C128 takes a nose-drive!

COMMODORE has delayed the introduction of its new C128 micro so that it may be offered with a new low-cost disc drive unit.

The C128 was originally scheduled to be in the shops last week, but has now been put back until the end of the month.

The new disc drive – the 1570 – was ordered by Commodore to replace the more expensive 1571 unit designed for the C128 in the US, apparently after the announcement by Amstrad of its competitively priced 6128 and 8255 machines.

The 1570, identical to the 1571 unit except that it uses a cheaper single- rather than double-sided disc mechanism, will retail for £199.

This means that the C128 machine plus disc drive combination will now sell for £468. This price is still over £70 more than the Amstrad 6128's price which also includes a colour monitor.

FEATURE ISSUE – EXPAND YOUR MICRO

Cartoon capers spring to life

CARTOON characters have caught the attention of software companies this autumn, as both Elite Systems and Melbourne House announce games based on animated heros.

Scooby Doo and *Wacky Races* have both been snapped up by Elite. In *Scooby Doo*, the player takes the part of Shaggy, who must explore McUrloch Castle with Scooby after he falls through a mysterious trapdoor. The rest of the investigative gang,

New QL may join Spectrum 128K?

NEWS that Digital Research and Sinclair are once again involved in discussions concerning DR's GEM operations system has further fuelled speculation that Sinclair may be planning soon to launch a successor to its present QL model – a rival for Atari's new advanced 68000-based ST micro.

Sinclair is also now expected to launch its long awaited sub-£200 128K version of the Spectrum in October.

Digital Research's Frank Iveson confirmed the talks

EDITORIAL

Despite Sinclair's dismal showing at the *Personal Computer World* Show – where it was overshadowed by born-again Atari, Amstrad and Commodore – the firm still retains much good will.

Although it is now fashionable in some quarters to snipe at Sir Clive, one thing still remains. He created the whole micro boom in this country, starting with the ZX80, right up to the Spectrum. There is hardly a single UK software house – producing for the Amstrad, C64 or whatever – which doesn't owe its existance in some way to Sinclair.

Sinclair paid the price with the QL of being first. Software houses were slow to realise the importance of the 68000 chip and trying to persuade them to write for the QL was like squeezing water from a stone. Much of the blame for the QL's comparative failure must of course still rest with Sinclair but there is no question that the QL made the acceptance of 68000-based micros from Atari and Commodore that much easier.

Ironically, most of the UK houses now writing for the ST and Amiga – which now includes most of the big names – owe their head-start over their American counterparts to the QL. Once again, Sinclair has helped the UK software houses. He unwitting turned them on to the 68000, even though most now only plan QL titles as a last resort.

It must all seem very unfair, if your name is Sir Clive Sinclair.

But there is a chance. Sinclair is thought to be working on a new 68000-based machine which, finances permitting, could steal the march on Atari. It would be capable of running much of the new 68000 software with little conversation, yet undercut the ST on price.

Could Sinclair pull off such a miracle? It would be nice to think so. There are still a great many people who, if the right machine presented itself, would buy a Sinclair micro.

And why not? Without Sinclair there would have been no micro industry – at least not in its present form. He is responsible for putting Britain on the world micro map – let us not forget that.

Computer Trade Association Magazine of the Year

BBC and Amstrad added as Soft Aid raises £350,000

A NEW Soft Aid compilation tape is set for release this Autumn, this time for the BBC and Amstrad machines.

"Soft Aid has so far raised around £350,000 for the Band Aid trust, and putting it on the Amstrad and BBC micros could push that figure up to the half million mark," said Rod Cousens, organiser of the original Soft Aid cassettes, which were inspired by Band Aid's hit record, *Do They Know Its Christmas?*

"The Band Aid trust has already received £150,000 which was passed on on July 10," Rod continued. "Another £100,000 will be paid in the near future – the difficulty is the time taken for various companies to pay their share."

When Soft Aid was first released, the focus was very much on the plight of Ethiopia.

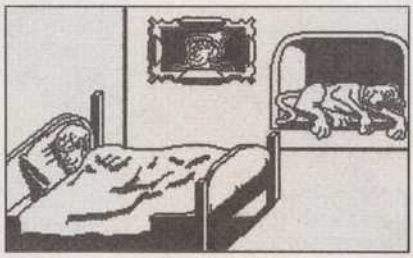
Now, with the spread of famine to the Sudan and other parts of North Africa, the Band Aid Trust is distributing aid more widely.

Cartoon capers

continued from page 1

Fred, Daphne and Velma, also appear in the game. Scooby Doo should be out at the end of October for the Spectrum (£6.95), Commodore (£7.95) and Amstrad (£8.95). Elite has not yet started work on *Wacky Races*, but the deal has been signed.

"They've run out of cartoon characters for computer games"



Melbourne House plans to release an Asterix game in time for Christmas. The game will take the form of an arcade adventure with Asterix himself appearing as a large 'cartoony' figure on the screen, according to Melbourne House's UK head, Geoff Heath. It will be released on Spectrum, Commodore and Amstrad machines, but no price has yet been fixed.

Commodore show move

THE VENUE for the Commodore Horizons Computer Show – to be held on October 26-27 has been switched from the Novotel in Hammersmith, London, to the Tech West Centre, Warple Way, Shepherd's Bush, London W12.

A free shuttle bus service will link Shepherd's Bush underground station, Novotel and Tech West.

C128 launch

continued from page 1

Both machines feature 128K Ram and will run CP/M 3.0 software. The C128 is fully Commodore 64 software compatible, while the 6128 is 464 and 664 software compatible.

"We are manufacturing the C128 now, and the machine will be in the shops by the end of September," confirmed Commodore UK's marketing manager, Chris Kayday. He declined to comment on the possibility that the C128 and 1570 disc unit may be offered as a single package to replace the planned built-in disc C128D model."

"The C128D will follow the C128 fairly closely – we think the machine will appeal to low-level business applications," he said.

GEM on QL

continued from page 1

with Sinclair over GEM: "We have always been having discussions with Sinclair, but as yet the outcome has not been decided."

"We'd certainly like to see GEM on the QL – it would help to stablise the software industry. GEM could be ported straight across to the machine; it wouldn't even need to be recompiled."

Yet GEM needs considerably more space in which to run than the present QL's 128K. The basic GEM system takes up 103K with *Gem Desktop* application taking another 77K, and a further 128K is needed as workspace for running applications under GEM.

Any QL or QL derivitive running GEM would need to have at least 256K Ram or have the GEM operating system built-in as a Rom, like the final version Atari 260 ST.

GEM would give the QL a fashionable icons/windows operating environment favoured by other 68000-based systems. So far, though, the only 68000-based system to adopt GEM is the Atari ST. The Macintosh has its own WIMP (windows, icons, mouse, pointer) environment and Commodore's Amiga has the Intuition software.

Sinclair recently dramatically cut the price of the present QL model by £200 down to £199.

Hot hits from BT

FIREBIRD has cut the price of its Silver range of titles from £2.50 to £1.99 from mid-October and announced a new range of titles that are neither Silver nor Gold.

They will be called Hot Games and four titles will be released to begin with. "They are too complex to go in our budget Silver range, but not right for the Gold Series," Phil continued.

The titles are *Gerry the Germ*, in which you play the part of a bacterium in the human body, *Costa Capers*, an arcade adventure set in a holiday resort, *Rasputin*, an arcade title with 3D-style graphics, and *Runestone*, the graphics and text adventure originally written by Games Workshop.

All four will be released at the end of October for £7.95 for the Commodore 64. Conversions to Spectrum and Amstrad are set to follow.

● Firebird has also announced a delay in the release of its conversion of the Utlimate title, *Sabre Wulf*.

Sabre Wulf should now appear on the shelves within a fortnight. *Underwurlde*, the second Ultimate game to be converted to the C64 by Firebird, is due for release in mid-October.

Both of the Ultimate conversions will be priced at £9.95.

Up-grades for CPC664 owners to 6128 spec

GERMAN company Datamedia is hoping that its Amstrad CPC664 up-grade kits will soon become available in the UK.

The kits give an additional 64K Ram to the 664 enabling it to run disc software which takes advantage of the new 6128's enhanced memory, and also the CP/M 3.0 version.

Datamedia manufactures 64K, 128K, 256K and 512K cards to fit inside the CPC464 and CPC664. It has recently signed a new distribution deal which it hopes will open up export markets including the UK. No prices are yet available.

Schneider, the company under whose name Amstrad machines are produced in Germany, is also developing a 64K expansion for the 664, which it plans to release in two months time. However, Schneider is not intending to release the expansion here.

Einstein no ho-ho!

WORKERS at Tatung, manufacturers of the Einstein computer, have been instructed not to laugh whilst working at its Telford factory.

The Taiwanese-based company has issued a circular to department heads outlining behaviour standards expected at the workplace.

Included were rules on smoking, drinking and eating, smoking in the toilets and not playing or laughing in working hours.

It is unclear whether workers indulging in outbreaks of mirth were those involved with the Einstein computer.

Atari deals for 130XE and 800XL

FOLLOWING the announcements of bundling packages from Commodore and Sinclair, Atari has put together 'bundles' for its 800XL and 130XE micros.

The 800XL is now available in two different packs – with a joystick and game cartridge for £70, and with a data recorder, joystick and software at £99.

There are two different packs also for the 130XE – the first comprising the micro, 1050 disc drive and software at £265.65, and the second a wordprocessing package with the 130XE, 1027 printer, wordprocessing software at £350.75.

On its own, the 130XE has come down further from its original price of £169. It is now £140.

Imagine team resurfaces

BRATACCAS, the Atari ST game launched at the *Personal Computer World* Show, is all that remains of Imagine Software's 'megagame' *Bandersnatch* project.

Psygnosis, the company developing *Brataccas*, includes several former Fire Iron and Imagine staff, including Ian Hetherington, Dave Lawson and Eugene Evans.

After Imagine crashed in July 1984, the unfinished *Bandersnatch* 'megagame' project was bought by Sinclair Research, who commissioned Fire Iron to complete the work for the QL.

Sinclair's funding ceased several months ago, and Psygnosis was then formed by members of Fire Iron, set up and funded by businessman Richard Talbot Smith.

Both *Bandersnatch* and the QL were set aside as the team concentrated on the Atari ST.

SHOW FOR AMSTRAD COMPUTER USERS

Everything for the Amstrad Computer User

Saturday 5th and Sunday 6th October

10.00am to 6pm

Tech West Centre
Warple Way
Shepherds Bush

Letters

Great value?

With regard to G Wylie's letter (September 5), I don't know what all the fuss is about!

CPC664 owners are not 'suckers'; nor have they purchased a machine that is unsupported in any way – all existing 464 software (disc and cassette) which is compatible with the 6128 will also run on the 664. Moreover, there are many who prefer the more 464-orientated styling of the 664.

So snap out of it all you 664 owners. Which other company could have provided you with a computer, disc drive, monitor, CP/M and Dr Logo all for around £320? It's still great value and it *is* fully supported.

Ivor Spital
Laboratory Manager
Amstrad Consumer Electronics

Gift Coupon

Here is the second of the four coupons you will need to claim your *Popular Computing Weekly* Free Gift – either *Tony Kendle's Arcade Addicts' Handbook* or a Sunshine game cassette.

Cut out the coupon and stick it on to the special reply flap attached to the front of the September 12 issue.

Free Gift Coupon No 2

Recycled chips

I agree completely with G Wylie (September 5) about Amstrad giving CPC6128's to CPC664 owners.

I bought a CPC664 on May 7 when the next Amstrad was due out in January '86. As the monitors used for the CPC664 and CPC6128 are identical, Amstrad should take back my CPC664 in exchange for a CPC6128 without monitor at no extra cost. They can take all the chips off the PCB and use them in a CPC6128 or CPC664. They can also take the disc drive and use it in a CPC6128.

As it is Amstrad will go in the *Guinness Book of Records* for the shortest lived computer.

