Acorn launches new generation of BBCs

ACORN is launching a new range of BBC micros this week – five machines in total, all based around a 'foundation' model which will replace the BBC B Plus.

The foundation machine is a 128K, 8-bit model based on the CMos low power version of the 6502 chip, the 65C12. "This is the base for a new generation of BBC micros," said Bob Coates, Acorn's product manager for the BBC series. "It looks broadly similar to the existing BBC B Plus, and will be compatible with the majority of current BBC software. You can never get 100% compatibility – but this will be about 80% compatible.

"It has a number of key additional features – for example the cartridge sockets are on top of the machine for sideways Roms, so there is no need to open up the micro. The 65C12, running at 2 Megahertz, is also faster than the existing machines."

The new 128K BBC micro – Acorn would not disclose its name – will be priced at around £500. The package also contains £160 worth of firmware, including View, *Viewsheet*, the advanced disc filing system, and the VT100 terminal emulator.

The second machine in the new range is a 16-bit micro running MS-DOS, with 512k of memory. It will be available as an upgrade to the foundation machine, achieved by unscrewing the circuit board and placing the co-processor board which runs on the Intel 80186 chip. This will also cost about £500.

The third is a 32-bit machine, with 1 Megabyte of Ram, using the 32016 chip. This upgrade is intended primarily for the scientific research market, and will cost around £1,000.

The fourth in the series strips the 'foundation' BBC down to an Econet terminal, and the fifth is a co-processor

QUICKSILVA is currently working on a game based on the TV film portraying Max Headroom, the allegedly computer-generated TV host.

The game is largely based around a chase sequence in the film, where Max Headroom, in his previous incarnation of Elliott Carter, is being pursued through the TV station Channel 23's building by two would-be assassins.

Max Headroom *is due to be launched at the end of February, on the Spectrum, Amstrad and Commodore machines. It will cost £8.99.*

EDITORIAL

Commodore's decision to stop manufacturing in Britain is bad news, both for the company and the Corby community.

The Corby plant was Commodore's centre for assembly of home micros for the European market.

Its closure implies a move away from the low end market for Commodore.

With the Commodore 64 now looking somewhat long in the tooth and its successor already available, and the struggle of the C16 and Plus/4 to attract attention, the company is pinning all its hopes firmly on Amiga's mast.

The closure almost certainly means the end of the C16 and Plus/4, which were assembled exclusively at Corby.

The C16s low specification and the inadequacies of the Plus/4 failed to attract volume sales and have accounted for a good part of Commodore's disappointing financial results during the last nine months.

Now the company is to concentrate on the highly automated plants in West Germany and the Far East, and the Amiga technology, which Commodore hopes, will help it regain its position as a world leader.

Commodore's Vic 20 was a pioneer of computing power at very low cost for the home user.

It will not be looking again for launches at that end of the market for a very long time to come.

New BBCs from Acorn

◀ continued from page 1

board containing the 65C102 chip. Under the name of Turbo, and costing £125, it simply provides a faster version of the base micro.

Bob Coates stressed that the new machines will not immediately herald the end of the BBC B Plus in its 64k and 128K versions, the BBC B 32K having already been discontinued. "The B Plus will remain available as long as is economic," he said. "Some people will prefer to have the traditional BBC, though we do expect them to move fairly swiftly over to the new models – they are better value for money. We will phase it out when appropriate, but not just yet."

US Gold takes on Ultimate

US GOLD has announced it has taken on all marketing, publishing and manufacture for Ultimate Play the Game's titles, under a contract initially running for one year.

This move follows some confusion when reports saying that British Telecom were to fulfil this role were published (see *Popular Computing Weekly*, December 26).

Under the terms of the US Gold/Ultimate agreement, Ultimate will write at least six Spectrum games during 1986 (titles for other machines are not fixed by the contract), which US Gold will publish and market, as well as organising conversions to other machines. Conversions to the Commodore 64, Amstrad and possibly the BBC are planned. Ultimate apparently wants to concentrate on writing for the Spectrum – including the Spectrum 128 – in the coming year.

"It's a very similar deal to the licensing contracts we have with American companies," said US Gold's general manager Tim Chaney. "We will be licensing six or more games and doing conversions, and we also have taken control of Ultimate's existing inventory. The people at Ultimate will now have no contact with marketing, and will continue just as a programming team. We will be paying them on a royalty basis."

The first Ultimate titles to be released by US Gold will be *Dragon Skulle* for the Commodore 64, which is due out this month, followed by *Pentagram* and *Cyberrun* for the Spectrum in February. All titles will cost £9.95.

Corby plant shut by Commodore

COMMODORE is to close its factory in Corby with the loss of 250 jobs. The decision means that the company no longer has any British manufacturing facility.

The decision, according to Commodore International's president, Thomas Rattigan, is because "Commodore is going to increasingly depend on fewer and higher technology plants. Corby, being essentially an assembly plant, does not easily fit into this strategy."

Two hundred jobs are being lost at the assembly plant itself, which Commodore opened only 18 months ago with the intention of creating 1,000 jobs. A further 50 people will be made redundant at the administrative headquarters in Corby, where there have been some managerial changes.

The closure leaves the future of the C16 and Plus/4 machines very unclear. They were assembled solely at Corby, and although one Commodore exeuctive said last September that their manufacture would probably cease at the beginning of 1986, Chris Kaday, now sales and marketing director, thinks otherwise.

"The C16 and Plus/4 have recently been very successful, although rather late in their lifetime. We will be assessing the demand for these products and I do not see why we cannot continue production if the demand is there."

Commodore 64s and 128s, also assembled at Corby, will probably now be entirely made at Commodore's German plant in Braunschweig. The closure will not, however, affect production of Commodore's PC 10 and PC 20, nor the Amiga. None of these were intended for assembly at Corby.

Commodore's UK's general manager, Nick Bessey, expressed regret at the redundancies: "Naturally we greatly regret the impact of this decision on workers who will lose their jobs, but we have been forced to recognise that difficult decisions must be taken in the aggressively competitive marketplace that exists."

