish; *J* Octopus; *K* Giant Clam; *L* The Kraken. Thanks, Robin.

Tony Kendle

We are searching for the top UK computer games player - the best there is!

The very best of Britain's game players will get to fight it out on a number of top secret new games - scheduled for release in the autumn.

Here's how it works

Study the table below and look at the column for the machine you have - these are the games you'll need to master. Send your high scores in on the form below, making sure that your scores are authenticated by a responsible individual signing the form. Any score achieved using technical short-cuts - such as infinite lives Pokes - will not be accepted.

Between now and September Tony Kendle will be keeping you up to date on the *Arcade Avenue* page with just who has the scores to beat. Then, in September, the top three scorers on each machine will battle it out for a place in the final and the chance to be the first to play our 'top secret' games.

	Commodore	BBC	Spectrum	Amstrad

POOLSWINNER

THE ULTIMATE POOLS PREDICTION PROGRAM

- **MASSIVE DATABASE** Poolswinner is a sophisticated Pools prediction aid. It comes complete with the largest database available - 2200 matches over 10 years. The database updates automatically as results come in.
- **PREDICTS** Not just SCOREDRAWS, but ALWAYS, HOMES and NO SCORES.
- **SUCCESSFUL** SELEC guarantee that Poolswinner performs significantly better than chance.
- **ADAPTABLE** Probabilities are given on every future - choose as many selections as you need for your bet. The precise prediction formula can be set by the user - you can develop and test your own unique method.
- **SIMPLE DATA ENTRY** All team names are in the program. Simply type in the reference numbers from the screen. Or use FIXGEN to produce fixture list automatically (see below).
- **DISCOMPRODRIVE COMPATIBLE** Tapes supplied with conversion instructions.
- **PRINTER SUPPORT** Full hard copy printout of data if you have a printer.

AVAILABLE FOR Spectrum (48K), Commodore 64, VIC 20 (+16K), AMSTRAD, BBC B, Atari (48K), ZX81 (16K), Dragon, Apple II, ELECTRON

PRICE £15.00 (all inclusive)

Stored, with detailed instruction booklet

NOW AVAILABLE

FIXGEN 85/6 AT LAST! No more struggling for hours to get the fixture list into the computer. FIXGEN has been programmed with all English and Scottish fixtures for 1985/6. Simply type in the date, and the full fixture list is generated in seconds. Fully compatible with Poolswinner. **POOLSWINNER with FIXGEN £16.50 (all inclusive)**

COURSEWINNER V3 NOT JUST A TIPSTER PROGRAM, Coursewinner V3 can be used by experts and occasional punters alike. **THE PUNTERS COMPUTER PROGRAM**

You can develop and test your own unique winning system by adjusting the analysis formula, or use the program in simple mode. Coursewinner V3 uses statistical analysis of major factors including past form, speed ratings, course statistics, prize money, weight, going, trainer and jockey form etc. etc. It outputs most likely winners, good long odds bets, forecasts, tricast etc. The database includes vital course statistics for all British courses. You can update the database - never goes out of date.

AVAILABLE FOR Spectrum (48K), Commodore 64, BBC (B), AMSTRAD, Atari (48K), Apple II

PRICE £15.00 (all inclusive) includes Flat AND National Heat versions.

Tony Bridge's Adventure Corner

MUD adventuring

Continuing our look at overseas adventurers and their problems, let's hear this week from James Bonello of Malta. He's written to me several times over the months, and I feel that I should mention him before he gets too angry!

He's the owner of a Commodore 64, and is particularly interested in corresponding with others who are working their way, like him, through *Eurekal*. Write to: 161 Old College Road, Sliema, Malta.

On now to a couple of Infocom adventures, and some help for players stuck in *Planetfall* and *Starcross*. D R Coomber, from Staffordshire is working through the former on his Einstein. He asks: "How do I kill the Microbe at Station 326 and get back to normal? How do I get into and out of the Radiation Lock? Where is the Radiation Suit?" To deal with the Microbe, you'll need the Laser - turn it up to the maximum setting (before you meet the Microbe) and then fire repeatedly. Now, here's a surprise, which may well throw many players off the scent!

This is not a zapping exercise - the laser has no effect on the Microbe, but it does love warm things, and now your laser will be red-hot. Just throw it into the cavern and the Microbe will follow. As for the Radiation Lock, you can't get into it (it's there for a bit of colour), and so you can also forget about the Radiation Suit. Mr Coomber is happy to help anyone currently working through the adventure, and his address is 14 Francis Green Lane, Penkridge, Staffs ST19 5HF.

Starcross is also giving trouble, to Mr

B Walker for one, whose cry from the heart is: "Help! I'm stuck and would be grateful for any help that you can offer." He's at 38 Roman Way, Edgbaston, Birmingham B15 2SJ.

Geoff Phillips is stuck in the game too. "In particular, extracting the red rod from the rat-ant nest, trying to get down from the control bubble and understanding the 3-slot machine."

To get the rod, throw something at the nest - anything will do except another rod! To get down from the control bubble, jump off and then fire the gun at the drive bubble. There are, as you know, several slot machines around - try inserting the ceramic disc to get a result.

And while I'm talking of Infocom adventures, let me report news of a most profound and shocking nature which has momentarily shaken my previously rock-like faith in the company - on idly messing around with *Deadline* the other day, I actually found two *spelling mistakes* in close succession! No, I couldn't believe it either, but there you have it. . .