Black cloud

It is with growing concern that I note the ever-increasing popularity of the so-called "shoot-em-up" type of arcade game.

During man's exploration of space, it is inevitable that, sooner or later, he will encounter extraterrestrial civilisations.

It is imperative to our survival that we realise the only way to approach these aliens would be peacefully, preferably followed by a scientific and/or cultural merger. But when we are instilling into our populace the inate urge to destroy anything alien, we are simultaneously placing an ominous black cloud over man's very survival.

An even more worrying facet of the shoot-em-up cult concerns terrestrial monitoring by alien beings. We have absolutely no way of knowing whether the Earth is being monitored by a technically-superior civilisation.

Suppose for one moment that it is. Now assuming that they haven't gone through a similar "shoot-em-up" phase in their past, and that the very concept of a "game" is incomprehensible to them, then what do you think they will think when they see half the Earth's population squatting over VDUs and zapping pixelised aliens with an apparently insatiable gusto.

My guess is that they would be unlikely to permit the continued existence of the human species.

I'm pinning my hopes on two things – that the aliens can read English, and that they subscribe to this magazine. If so, and they read this letter, then humanity will be able to breathe a sigh of relief.

Wobbles

Program *William Wobbler* **Micro** Commodore 64 **Price** £12 **Supplier** Wizard Development, Alpha House, 10 Carver Street, Sheffield S1 4FS.

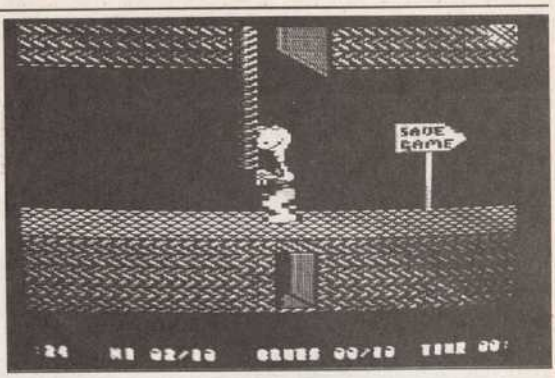
A new departure from Tony Crowther – a game that isn't based on *Loco*.

William Wobbler is a strange and complicated arcade adventure with some excellent graphics. It features a central (enormous) sprite which looks like a Dragon with human body and a neck that wobbles like those nasty dogs in the backs of cars.

In essence the mechanics of the game are the usual ones, jumping over things, climbing things, collecting things, solving puzzles, but the look of the game definitely gives it an edge of originality.

Within the game are ten clues to solve a final riddle and there's a price of £1,000 worth of treasure for the first to complete the game on each of the micros on which the game is available. To enter you submit your solved game saved on to an official entry disc. There is no cassette *Save* facility, though the disc *Save* game is one of the nice features of the game – to do it you must actually guide William to a certain section of the game indicated by little signposts saying Save Game – a clever touch.

The game is, to begin with, extraordinarily complicated, you quickly realise that you only get one life and on the first 27 goes this is lost within about three seconds as William's head is knocked off by flying frogs or his legs swiped by pink snakes. The initial solution seems to be a matter of knowing which pot holes to go down, some combination appears to remove certain obstacles and get you into the meat of the game. I found it more infuriating than challenging though. In fact my irritation was added to by the bouncey 'Oh what a happy day we're having' music that runs through the game.

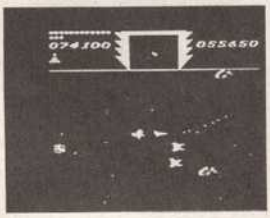


Graphically very neat, and once you get involved probably utterly captivating. I couldn't help wishing there was an idiot level of play to begin with even if it didn't contribute to the prize.

Graham Taylor

Speed kills

Program *Deathstar* **Micro** BBC B **Price** £9.95 **Supplier** Superior Software, Regent House, Skinner Lane, Leeds LS7 1AX.



At last a shoot-'em-up game that demands strategy as well as fast reflexes.

Deathstar is all go from the start as you fly a hyperspeed ship through space strewn with planetoids. There's only one speed on this ship: maximum.

You have to mine planetoids for drive crystals but various nasties are stealing the bread from your mouth . . . and using the crystals to build deathstars – the most deadly devices in the universe. Your only hope is to collect enough crystals to form your own starbombs – leaving enough of them for a deathstar to run into may save your skin. If you have time then shooting up the meanies is valuable – and satisfying.

You do need a colour display for this game to identify the baddies and so be prepared for what they might do to you – they're mostly harmless but . . .

Controls are keyboard only but sensibly set out, sound effects are reasonable and there's no horrible tune waiting for you between rounds.

Good fun, if a little pricey.

Dave and Jan Watterson

Odd bits

Program *Talos* **Micro** Spectrum 48K **Price** £7.95 **Supplier** Silversoft, Kings Yard, Carpenter's Road, London E15

Yes, I remember *Talos*. Big guy; 'battle robot' he called himself. Had his moment then went all to pieces and now, blow me down if we don't need our fragmented friend again.

Of course he's not himself so his first task is to find his bits – namely one arm. After that, he can go off in search of the Crown of Eternity.

Now this green and pleasant land is unusually bustling with (I quote) 'terrifying creatures'. Such as? Psychotic snails, killer squirrels. . . what sort of 'battle robot' is *Talos*? Not the sort you'd invite on a picnic, I'd say.

If my reaction to Talos's prowess when faced with a cuddly bunny is none too hot, I'm positively underwhelmed when it comes to this game's graphics which are a good two years out of date. Despite this I found it moderately enjoyable, but a nagging voice kept saying I should be getting more.

John Minson

Wah! Games

Program *Waterloo* **Micro** Spectrum 48K **Price** £11.50 **Supplier** K W Software, 155 Ringinglow Road, Sheffield.

The computerised wargame can take several forms, from the arcade presentation of Imagine's *Stonkers* to the approach chosen for *Waterloo* which comes with counters and hex map. While this may infuriate the microchip purist it warms the heart of an old boardgamer like myself.

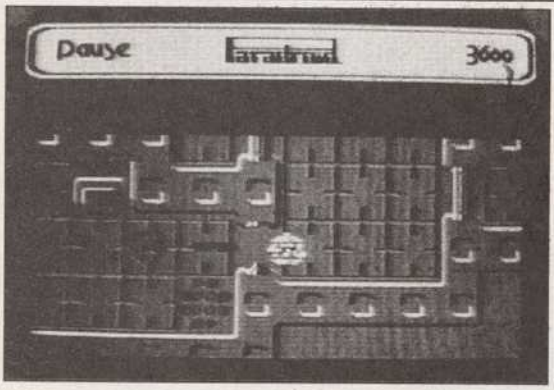
The battle of Waterloo is a favourite for simulationists and this is far from the most complete version available. However, the reduction in complexity means that the computer can provide a powerful English army to match against French forces. It has four opening strategies and then responds tactically, it seems to be a worthy opponent.

You also gain in that enemy positions remain unknown until troops become visible, something which is very difficult in traditional board games, and enemy strengths can be reported as approximated after battles. There's an important morale factor and your generals will question orders if they are likely to lead to heavy losses.

Commands are mainly by menu, though corps are ordered by the use of keywords, such as 'Advance and engage the enemy' which again adds to mere counter shunting. Presentation is unspectacular but clear and response times are good.

This won't thrill the unconverted and its minority appeal is reflected in the price, but cerebral types and cardboard Napoleons will have a field day.

John Minson



Fresh air

Program *Paradroid* **Micro** Commodore 64 **Price** £7.95 **Supplier** Hewson Consultants, 56b Milton Trading Estate, Milton, Abingdon, Oxon.

It seems Hewson can do no wrong these days. . . the classics keep on coming, this time with a game going by the name of *Paradroid*. Written by Andrew Braybrook, author of the very respectable *Gribbly's Day Out*, it comes as a breath of fresh air after what seems like a couple of weeks of platforms and ladders.

Here you are given the task of clearing a ship of rogue droids. With 20 different levels within the ship (most severed screens in size shown in plan view) and 24 classes of droid, this would be interesting even if it were a straight forward shoot-em-up. But there's more.

Controlling an 'Influence Device' beamed on board the runaway, you can either destroy droids with your twin lasers, or attempt to take over control of them, taking you to a screen where you must outthink your droid opponent on a pseudo-circuit board, up against a strict time limit. If successful, you now control that droid (until it burns out under your unwanted influence) giving you its greater firepower, takeover ability, security clearance and so on. You must select your victims carefully, however, as attempting to takeover a powerful droid while inhabiting a weak host may cause the destruction of both.

While inhabiting a host droid, even if it is killed during combat, or burnt-out by an unsuccessful takeover, your Influence Device is left unscathed – effectively giving you almost infinite lives, if you are clever enough.

I've not enjoyed a Commodore game so much since *Shadowfire;* the whole thing just hangs together so well. The ship is sensibly organised – relatively harmless maintenance droids on the repair level for instance – but watch the bullets fly if you make for the bridge! And I suspect it has hidden depths I've yet to plum – the full significance of the consoles for instance – and what are those flashing thingies?

Believe me, this one has just the right balance of intellect and trigger instinct – which makes it one of my top games of the year so far.

John Cook

Disc aid

Program *Discpower.* **Micro** CPC 464 (with Rom board) **Price** £39.95 **Supplier** Microwpower Ltd, Northwood House, North Street, Leeds LS7 2AA.

Out of the very many Rom software releases for the BBC one of the most respected must be *Disc Doctor. Discpower,* although by a different company, is an attempt to provide a similar utility for Amstrad owners and it offers features that could make it an important buy.

Amongst other things it allows you to read the information held on disc, either on a track and sector basis or by automatically tracking through a selected file. The data is loaded in and held in a buffer and can be viewed in a hex, ascii or disassembled form – ideal for those programs that are too long to be held in memory at the same time as a disassembler.

You can also display the contents of Rom software in the same way and although of course the Roms can't be altered you can tinker and save the changes to disc. You are given an introduction to the way that CP/M and Amsdos save files and an illustration of how the directory tracks can be altered directly to recover deleted or corrupted files, as long as they hadn't already been overwritten – a facility worth the cost of the Rom itself to some people.

There are also utilities such as a binary-decimal-hex calculator and the ability to get information about load addresses of files. This can also be edited. There are also disc backup and format routines that work without having to use your CP/M systems disc – it would be invaluable if you were half way through using *Amsword* or something and ran out of disc space if it wasn't for the lunatic feature that once *Discpower* has been called up there is no way of returning to Basic with the memory intact. Despite that, it's a powerful release, but not for beginners.

Tony Kendle

Jumpers

Program *Devil's Lair* **Micro** Enterprise **Price** £7.95 **Supplier** Enterprise Computers Ltd., 31-37 Hoxton Street, London N1 6NJ.

Every home must have one, or rather every computer – a platform and collecting game that is.

Once again it's running, jumping and standing still. Or put it another way, because you do more jumping than ever in this one – bounding chasms and making last minute leaps from slides.

Running holds perils aplenty as you try to dodge flickering flames without treading on a variety of land mines which explode once only, and booby trapped plates which frazzle you repeatedly.

At first I thought this was difficult beyond playability but gradually realised that things I'd thought impossible can be done. It's a bit dull – *Jet Set Willy*'s great virtue was its humour. Enterprising addicts of the genre should love it though.

John Minson

In knots

Program *A Tangled Tale* **Micro** Spectrum 48K **Price** £0.99 **Supplier** Central Solutions, 150 Regent Street, London W1R 5FA.

How long is a piece of string? Lewis Caroll, best known for his two 'Alice' books, loved questions like this nonsense. But the best nonsense contains some truth. In 1885 he published *A Tangle Tale,* a collection of mathematical puzzles – the end of the string and the beginning of this review.