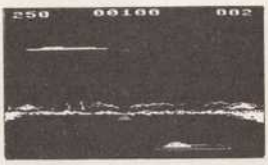
However, despite the pull-out in Britain, Chris Kaday asserted that Commodore still expected to show a profit in the current quarter, which will take in the Christmas period.

Commodore may well have to pay back government grants as a result of the closure – Corby is an enterprise zone and financial incentives are often given to companies setting up there.

Game designer from Activision

ACTIVISION has announced a game creation package for the Commodore 64.

Gamemaker will provide you with a set of tools – including sprite and screen designers, sound generator and music editor – which allow you to create your own arcade games.



The program will be available in March, priced at £9.99 on cassette and £14.99 on disc.

Supersoft improves the image

IMAGE-CONSCIOUS owners of Commodore 64s and 128s should be interested in a new peripheral from Supersoft. The Print-Technik video digitiser allows your micro to capture a video image from a video camera, recorder or other source and display it on-screen.

Pictures are displayed in four colours – the default is black, white and two grey shades, but any of the 64's 16 colours can be used. Resolution is 256 x 256 pixels, although only 160 x 200 can be shown on screen at once.

Once captured, images can be stored on disc or cassette, or printed out on a range of dot-matrix printers including Epson and Commodore models.

The disc-based version costs £149.95, with the cassette version to follow soon. Supersoft can be contacted on 01-861 1166.

More games for the Mac

THE SELECTION of games software for the Apple Macintosh is growing, the latest is Sir-Tech's *Wizardry*.

Wizardry is a dungeons and dragons adventure with animated graphics. The package is distributed by Softsel at a retail price of £51.55.

Soft Aid follow-up launched over dinner

FOLLOWING the success of *Soft Aid*, which has now raised over £350,000, a second charity tape was launched at the Guild of Software Houses/International Society of Software Artists dinner last month. The tape is again to be organised and set up by Rod Cousens, managing director of Electric Dreams Software, who masterminded Soft Aid.

A new compilation tape is to be released, entitled *Off the Hook*. Proceeds from its sale will go to the Princes Trust for Drug Abuse Rehabilitation.

Although the tape has not yet been released, already £16,500 has been raised. A bottle of champagne was auctioned at the dinner, and 14 software houses placed a corporate bid of £14,000 to buy it. One thousand pounds was raised in a cash collection at the dinner, and profits of £1,500 from the evening make up the total amount raised so far. Commodore has also donated an Amiga system to be sold by auction.

As yet, the programs to be included on *Off the Hook* have not been finalised. "Nine companies have pledged to donate at least one of their titles," said Rod Cousens. "These are Activision, US Gold, Ocean, Gremlin Graphics, Ultimate, Firebird, Melbourne House, Elite and Beyond.

"However, I am planning to release *Off the Hook* on the Spectrum, Commodore, Amstrad and BBC machines, so I am hoping that companies which have a strong catalogue on the BBC will also participate."

Off the Hook will cost £6.99 on all formats, and Rod Cousens hopes that all implementations will be released in March. Of the £6.99, about £4.00 will go directly to the Princes Trust.

"I would hope that we can raise around £100,000 with *Off the Hook*," Rod continued. The money raised through sales of *Off the Hook* will be held by Lightning Distribution in a separate bank account, which has already been set up. A committee will make monthly payments to the Princes Trust.

Firebird, Newsfield, Melbourne House, *Computer Trade Weekly*, Centresoft, Gremlin Graphics, Electric Dreams, Epyx, Ocean, Activision, US Gold and Beyond bosses raised £14,000 for one bottle of champagne.

Over 100 new products at Amstrad show

THE SECOND Amstrad Computer Show takes place this weekend at the Novotel in Hammersmith, London W6.

Organiser Database Publications is expecting over 100 new products to be launched at the show. These include Screen Micros' MS-DOS board for the Amstrad CPC 6128, which will give Amstrad owners IBM compatibility.

DK'Tronics will be showing its Amstrad peripheral range. The Electric Show will show a prototype of a digtial tracer and Northern Computers will introduce its hard disc network system.

New software will be launched by Amsoft (a graphic adventure range), Hi-Soft (Catalog, which will keep track of disc files) and Cambrian (a database for the PCW 8256 at £39) among others.

The show will open on Saturday and Sunday, January 11 and 12, at 10 am.

DIGITAL PRECISION

THE BEST SOFTWARE FOR THE QL!

ALL DIGITAL PRECISION SOFTWARE IS AVAILABLE NOW. ALL DIGITAL PRECISION SOFTWARE IS COMPATIBLE WITH ALL VERSIONS OF THE QL AND WITH ALL MEMORY EXPANSION AND DISK INTERFACE SYSTEMS.

SUPERCHARGE, THE FULL SUPERBASIC COMPILER **£59.95**
INSTANT MACHINE CODE ON YOUR QL!!
SUPERCHARGE CONVERTS BASIC PROGRAMS (EVEN HUGE ONES) INTO COMPACT MACHINE CODE, **COMPLETELY AUTOMATICALLY** – YOU NEED NO SPECIALISED KNOWLEDGE AT ALL. BREATHTAKING EXECUTION SPEED IMPROVEMENTS OF UP TO **100 TIMES** (STANDARD BENCHMARKS). LOADING TIMES FROM MICROCARTRIDGE IMPROVED FROM 3-4 MINUTES TO UNDER 10 SECONDS. UNIQUE OPTIMISING FEATURES. SUPPORTS THE **ENTIRE SYNTAX** OF SUPERBASIC. PRODUCES STAND-ALONE TASKS (IE, COMPILER NEED NOT BE PRESENT AT RUN TIME) THAT ARE FULL **MULTITASKING**. SUPPORTS VIRTUALLY ALL EXTENSIONS AND ADD ON UTILITIES. CORRECTS MOST INTERPRETER BUGS. DETAILED DIAGNOSTIC ERROR MESSAGES FOR BOTH COMPILE TIME RUN TIME, GIVING EXACT (POSITION WITHIN STATEMENT!) LOCATION. FULLY DOCUMENTED IN 105 A4 PAGE USER MANUAL.
"EXCELLENT" IS WHAT COLIN OPIE (THE MCGRAW HILL TECHNICAL AUTHOR) SAID ABOUT SUPERCHARGE. EIDERSOFT SAID "!!" . . . A CULT HAS BEGUN.