Geoff also asked me to pass along a few hints. "In *Beyond's Shadowfire*, you'll find lots of interesting things to be found around the ship. For example, the captain's cabin has a key-card that gets you in through the door, and there is also a strange device in the science area. It would have been nice if the game awarded a bonus score for collecting souvenirs (there are hundreds of weapons all over the place). To stop Zoff escaping get Manto to drop the transporter over the doorway, then retire back to the ship.

"Once there, Manto can monitor who is passing the transporter and beam up a surprised-looking criminal. In fact, using Manto to beam people up and down seems to be the main tactic for surviving the attack outside the room where the Ambassador is kept.

"A problem with Infocom games is that, when you come to the end you often have to switch off and reload. An improvement, on the C64 anyway, is to type *Poke 792, 0:Poke 793,12* before loading the game. You are then able to restart by typing *Restore*."

Most of you, I imagine, will have heard or read about *MUD*. It's short for *Multi-User Dungeon*, and until now was only available to Essex University students and lucky Commodore owners with

modems (used to tap in to the main computer, in the same way as user tap into Prestel or Micronet).

Richard Bartle and Roy Trubshaw, a pair of former Essex University students, set up the first *Dungeon*, which is still running, back in 1980 on the University's main-frame. I've had only a very brief exposure to *MUD*, but it's absolutely fascinating. Imagine a *Zork*-like scenario, with lots of gold, treasures, combat and most important, lots of difficult, complex puzzling and detective work - and then share the adventure with lots of other players, all trying to out do each other (and you!) in scoring points. Apart from collecting treasure to gain points, they are also won by killing off other players (and lost, of course, by being killed), which is why proceedings can get heated! Points are important, as your rating goes up according to how well you have played, the ultimate accolade being promotion to Wizard. Attaining this much contended position renders you pretty well invincible, but also allows you to actually change the parameters of the game itself. This means that the more humble player can be getting along quite well in working through a particular problem, and then find that he has been led up a long garden path by a sniggering Wizard. This, rather than putting anyone off, is all part of the fun, and indeed an incentive to keep slogging away at amassing points for your own apotheosis.

I could go into far more detail, but why not try it for yourself? Soon, *MUD* will become available to any computer-owner with a modem. The compunet version is apparently opening up to non-C64 owners this month (see News July 25 issue) and an enhanced version from British Telecom, which will be available for a trial period in September, is scheduled to come on-stream in November.

In order to play the BT version, the user must first purchase a *MUD*-pack for £20 (and early purchasers will be able to play free for that trial month), after which an hourly charge is made while on-line to the *MUD* computer.

I find all these charges (BT and Compunet have different scales, with Compunet requiring a monthly subscription, the level of which decides your hourly charge) rather high at the moment.

Knowing how addictive *MUD* can become, I shudder to think of my phone bill - imagine two or three hours of play a night for three or four nights a week! Do they have soup kitchens for adventurers? I'm sure, though, that if the project becomes a success, that these charges will come down.

I'd recommend *MUD* unreservedly to any millionaire adventurer, and if the rest of us can keep our modem adventuring to a reasonable level (difficult though it will obviously be!), then I think multi-player adventures like this could become very important in the future.

Adventure Helpline

Going bananas? If you are stuck in an Adventure with nowhere to turn do not despair - help is at hand.

Fill in the coupon, explaining your prob-

lem, send it to us, and a fellow adventurer may be able to help.

Remember - the system only works if those adventurers who have solved the puzzles get in touch. Every week is Save An Adventurer Today (SAAT) week!

Maddocks, 8 Pine Dale, Rainford, Merseyside WA11 8DP.

WDSOFTWARE

For the QL:

WD Utilities (3rd ed) (base £5.50)

PRINT 60-file Directory or view it on one screen, one-key LOAD, COPY or PRINT 60 files with one key (allows for namesakes). Multiple FORMATTING to prevent corruption by stretching of tape. TOOLKIT to give dated, numbered modules in program development. PRUNE old files to release space (one key DELETES a file). Full instructions in QULL file. Use up to 5 EXTRA MICRODRIVES (add on your Spectrum ones!)

WD Utilities for CST Q-Discs (base £8)

100-file capacity, for CST/Computamate disc systems AND up to 4 extra microdrives. User-friendly timesavers.

ReiQL (3rd ed) (base £3)

500 useful QL references in an ARCHIVE file (too long for one cartridge with Utilities and Morse).

For Spectrum/QL/BBC

WD Morse Tutor (base £4)

From absolute beginner to beyond RYA and Amateur Radio receiving. Adjust pitch. Set speed to your test level (4-18 wpm). Learn from single characters, via groups with wide spaces to random sentences; decrease spacing to normal. Write down what you hear, then CHECK on Screen or Printer (or speech for Spectrum with Currah Microspeech). Also own message, random figures, letters or mixed.

For Spectrum 48K

Tradewind (base £4)

Sailing/trading strategy game with graphic surprises.

Jersey Quest (base £4)

Text adventure with Bergrac and the Dragon (not disc).

PRICES (incl Europe postage - elsewhere add £1)

Spectrum/BBC Cassettes - base price only

QL or Spectrum Microdrives - £2.00 cartridge plus base price

5 1/4" Floppies, £2; 3 1/2" Floppies, £5. (please state format wanted)

Two or more programs on medium - pay medium + base, eg. WD Utilities and ReiQL for £10.50, but IM-POSSIBLE to mix QL/BBC/Spectrum programs on one medium. Send YOUR cartridge and pay base price but FORMATTED it FIRST in your DRIVE 1 for compatibility.