Actually it's the string's beginning too because it's a loop. At the start of the adventure you have to undo the knots and rescue Alice to take her to the eighth square. To do so go left, solve ten puzzles of the five Wonderland characters, and end up at the right. . . All of which had my head in circles too.

How long is an adventure? This could take weeks, even without a multitude of locations. It's unlike anything I've seen before, concentrating almost totally on untangling the cryptic riddles.

How cheap is a budget game? Never as cheap as this. Buy it and tie yourself in knots.

What next . . .

Graham Taylor looks at ways of getting more from your micro from graphics to music. For newcomers to computing we look at packages you're likely to need first . . .

Spectrum

Of all the successful home micros the Spectrum comes with the least in the way of extras beyond the basic computer: no joystick port, no printer port, no tape or disc, no easy outputs for monitor and come to that, no on-off switch.

First choice is almost certainly going to be a joystick interface. Whilst the Spectrum has some of the best games, the Qwerty keyboard hardly makes for ideal input when the going gets tough. The most popular interface is almost certainly the Kempston. Evidence of this is provided simply by the games themselves – try to find a single recent game where joysticks are appropriate which does not have a 'Kempston or Kempston compatible' option. It's a small black box that slots into the edge connector on the back of your Spectrum with a socket on the top. The socket shape is standard for almost any joystick you could buy. Price is £9.95. There are other devices though, although few people now make interfaces that don't have a 'Kempston emulator' option.

One sensible alternative is a 'programmable' interface. This allows you to assign your own format for up, down, left, right, fire, based around the Qwerty that are emulated by the joystick movement. If this sounds complex it isn't really; all it means is that if, for example, a game features a 'cursor control' option you can patch the joystick to act as if the cursor keys were being pressed. The Comcon interface is one such, is easy to program and will support two joysticks for two player games. At £19.95 it's reasonably cheap. One final choice might be to buy Sinclair's own *Interface Two* which gives you two joystick ports and a cartridge port (though this latter idea was not very successful and you'll be lucky if you find a single game that uses it). The Sinclair interface is probably not as well supported as the Kempston. Price: £19.95.

If you have bought your Spectrum for serious business purposes of if you are an intensive programmer, you will almost certainly want to connect the micro to a printer. This is nowhere near as easy as it might seem. The Spectrum will not connect directly to any printer other than the Sinclair silver paper one, so to link it to a 'real' printer you are going to need another interface. At an early stage you will need to know whether you want a serial or Centronics link. This is partly to do with what printer you anticipate buying; most printers accept Centronics as standard with serial as a second option which requires more expenditure. However, a few small printers only come with a serial port so it's worth being informed.

If you go the serial interface route then things are slightly simpler; the obvious choice for a Spectrum serial interface is Sinclair's own Interface One which allows for area networking and connection to Microdrives. You may still have some problems with the right lead though. . .

Things are simpler with Centronics, as there are several options. Again, Kempston manufactures one of the most well supported interfaces, ie, some business packages are designed to let you print out on a Centronics printer via the Kempston interface. Tasman, manufacture of the excellent *Tasword Two* word processor, has its own Centronics interface compatible with that program. The Tasman Printer Interface costs £39.90, the Kempston with software on Eprom is £39.90.

Kempston Centronics interface

Microdrives are, these days, pretty reliable on the Spectrum and do provide something approaching a disc drive facility for the machine. However, the fact remains that there is very little software that either comes on Microdrive, or even on tape with save to Microdrive option in it.

Price for Interface One is £49.95 and the individual microdrive units also cost £49.95, although you can buy both bundled with some rather good software as an expansion pack which retails for £99.95.

There are other alternatives to tape for the Spectrum. *Discovery* from Opus is a unit that slots into the back of the Spectrum and contains a 3½ inch disc drive. The unit costs £199.95 but although popular with software houses for development has little software support.

Similar software problems exist with the Rotronics Wafadrive, marketed by the franchise firm Spectrum Computers, a system which uses a flat cassette shaped storage medium using tape. It is cheaper than the Opus disc drive at £129.95, but slower.

Speech Synthesisers

Another one of those expansions that seems marvellous but is seldom supported by software. There are essentially two kinds of speech unit. One has a built-in existing vocabulary of words which you can access and arrange into sentences, the other uses phonemes, which are small sound elements that are put together to make complete words. The advantage of the latter system is that, theoretically, the range of words possible is infinitely greater; the problem is that using the system tends to be much more complicated.

Drawbacks

Nearly all the available speech units utilise the same General Instruments chip, which produces speech that is recognisable, but only just. It always sounds like a dalek with a speech impediment and most systems have no facility for introducing expression into the voice. Quite a lot of people find that the initial amusement of having your computer 'speak' wears out quite quickly and without software support for the unit, it often gets forgotten about and left on the shelf.

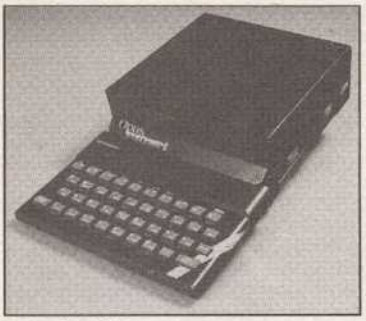
Suppliers

Amstrad has a phoneme based speech synthesiser that is also a stereo amplifier for £29.95. DK'tronics markets both its own speech synthesiser for the Spectrum at £24.95 and the Currah unit (Spectrum again) which also amplifies the sound at £29.95. The company also has a speech synthesiser for the Amstrad at £39.95, which, like the Amstrad official unit, amplifies the sound and speaks in stereo. The BBC speech unit is the *Speech Upgrade* chip which can be fitted inside the machine and is supposedly based on Kenneth Kendall, the ex-newsreader. Price for the chip is £55.

A Currah unit is also available for the Commodore 64 from Welwyn Systems, Bedlington, Northumberland. William Stuart Systems of Quarley Down House, Chorlderton, Wilts, also have a system called *Chatterbox* which costs £39. *Speech maker* is a unit from Adman Electronics that mixes both set vocabulary and adjustable allophone techniques at £29.95, available from Adman Electronics, Ripon Way, Harrogate, N. Yorks HG1 2AU.

for your micro

Finally, on the kind of expansions you might want specifically for the Spectrum rather than computers as a whole, music fans may find that the *Beep* device doesn't give them much by way of electro music facilities – this can be remedied somewhat. A couple of companies produce three-channel synthesiser add-ons, which give the Spectrum approximately the same facilities as other micros like the Amstrad and BBC. Some offer three note polyphony (up to three notes at the same time) and each of those sounds can be considerably more complex than the usual Spectrum *Beep* – more like what you might expect from a small synthesiser.



Opus disc drive

Amstrad

Of all the micros mentioned here, the Amstrad machines are probably the most 'complete' in the sense that there are few obvious immediate expansion choices specifically appropriate to the machine. One thing you might need is a RS232 converter. The Amstrad comes with a Centronics printer port and some printers, often the cheap ones, use serial information. Many of the serial interfaces available also contain other bits and pieces. Honeysoft, for example, has Basic compatible interfaces from £29.95. Timatic Systems do a dual RS232 with 8-bit printer port that will connect not only to printers but also modems and touchpads as well for £59.00. Amstrad's official unit comes with Rom software at £49.95.

If you have bought a green-screen version of the 464 or 6128 you may decide at some point that you want colour. At present there don't seem to be any plans to sell the Amstrad colour monitors individually, so one option is to buy a TV modulator which will allow you to connect your machine to an ordinary television – though with a loss of screen resolution. Amstrad market its own MP1 for the 464 and MP2 for the 6128. These are small boxes which connect computer to the TV aerial socket, both cost £29.95.

CPC 464 owners may find they wish to up-grade to disc drive fairly quickly. The Amstrad disc drive is not only cheap at £159.95, but also comes with software that'll let you run CP/M software on your machine.

Not only that but nearly every Amsoft title and most others are availabe on disc as well as cassette and already special disc only versions of games are appearing with extra features. Additional disc drives cost £99.95

Commodore 64

The big problem with the Commodore, is the way Commodore has designed the machine only to be immediately compatible with Commodore printers. Many people may want to to link the machine to an existing printer, perhaps having up-graded from a previous machine.

The problem can be solved by the purchase of a interface which converts the unusual configuration of the Commo-

continued over the page

Light Pens

Light pens appear to be rather complicated items at first sight, whereas, in fact, they are simple. The only real use for a light pen is in graphics packages where they can be used to precisely locate where you want to draw something on the screen. They usually come with a program that allows them to be used as a graphics tool.

Drawbacks

Light pens usually work on a system which depends on the screen refresh of your television or monitor. For a whole variety of reasons this can vary enormously and usually each light pen has to be recalibrated by you for correct adjustment with your television. Badly calibrated light pens simply fail to respond to the right location on the screen.

The problem is that the calibration can be a seemingly endless process, particularly with an old TV you can find yourself doing it over and over again. And light pens are probably not accurate enough generally for people wanting to produce professional quality graphics work.

Suppliers

DK 'Tronics (Unit 8, Shire Hill, Industrial Estate, Saffron Walden, Essex) makes a Spectrum light pen which has some good software with it for £19.95 and also an Amstrad light pen for £24.95. Amstrad's official light pen (see review) costs £24.95 from Amstrad, PO Box 462, Brentwood, Essex CM14 4EF.

BSF CSL's *Graphkit* is a drawing utility that comes with a free light pen at £15.95 on tape for the Commodore 64. Details from BSF CSL, 82 Furnace Drive, Crawley, West Sussex RH10 6JE.

Hardware Amstrad LP-1 Light Pen **Price** £19.95 Machine – all CPC's (except 8256) **Supplier** Amsoft, Brentwood House, 169 King's Road, Brentwood, Essex.

Following on from the contest between their speech boxes and sound amplifiers the race between DK Tronics and Amsoft to bring out CPC peripherals enters another round with this light pen. Once again Amsoft have released theirs slightly later than the independent company and once again they are not compatible, ensuring that whilst DK Tronics will have snatched a large proportion of sales no one will be sure which, if any, to support with software.

First of all it has to be said that the DK Tronics release is more versatile – the LP-1 will not operate on a green screen monitor, and you are told that the supplied software, which is Mode 1 or Mode 0 only, will not work if there is a speech chip or serial interface fitted which seems an absurd case of Amsoft spurning their own hardware. Whether it means that no light pen software will work with these peripherals I cannot say, but it must mean that writing such is no easy task.

One thing the LP-1 does score major points on is that it fits into the joystick port. This strikes me as being rather clever and will be a relief to those who have an ugly daisy chain of add-ons hanging from the disc edge connector and find they can barely make the pathetically short monitor leads stretch the required distance. Cynics however may suggest that Amsoft have chosen to use the joystick port because it is the only one they have kept standard over all their machines. Again I cannot say

The supplied graphics design software is far from exciting – it completely lacks the elegance and care that DK Tronics put into theirs, but it does provide some useful features that are lacking in Amsoft's own Screen Designer, most notably the ability to magnify and copy blocks of the screen into different places. However, it is functional and manages to provide most of the options where a light pen would make a useful contribution, eg, box, hand draw, circle, fill, and position text. There is a dump to printer option but it only works on the DMP-1 rather than an Epson standard. The software is unprotected so you can list it to discover how to use similar routines in your own program – indeed you will have to since the manual carefully avoids this subject entirely.

The overall impression is that Amsoft may have had a bit too much too worry about lately with their new machines. The LP-1 is a pleasingly simple and cheap piece of hardware but has been bundled in with some uncharacteristicly drab software support and a manual that looks like it was rushed out in a hurry. Try out the competition before you buy this one.

Tony Kendle

What next . . .

dore 64 to Centronics or serial. There are several available, the cheapest being the *Access* interface cable which fits into the usual printer socket, but produces a standard RS232 output. More sophisticated is *Turboprint*, a unit that plugs into the expansion port and produces a Centronics output. It comes in a variety of formats, some of which include things like printer buffers. The basic system costs around £50.