SUPERFORTH + REVERSI, A COMPLETE FORTH – 83 SYSTEM **£29.95**
PRODUCES STAND ALONE MACHINE CODE AUTOMATICALLY!
FULLY MULTIASKING, ULTRAFAST (**50 TIMES FASTER THAN BASIC**). FULL FORTH SYSTEM WITH A 100 A4 PAGE USER GUIDE. NO PRIOR KNOWLEDGE OF FORTH NEEDED. LOTS OF ADDITIONAL FEATURES. COMES WITH FULL SCREEN EDITOR AND INTERACTIVE DEBUGGER/ERROR HANDLER. FULLY INTEGRATED WITH QDOS. UNLIKE ITS COMPETITORS, SUPERFORTH SUPPORTS WINDOWS, SOUND, PERIPHERALS, DEVICE INDEPENDENCE, GRAPHICS ETC. SUPPLIED WITH SUPERFORTH IS A FULL FEATURE REVERSI WITH 9 LEVELS, 3 MODES, EXCHANGE, SET UP, RETRACT, ALPHA-BETA EVALUATION, INTERRUPT, HINT, DISPLAY THINKING ETC, ETC, WRITTEN IN SUPERFORTH AND READY TO PLAY (WE GIVE YOU THE COMMENTED SOURCE CODE AS AN ULTIMATE EXAMPLE OF A COMPLEX FORTH PROGRAM). SEARCHES THROUGH MILLIONS OF POSSIBLE LINES AT ITS HIGHER LEVELS. GUARANTEED TO BEAT "THE OTHER" REVERSI PROGRAM **EVERY TIME!! REVERSI IS ALSO AVAILABLE ON ITS OWN FOR £12.95**.

SUPER ASTROLOGER **£24.95**
VERSION 1.5 IS A FULL PERSONALITY, CHARACTER, HOROSCOPE AND PREDICTION SYSTEM, RUNNING IN HYPERSPEED (SUPERCHARGED) MACHINE CODE FROM TWO CARTRIDGES AND DRAWING ON 210K OF PROGRAM/DATA! NO KNOWLEDGE OF ASTROLOGY REQUIRED – FULL MANUAL SUPPLIED. SEVERAL DOZEN EXAMPLES PROVIDED. ALL CALCULATIONS (INCLUDING THE PRODUCTION OF 4 × A4 SINGLE SPACED SHEETS OF CHARACTER DELINEATION!) ARE FULLY AUTOMATIC. HAS **ALL** THE FEATURES: NATAL CHART, PROGRESSIONS, ASPECTS, CROSS-ASPECTS, COMPARISONS, SELF-MODIFICATION OF PERSONALITY FILES (FOR EXPERIENCED USERS) AND HOSTS OF ASTRONOMICAL FEATURES. DEFAULTS TO PLACIDUS SYSTEM. THIS PACKAGE REALLY WORKS. IT COMES COMPLETE WITH ALL YOU NEED.

SUPER SPRITE GENERATOR. VERSION 3.5, THE FULL QL GAMES DESIGNER **£24.95**
NOW COMPLETELY IN MACHINE CODE, WITH FULL INSTRUCTIONS ON CARTRIDGE, SSG 3.5 IS ALL YOU NEED TO PRODUCE EXCELLENT ARCADE GAMES (LOTS OF THOSE PRODUCED BY OTHER SOFTWARE HOUSES HAVE BEEN WRITTEN USING IT!) NOW **COMPLETELY FREE FLICKER FREE**, ULTRASMOOTH ACTION, FULLY AUTOMATIC. NO KNOWLEDGE OF MACHINE CODE NEEDED (THROUGH SSG CAN BE USED FROM MACHINE CODE AS WELL AS FROM BASIC) VERY SIMPLE TO USE. (**FULLY COMPATIBLE WITH SUPERCHARGE**) SSG IS NOW BETTER THAN IT EVER WAS BEFORE. IT HAS EVERY CONCEIVABLE FEATURE!

SUPER MONITOR/DISASSEMBLER. VERSION 3.0 ..... **£18.95**
THE ONE WITH ALL THE FEATURES YOU COULD POSSIBLY WANT. DETAILED INSTRUCTIONS ON CARTRIDGE. AMAZINGLY COMPACT (8K)!!

SUPER BACKGAMMON VERSION 3.0 ..... **£12.95**
NOW IN HYPERSPEED MACHINE CODE (SUPERCHARGED) WITH INCREDIBLE RESPONSE TIMES AND LOAD SPEEDS. PLAYING STRENGTH GREATLY IMPROVED. FULL EVALUATION DISPLAY. 6 LEVELS, 3 MODES, EVALUATION DISPLAY, CLOCKS, DICE THROWER OVERRIDE. FOLLOWS **ALL THE RULES OF BACKGAMMON** (**INCLUDING DOUBLING**). ENJOYABLE AND ENTERTAINING.

SUPER ARCADIA **£15.95**
TWO HYPERSPEED MACHINE CODE ARCADE GAMES (BMX BURNER Á LA JETPAC; GRID RACER A CHASER GAME) TO KEEP YOUR NERVES TINGLING FOR MANY AN HOUR!

SPECIAL OFFERS!!