SERVICES

MANCOMP SPECTRUM MANCOMP BBC MANCOMP

EXPRESS SPECTRUM & BBC REPAIRS!!

First company in all U.K. to introduce while-u-wait service. Now first to offer an international repair service!

"I have come across a firm that will be more than willing to advise you as to how to remedy your problem. They are called MANCOMP, and as well as repairing faulty Spectrums, are also quite willing to discuss your problems with you, and offer reasonably cheap, and [MORE IMPORTANTLY] correct cures."

Phil Rogers 'Peek & Poke', 'Popular Computing Weekly' Jan. 1985 (Vol. IV, No. 1)

"My Spectrum blew recently. I took it to MANCOMP, who fixed it in 8 minutes! And for less than £10. They are local, clued up, and blindingly efficient."

Computer column, "4 Heaters Digest" (Vol. I, No. 11)

"One firm, at least, can usually effect any necessary repair over the counter in 45 minutes. Based in Manchester, MANCOMP can offer what is arguably the fastest turnaround in the business, to personal callers." "Crash Magazine", June 1985

"Of all the repair companies 'Sinclair User' spoke to, MANCOMP seemed the most professional when it came to advice and a helpful attitude." August 1985

- Send Spectrum incl. £1.80 return postage (U.K.), £2.50 (Europe), £6.50 (Middle East, Africa).
- Or phone/bring Spectrum for free, no obligation estimate.
- We repair most Spectrums in minutes.
- Every Spectrum sent insured and by receipted parcel post (U.K.), registered air mail if overseas.
- No hidden costs.

MANCOMP LTD. (Dept P31)

Printworks Lane, Manchester M19 3JP.

UTILITIES

NEW TAPE TO DRIVE TRANSFER OF RECENT PROGRAMS

SPECTRUM owners can even transfer many of the LATEST fast/jerky programs to their drives at **LOW COST** with our software and information sheets. No risk as our programs carry our **MONEY BACK GUARANTEE** (not updated).
Firstly you will need our MD1b (for M/Drive) or WD1b (for Wafa or disc drive) programs. Includes the ability to chop/split bytes in one go, bytes move, 'VAL' creator and REMkill. Make visible etc. **FULL** manual with example transfers. **MD1b or WD1b cost on tape £5.99**. "MD1b manages more programs" - *Your Spectrum*
To manage the latest programs you will also need our T7 program which INCLUDES the ability to ALTER fast/jerky loaders to "normal".
*Features Baud rate measurer
*Jerky detector
T7 cost **£6.50 on tape**. On M/Drive cartridge **£9.99** (incl MT6, an extra M/Drive utility).

NEW LERM INFORMATION SHEETS

Each sheet gives you the DETAILED instructions (using our software) required to transfer to your drive 8 of the more POPULAR programs. They cost **£2 EACH** plus SAE. Up to sheet 4 available.

SPECIAL OFFER - TRANSFER PACK. Buy MD1b + T7 on M/Drive cartridge + INFORMATION SHEETS 1-3 for **£15.50** (other drive owners get WD1b + T7 on tape + sheets for same price).

UPDATE SERVICE: Send old tape + large SAE to get a **£2 REDUCTION**. OVERSEAS: add £1 Europe. £2 others for each product. **SAE for enquiries.** PL460

LERM, DEPT PCW, 10 BRUNSWICK GDNS, CORBY, NORTHANTS NN18 9ER

AMSTRAD CPC464 colour monitor for sale mint condition some software included. Only £270 phone 061 881 3651 Tony.

AMSTRAD (green tube) + Basic part I £200 ono new April little used boxed etc. Phone 091-472 3263 eves.

PANASONIC MSX 64K Boxed with leads. Manuals and a cartridge game. Unwanted gift with full guarantee. Worth £300 bargain £185 ono Tel. 01-938 1907 after 6pm.

AMSTRAD software all originals Quill £9, Blagger, Codename Mat, Manic Miner, Roland Ropes, Survivor, Technician Ted and Fighter Pilot £4 each Tel. 0630 57129.

SOFT OPTIONS handbook and artist of magic pen, symbol 464, big letters, paint 464, the artist. Swap for Myrddin Flight simulation or W.H.Y. Money's Either Way Paid Stan 593 8522.

MAKE MONEY - All you need to know to set up your own software company. Package includes advertisement rates, marketing, duplication, etc. Send £2.50 to M. Eiford, 114 Northcott, Bracknell, Berkshire.

AMSTRAD CPC464 mono screen & DK Tronics speech synthesizer & 3" single disc drive & Kaga Taxan KP-810 printer & £500 + software & magazines & books & discs: (Tasword, Masterfile, Pascal 47 games) VGC £850 ono (No split), Rick 444 9132.

AMSTRAD CPC464 (colour) in box, one month old. Complete with manual, or logo and system utilities. Over 11 months guarantee £400 ono Tel 0783 (Sunderland) 42788 after 6pm.

WANTED - BBC Penpal, preferably with disc drive - to swap programs, hints, tips, etc. Write to - Paul Phillips, 13 Mountain Rd, Conwy, Gwynedd.