Next purchase may very well be a disc drive. The 1541 disc drive is slow by anybody's standards. Nevertheless many games are disc-based, a disc drive is essential for business uses and generally it loads (slightly) more quickly than tape. Price for the unit is currently £299 although it is due to be replaced by a faster version sometime next year. The 1541 is also soon to be offered in a special pack together with a printer and

Music

An enormous topic with so many different permutations that it's near impossible to cover them all.

The most significant single development in this area has been the introduction of expansions to make your micro Midi compatible.

Midi is an electronic standard agreed between the manufacturers of electronic instruments that enables them to be used with one another.

Giving a computer Midi compatibility means that it can be used to control electronic keyboards, store note information, act as a composing tool and even, with a few more add-ons like sound devices and keyboard, join in the music directly.

Hybrid Technology has developed *Music 500*, which for £199 gives your BBC not only Midi compatibility, but also a powerful sound generation system as well. The Commodore 64 has recently gained a whole range of musical devices, many of them being marketed by Commodore itself. These include an FM voice expander for around £100 and a four octave keyboard for £69, though details are not finalised yet.

The Spectrum fares less well mainly because its own sounds are so poor to start with. Nevertheless Cheetah is marketing a drum synthesiser package for £29.95, which features good quality sampled voices.

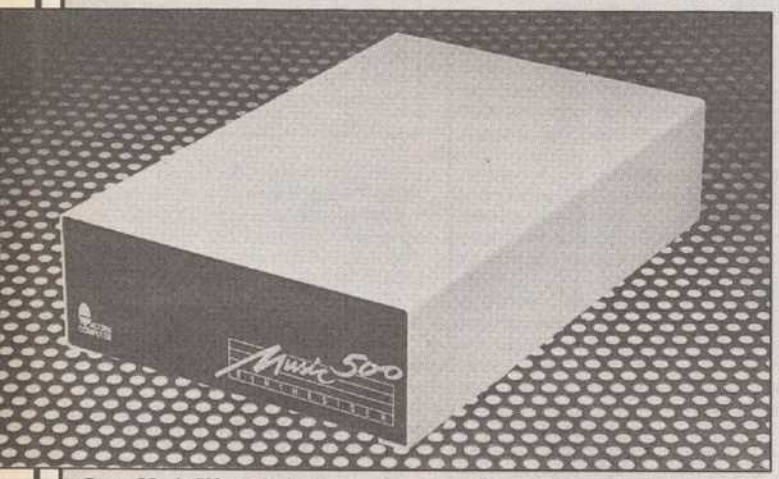
Drawbacks

It's expensive. To really play music you will need a Midi equipped keyboard which means £300 as a minimum. Even those sound units which come as cheap add-ons to the computer, like the new Commodore devices will need decent amplification.

You may quickly find that leads, tapes, and other units start to make music a very pricey hobby indeed.

Suppliers

Several companies have Midi systems. Siel has a range of packages which are designed (mostly) around the Commodore 64 and its own synthesisers. Details from Vince Hill, 35A Grove Ave, Muswell Hill N10. Passport has a large range of software for the Apple and Commodore 64 including educational and recording packages. Prices start at £60 for a four track recorder. Details from Passport Designs, Rittor Music Europe, 24 Broomgrove Gardens, Edgware, Middx. Electromusic Research produces Midi hardware for Spectrum, BBC and Commodore (around £90 per package) and supports this with a number of software packages including DX voice control and eight track real time recorders. Contact: 14 Mount Close, Wickford, Essex SS11 8HG. Details on the Spectrum drum synthesiser mentioned above from Cheetah Marketing Ltd, 1 Willowbrook Science Park, Crickhowell Road, St Mellons, Cardiff.

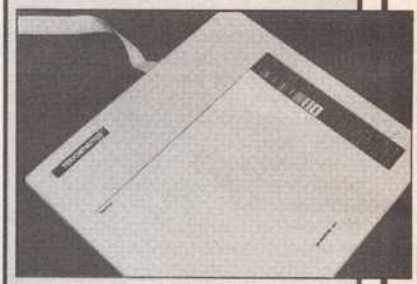


Acorn Music 500 synthesiser

Graphics Tablets

These devices are usually considered the professional version of light pens. They consist of a flat board which receives signals when pressed by a metal stylus. The board 'mimics' the TV screen in structure – thus pressing the board in the middle is analagous to pointing a light pen at the centre of the screen. Most professional games artists and illustrators use such a system and an accurate board with good software can create excellent results.

All of the units mentioned here fit into the computer's edge connector and come with their own software.



Touchmaster graphics pad

Drawbacks

None really, except that compared to a light pen a graphics tablet is an expensive way of doing the same sort of thing. It's also a very cumbersome device that needs a largish flat surface.

Suppliers

Commodore owners have a choice of several devices – the *Koalapad* by Audiogenic costs £79.95 and uses icon based software. Audiogenic, 39 Suttons Industrial Park, London Road, Reading, Berkshire. Touchmaster do a very sophistcated tablet which comes at the equally sophisticated price of £120. Touchmaster, PO Box 3, Port Talbot, West Glamorgan. The same unit with different edge connectors and software is also available for the Spectrum and Dragon. Saga Systems will shortly introduce a graphics tablet for the Spectrum at about £60 which uses its interface/A/D convertor unit. Saga Systems is at 2 Eve Road, Woking, Surrey. British Micro has recently launched *Grafpad 2*, a standard unit which comes with different interfaces and software for a number of machines. Price for the tablet is £44.99, the interfaces cost £23.95. British Micro, Penfold Works, Imperial Way, Watford, Herts.

word processor for £199.99.

BBC

The basic BBC comes with more ports than most people know what to do with, so there are few problems with connections to external devices.

Curiously, however, it does not have a port to take a standard Atari-style joystick; you need either special joysticks which fit into the analogue port or a special adaptor.

The official Acorn disc drives are very good, but require a disc filing system to be fitted to the machine – if you don't have one it'll cost about £95. Almost equally popular are the Cumana disc drives which cost around £125 for a single-sided 40-track 100K unit.

Because the BBC comes with the most 'extras' as standard it is also one of the most expandable micros. The 6502 and Z80 sceond processors (£175 and £280, respectively) will both speed up processing times significantly – the Z80 will give the BBC some CP/M compatibility, the 6502 lets you run a beefed up version of *Elite!* (and a few other things too).

QL

Some would say that the only real question with the QL is whether you want to save your data successfully and reliably or not. If you do you'll need disc drives. If not, the microdrives are fine.

There are several disc drives available for the machine. Sinclair has badge engineered a 3½ inch model by Microperipherals which will presumably be supported automatically by any future software from the company, which costs £296.70. Quest also does a disc drive – a 5¼ inch which costs, in its single 200K version, £249. CST also does a Centronics interface at £50 and an IEEE Interface at £195.

On a more mundane level, if you want to use normal joysticks with the QL you will need an interface, since Sinclair have only provided the odd-shaped serial ports. A couple of companies do connectors that provide an Atari style joystick. Eidersoft has one at £5.49.

Spectrum Computers *5 Hunting Gate, Hitchin Herts SG4 0TJ*

Hardware Saga Elite keyboard **Micro** Spectrum **Price** £79.95 **Supplier** Saga Systems, 2 Eve Rd, Woking, Surrey, GU21 4JJ (04862-22977).

It makes a reviewer's life hard when a new product has few discernable faults or omissions. Imagine the difficulty, then, in reviewing an add-on keyboard for the Spectrum, which is so much better than anything else on the market that it makes most of the opposition look like toys.

Few Spectrum owners will doubt the value of a proper mechanical keyboard – the positive feel and improved appearance most units lend to the Spectrum makes them a worthwhile purchase.

The Saga Elite keyboard is devastatingly smart and appears to have no significant operating problems at all. As with most products of its kind, the keyboard is fitted by removing the Spectrum's PCB from its case, mounting it in the new Elite keyboard and connecting up the two ribbon cables, and screwing together the case. That's all there is to it – and your humble Spectrum (or Spectrum +) is transformed from a kiddy keyboard to something resembling an IBM PC.

The Saga Elite isn't designed to accomodate the Spectrum's power supply – perhaps

wisely, since most attempts to do this have proved to be awkward or unreliable. In fact there are none of the gimmicks such as built-in sound amplifiers or interfaces, which tend to complicate some units. What the Elite does offer is an unmatched selection of keys – 88 in all – set in a slim cream case designed to resemble an Apricot or IBM unit.

The keys are screen printed with black legends, and have a positive action which is unlike anything else on the market, but which soon becomes familiar. To the left of the unit is a cluster of ten often used Basic command keys – *True Video, Inv Video, Load, Save, Clear, Copy, Pause, List,* and *Run.* It goes without saying that it's very helpful to have these special keys to hand while programming.

On the left hand side of the main key cluster is another set of little helpers – *Edit, G Mode, Caps Lock, Symbol Shift* and *Extended Mode* keys. The only reservation about the Elite keyboard is that these keys leave very little space for the *Caps Shift;* it would be easy to find yourself hitting *Symbol Shift* by mistake.

The main key cluster has a full-size space bar at the bottom, and to the right there are more special function keys – *?, ", =, $,£, Stop, Enter,* full stop and comma. The last section of keys consists of a numeric keypad with a double-sized 0, four cursor keys (arranged in a line rather than in an MSX-type cross), four mathematical function keys, and *Delete.*

The slots for power, I/O, Load/Save and Monitor are properly aligned and cut out – unlike those in some units available – and there's another slot, the function of which isn't identified, unless it's for some kind of supplementary earth connection.

The Elite is wider than a Commodore 64, (though not so wide as an Amstrad,) so some users might have to clear a bigger space on their desks. Apart from that problem, and the minor carp over the *Shift* key, there aren't any obvious disadvantages to the Elite. It's easy to fit, works well, offers an excellent selection of extra keys, and looks incredibly smart. As for the relatively high price – do you want your Spectrum to have the best, or don't you?

Chris Jenkins

Skippit

Patience is a virtue in this inventive game for the Spectrum by Mary Tate

This is a game of patience in which you are challenged to clear the board of coloured bugs. Use the cursor keys on your Spectrum to move the Black Gobbler over the playing area. For the purposes of scoring, the energy value of the different bugs is as follows: Red – two, Magenta – three, Green – four, Cyan – five, Yellow – six.

The Black Gobbler must eat all the Red bugs before his delicate digestive system can cope with the next colour, Magenta . . . and then on to Greens . . . and so on up to the Yellows.

You start with an energy level of 20 which increases by the energy value of each bug eaten. However, each incorrectly coloured bug the Black Gobbler tackles is tossed behind him, and the effort required decreases your energy level of the appropriate amount.

Once the last Magenta bug has been eaten, the ghosts of exterminated bugs begin to appear, obstructing previously clear paths – they use up seven units of energy for each one you have to move.

Successful Gobblers retain energy gained from Menu One, and are allowed seconds, with another plateful of bugs being served up. This serving is even more difficult to devour, as some ghosts remain from the first screen.

Hint – patience is a virtue. Don't lose your temper if the Gobbler seems to take off on his own. Just move one step at a time and he will behave himself.

Note that the underlined capitals in Lines 40, 50, and 3020 should be entered in graphics mode. Also, the underlined sixes in Lines 70-90 should be entered in as the chequered symbol found on that key. Good luck!

Permanent changes

Personalise your 64 with this Rom development routine – by ***Tim Decker***

The idea for this program came when some of my friends managed to get hold of an Eprom burner. They then made themselves a new Kernal Rom that defaulted to disc and changed the start-up message on their computers. They had in fact done a bad job, one thing being that the cursor used to become invisible. How much better to do everything with software first to prevent any bugs.

This program, once run, does the following. The computer is made to default to disc. The screen and border colours are changed to black and the cursor colour to green. Pressing *shift run/stop* loads the directory from disc and lists it. Finally owners of older machines can now see a character poked to the screen without changing colour memory.