* £5 OFF SUPERFORTH AND SPRITE GENERATOR AND £2 OFF MONITOR/DISASSEMBLER IF ORDERS WITH SUPERCHARGE.
* IF YOU HAVE AN EARLY VERSION OF ANY OF OUR PROGRAMS, SEND £5 AND THE ORIGINAL CARTRIDGE (NOT PACKAGING) FOR A QUIBBLE FREE UPGRADE. USERS OF SUPERCHARGE VERSIONS 1.11 AND EARLIER, SEND £10 PLUS CARTRIDGE FOR THE LATEST VERSION.
* £1 OFF IF YOU BUY 2 PROGRAMS, £2 OFF IF YOU BUY 3, £3 OFF IF YOU BUY 4, ETC.
* UK DELIVERIES POST FREE. FOR DELIVERIES ABROAD: EUROPE ADD £1 (£2.50 FOR SUPERCHARGE) PER PROGRAM; ELSEWHERE £1.50 (£4). FOREIGN CHEQUES SHOULD BE EITHER EUROCHEQUES OR DRAWN ON A UK BANK.
* PHONE ORDERS ARE ACCEPTED ON 01-527 5493. ACCESS/VISA ORDERS ARE EXCEPTED.

ZX 81

Even a small computer gets more from Cassette 50! You can run 39 games on just the basic 1K ZX81, while 11 more will play with the addition of a 16K expansion pack. Where else could you watch your radar instruments and judge your final approach in games like RADAR LANDING – a realtime flight simulator, or enjoy the thrills of PSION ATTACK. Logical, tactical, maze, arcade – all kinds of games on just one tape!

BBC A/B

An advanced computer like the BBC demands a sophisticated games cassette. That's why Cassette 50 gives you full use of screen modes with high resolution colour graphics, user-defined graphics, excellent sound and music, joystick compatibility and many high speed games. HIGH RISE gives you the chance to beat a realistic roulette wheel, with all the extras, and you'll need the fastest reactions of all to beat EVASIVE ACTION as you trail across the screen in a frantic search for oxygen. With multi-levels and superb graphics this game is totally addictive.

ATARI

Munch, Munch . . . it's the MAZE EATER! Can you eat the ghosts before they eat you? Or would you rather chance it on the MOTORWAY? Your Cassette 50 is compatible with the 400/800 and 600XL/800XL series ATARI computers. Advanced features include high resolution graphics, sound, music and mixed mode screens. Many games are joystick compatible.

FREE

20 KEY, MULTIFUNCTION CALCULATOR WATCH

COMMODORE 64

Only you can save Europe from destruction! It's ROCKET LAUNCH, the thrilling war game that reproduces a European map. More ambitious? Try rescuing your crew under an ultrafast GALACTIC ATTACK and escaping back to your spaceship! Just two of the great games on your Cassette 50, featuring high resolution and user-defined graphics, sprites, sound and music.

1. Maze Eater
2. Galactic Attack
3. Space Mission
4. Lunar Landing
5. Plasma Bolt
6. Startrek

ELECTRON

Can your FORCE FIELD protect the city from Alien Attack – or maybe you have the skill to DYNAMITE the dam and flood enemy headquarters! Fifty different games with high speed, high resolution colour graphics, user-defined graphics and excellent sound and music. Not to mention full use of screen modes. Fifty fast paced, fascinating games.

ORIC ATMOS

Have a go at GALACTIC ATTACK – you'll need fast reactions to beat the invaders in this all-time favourite – or if you prefer you can travel through space at warp factor 9 in SPACE MISSION, a realistic 3-D version of space warfare as seen from the cockpit of a spacecraft. Everyone has a favourite game on Cassette 50. With fifty classic and original games featuring user-defined graphics, sound effects and increasing levels of play.

VIC-20

Will it be BALLOON DODGERS, or the prizewinning DUSTMAN DAN? Play these and 40 other fabulous games – including many automatic double loaders – on your unexpanded 3,5K VIC-20. And with an 8K* or 16K** expansion cartridge you can choose from 8 additional games like STARTREK or SKULL CASTLE. Special effects user-defined graphics, super sound and music.

ORIC 1

Cassette 50 includes PLASMA BOLTS, a superb high speed version of the classic arcade Centipede game. Watch out it's really tough!

DRAGON 32

If you like the light cycles of TRON, you'll love JETMOBILE – a thrilling 2-player game featuring high speed graphics.

APPLE

Cassette 50 gives you 50 great games to choose from including a classic STARTREK and BLAZING INFERNO.

FREE *calculator watch with every Cassette 50*

Letters

Where are they?

As an Amstrad user, I am interested to see all the Mastertronic tapes in your charts for £1.99 each.

But can you tell me where these can be purchased? None of our local shops stock them and they are not mentioned in the lists of any of your Mail Order services.

Can you give me the name of a dealer, or the address of Mastertronic so that I can write to them direct (they never seem to advertise).

Peter Smith
19 Westover Rd
Bournemouth

Mastertronic's address is 8-10 Paul Street, London EC2. Its games can usually be found in places such as newsagents, garages, video shops, supermarkets, and motorway service stations, if you have had no luck in the computer stores.

An evil plot

I've just read *Ziggurat* (Vol 4 No. 51) and I can't let Rod Dawson's fatuous drivel go unchallenged. It really is time that the myth of jargon being designed to keep out the uninitiated was laid to rest.

A few years ago, there was no such thing as computing. As it developed, new objects, concepts and activities were brought into existence, and new words had to be invented to describe them. You might as well argue that the words tram, internal combustion engine and bus stop were jargon invented to conceal the concept of mass travel from the uninitiated.

It isn't jargon to say Rom, Ram, ULA and ASCII – those are their *names!* Rom is computer memory which cannot (normally) be altered, but which retains its data without power. Ram is memory which can be altered, but forgets everything when switched off. A ULA is a computer component which reduces development time and costs by being as general-purpose as possible: its final functions are determined only at the last stage of manufacture. Computers can only work with numbers internally, so we use certain numbers to represent letters and the standard conversion from one t'other is called ASCII. Four pieces of 'jargon', four simple explanations.

As for not knowing the values of mega-or giga-, the metric system is the most widespread counting and measuring system we have on this planet: if anyone doesn't know it then something is seriously wrong. Incidentally, our previous system of measurement used such non-jargon as rods, perches, miles, chains, yards and furlongs. I assume Mr Dawson can sort these into size order without looking it up.