48K SPECTRUM plus, 6 month's guarantee, ZX printer, Kempston Interface, over £100 of software, £50 worth of books, whole system worth over £300! Quick sale, bargain only £145 ono phone now! Mark 907 5396.

ATARI XE130 128K plus disc drive and discs, and Dos 2.5. Six weeks old £320 ono. Phone Steve 0268 727066 daytime or 0268 729139 nights.

ELECTRIC software's new graphic adventure, "The Wreck", for 48K MSX micros, for sale, one only, R.R.P. £14.95, my price £10 ono. Tel. Neil on 0532 672723.

AMSTRAD software for sale, all titles, original as new, Combat, Lynx, Galactic, Plague, Hunter, Killer, Roland, Caves, 30, Star Strike. £4.95 each. Phone 01-743 3931 ask for John.

ADVENTURE HELPLINE

Twin Kingdom Valley on Electron.

How do I get the giant to follow me to Watersmeet? Alan McGregor, 6 Marchmont Gardens, Strathaven, Strathclyde. (Tel: 0357 22082.)

Aztec on Spectrum. I cannot get into the temple or across the river in the river valley. D. Kisby, 89 The Vineyard, Richmond, Surrey.

The Hulk on Spectrum. How do you kill bees? What does the fuzzy area mean? How do you kill ants? What do the scratch marks on the wall mean? Any help at all. Graeme Cloughley, 36 Mungahed Road, Bainsford, Falkirk, Scotland.

Valkyrie 17 on Spectrum. I have got out of the hotel, got the skis and book on skiing, but I cannot get down the slope because the voice stops me. Do I have to do this? What do you do with the grille in the hotel? Mark Bell, 98 Grande Avenue, Wickford, Essex.

Message from Andromeda on Amstrad. How do I get past the alien commander's chamber? How do I gain access to the teleport and how and where do I use the explosives, the coin, the metal bar and the detonator? R. Wilson, 7 Gawthorpe, off Dukess Row, Blackburn, Lancs.

Gremlins on Spectrum. How do I stop the snowplough from running me down and how do I create an explosion? Any help gratefully received. Symon Kendall, 50 Tower Street, Treforest, Pontypridd, Mid-Glamorgan.

Curse of the Werewolf on Vic20. How do I get into the castle if I don't have the staff? How do I make silver and what use is the telescope, sword and scroll? S Macgowan, 47 Hallgarth Circle, Kettle, Cumbria.

Tower of Despair on Spectrum. How can I escape the statue in the woods. I have all the magic items, gauntlet and staff, but keep returning to the same place. K M Thorpe, 96 Woodlands Avenue, West Byfleet, Weybridge, Surrey.

Eureka on Spectrum/C64. Is anyone willing to swap the solution to adventure 3, 4 or 5 in exchange for the answer to adventures 1 and 2. Colin Langley, 5 Clare Crescent, Botolphs, Scunthorpe, S Humberside.

Sherlock on Spectrum. How do I prove that Fionlukes is innocent? For other hints. Sara King, 41 Boxley Close, Penenden Heath, Maidstone, Kent ME14 2DP.

Catacombs on Commodore 64. How do you get past the harpy in the statue room? Chris Waite, 16 Sussex Close, Boreham, Chelmsford, Essex CM3 3ED.

Crystal Theft on Amstrad. I can't get started! I can offer help in exchange on Message from Andromeda, Jewels of Babylon and Snowball. David Carr, "Thronlea", Oak Road, Mottram Saint Andrew, Macclesfield, Cheshire SK10 4RA.

Twin Kingdom Valley on Spectrum. How do I get the desert's king treasure chest? Also any other help please. Christopher Hallam, 43 Duke Street, Cotnamhay, Ilkeston, Derbyshire.

System 15000 on Spectrum. Any help please. Suzi yann, 3 Grainger Street, Dudley, West Midlands.

Zim Zala Bim on Commodore 64. How do you get out of the dungeon and what is the plank for? Clive Ditton, Church End House, Lynn road, Middleton, Kings Lynn, Norfolk.

Castle of Riddles on BBC. How do I get out of the black maze? How do I get past the bear? Kenneth Tracy, 5 Dennet Close, Mashull, Merseyside L31 5PD.

Eureka - Roman Times on Commodore 64. How do you get in the army camp? I've tried everything! Simon Talbot, 53 Fortis Green, East Finchley, London.

Castle Quest on BBC. What do you do with the wand? David Bonehill, 131 Donnington Close, Church Hill, Redditch, Worcs.

Jewels of babylon on Commodore 64. How do you cross the bridge? Where is the slab of rock? Where is the key? Chris Waite, 16 Sussex Close, Boreham, Chelmsford, Essex.

Knight's Quest on Spectrum. How can I climb out of the valley by the river? I have found the dwarf, rope, metal bar and magic compass. K M Thorpe, 96 Woodlands Avenue, West Byfleet, Weybridge, Surrey.

Urban Upstart on Spectrum. I have found the airport and I have got the book on flying and all the other objects, but I can't find the plane. What next? Marc Bell, 98 Grande Avenue, Wickford, Essex.

Rendezvous with Rama on Commodore 64. Any help from inside Rama, please. J H Picford, 5 Poplar Grove, Bollington, Macclesfield, Cheshire.

System 15000 on BBC. Could someone please send me all the telephone numbers and codes to beat the game. Paul Tang, 21 Main Street, Brianston, Burton-on-Trent, Staffs (Tel: 0283 69635).