The program still works if *Sys 64738* is called. However, a reset button will put the Rom back in. This unfortunately cannot be avoided, but after resetting the computer *Poke1, 53* will reactivate the program.

From the assembly listing it can be seen that the program can be extended to change anything, in either the Basic or Kernal Ram. Other possible changes are a different start-up message or screen colours. The ambitious may like to put in a parallel printer interface or a fast disc operating system in place of the RS 232 routines.

Once you have developed your new Rom and tested it, you might like to get hold of an Eprom burner and make your changes permanent.

POOLSWINNER

THE ULTIMATE POOLS PREDICTION PROGRAM

Boxed, with detailed instruction booklet

- **MASSIVE DATABASE** Poolswinner is a sophisticated Pools prediction aid. It comes complete with the largest database available – 22000 matches over 16 years. The database updates automatically as results come in.
- **PREDICTS** Not just SCOREDRAWS, but AWAYS, HOMES and NO SCORES.
- **SUCCESSFUL** SELEC guarantee that Poolswinner performs significantly better than chance.
- **ADAPTABLE** Probabilities are given on every fixture – choose as many selections as you need for your bet. The precise prediction formula can be set by the user – you can develop and test your own unique method.
- **SIMPLE DATA ENTRY** All team names are in the program. Simply type in the reference numbers from the screen. Or use FIXGEN to produce fixture list automatically (see below).
- **DISC/MICRODRIVE COMPATIBLE** Tapes supplied with conversion instructions.
- **PRINTER SUPPORT** Full hard copy printout of data if you have a printer.

AVAILABLE FOR Spectrum (48K), Commodore 64, VIC 20 (+16K), AMSTRAD, BBC B, Atari (48K), ZX81 (16K), Dragon, Apple II, ELECTRON

PRICE £15.00 (all inclusive)

NOW AVAILABLE

FIXGEN 85/6

AT LAST: No more struggling for hours to get the fixture list into the computer. FIXGEN has been programmed with all English and Scottish fixtures for 1985/6. Simply type in the date, and the full fixture list is generated in seconds. Fully compatible with Poolswinner.

POOLSWINNER with FIXGEN £16.50 (all inclusive)

COURSEWINNER V3

THE PUNTERS COMPUTER PROGRAM

NOT JUST A TIPSTER PROGRAM, Coursewinner V3 can be used by experts and occasional punters alike. You can develop and test your own unique winning system by adjusting the analysis formula, or use the program in simple mode. Coursewinner V3 uses statistical analysis of major factors including past form, speed ratings, course statistics, prize money, weight, going, trainer and jockey form etc, etc. It outputs most likely winners, good long odds bets, forecasts, tricasts etc. The database includes vital course statistics for all British courses. You can update the database – never goes out of date.

AVAILABLE FOR Spectrum (48K), Commodore 64, BBC (B), AMSTRAD, Atari (48K), Apple II

PRICE £15.00 (all inclusive) includes Flat AND National Hunt versions.

SUMMER SALE!

PRINTER OFFERS

Look at these deals on Centronics Printers. All prices are inclusive of receipted delivery, VAT and lead (please specify Amstrad, BBC, CBM 64, Oric, Dragon, Einstein or Memotech) for Spectrum users we can supply with a Kempston Centronics "E" interface for an additional £20.00.

SMITH CORONA FASTEXT 80

Another **scoop purchase** allows us to offer these **high quality** fully fledged **80 column, 80 cps dot matrix printers** at a stunning price. These printers were intended to sell for around the £250 mark. Our offer allows you to buy a **proper** printer for less than the cost of many thermal printers. **Friction speed** is standard and an optional tractor unit is available.

£129.95

Price includes Centronics lead to suit your micro.
Or to suit Spectrum with Kempston "E" interface £149.95

TATUNG TP100

Bulk purchase allows us to offer this **highly popular, high specification** printer at an **unheard of price**. It is from the same manufacturer and of very similar specification to the Mannesman Tally MT80+ and Shinwa CPA80. This style of printer reputed to be the most popular in its class boasts many superb features. It uses square pins which avoids that "dotty" look and gives a nicely formed up **"near letter quality"** print at 100cps. Friction and tractor feed are standard. It has full graphics ability. Take a look at these unretouched, actual size print samples.

Standard PICA text (100cps)
PICA text emphasised
True descenders on jpg etc.
ELITE mode gives 96 columns
CONDENSED mode gives 142 columns
ENLARGED mode
SUBSCRIPTS and SUPERSCRIPTS
underlines nicely
Italics available in all modes

We are convinced that this printer offers the **best performance and value** in its class and at our unheard of price is a **BARGAIN**.

ONLY £189.95

Price includes Centronics lead to suit your micro.
Or to suit Kempston "E" interface £209.95.

MICRO P MP165

This printer is a **very high specification** at an **unbelievable price**. It boasts 165 cps in draft mode and 70 cps in **near letter quality** mode, which is switch or software selectable. It is friction and tractor feed as standard has a **2K buffer** and is EPSON compatible (it even uses an EPSON ribbon). It can print in standard PICA 80 column mode or a variety of others from enlarged 40 column mode to condensed at 132 column. Italics are available in all modes. Normally this printer would be expected to sell at £300 plus we are offering it at our **ultra keen** price **inclusive** of printer lead to suit BBC, Amstrad, CBM 64, Oric, Dragon, Einstein or Memotech.

ONLY £249.00

Price includes Centronics lead to suit your micro.
Or to suit Spectrum with Kempston "E" interface £269.00

COMMODORE OFFERS

STAR SG10C

A superb new 120 cps **Commodore ready** printer that offers many features including friction and tractor feed, CBM graphics, near letter quality mode etc. Packaged ready to use at the special introductory price of

End of the process

Concluding our simple wordprocessor for the BBC – written ***by M Smith***

To Split a Paragraph there are two procedures depending on whether you are indenting or not. If you are not indenting, position the cursor under the space at which you wish to split, press *f7*, then *f8*, then *Return*. When you display the text in the justified mode, there will be your extra paragraph. If you require an indented paragraph, after the split, position the cursor under the space at which you wish to split, press *f5* and wait for the screen to clear. Type in *zzzzzz* and press *f2*. When you are returned to the Edit Mode position the cursor under the first *z* press *f7* then *f8*, press the space bar five times, then press *Return*. The next time you preview the text your extra paragraph will be there fully indented.

To Jump press *f9* followed by *D* for *Down* or *U* for *Up* and enter the number of lines you wish to Jump. Press *Return* and the display will change.

After Editing on returning to the Entry Mode (via *f1*) you may find that the Entry Cursor is not in the correct position. Use the *Delete* key to run the cursor back to the last letter already entered, and either re-start from this point if it is in the middle of a paragraph, or press *Return* if it was the last letter of a paragraph.

Save To or Load From Tape, press *f5* or *f6* and follow the prompts. The routine is the standard *Beeb* routine so keep your filenames down to under ten letters.

Print or Preview. *f7* opens Print Mode and you will be prompted from the screen. Use the Justified Mode for all printing unless you have laid out the page in an exact format. To Preview the Justified format press *f8*. The display is in the paged mode to give you time for checking. Press *Shift* to move the text on.

Any wordprocessor is only as good as the instructions you get with it and these are rather short, so if you run into any problems you can't solve please write to me and if I can help I will.

The program is fairly tightly packed and if you find the idea of typing it all in a little daunting I will be happy to send you a copy on tape for £3 and a 17p stamp (or £6 for an advanced disc version). Please write to M Smith, Gwylfa, Llangadfan, Welshpool, Powys SY21 0NW.

CBM 64 UTILITIES

Quickdisc+

FAST LOAD PLUS UTILITY CARTRIDGE

Get a **QUICKDISC+** cartridge plugged into your 64 and your 1541 will really **start to perform**. So many features per pound (sterling) that you will hardly believe it. Includes the following ....
Fast LOAD and SAVE (four to five times normal speed). Works with most protected software. Can be switched in and out from the keyboard.
Fast Format takes just 10 seconds.
Fast Backup copies an entire disc in four minutes. (Not heavily protected software.)
Fast File Copier for selective fast copying.
Improved DOS commands (DOS 5.1) makes for easy use of the disc drive. e.g. $(RETURN) will LOAD and display a directory without overwriting BASIC. SHIFT RUN/STOP will LOAD"0:*",8,1 etc. etc. Very, very useful.
Incorporates Centronics printer software (user port) **with CBM graphics** capability. See "Commodore Connexion" for suitable lead.
A RESET switch is fitted. (We have found this to be "unstoppable", it also preserves the tape buffer.)
NO MEMORY IS USED by this cartridge, it is totally "transparent" and uses special switching techniques.
Now the price. No, not £49.95, it's **not even half** that much. Can you afford to be without QUICKDISC+
ONLY £19.95

No extra connections are necessary with QUICKDISC+ and unlike most similar products it is compatible with printers and second drives.

DISC DISECTOR V3.0

Now the ultimate disc copying and utility program for the CBM 64 with 1541 disc drive has been **improved even further**. As well as general improvements plus the addition of some useful utilities two important new programs have been added.
The Evesham Nibbler
This is the first copier of its kind to appear on the U.K. market. It is a **true nibbler** (byte for byte) copier that will copy **ALL** of a protected disc. Even highly protected discs are copied in around 2½ minutes. Not only that but it will copy **ALL DOS errors automatically**. This includes DOS errors 20-29 etc. plus non standard errors like half tracks, extra tracks, non standard sync, renumbered tracks, etc. They are all created as normal with no knowledge is required at all. It just **nibbles away** and produces a perfect copy. Yet it **only takes eight minutes**. Has copied **all discs tested** (except itself). **A class above** anything else available.
Fast File Copier
An **incredibly handy** selective file copier that LOADs and SAVEs at **five times** normal speed. Sounds useful? You won't believe how much until you have used it.
As well as these programs, 'Disc Disector' incorporates a whole host of useful utilities including the following: **Fast Format**, **Selective**, **Menu Maker**, **Disc Editor** (new sophisticated machine code version), **Scratch/Unscratch**, **Fastcopy**, **Rename**, **Fastload** (four times faster), etc. etc. This program is an **essential purchase** for the 1541 user.
ONLY £29.95

Customers with earlier versions may return them along with £9.95 for "V3.0".

ALIGNMENT PROBLEMS?

1541 PHYSICAL EXAM
£39.95

The program includes a digital alignment disc and software which allows you to **accurately check and correct** disc drive alignment. The instruction booklet is **very detailed**. Also includes quiet drive stops to **stop** that "hammering" thus preventing further problems.
ONLY £39.95

SELECTED UTILITIES

DISCO
Sof **the best tape to disc** utility for normal speed loading tapes. Simple to use but rarely beaten. **ONLY £8.95**
FASTBACK
Converts most slow loading tapes to **"turbo" load**. Single and multi part, very easy to use. **ONLY £9.95**
BIG MOUTH
A superb text to speech synthesis program that is great fun to use. **Unlimited vocabulary**. **ONLY £7.95**
ROCKET
A useful mygent faster/quicker utility for the 64. Handy for the programmer who hasn't a disc drive. **ONLY £7.95**
TAPER
Super copier for normal speed loading software. Easy to use and very rarely beaten. **ONLY £5.95**
COMMODORE CONNEXION
Software and cable for connecting **any centronics type printer** to the 64. Driven with Quickdisc+. **ONLY £17.95**
QUICKDISC
Speeds up disc loading by **four to five times**. Includes menu maker and some utilities. **ONLY £11.95**

AZIMUTH 3000
Allows you to **check and realign** your data recorder head alignment. Screwdriver provided. **ONLY £8.95**
THE ANATOMY OF THE 1541
Get to grips with your 1541 with this **very detailed book** includes 6502 disassembly. **ONLY £8.95**
THE ANATOMY OF THE 64
The best insight into the 64 bots of **"secret"** information. **ONLY £8.95**
ZEUS ASSEMBLER
Reviewers have consistently considered this **the best** cassette based assembler. **ONLY £9.95**
FIRST PUBLISHING ASSEMBLER MONITOR
The **ultimate** in disc based assemblers. From the same home as the "anatomy" series. **ONLY £19.95**
DTL JETPACK Cassette
BASIC compiler will handle programs up to 12K long. Easy to use. Handles **all** BASIC. **ONLY £14.95**
DTL JETPACK disc
Disc based compiler will handle **any** program length. This is the one **the professionals use.** **ONLY £29.95**

SPECTRUM UTILITIES

MAKE THE MOST OF YOUR MICRODRIVE WITH

INTERFACE III

THE IMPOSSIBLE HAS BEEN DONE

Yes it's true this **fantastic** new peripheral will provide **every program available** on to microdrive. **Yes every one**. Yet, believe it or not, it is so **easy to use** that we are guaranteeing our pet cat (Clive) to use it. **Any one** capable of loading and saving a BASIC program can transfer **really awkward** programs to microdrive.