Mr Dawson's real argument seems to be the depressingly prevalent modern one that, if something involves any effort at all, then don't bother to work at it.

You're right, Mr Dawson: we must "recognise the dynamism of the language, and not expect it to fossilise". Isn't it self-contradictory to tell people not to learn the new words, and "speak English"? Whose English – Dickens', Chaucer's, Shakespeare's or Boadicea's? Exactly when did adding words to the language become an evil plot to baffle the people?

Peter Green
London E4

Roller price

I read with interest a letter written by Mr David Cummings published in *Popular Computing Weekly* dated 19-25 December 1985, concerning Ibico Printer Ink Rollers.

I apologize for any confusion concerning the price of the replacement ink roller. I would like to now clearly state that the retail price for this item is £4.95, and is available only from Saga Systems.

As a point of interest, it is not necessary to obtain replacement rollers as they can easily be refilled. To do this remove the ink roller from the printer and submerge in a cup with normal stamp pad ink and a drop of washing up liquid to break the surface tension. Leave overnight, remove from cup and wipe the plastic dry.

D C White
Saga Systems
2 Eve Road
Woking
Surrey

"But officer . . . I only drank a thousand pounds worth of champagne!"

From Monday, January 13, *Popular Computing Weekly* will not accept any more requests for replacement Micro Magic cards. However, you may still claim prizes for cassette labels, or Amstrad CPC 6128, on your winning cards.

Restrictive

I am amzed by the high rating given to Incentives' *Adventure Creator* by Tony Bridges (19 December). I had the misfortune to by one, and found it was useless for anything except the simplest games. There are just too many restrictions on the type of game you can produce. It is no good having something easy to use if it is not flexible. Plasticine is easy to use, but you wouldn't use it to build the Forth bridge! I think the review was misleading and condescending. We can handle a diet of more then just baby-food, you know!

Fortunately I have access to a copy of *Genesis* from CRL/Camel, which is infinitely more useful. Unlike *Adventure Creator* you do not need to do all that pre-planning on paper as it is truly interactive. I'm afraid Incentive's program will not be out of its box very much.

Kevin Marks
5 Ramport Rd
Glasgow

Tony Bridge replies: To write an adventure, I want a simple, easy-to-understand utility, and Incentive's fits the bill perfectly. There is obviously a need to have a closer look at the way in which both programs work and which would be more suitable for the job: I intend to devote a future week's corner to that look.

There's no denying that *Genesis* is very good value, particularly when one compares the prices of the two packages, but 'simple' computer programs are not necessarily 'inflexible'; on the contrary, I believe that *GAC* is *more* flexible than *Genesis* and there are no restrictions that I have found so far.

Spectrum defence

Taking your magazine for the first time this week, I was very pleased to read R J Peters' letter in defence of the Spectrum. I too like the single keyword entry.

February of this year was the first time I had ever touched a computer, and since then I have become very attached to my Spectrum Plus. Although tempted by the new Amstrad package, I remain faithful to the Spectrum and look forward to the 128K version.

I wonder if any of your readers have found a way to modify *Tasword* to produce 80 characters per line?

The only problem I have found with the Spectrum is that I cannot LLIST programs on the Brother 1009 because of Spectrum's use of CHR$ (128) to (255) for graphics and commands.

Programs using LPRINT require some modification for the Brother, but this is not too much trouble and the presentation is well worth the effort.

A B Wright
Thatcham
Newbury

Apologies

In our recent survey of bulletin boards (*Popular Computing Weekly*, December 12) we printed an incorrect phone number for the SWAFAX board. The correct number is 0622 850440. We apologise to everyone concerned. We have also been asked to point out that SWAFAX operates two other boards: on 0622 858304, and on 0440 820002.

Amstrad Expansion

Hardware Vortex Expansion Board **Micro** Amstrad 464 **Price** 64K – £99.95 (512K – £159) **Supplier** Screen Micro, 6 Main Avenue, Moor Park, Northwood, Middlesex.

If you wish your Amstrad 464 could run 6128 software or true CP/M software but the Christmas overdraft means you can't afford a new machine, then perhaps the Ram expansion from Vortex is for you. They are selling at a rate of 2,000 a month in West Germany, so they must be worth considering.

For £100 you can have a 64K Ram expansion system which will emulate a 6128, plus the software to re-configure your Amstrad CP/M to give you 62K of program area with an optional 32K printer buffer. This means you can run any standard CP/M 2.2 package on your expanded 464.

Any extra memory (a 512K board costs £159) can be configured as a Ram-disc, which on a fully expanded system is 444K formatted.

Also included is a good machine code monitor/assembler/disassembler in Rom, which can be called from Basic even in the middle of running a program and will return to the same point you called it from.

If you program in Basic the system includes a small operating system of RSX's – called by entering *bae-BOS*. Until you do, your machine is unchanged other than losing a few bytes for the RSX to boot the Bank Operating System. When called you have the following options for your extra memory:

- To store screens and recall them at up to three per second.
- To store programs and data (up to 288K and 256K respectively with a full 512K expansion).
- To set up a 32K printer spooler which operates whenever you List to the printer.

There are also commands which improve graphics control from Basic and others like *bae-GOSUB,<bank number>,<variable>* and *bae-COMMON,<list of variables>* which allow a more structured programming style than otherwise possible in standard Amstrad Basic.

So what are the disadvantages? First, it does not run CP/M+. The manufacturer considers there is plenty of CP/M 2.2 software and the demand for CP/M+ has yet to be shown, although they would do the necessary if demand rises. Secondly; you have to open up your computer to install the board, which would void the 12 month guarantee, but as a large number of 464's are over 12 months old this is not such a drawback.