Zkuk on QL. What do the tongs and the green tank do? How do you read the message in the pentangle. E Penman, 7 Kenneth Court, 173 Kennington Road, Kennington, London SE11.

Lords of Time on Commodore 64. I can't find the frozen lake on level 2. Michael Carroll, 3 Tuskar View, Wexford, Ireland.

Sherlock on Commodore 64. I can't do anything! Ian Faddes, 14 Mull Place, Broomlands, Irvine, Ayrshire KA11 1HP.

Dungeon Adventure on Atari. This is the first adventure game I've tried. I can get almost everywhere in the game but I don't know how to solve it! Mike de Cock, Primeur Straat 11, 21000 Deurne, Antwerp, Belgium.

Fantasia Diamond on Amstrad. How do you break the black windows or cross the river? Sean Lambert, 44 Dunlin Road, Grovehill West, Hemel Hempstead, Herts HP2 6LY.

Eric the Viking on BBC. I've managed to set sail, but I seem to be getting nowhere from there. R Dawson, 41 Union Court, Otley, W Yorks LS21 3AS.

Winning phrase No 36: "Tasty spiv does life" from Terry Flood, Leclair House, Ferrier Estate, Kidbrooke, London, who receives £25. Others who came close include (mainly yetis): "Pope lists sad yeti" from Alan Crawford, from Penicuik and "Yetis tippie soda" from G P Craig of Dundee.

Now voting on week 37 - £25 to win

Each week *Popular* is compiling its own special software top ten chart - compiled by YOU.

And each week we will send £25 to the person who sends in, with their chart votes, the most original (witty, neat or clever - but never rude) phrase or sentence made up from the letters (you don't have to use them all) in the titles of the top three programs in this week's chart, published above.

You can still vote in the chart without making up a slogan - but you won't be in with a chance of winning the prize.

All you have to do is fill in the form below (or copy it out if you don't want to damage your magazine) and send it off to: Top 10, *Popular Computing Weekly*, 12-13 Little Newport Street, London WC2H 7PP.

Voting for Week 37 closes at 2pm on Wednesday August 7 1985. Entries received after that time will not be eligible for inclusion in that week's voting. The judges decision is final. Only one entry per individual per week will be allowed.

Name	My top 3: Voting Week 37

New Releases

HARD-CORE

Elite's computer game based on *Airwolf* the TV program has now been converted to the Amstrad.

Consensus of opinion of

Airwolf in its earlier versions for the Spectrum and Commodore was probably 'pretty good but horrendously difficult' and I think that's the case here.

The vague plot had you plotting your super high powered mega copter through a series of heavily defended caves down to where (as ever) a bunch of scientists are held captive.

This involves shooting away defensive barriers, destroying missile control boxes and, more important than anything else, carefully piloting your helicopter through what are often very narrow gaps indeed.

It's the helicopter control that poses the real headaches - the damn thing refuses to hover in one position. It's impossible to make it stop moving completely, consequent-

ly, doing this whilst also firing lasers and dodging baddies is amazingly difficult. Definitely for hard-core addicts - ordinary mortals may give up pretty quickly.

Program *Airwolf*

SIMPLE LOGIC

McGraw-Hill's Ladders to Learning series of educational titles covers some topics for kids under 13 that I was never taught - this new fangled new maths stuff. So I suppose you can say where the program *Set Theory* is concerned, I represent an under 13 year old at least as well as a real under 13 year old, more so probably.

So it has to be said that the program works very well indeed.

Pick of the week

ON THE TRACK

Racing Destruction Set is one of the more original racing games I've seen, one of the few that owes little to *Pole Position*. In fact, it owes a lot more to slot car racing.

The screen is split into two sections which shows the current racing area since pretty soon the computer car outpaces you and ends up on a later section of track. The display is a kind of 3D in that the cars are displayed at an angle and you can see their sides as they turn corners.

The real skill of the game is judging speed - just like *Scaletrix*, if you leave the cars alone they will steer themselves along the right path but hopelessly slowly. It's up to you to use acceleration and braking to make a fight of it with the other car.

There are jumps and chicanes to make life difficult

and, a major feature of the game, you can customise your own track layout using a menu driven command system.

Again it reminds me of nothing so much as the car racing games of old - no bad thing. I much prefer this game to the alternative track disappearing into the middle distance style and the design makes for a greater competitiveness as a two player game - you get a much clearer sense of how your rival is doing.

Palace Street

London SW1E 5HS

Based around grouping basic geometric shapes into different sets and asking simple questions, *Set Theory* teaches simple logic, which is what most new maths turns out to be all about. It shows that Socrates isn't a fish after all. Nor are all men small blue oblongs.

TRUCKING

All together now: "I like trucking, I like trucking, I like trucking and I like to truck!"

Well, it had to happen - at last someone has brought out a truck driving simulation - the someone being CRL, and the program *Juggernaut*. Did I say simulation? As they say, show me a 40 tonner that can do 0-40 in under six seconds and I'll show you a cast iron hedgehog.

But really, it's not all that bad. Despite having graphics only marginally better than the Paris section of *View to a*

Kill, it really is quite fun as you manoeuvre your rig around town, picking up various loads. No other traffic here (perhaps it's a Sunday) but there are traffic lights and stuff.

If there's a lorry driver in the family, then it's highly recommended. Otherwise, strictly for Yorkie fans.