Just look at these features . . .

- **Consists of hardware and software.**
- **Transfers all programs available on to microdrive.**
- **Very, very, easy to use. (If Clive can do it we're sure you can.)**
- **Makes a "snapshot" of any stage of a program. (Saved as a screen!)**
- **Transfer can be actuated at any stage allowing "customised" versions.**
- **All programs reLOAD and RUN once transferred.**

WARNING: Unlike competitive products, transferred programs run independently of the utility and occupy the correct amount of cartridge space for the program. (This means you can fit two large programs on one cartridge.)

IF YOU HAVE A MICRODRIVE YOU MUST HAVE INTERFACE III

ONLY £39.95 inc. P&P

SIMPLY AMAZING

Trade and distributor enquiries invited. U.K. and overseas.

The software can be supplied on cassette for tape users.

This product is in a class of its own. Designed by CRAYSOFT.

All prices include P&P and VAT. Send cheque, Postal Order or Credit Card No. Credit Card order accepted by phone. Callers welcome. Wide range of goods stocked. Trade enquiries welcome. European orders send price as advertised. Outside Europe £2.00 for airmail. Mail order to Evesham Shop please.

Words of explanation

More debugging in SuperBasic from the keyboard of
Simon Goodwin

This week, the SuperBasic listing for installing our two new keywords — *Find* and *How Come*, plus some program notes describing their function and use.

The *Find* command works rather like *List*. The difference is that you specify the name of the procedure or function you want to find, rather than the line-number. If you like to renumber your programs, or move lines around, the command is vital. It is also very useful when you're developing large programs and you can't keep all the crucial line numbers in your head.

To use the command, type: *Find* "name". The name must be specified as a string. The QL's memory is searched at a rate of about 100 names a second, and the procedure or function with that name is listed from its beginning. Type *Ctrl- F5* or *Ctrl- Space* to pause or halt the listing.

If you specify a name which does not exist, the routine will find out and print an appropriate message. Likewise, if you use a name other than that of a procedure or function, the routine will complain. *Find* searches the QL's internal tables, instead of the stored program, so it is very fast.

The second new command, used for debugging, is called *How Come*. Run your program as usual. It will pass from one procedure to another, until you press Break or an error occurs. In either case, type the command *How Come*.

The QL will display a list of the procedures or functions which were in use when the program stopped. The list also shows the first line of each routine (so that you can list it or check its parameters) and the line number at which the next routine was called. If you get desperate, you can put *How Come* commands into your program. Whenever one is reached, the QL will show how it got there.

How Come is often much more useful than a 'trace' — a list of previous line-numbers — since it shows the points at which decisions were made, and not the dozens of less important lines in-between.

There are a few circumstances — usually after a *Clear* — when *Find* and *How Come* may give strange results. This is because the QL tables are not fixed in memory: they can move around slightly when a program is started from scratch. If the routines don't work when first loaded, repeat the command and all will be well.

Program Notes

The *Find* routine may look fairly devious, but it is quite simple in design. The variable *Name Ptr* is set to point to the start of the 'Name List', which contains the text for each name. Line 32050 skips over the first 114 entries in the list, which contain the names of Rom routines like Print in *'AH'* or *'JM'* versions of the QL.

Names are preceeded by a count of the number of characters in the name, so the routine can skip over names with the wrong number of characters (Line 32120). The loop at Line 32140 is only entered if the length of a name in the list matches that supplied by the user. It matches the characters supplied with those in memory, one by one. If they do not match, the search through the list continues — otherwise the corresponding entry in the Name Table is found (using the number of the entry in the Name List).

Line 32210 checks that the entry is that for a Basic procedure or function. Line 32240 extracts the 'value' information — in this case, the first line number of the routine — and Lists accordingly.

The *How Come* routine is even simpler. It searches another QL tables, the 'Return stack' which keeps the details of each procedure or function call. Whenever a call occurs, 24 bytes are used to store the details so that the computer can return to the correct place later. Among these details is the line number from which the call was made, and the first line number of the routine called. The routine just extracts this information.

There is one special case. The entry for the last routine entered contains zero for the 'line number of next call', since there is no subsequent routine. In its place *How Come* prints the line number at which the program stopped, extracted from the Basic system variables.

Armed with our structured debugging tools, you should have no trouble developing large SuperBasic programs. All you need now is a faster way of loading them . . .

Watch this space!

In cold storage

A household utility for the Amstrad machines – written by ***Alan Lawless***

Ever since purchasing my Amstrad I have been under pressure to justify the expense and make it do something useful! It has often been the case in our household to find food well past its best down in the darkest corner of the freezer and subsequently have to be thrown away. So it was that I decided to search for a way of monitoring the contents of the freezer and learn how to drive my new acquisition!

The program is menu driven and gives the user the ability to add and delete items, view a list of contents in alphabetical order, and save the information on tape under the file name *"Freezerdat"*. As the user is prompted to enter the date on power up, a facility has been added to warn whether or not any item is past its best or whether anything in the freezer should be eaten within the next *"x"* weeks.

Program notes

Line No	
600-780	Routine to convert date to an integer number of days elapsed since 1st Jan 1985.
180-240	Load data file from tape.
320-350	Set up various text windows and pen/paper combinations.
380-510	Display master menu
510-570	Enter and select option.
840-1010	"Add" routine – note facility to change date.
1070-1280	"Remove" item.
1340-1490	Produce inventory in alphabetical order.
1500-1580	Swap subroutine – called during alphabetical sort.
1650-1800	Display any out of date items and give opinion to see which items will expire shortly.
1860-1940	Save data to tape.

Main variables

Item	Array of up to 100 items stored in freezer.
Expirnum	Associated integer array containing a number equivalent to the expiry date.
Count	Tally of number of items in freezer.
Daynum	Equivalent number of days elapsed since 1/1/85.

"WHEN IT COMES TO SOFTWARE-I LIKE TO BE FIRST ON THE BALL."

LUTHER BLISSETT
ENGLAND WATFORD

Here's what's in the October issue:

Reviews of all ***latest games,*** a survey of ***music hardware*** and ***software*** and ***programs*** for owners of ***Sinclair, Amstrad, Commodore*** and ***Acorn*** machines.

Plus *dozens of prizes* to be won in the sci-fi ***'Bladerunner'*** competition.

MAKE SURE YOU'RE FIRST ON THE BALL, GET **YOUR COMPUTER** TODAY!!

OUT NOW!

NOW WITH ***MORE GAMES*** FOR ***MORE MACHINES***

Arcade Avenue

First foray

Now then, today's a big day for the column since we are taking our first foray into 16 bit hacking (who says we don't move with the times). Here it is, the premiere 68000 cheat routine from Allan Jarvis of Benfleet. "I have been a fan of your page for some time now, but have been unable to contribute since I own a QL. At last the first arcade game arrived – *EVA* from Westway – it is not only the first, it is of reasonable quality, smooth graphics, etc, and as your reviewer said is really great fun. But it's also difficult – I only managed to get to screen 5 (of 26) with a score of 4575. Because I wanted to see the rest of the screens I wrote this routine:

```
10 a=Respr(59000)
20 Lbytes mdvl_evamain,a
30 Poke_W a+412,20081
40 Sbytes mdvol_evamain,
a,59000
```

"Run this, and then whenever the game is loaded you will have endless lives. To get five lives back replace Line 30 with *Poke_ a+412,21264* and run it again. Even with the lives poke I found the last three screen extremely difficult. Screen 26 took me almost an hour to complete – as soon as you move the aliens close in with frightening speed. Screen 1 restarts with no speed increase but it will be a long time before anyone gets there with just five lives. I will continue to hack *EVA* until Sinclair releases QL *Caverns*."

Look forward to hearing more from you, Allan.

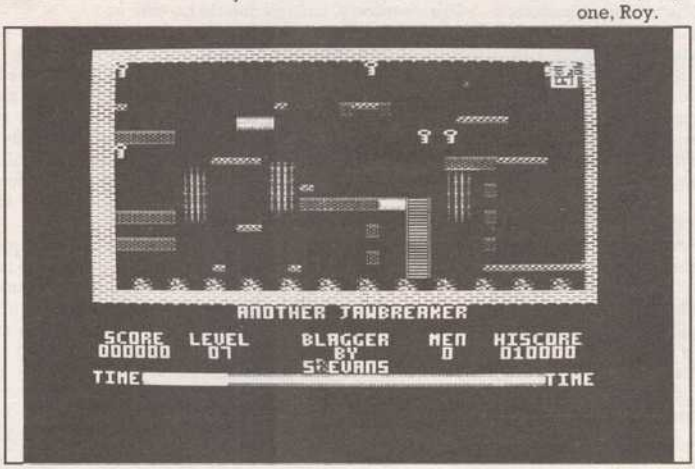
To stick with new machines for the column – for the C16 version of *Xargon Wars* from Ian Caldwell. Before running program type *Poke 7302,201* for 200. lives.

The biggest bunch of new pokes that arrived on my desk today is for the MSX machines. From Simon Dobson of Horrabridge for Alligata's *Blagger*, type 1,2,3 then press the space bar and cursor up to put yourself in cheat mode. Press cursor right to see levels and space bar to play from the chosen level.

From Richard Marsden of Wakefield for MSX *Manic Miner* – "Load first part of tape using load *"MANIC"* instead of load *"MANIC",R* (don't forget to stop tape when first part is loaded). Type *List. Edit* Line eight to *Bload "MINER"* instead of *Bload "MINER",R*. Type this in and *Run* it – then restart the tape.

```
10 Poke 39211,0 : Poke
39212,0 : Poke 39213,0
20 Poke 61856,6
30 Def Usr=39165 : A=Usr(0)
```

Line 20 gives you infinite lives and room select – if you *Poke* 4, you get room select only, if you *Poke* 2, you get infinite lives only. Room select is obtained by pressing a combination of keys one to five, then pressing zero to select the room (when the game is running!).



***Blagger* from Alligata**

Automatic load

From J M Lyndon-Smith of Johannesburg – "To make Willy invulnerable against all moving objects in *Manic Miner* type – *Load "CAS:"*

```
8 Bload "CAS:":Poke
&H8D81,0 : Defusr0=&H98FD
: z=Usr0(0)
```

Run

To get 255 lives on Blagger:

```
10 Bload "CAS:",r : Bload
"CAS:":
Defusr0=&H9254,255 :
z=Usr0(0)
```

Run

To get 255 lives on Time Bandits:

```
10 Screen1 : Colour 15,1,1 :
Cls : Defusr0=&H8C00
20 Print "Loading . . ." :
Bload "TIMEM2"
30 Poke &H8F01,255 :
Z$=Usr0(0)
40 Goto 20
```

Run

Vacummania:

```
10 Screen1 : Colour 11,1,1 :
Cls : Defusr0=&HCA00
20 Bload "VACMC"
30 Poke &HCA51,255 : Poke
&HCA4E,X
40 Z=Usr0(0) :
Goto 40
```

Then *Run* it. 255 is the number of lives, X=speed of Wooms (3 is fastest, 12 slowest).