Although DK'Tronics' rival memory expansion is claimed to run CP/M+ you cannot buy CP/M+ for it, and it slots on the back of the computer. Personally, I prefer not to have my computer festooned like a Christmas tree with add-ons. Moreover, the DK'Tronics expansion cannot be used under CP/M 2.2 and does not give the sophistication of the Vortex extra Basic commands. The Vortex board can be easily expanded from 64K through 128K, 256K 320K up to 512K and you can get the extra memory chips yourself and plug them in (there's even a Vortex program to check if your Ram is OK).

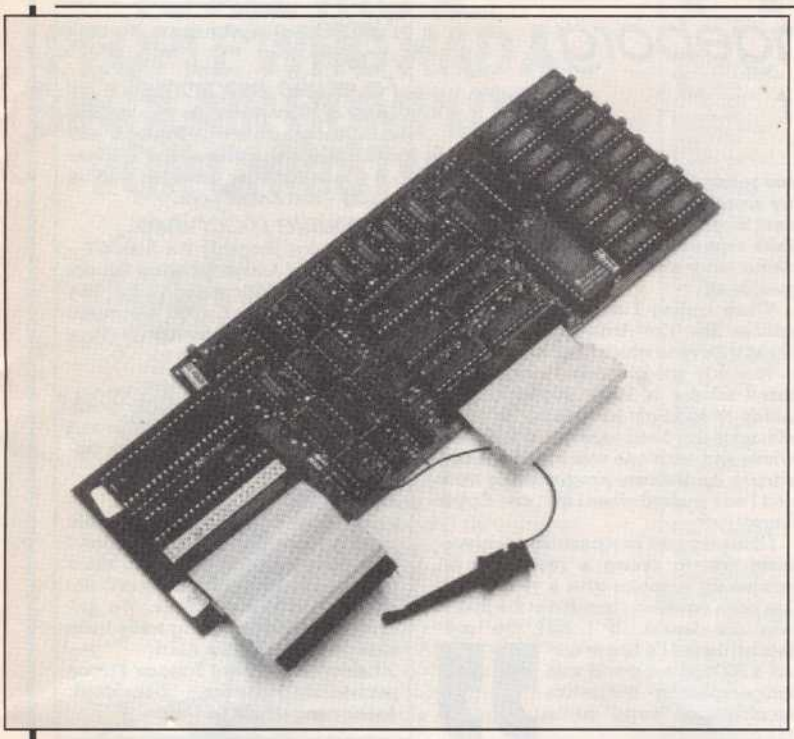
With the Vortex board you do get a full 62K CP/M system with a 32K printer buffer and the Ramdisc option. If you want to use full size CP/M programs, like *Wordstar*, then this will be perfect. The same board will allow you to connect to either 3.5 or 5.25 inch disc drives – even a hard disc – and these will run happily side by side with the Amstrad disc drive. If you have not yet bought a disc drive you can get a twin 5.25 drive (1.5 megabyte formatted) CP/M 2.2 system including this board for £399, with VDOS on Rom which is Amsdos compatible and an Amsdos compatible graphics package.

The Vortex expansion comes with instructions on how to install both it and the new CP/M configuration. There is also a brief guide to the software and the machine-code monitor, all contained in a slim booklet.

You can tell from the style and humour that it has been translated from German

(All of these are RSXs so must be typed with a bar before them)

Expanded Basic Command Set	Effect
BANK,<integer>	Changes active bank.
BASIC	Returns to Amsdos, removes BOS
CALL,<integer>,<address>[,parameters]	Calls machine code routine in one bank
COMMON [[,<string variable address>], <list of integers>	Declares variables by first letter that will be common to given banks
DEV,<integer>	Determines channel for output of LIST
EMULATE	Configures Ram to emulate a 6128
FAST	Speeds up printing to screen in Mode 2
FRAME	Delays program until next frame flyback
GCHAR,x,y,<integer variable address>	Returns ASCII value of character at x,y,
GOSUB[,<integer>],<line no>	As for Amsdos except may be any bank, and line number may be a variable
GOTO[,<integer>],<line no>	As for GOSUB
GPAPER,<integer>	Changes graphics background colour
GPEN,<integer>	Changes graphics foreground colour
ID	Display status of extra memory allocation
LIST[<list of integers>]	Lists programs in all or selected banks
LOAD,<string variable address>	Loads a program into the bank(s) it was saved from
MASK,<value>	Sets mask for graphics
MON	Calls monitor/assembler/disassembler (available under BOS or just Amsdos)
NEW[<list of integers>]	As for Amsdos except you can select banks
PEEK,<integer>,<addr>,<str var addr>	As for Amsdos but you choose bank to *Peek*
POKE,<integer>,<addr>,<value>	As for Amsdos but you choose bank to *Poke*
RAMCLOSE	Closes the relative data file if open
RAMFIELD,<list of integers>	Sets field lengths for each record in the relative data file
RAMOPEN,<integer>	Opens relative data file and sets record length to be used
RAMREAD,<integer>,<list of var addr>	Reads into selected variables the record given by the integer
RAMWRITE	As for *Ramread* but writes to the record
RECORDS	Returns in system variable REC the number of records available in the data file
SAVE,<str var addr>[,<list of int>	Saves programs in all or selected banks
SCREEN.IN,<integer>	Loads a 16K screen from video Ram
SCREEN.OUT,<integer>	Saves screen to video Ram
SCREENS	Returns in SCR the number of screens that can be held in video Ram
SLOW	Reverse the effect of *Fast*
SPOOL.ON	Allocates 32K of Ram to a printer spooler
SPOOL.OFF	Frees 32K of Ram if spooler allocated
UNMASK	Turns off graphics mask
VIDEO.ON	Formats extra memory to hold 16K screens
VIDEO.OFF	Reformats memory as when BOS entered



but it is clearly written and I had the board installed within an hour.

You have to remove the Z80 and Amstrad Rom chips from their slots, insert them in the expansion board and then connect it. This calls for some care – put the cat out and shut the door before starting – but no great skill. I was doubtful at first of carrying out this sort of surgery on my own machine but it was really very simple.