TEDIOUS

Mayday really is dreadful. The title may deceive, but what we have here is a version of boring old *Lunar Rescue*. For those too young to remember it, the game involves piloting a space shuttle down the screen dodging meteors, landing on a suitable landing pad and returning to the mothership at the

top of screen by blasting one's way back up the screen.

So it goes, different screens have more difficult landing sites which involve negotiating your way down winding channels.

It's OK as a game but then it has been for centuries and there are zillions of other versions at least as good as this one. Utterly tedious and should be on a cheap label if anywhere. £7.95 is just silly.

SINGLE STEP

Assembly Language Programming on your Commodore 64 is a combined Assembler package - one of several dozen.

There's nothing really all that special about this package except that it's just been released and it's relatively cheap at £18.95.

The Assembler accepts source code written in basic lines which can be edited using the normal text and screen facilities. Labels may be up to 75 characters long and the program is not fussy about hexadecimal or decimal numbers and how many spaces you leave between mnemonic and value.

The Disassembler also accepts hex or decimal and will

COMMODORE 64 MACHINE-CODE ASSEMBLER/ DISASSEMBLER

function continuously in pages or single steps.

Both parts of the package are about as easy to use as they can be and the Pseudo instructions acceptable to the Assembler may prove to be a godsend; for example, DFS lets you enter a character string at the current assembly address and could therefore save you hours on titles and headings.

EXPLOSIVE

Grand Prix Rally II is a racing game for the Amstrad in the classic style - the rear view of the car and a road that is drawn into a point in the far horizon, giving an illusion of distance.

It's a standard computer

trick and how well it works depends on the effectiveness of the 3D scrolling effect - on the Amstrad it looks good, although the car is slightly wonky when turning sharp corners.

The car is operated simply by joystick left, right, forward makes you go faster - no gears to worry about. There are other cars on the track, so, as ever, the game is all about quick reactions: there's

a fairly effective explosion when things go wrong.

Interest in the game is maintained by a variety of driving conditions which affect the handling of the car and various sections of road where miscalculations on corners are fatal.

This Week

Monster creation

The story of Dr Weizenbaum has become fairly famous. He's the man who back in the mid-seventies put together some clever programming tricks to produce *Eliza*, the almost-human computer program which - like her namesake in George Bernard Shaw's *Pygmalion* - learnt to talk so well that you could hardly tell she wasn't the real thing.

Slightly disguised as *Doctor, Eliza* became a brilliant parody of a psychotherapist, responding to a patient's confessions with gently probing questions.

Dr Weizenbaum was immensely pleased with what he'd done - until he realised that everyone else was taking the program seriously. Learned journals were predicting the total computerisation of the psychiatric industry; students were secretly plugging in for hours of late-night conversation about their favourite topic - themselves. The last straw for Weizenbaum was when his secretary, who actually knew many of the little tricks that went into the program, asked him one day if he would leave the room so that she could consult the computer in private.

"But it's only a trick! I didn't mean this to happen!" howled the unhappy Weizenbaum to anyone who would listen, while the public (and some computer specialists who should have known better) continued to hail his program as a breakthrough in Artificial Intelligence.

Dr Weizenbaum's pain and remorse are amply apparent in his book *Computer Power and Human Reason*, published by Pelican (a reprint of the 1976 American edition, but with a new preface expressing disquiet about the moral values of video games). It's a striking book, with many interesting things to say about computers and their limitations. The Weizenbaum conclusion is that computers can do almost anything - except the things

that are actually important.

The main point he makes is about the enormous difference between the calculating powers of a computer and real intelligence, the human quality that comes not from electric currents activating logic gates but from the human experience - physical, moral, emotional, that machines can never know. Machine intelligence will never be more than a pale copy of limited aspects of human thought.

But some of Dr Weizenbaum's comments made me wonder. For example, he writes, "I had thought it essential, as a prerequisite to the very possibility that one person might help another to cope with his emotional problems, that the helper himself participate in the other's experience of those problems." This brought me up short as I thought of all those people who have been helped to cope with their problems by people they have never met - by authors of books and poems, for instance, that, sometimes very indirectly and in ways quite unintended, speak to their own condition.

Perhaps when writing was first invented, there were people as distrustful of the new medium as Dr Weizenbaum is of computer software. They could have pointed out all the subtleties that any written account must, by its nature, leave out. They would have worried that the relationship or author and reader could never quite be that of man meeting man in the flesh. Remote influence is nothing new. It's the basic condition of literature.

Perhaps computer awareness will have grown up when we realise that there is nothing magically different about a piece of computer software. It's just like a book, in that it has an author, who may be right or may be wrong, but either way is *responsible*, whether he likes it or not.

As for people misunderstanding you - that happens to authors all the time. And when were a writer's intentions a guide to the value of his work?

I'm afraid I can't resist a smile when I read of Dr Weizenbaum's horror when he glimpsed his creation reflected in the eyes of others.

But his creation it was - every byte of it determined by him. It's Baron Frankenstein who's the real monster, after all.

George Simmers

Four across

Puzzle No 169

In this crossnumber puzzle, numbers have to be filled in rather than words. Can you complete the puzzle and also determine the values of A, B, and C.