Hunchback:

```
10 Bload "CAS:" : Poke
&HD830,224 :
Defusr0=&HD77A
20 For I=0 to 7 : Read A$ :
Poke &HE000+I,Val
("&H"+A4) : Next
30 Z=Usr0(0)
40 Data 3E, 00, 32, A9, A3, C3,
00, 88. Then Run.
```

"All of these routines automatically load and alter the machine code program before running it. I am working on a number of games besides these, including Jetset *Willy* (shudder!) and will send you the pokes when I have found them. I haven't seen any MSX pokes before in your mag. I am not being biased when I say that the MSX are very powerful machines and deserve to be popular – after all I have an Amstrad as well.

Please could you ask any MSX owners to contact me, so that we could exchange information etc."

Well, I hope a lot of people will take *'JM'* up on that since he/she seems to be a mine of useful tips – write to this address: 49 Garden Road, Orchards, 2192, Johannesburg, South Africa.

Useful tips

Now on to some more familiar machines. Roy Palmer of Hatfield has sent in this tip for Spy Hunter."When the helicopter comes, remain at the bottom of the screen. If you do not move the bombs explode above you and you gain 150 points. In that way over a few hours I scored over 1,250,000 points". Nice one, Roy.

Steven Liles of Barnsley has a confession to make. "My tip for the game *Perils of Willy* on the Vic 20 has errors in it. The correct routine is this. Load the game as normal and press *Control/Q* and *Restore*. For infinite lives *Poke 11373,200*. To prevent characters disappearing you must type *Poke 11360,234* : *Poke 11365,234*. To start on any screen *Poke 11378,x (x=0 to 31)*. To restart the game *Sys 12269*.

To finish this week here is a letter from Barry Blitz (sic) of 35 Villa Road, London SW9 7ND who writes: "For the first time in my live I have actually finished a Spectrum game and very satisfying it was too. *Starion* proved to be not only a superbly smooth arcade game but educational too, although some of the anagram solutions turned out be rather obscure words.

"Anyway congratulations to David Webb the author. More please! I would be glad to provide help with this program to anyone who needs it, I certainly did."

Tony Bridge's Adventure Corner

Show products

The prize of 25,000 portraits of the Queen offered for solving *Eureka!* has been won! Matthew Woodley, a part-time schoolboy, full-time *Eureka!* – solver from Hampton is the dogged soul who kept on at the game until he found that magic phone number. Congratulations, Matthew, and commiserations to the other 100,000 *Eureka!* players who couldn't find the number.

Pleas for help in this adventure have been a regular feature of my mailbag over the past few months, and I have been rather reluctant to give away too much, for obvious reasons. But now I will be able to give more attention to these problems.

You will remember that I discussed *Bored of The Rings* some weeks ago, an adventure from one of my favourite outfits, Delta 4. I hear rumbles, though not officially from Melbourne House, that the first part of the epic *Lord of The Rings* is currently nearing completion. Delta 4 have produced this lovely romp through Middle Earth as a stopgap which may even find more fans that the original.

The marketing has now been taken over by Silversoft, and the re-vamped program should be available now for the Spectrum, BBC and QL. A version for the Amstrad is being prepared, using Silversoft's own adventure-writing facility, *Genesis*. This should prove to be the equal of *The Quill*, and in fact offers even more facilities, including sound.

Mention of *The Quill* brings me to the third item of news for this week – the imminent release of *The Quill* part three. My moles tell me, and again I should say that this is completely unofficial, that added features will include split-screen text and graphics as well as other enhancements.

The *Personal Computer World* exhibition in London's Olympia last week had several interesting new products. Most of them, of course, will be 'ready at the end of September', according to people on the stands, which probably means the beginning of December. The Level 9 stand was running a demo of *The Diary of Adrian Mole*. Pete Austin tells me that the clue sheet for *Red Moon* will be ready very soon – it has been delayed for a worthy cause, the completion of *Adrian Mole*, another Level 9 collaboration with Mosaic Publishing.

The demo was running at *PCW*, and was the mix of superb text and graphics that we have come to expect from one of Britain's premier adventure houses. The game is in the final stage of production, and I'll report on it when I see the final version. Their next release will be *The Worm in Paradise*, the last of the Silicon Dream trilogy, and this should be with us 'before Christmas', as they say.

Talent Software of Scotland, known to us adventurers for *West* and *Zkul* on the Commodore and QL, were showing a very verbose version of *Colossal Cave* on the Atari 520ST. This was all-text (as far as I could see – when is someone going to do a graphic version of the old classic?), and was just one of a rapidly-growing number of titles for this new micro, including a *Manic Miner* – like platform extravaganza.

A new title

A very impressive new title was *Brataccas*; the title's impressive, and so is the game, which is rumoured to be the final apotheothis of Imagine's *Bandersnatch*. It's good to see those familiar names in the 80-page booklet – Dave Lawson, Eugene Evans . . . ah, nostalgia. Adventure International was showing *Robin of Sherwood*, and Novogen, authors of *Encounter!* were running their latest game, *Mercenary*, a fantastic blend of arcade shoot 'em up, strategy role-playing and adventure.

Well, now, that's the news for this week – let's have a quick look at a new arcade-adventure which was generating a lot of interest at the *PCW* Show. The Edge, as the arcade players will know, is the company formed to inject a bit of life into Softek. Now along comes *That's the Spirit*, billed as a 'graphics adventure with text-adventure-like play, but without the text!'

What this means is that you plug in your joystick and move your little character around the screen, avoiding the usual nasties and meanies. Along the way, many objects can be picked up and used with varying degrees of success.

You'll have read all about this game I'm sure in *The Zappers and Mappers Monthly*, and can probably tell me exactly how to do it all in 234 moves and eight minutes, but for the more sedate amongst us, let me describe it. The upper half of the screen is the playing area, and shows your little woman walking back and forth in front of a backdrop of New York. The authors, Simon Lipowicz and Andy Blazdell seem to know their way around Metropolis, judging by the in-jokes scattered around.

Information area

Beneath the playing area is the information area. Here you'll be given details of your strength (or sanity!) and various other life-supporting details, as well as a pictorial list of the objects you are carrying. Moving a box cursor over each object allows you to manipulate that object – thus dropping or examining it, or connecting it to another object.

True to the tradition of today's arcade programs, the documentation is pretty obscure, and an adventure in itself. Finding the combination of objects and connecting them in the right order, which entails much taking and dropping, seems to be the way to success.

The blurb on the box says 'Completion time: months even for an experienced player', and I can well believe it, with so many combinations to be tried. A clue here: one of the first problems is getting rid of the dog. There is a bone lying around just a little way from the brute, which cannot be passed until dealt with (and your sanity will drop to a dangerous, nay, fatal, level if your persist in trying to pass it!). Pick up the bone and go to the right-hand post of the subway entrance. Making sure that you accurately aligned here, *Throw* the bone at the dog. This should give you a feel for the rest of the adventure – a a mixture of acquiring and using objects in the right order, and arcade skills.

A keyboard overlay is supplied, although it's more of a 'layover the top of the Spectrum', and this will give you few ideas for commands – try *Swear* for instance. The resulting catastrophe is not original (did it appear in a Softek game, methinks?), but it still sends a shiver down the aged spine!

I like *Spirit* – but I think the program looks a little more like a £4 or £5 game, at which price it would have no competition.

Adventure Helpline

Going bananas? If you are stuck in an Adventure with nowhere to turn do not despair – help is at hand.

Fill in the coupon, explaining your problem, send it to us, and a fellow adventurer may be able to help.

Remember – the system only works if those adventurers who have solved the puzzles get in touch. Every week is Save An Adventurer Today (SAAT) week!

EXPRESS SPECTRUM & BBC REPAIRS!!

Repairs between £9 and £20

First company in all U.K. to introduce while-u-wait service. Now first to offer an international repair service!

"I have come across a firm that will be more than willing to advise you as to how to remedy your problem. They are called MANCOMP, and as well as repairing faulty Spectrums, are also quite willing to discuss your problems with you, and offer reasonably cheap, and (MORE IMPORTANTLY) correct cures."
Phil Rogers 'Peek & Poke', "Popular Computing Weekly" Jan. 1985 (Vol.IV, No.1)

"My Spectrum blew recently. I took it to MANCOMP, who fixed it in 8 minutes! And for less than £10. They are local, clued up, and blindingly efficient."
Computer column, "4 Heatons Digest" (Vol.I, No.11)

"One firm, at least, can usually effect any necessary repair over the counter in 45 minutes. Based in Manchester, MANCOMP can offer what is arguably the fastest turnaround in the business, to personal callers". **"Crash Magazine", June 1985**

"Of all the repair companies *'Sinclair User'* spoke to, MANCOMP seemed the most professional when it came to advice and a helpful attitude". **August 1985**

- Send Spectrum encl. £1.80 return postage (U.K.), £2.50 (Europe), £6.50 (Middle East, Africa). • Or phone/bring Spectrum for free, no obligation estimate. • We repair most Spectrums in minutes.
- Every Spectrum sent insured and by receipted parcel post (U.K.), registered air mail if overseas. • No hidden costs.

MANCOMP LTD. (Dept P37), Printworks Lane, Manchester M19 3JP.

Phone **061-224 1888/9888**

Open 9a.m. till 7p.m. Mon. to Sat.

NEW TAPE TO DRIVE TRANSFER OF RECENT PROGRAMS

SPECTRUM owners can even transfer many of the **LATEST** fast/jerky programs to their drives at **LOW COST** with our software and information sheets. No risk as our programs carry our **MONEY BACK GUARANTEE** (not updates).
Firstly you will need our MD1b (for m/drive) or WD1b (for Wafa or disc drive) programs. Includes the ability to chop/split bytes in one go, bytes move, 'VAL' creator and REMkill. Make visible etc. **FULL** manual with example transfers. **MD1b or WD1b cost on tape £6.99.**
"MD1b manages more programs" – *Your Spectrum*
To manage the latest programs you will also need our T7 program which INCLUDES the ability to ALTER fast/jerky loaders to "normal".
*Features Baud rate measurer *Jerky detector
T7 cost £6.50 on tape. On M/drive cartridge £9.99 (incl MT6, an extra M/drive utility).

NEW LERM INFORMATION SHEETS

Each sheet gives you the DETAILED instructions (using our software) required to transfer to your drive B of the more POPULAR programs. They cost **£2 EACH plus SAE**. Up to sheet 4 available.
SPECIAL OFFER – TRANSFER PACK. Buy MD1b + T7 on M/Drive cartridge + INFORMATION SHEETS 1-3 for £15.50 (other drive owners get WD1b + T7 on tape + sheets for same price).
UPDATE SERVICE: Send old tape + large SAE to get a £2 REDUCTION. OVERSEAS: add £1 Europe, £2 others for each product. **SAE for enquiries.** PL460

RECRUITMENT

CAN YOU REALLY HACK IT?

Argus Press Software is looking for a programmer to assist in the production of our seven 'Magazines on Tape' and to help in the development of our Adventure/Strategy range 'Mind Games', and other software projects.
The work will involve time on all the major Home Computers, i.e. Sinclair, Commodore, Atari, Electron, MSX and Amstrad, and while prior knowledge of every machine is not a requirement – the more the merrier! The successful applicant will be thoroughly competent in basic, and fluent with either the 6502 or Z80 processors.
Previous experience in the computer industry is not necessarily an advantage for this position, as it is quite possible that a serious Home enthusiast will have all the required skills. A very competitive salary will be paid. All applications should be accompanied by a full C.V. and where possible, a sample of work should be included on either disc or cassette for ONE of the above computers.