Without doubt this memory expansion is good value if you already have a 464 and you find you need full-sized CP/M. Even if you do not own an Amstrad it's worth thinking about. A 464 has a built-in cassette and runs all the 464 software.

With the cheapest Vortex expansion you would be paying the same as for a comparable 6128 system and yet have a full sized CP/M 2.2 and 32K printer spooler.

The product is being distributed by Screen who will be demonstrating this expansion and a similar board for the 6128 at the Amstrad Computer Show at London's Novotel on January 11/12. The German development team will be represented to answer questions about it and the exciting MSDOS board expansion for the Amstrad 464 still under development. Watch this space.

Barney's *Clothes Line* will really choke you up.

ROCK'N WRESTLE

Code Words

Name: Bo Jangeborg
Author of Fairlight

"I started learning Basic on a Swedish computer called the ABC – it was a Z80 based thing with 8K, that was in about 1978. That led on to the Spectrum and as I began to realise how slow Spectrum Basic was I started to learn machine code.

Most of my knowledge of machine code came from the Spectrum manual and a book called *Spectrum Machine Code for Absolute Beginners*, neither of which was very good. Later on I got hold of a small reference manual put out by Zilog which had lists of commands with the time they take and how the registers are affected – that was more useful.

Most of my coding experience grew out of necessity. I think what I need to do and then find a way. My program, *The Artist*, began as a drawing program in Basic and gradually was turned into machine code to get the speed.

My advice to any would-be machine code programmers is to begin with one very simple objective, even something like putting a dot on the screen. If you see results quickly it encourages you to try something a little more complicated next time. I wouldn't necessarily get the Zaks reference manual – it's very academic and would probably put most people off.

When coding I mostly use my own utilities like *The Artist* but I also have Hisoft's *Devpac* which I find very good.

The only programmer I can think of that I admire is Mike Singleton. With *Lords of Midnight* he created so many elements that fitted together in a perfect whole and each one was original. I also admire the Ultimate programming team and I was amazed when I first saw *Knight Lore*.

I think my own programming achievement was to create a really fast fill routine for graphics over a year ago. It has been equalled since but at the time it was the fastest. If I had the perfect hardware I'd like to create a 3D high res world with full perspective – it'd be like an intelligent 'world' inside the computer."

Name: Bo Jangeborg
Age: 23
Favourite programs:
Lords of Midnight for the way it mixes excellent graphics with strategic elements (I like wargames), *Fall of Rome* – it was an old Basic game but was fun to play – and *Knight Lore*.
Favourite machines:
Hard to say; probably the Atari ST – although the Amiga is better, I'm not sure how well it's going to do. The Amstrad is a very good all round machine but the Spectrum is very much cheaper.
Softography:
The Artist, *Fairlight* – I'm also working on an upgrade for *The Artist* and may bring out my own graphics language called *Grax* at some point.
Hobbies:
I play a lot of wargames and role playing games; at home in Sweden I have hundreds of them. I also run a computer company and shop in Gothenburg with some friends. We sell computers and are doing some business programs for the Atari.

I also read a lot of Science Fiction particularly Steven Donaldson, Asimov and Ursula Le Guin.

Special Offer

The Christmas season may be over but here at *Popular Computing Weekly* we're still feeling generous and we've got a bagful of free gifts for our loyal readers.

First of all, we have hundreds of copies of eight Firebird games running on the best-selling machines. Spectrum owners can choose between *Sub-Sunk* and *Don't Panic*; Commodore 64 owners can select *GoGo the Ghost* or *The Helm*; on the Amstrad there's *The Wild Bunch* or *Short's Fuse*; and *Bird Strike* and *The Hacker* running on the BBC B.

If you prefer, you can choose Tony Kendle's *Arcade Champion's Guide* – our arcade ace's handbook to playing some of the best games on a host of machines.

Apart from hints and tips on strategy and features, there are several complete game maps.

To claim your free gift, simply collect five coupons from this and future issues of *Popular Computing Weekly* and at tach them to the card on the front of the magazine.

COUPON 1

Please note that if demand for the Firebird games exceeds supply we will substitute either the alternative game for your machine, or a copy of the *Arcade Champion's Guide*.

So, don't forget to start saving the coupons now!

GoGo the Ghost

A SPECIAL MESSAGE TO ALL THOSE PEOPLE WHO HAD A SINCLAIR COMPUTER FOR CHRISTMAS

(and those who have had one for years)

Looking for great gizmos for your new Spectrum or QL? There's one place you will find everything: THE MICROFAIR.

If it's new it will be on show. If it's original you'll find it on sale. If you need advice you only have to ask the exhibitors. If you want to meet thousands of enthusiasts, just come along and enjoy yourself.

There's everything for Sinclair Computers. Hardware, Software, Books, User Clubs, Programming Aids, Games, many at special 'show' prices — there's even a bring and buy sale.

For a fun day out and a chance to see and buy everything new and exciting . . . you won't beat the MICROFAIR.

THE NEW YEAR MICROFAIR

1st FEBRUARY 1986

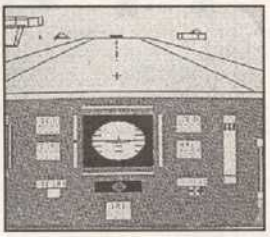
L.A. BRUCE

Bruce's *Armlocks* can really spin you out.

ROCK'N WRESTLE

Take off

Program *QL Flight Simulator* **Micro** QL **Price** £19.95 **Supplier** Microdeal, 41 Truro Road, St Austell, Cornwall.



Up up and away with your QL is the promise from Microdeal. One of the essential programs on a home micro is the flight simulator and there have been the good and the appalling.

Microdeal's falls somewhere in between – the manual spends much of its time apologising for the graphics (it doesn't need to, they're fine) and asking the reader what he/she expects from a mere £200 computer. But the program doesn't warrant such excuses, it can stand on its own three wheels.