Across

1 B²

4 A*B

8 C²

Down

1 (A-B)²

2 (A-B)³

3 C

Solution to Puzzle No 165

Of the 2187 different possible combinations of cards, 343 of them will win and 1854 will lose.

```
10 LET MULT=0:LET NONMULT=0
20 FOR A=1 TO 13
30 FOR B=1 TO 13
40 FOR C=1 TO 13
50 LET S=A+B+C
60 LET P=A*B*C
70 IF P/S=INT(P/S) THEN MULT=MULT+1 ELSE
NONMULT=NONMULT+1
80 NEXT C
90 NEXT B
100 NEXT A
110 CLS:PRINT "#WIN=";MULT,"#LOSE=";NONMULT
120 END
```

The program uses three *For/Next* loops to generate each of the possible combinations of cards in turn. The sums and products of these cards are then calculated and if the product is an exact multiple of the sum, then the *Mult* variable is incremented by 1. Otherwise, the *Nonmult* variable is incremented.

After all combinations have been assessed, the result is displayed.

Winner of Puzzle No 165

The winner is Keith Simpson of Poole, Dorset, who receives £10.

Rules

The closing date for Puzzle No 169 is September 4.

The Hackers

ATARI 520ST

POWER WITHOUT THE PRICE

THE NEW ATARI 520ST

Under the new leadership of Jack Tramiel (former boss and founder of Commodore Business Machines), Atari Corporation have marked their entry into the world of business/personal computers with a machine which leaves the competition standing. Tramiel's slogan 'Power Without the Price' has been implemented in the manufacture of the new 520ST Atari 520ST color computer which offers the user amazing high performance at an incredibly low price. Launched as a work station, this new system incorporates seven software packages as well as the 520ST computer with 512K RAM, mouse controller, high resolution monochrome monitor (640x400), 95 key keyboard with 18 key numeric keypad, MOU Interface, GEM and a 500K 3.5" inch disk drive. All for the package price of only £595.30 (VAT in C148). Dubbed the 'Mac beater' and the 'Jackintosh' (after Atari's Chief, Jack Tramiel), Atari's new machine has been directly compared with the Apple Macintosh RRP £399 (VAT - £306), which offers similar features and capabilities but at a much higher price. It is worth noting by the UK's highly critical specialist computer press, the 520ST is likely to make a great impact in this country as a sophisticated alternative to an IBM PC, APPLE II or APPLE MACINTOSH. Create its overpriced competitors, the Atari 520ST can be hooked up to a colour monitor to unleash a choice of up to 812 colours. The addition of colour brings out the full potential of graphics packages such as GEM.

USER FRIENDLY GEM OPERATING SYSTEM

The power of the ST is increased and made user friendly by the new operating system 'GEM' from Digital Research. GEM stands for Graphics Environment Manager and allows a user friendly colour or B/W graphics interface which closely resembles that of the Macintosh. The similarity extends to the use of movable resizable windows, icons to represent objects such as disks and disk drives, and the use of pull down menus and a mouse. The advantage of all this is that the computer becomes extremely easy to use. GEM has now been implemented for the Acorn, ACT, Atari, IBM, ICL, and Olivetti. Software written for GEM on one computer should also run under GEM on another computer. This will enable the market to quickly produce a large library of software interchangeable software.

FREE SOFTWARE AND FUTURE EXPANSION

The Atari 520ST comes supplied with seven free software packages as listed below: 1) OS - Transfer Operating System based on CP/M 8.0; 2) GEM Graphics Environment Manager by Digital Research; (DI) giving a WIMP (Window, Icon, Mouse, Pull down menu) environment; 3) DR Gem Paint for creating graphics masterpieces; 4) DR Gem Writer for word processing; 5) Logo learning language to enable you to write your own programs easily using logic graphics; 6) DR Personal Basic a powerful user friendly version of the Basic programming language; 7) DOS operating system giving you access to dozens of business applications packages already available on the market. Designed with future expansion in mind, the ST also features a host of different interfaces to the outside world and an impressive list of accessories is planned. Atari will soon be releasing a 1000K (1MB) 3.5" inch disk drive, and a 15MB hard disk storage system as well as a mass storage compact disk (CD) player capable of storing an entire 20 volume encyclopedia on one disk. A full range of inexpensive printers are offered including dot matrix, daisywheel and thermal colour printers. With its unbelievable graphics, speed and software at a price which is far below that of any comparable personal computer currently on the market, the ST is set to do battle with the competition. To receive further details of the ST, from Silica Shop, just fill in the coupon below with your name and address details and post it to us.

Silica Shop Price: £551.30 - £37.70 VAT - £749.00. This price includes:

- * 512K RAM
- * B/W MONITOR
- * MOUSE
- * 500K 3.5" DISK DRIVE
- * GEM
- * KEYBOARD (95 KEYS)

ATARI 520ST SPECIFICATION

MEMORY
512K RAM (512KB total)
10K ROM expansion to 100K
For added 128K expansion 128K cartridge
200K 128K operating system

GRAPHICS
Individual addresses can bit mapped screen with 4 screen graphics modes
320x200 pixels in 16 colours (see resolution)
640x400 pixels in 4 colours (see resolution)
840x480 pixels in monochrome high res
16 shades of grey in low res mode
412 colours available in 640x400 res
16 shades of grey in low res, green and blue

ARCHITECTURE
4 custom designed chips
CPU: Chip - 1MHz Memory Manager and DMA Controller (Optional) bit mapped 1024 bit Motorola 68000 processor 16 MHz
1024 bit cache memory
eight 32 bit address registers
16 on state built in address bus
16 levels of interrupt structure
16 interrupting processing functions
16 interrupting processing functions