Apply in writing to:
Ken Fletcher

10	(8)	Red Moon (Spectrum/C64/BBC/Electron/Amstrad)	**Level 9**

Winning phrase No 42: "Potty sentry said 'There who goes'" from Terry Flood of London SE3 who wins £25. Runners up include: "Hewson goes off the rails" from R Robertson of Moss End, Lanarkshire and "Why is life so perplexing today, pet?" from A Cunningham of Aberdeen.

Now voting on week 44 – £25 to win

Each week *Popular* is compiling its own special software top ten chart – compiled by YOU.

And each week we will send £25 to the person who sends in, with their chart votes, the most original (witty, neat or clever – but never rude) phrase or sentence made up from the letters (you don't have to use them all) in the titles of the top three programs in this week's Readers' Chart, published above.

You can still vote in the chart without making up a slogan – but you won't be in with a chance of winning the prize.

All you have to do is fill in the form below (or copy it out if you don't want to damage your magazine) and send it off to: Top 10, *Popular Computing Weekly*, 12-13 Little Newport Street, London WC2H 7PP.

Voting for Week 44 closes at 2pm on Wednesday September 25 1985. Entries received after that time will not be eligible for inclusion in that week's voting. The judges decision is final. Only one entry per individual per week will be allowed.

New Releases

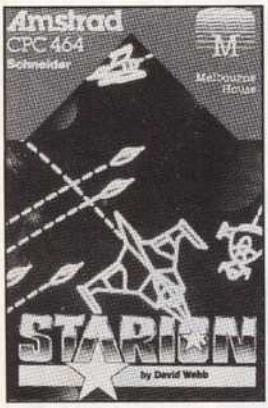
TIME WARP

Starion was, I think, an *Elite* surrogate. When, for the first time in their lives, Spectrum owners were actually jealous of BBC owners over the mighty game, *Starion* provided a sort of mini-*Elite* to keep them going. Now it has been faithfully converted to the Amstrad.

Starion is a curious mixture of good vector graphics, space shoot 'em up with radar, battle computers. All that and a puzzle game.

When you blow up the nasty baddies a letter is revealed floating through space — collect all the letters in a given segment and you have an anagram referring to a specific time zone, work out the correct one and warp into it . . .

I always found the zap/anagram a somewhat uneasy mix. But, whatever else, *Starion* is the best space game currently available for the Spectrum (but soon, oh soon-*Elite!*) and now the same is true of the Amstrad.



Program *Starion*

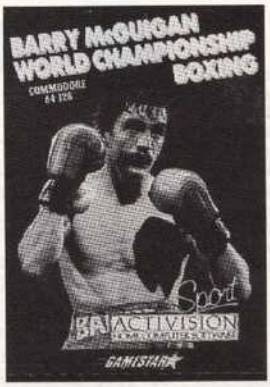
ROUND ONE

Latest from Activision for the Commodore 64 is *Barry McGuigan World Championship Boxing*. It's a late contender for the boxing game crown but in terms of playability it scores well.

It's more than just the actual slugging it out in the ring; you choose your boxer from a range of temperamental, and even racial types, then develop him still further on a training circuit – you allot how long to spend on various kinds of training, judging your boxer's weakest points and pit him against an opponent who best matches his strengths and weaknesses.

All the boxing moves are controlled by joystick using combinations of direction and direction with joystick pressed down movements. It's similar to *Way of Exploding Fist* in the amount of complexity that it can accommodate. The game is easy to get into, there are plenty of chances to redeem a bad start. The animation is extremely good, again a comparison with *Way* is appropriate in that the actions move smoothly from one to the other.



I like the game very much, it gets my vote as the best boxing game of the lot. Watch for the cameras!

Program *Barry McGuigan World Championship Boxing*
Price *£9.99*
Micro *Commodore 64*
Supplier *Activision*

Marylebone Road
London NW1 5HE

COLOURFUL

Design Design have been quietly knocking out minor hits for some years now – remember *Invasion of the Bodysnachers*, *Dark Star* and *Hall of the Things?* Well, here is their latest offering *On the Run*, for the Amstrad CPC464 and Spectrum.

The scenario is fairly standard stuff – you (wearing an off-the-shoulder protective suit, plus jet-pack and laser) must rescue six flasks of dangerous chemicals, from a maze area which has suffered an unfortunate accident involving nerve gases and the like. This explains all the weird looking plants and animals, I suppose, a bit like a mutated *Sabre Wulf* almost.

The game plays well, with your besuited persona blasting away the nasties – lots of big colourful sprites on the Amstrad version – contact with whom drains your limited energy, which can be replenished by picking up various objects, etc, etc, etc.

All very competently done, as you would expect, and although Amstrad owners will welcome this with open arms, those with Spectrums may have seen this all before. But there again, they've got the Design Design autumn biggie provisonally entitled *2112* to look forward to. Lucky them.

Pick of the week

EXTRA SCREENS

There's gold in them there hills . . . err . . . hold on a bit. Are there any hills in Brentwood? Oh well, never mind – suffice to say the Amsoft Gold range has been released on the waiting world – in this case *Sorcery +*, an enhanced disc version of the smash hit Virgin game of almost the same name.

So what do you get for your £13.95? First of all, you get the same fab colourful graphics and ultra smooth scrolling found on the original Amstrad version.

However, you also get a total of 35 extra screens, seven tacked onto the original game. They've moved the easiest Sorcerer from the Chateau to heaven knows where and created a whole new second section consisting of a further 28 new screens.

Now, after defeating the Necromancer in Chapter One by freeing your fellow captive Sorcerers, you go on to confront him in his hideout to try and surround him with hearts. Programmer Steve Chapman reveals there are four to find, three being quite easy – the fourth, "nigh on 99% impossible". You're not going to take that challenge lying down, are you?

EFFECTIVE

Stealth is another of Ariolasoft's recent releases and whilst there isn't anything terribly amazing about it, it's the best of the Buck Rogers style zap-em-ups.

Plotwise there isn't a lot to the game; blast your way to a distant black tower. There is a wide selection of baddies including spinning red blobs, bouncing yellow things and enemy planes. Occasionally, spinning yellow blobs appear which, once passed through, give you energy.

As you approach the tower, it grows smoothly in size and generally 3D effects are well done – the approach of objects is achieved using the sprite update style and it's slick and effective.

Really my only complaint is the tiredness of the plot. If that doesn't bother you, you'll like *Stealth*.

STAR MAPS

Astrolab is one of many astronomy programs around for the Spectrum, but it is almost certainly the most useful to the amateur astronomer.

The simple objective of the program is to enable you to discover exactly what features will be on view in your locality on any particular night.

The program has detailed star maps for locations in North America and Europe, these are updated every 45 seconds synced to the Spectrum's external clock. This will mean that the computer display will change and develop as the sky does, helping you to spot particular features.

The program is the slickest from Eclipse Software yet, gone are input statements, instead options are selected through a one key press menu system. Other options in the program allow you to scan particular sections of sky or use a bright star as a guide. A short manual gives background information on using the program, but there really isn't anything too difficult about using the program.

For astonomers and the idly curious an excellent (and cheap) purchase.

Duck soup

I sometimes wonder whether we pay enough attention to the earliest pioneers of robotics.

Take Jacques de Vaucanson, for example. In 1738 he presented his mechanical Automaton Duck to the people of France, and eventually to the French Royal Academy of Sciences.

"In this duck," Vaucason announced, "will be noticed the mechanism of the viscera, intended to perform the functions of eating, drinking and digesting." The bird puts out its head to take up the seed, swallows it, digests it, and evacuates it through the usual channels.

The automaton could quack, flap its wings, and do most things a duck likes doing, but it seems to have been the remarkable simulation of digestion and excretion that caught the public imagination. You can see why.

Alan Turing, the mathematician, produced a paper in 1937 *Computible Numbers*, which demonstrated that since mathematics can be understood as the manipulation of strings of symbols, it should be possible to perform any valid mathematical operation mechanically. Not only that, but a *universal* machine could be possible, that could undertake the work of any other symbol-shifting machine. In so doing he laid the theoretical foundations for the development of computers.

In 1951 (after war years spent in the hacker's paradise at Bletchley Park, breaking the German Enigma ciphers) he published a paper *Computing Machinery and Intelligence*. here he tried to define what meaning, if any, could lie in the phrase "intelligent machine".

Clearly this could not be "a machine that is like a human in every respect" – a machine could not be expected to think from visceral experience and sensations in the way that a human does. On the other hand, Turing recognised that machine intelligence must mean more than competence within the narrow and tightly-defined rules of, say, mathematics or chess.

So Turing, always a puzzle enthusiast, adapted another game, at once simpler yet infinitely more wide-ranging than chess.

In the *Imitation Game*, a male (A) and a female (B) are both in a different room from the questioner (C), who communicates with them by means of typed notes or telex, and so has no visual clues as to which is which. B tries to convince him that she is the male: A tries to set him right, and C attempts to sort out the jumble of information and misinformation that comes in response to his questions. As a party-game this is quite jolly, especially when the questions start getting rude.

But could a computer play it? Could it play well enough to convince C that it was human? Since any and every kind of question could be asked, the machine would need extremely sophisticated language analysis capabilities.

Turing wrote, "I believe that in about 50 years' time it will be possible to program computers, with a storage capacity of 10^9, to make them play the imitation game so well that an average interrogator will not have more than 70 per cent chance of making the right indentification after five minutes."

Passing the Turing test is a dream that lures many an AI researcher onward.

I can't help feeling a little unhappy at a test that cares only for the output, and doesn't worry about how it's produced. Because, you see, of that Automaton Duck. The authentic-seeming output that so impressed the finest minds in 18th-century France was a cheat. After Vaucanson's death, the mechanism was examined. The duck had no digestive system, no gastric juices, no stomach, no intestines. Seed picked up by the beak slid down into a small container. After a suitable period, a clockwork mechanism extruded breadcrumbs dyed green from the other end.

So the duck really belonged more to the art of faking, than to the science of precise simulation. Which is why, whenever I hear of programmers working away at imitating the output of human beings, I can't help wondering whether the result won't just be a load of green breadcrumbs.

George Simmers

Coincidence

Puzzle No 175

"Think of a number between 1,000 and 9,999,' asked my nephew Jamie the other day. 'Now multiply by three and then add three.' I did as he requested.

'Now,' he continued, 'take this total and again multiply by three and add three.'

He then asked me for my result and was able to determine the number that I had originally thought of. By a curious coincidence, this final number that I had arrived at contained just one digit, although repeated a number of times.

Given this information, you should be able to calculate what number I had first chosen.

Solution to Puzzle No 170

In each case there is only one possible answer: Offenbach: 562, Rossini: 152, Scarlatti: 748, Schumann: 299, and Sullivan: 313.

```
10 INPUT"NAME";A$
20 CLS:PRINT A$
30 LET L=LEN(A$)
40 LET P=10↑(L-1):P=P↑(1/3):P=INT(P)+1
50 LET Q=10↑L-1:Q=Q↑(1/3):Q=INT(Q)
60 FOR N=P TO Q
70 LET C=N*N*N
80 LET C$=STR$(C)
90 FOR A=1 TO L-1
100 FOR B=A+1 TO L
110 IF MID$(A$,A,1)<>MID$(A$,B,1)AND MID$(C$,
    A,1)=MID$(C$,B,1)THEN GOTO 160
120 IF MID$(A$,A,1)=MID$(A$,B,1)AND MID$(C$,A,
    1)<>MID$(C$,B,1)THEN GOTO 160
130 NEXT B
140 NEXT A
150 PRINT N,C
160 NEXT N
170 GOTO 10
```

The problem involves finding cubes of numbers in which like and unlike digits correspond to like and unlike letters.

The program tests any name that is input, Lines 40 and 50 determining the lowest and highest whole number whose cubes have the same number of digits in turn by comparing both the numbers and the names for like and unlike letters and digits.

Winner of Puzzle 170

The winner is David S Leatham of Higher Heysham, Morecombe, Lancs, who receives £10.

Rules

The closing date of Puzzle No 175 is October 16.