DATA STORAGE
High speed hard disk interface
Direct memory access 1.3 Mbytes per second
CD (Compact Disc) interface
Built in cartridge areas
Dual in line cartridge controller

DISK DRIVE
512K (as formatted) 5.25" floppy disk drive
3.5" (as formatted) storage capacity

SOUND AND MUSIC
Sound Generator
Frequency control from 50Hz to 20kHz audible
32 channels (optional) or 16 channels audible
Built in speaker amplifier
Separate frequency and volume controls
Optional analogue output
ADSR (Attack, Decay, Sustain, Release)
Voice generator
MIDI interface for external music synthesizers

KEYBOARD
Separate keyboard with programmable function keys
Backlit (optional) keyboard styling
10 keys including 10 function keys
Numeric keypad - 18 keys including ENTER
10 keys of numeric keypad

MONITOR
24" screen - high resolution monochrome monitor
500K monochrome resolution
Note: Some of the above specifications are pre-release and may therefore be subject to change

THE NEW MACINTOSH v F16 v 520ST

Imagine a Mac IIc, the 512K Apple Macintosh - that with a bigger screen, a 100 key keyboard with numeric keypad, cursor and function keys, and colour. That is your choice of what the Atari 520ST is like, except for two important things: First the Atari seems better. Second the Atari system is about one third of the cost.

ATARI'S NEW COMPACT IMAGE is an aggressive low cost computer maker is likely to raise that of Commodore when Mr. Tramiel established the new that 'Silicones' was.

August 21 1984 **FINANCIAL TIMES**
 "This is the only personal computer I know of that comes with a MOS interface as standard."
 Peter Bright March 1985 **PERSONAL COMPUTER NEWS**
 "The Atari 520ST system running on the Atari 68000 machines will have the exceptional advantage of having the PC version (GEM) styling." April 1985 **PERSONAL COMPUTER NEWS**
 "It would seem that GEM offers the ideal operating system."
 March 1985 **POPULAR COMPUTING WEEKLY**
 "I found it (GEM) extremely easy to use and was very impressed with the way in which it organises the underlying hardware and operating systems lurking under the surface."
 Peter Bright Feb 1985 **PERSONAL COMPUTER WORLD**

PRESS COMMENT
 "The electronics in the machine are a work of art... The heart of the 520ST is a Motorola 68000, one of the most powerful 16-bit processors around and in many respects it is close to being a 32-bit chip... when the machine appears in the shops... it is at the front end of the queue to buy one."
 Peter Bright June 1985 **PERSONAL COMPUTER WORLD**
 "The machine is significantly more powerful than an IBM PC... It is possible to design a more powerful machine, but it is not."
 May 1985 **PERSONAL COMPUTER NEWS**
 "... the use of GEM makes the new range of Atari computers... the most attractive of any Atari computers and are now firmly established as computers that they are already being called 'Jackintoshes'."
 May 1985 **PERSONAL COMPUTING**

The new Atari ST computers truly represent to the computer user 'Tramiel is saying... we can use computing power without the price' March 1985 **ANALOG COMPUTING**
 "(The ST) uses the most modern technology that is available in a package that gives a professional impression."
 May 20th 1985 **POPULAR COMPUTING WEEKLY**
 "The Atari ST is one of the most elegant designs I have seen. Atari has used an original and elegant method of memory management which almost makes the ST faster than any other PC on the market... in any price bracket... The 50K dollar question is would you 'buy' and spend money for 'user' for which the only answer is 'Try and stop me'."
 John Lennell - July 1985 **ELECTRONICS & COMPUTING**
 "The 520ST is a remarkably excellent... The 520ST hardware is the new standard by which others will be judged."
 July 1985 **YOUR COMPUTER**

SILICA SHOP

ATARI WE ARE THE UK'S No1 ATARI SPECIALISTS ATARI

At Silica We have been successfully dedicated to Atari ever since their products first appeared on the UK market. We can attribute our success largely to the Atari specialisation which we practice and to the user back-up we provide. Rest assured that when you buy a piece of Atari hardware at Silica you will be fully supported. Our mailings give news of software releases and developments will keep you up to date with the Atari market and our technical support team and sales staff are at the end of the telephone, let us deal with your problems and supply your every need. With our specialist bias, we aim to keep stocks of all the available Atari hardware, software, peripherals and accessories. We also stock a wide range of Atari dedicated books and through us, the owners on our list can subscribe to several American Atari dedicated magazines. We can provide a full service to all Atari owners and are now firmly established as the UK's NUMBER ONE Atari specialists. Here are just some of the things we can offer to our customers:

- * FREE POST & PACKING ON MAIL ORDERS
- * FREE NEXT DAY SECURIOR DELIVERY
- * INFORMATION LITERATURE SERVICE
- * TECHNICAL SUPPORT TEAM
- * HIGHLY COMPETITIVE PRICES
- * AFTER SALES SUPPORT SERVICE
- * REPAIR SERVICE ON ATARI PRODUCTS

If you would like to be registered on our mailing list as an Atari computer owner, or as a person interested in buying an Atari machine, let us know. We will be pleased to keep you up to date with new Atari developments free of charge. So, return the coupon today and begin experiencing a specialist Atari service that is second to none.