The wire graphics I mentioned are good enough to lend quite a realistic air to the view from the cockpit window of your single-engined machine – I particularly liked the floating compass points through which you can fly! On the dashboard your instruments are adequate: there are no navigational aids apart from a heading indicator, but you also have an altimeter, rev counter, gear up/down indicator and artificial horizon, together with rudder/aileron/el-evator indicators.

Your flight takes place over eight "worlds", each of which has its own runway and potential hazards in the shape of mountains, radar dishes, bridges and so on: and the weather in each world may be changed to the user's preference. Flying about the air space is as realistic as the taxiing sequence, during which you can refuel at the dump alongside each runway.

Sound is used well, with a lovely start-up burble, but fun isn't really what the program is about. Although there is a bridge and power-line to fly under, this simulator is really for the serious student of flying. While the manual and program are a touch stuffy, there is enough for the merely interested home user – and at a reasonable price – to make this *the* flight simulator for the QL.

Tony Bridge

Marley's ghost

Program *Exodus* **Micro** Commodore 64 **Price** £2.50 **Supplier** Firebird Software, Wellington House, Upper St Martin's Lane, London WC2H 9DL

This pocket-money priced game has you trying to destroy numerous strange objects that are attempting to escape from 'The Pit'.

This pit turns out to be an octagonal black shape at the centre of the screen and the objects which fly out include galleons, abominable snowmen, hover mowers, mutant llamas (sounds familiar!) and other horrors. By moving your ship either clockwise or anticlockwise you can cut off their escape but you mustn't touch any object once it has escaped. Even worse, if a llama gets away you lose one of your three lives.

Despite its quirky humour – like extra points for shooting a television tuned to Channel 4 because it's so rare – I found the game quickly lost my attention. The graphics are effective but rather simple and the game itself is actually too easy.

Lionel Carter

Fast lane

Program *Scalextric* **Micro** Commodore 64 **Price** £9.95 **Supplier** Leisure Genius, 3 Montagu Row, London W1U 1AB.

I was always really proud of my Scalextric set, I even had a record of racing car noises to go with it. The thing about it wasn't just the racing, but the peripherals that went with it, the grandstands, pit crews, TV cameras and bridges to name but a few.

So how does the computer version compare? The only real comparison to the original is in the track construction. You can design any shape of circuit complete with chicanes, cross-overs and banked curves, subject only to the space available in the screen section. Once designed and saved on to tape you then proceed to the race. From here on in the similarity ends and we are looking at a *Pit Stop II* clone, but with only two cars.

The screen is the usual design split and the position of each car on the track is shown on individual maps.

There are a few disappointments. A banked curve is not graphically shown while racing (you only know it by the lessening of centrifugal force), nor are there any cross-over sections which really makes using them in the design a waste of time.

There are 17 Formula 1 circuits already constructed and are available using the program prompt along with lap numbers from one to 99. During the race the track whizzes along quite smoothly and the cars are graphically pretty, but where are the slots?

Given the choice, I'll buy *Pit Stop II* any day as apart from building the tracks it is really a racing game and not a Scalextric simulation.

Andy Moss

On form

Program *Back to Skool* **Micro** Spectrum **Price** £6.95 **Supplier** Microsphere Computer Services, 72 Roseberry Road, London N10 2LA

School Report – Pupil: Eric

Form Master: Eric's behaviour has not improved. At the end of last year we caught him trying to steal his report from the headmster's safe Obviously he succeeded because he began this term trying to replace it. We hoped that the redesigned school would confuse him. However, Eric was not averse to creeping out to the neighbouring girls' school.

Biology: There has been the disappearance of a frog from the biology lab, plus the unexpected appearance of several mice elsewhere. When questioned, Eric said that he was trying to redress the balance of nature.

Chemistry: Eric blamed me for the smell outside the headmaster's study when it was caused by his stink bombs. Apparently he used them to get the head to open the window, so he (Eric) could fire his catapult, dislodge a conker and knock out the caretaker!

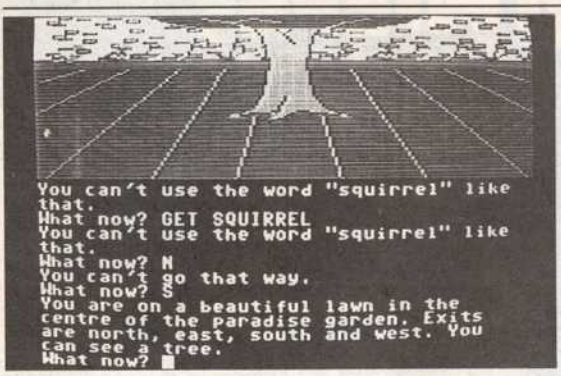
PE: A fine year for Eric. He learnt to ride a bike and then to leap on the saddle and perform stunts. Unfortunately, this was only in order to put a frog in a cup in the girls' school kitchen.

Geography: If anything matches Eric's ignorance of his own school. I know that the place, with its tribes of swots, bullies and tearaways, is confusing at first but I really suspect him of dodging lessons.

History: I caught Eric looking in a desk. He claimed he was searching for his roots, but had only found a water pistol.

Headmaster's Report: What can I say? He's back and making the lives of my colleagues even worse. However, there's much more for him to do and life would be awfully quiet with out him. Welcome back, you little monster. . . here's 5,000 lines.

John Minson



Part three

Program *The Worm in Paradise* **Micro** CBM64/Spectrum 48K/Amstrad/BBC/Atari/MSX **Price** £9.95 **Supplier** Level 9, 229 Hughenden Rd, High Wycombe, Bucks.

Level 9's latest release completes the science fiction trilogy which started with *Snowball*. *The Worm in Paradise* is also their first adventure to incorporate a new adventure writing system. Taking over a year to perfect, the new system has a 1000 word vocabulary and the most advanced parser ever seen in a cassette based game.

Multi-tasking is also a new feature which will enable you to input commands while the graphics are actually drawn; in other words, no more twiddling your thumbs while waiting for the pictures to appear.

The game contains over 200 instantly drawn graphics; unfortunately, or fortunately, depending on taste, because of memory limitations the BBC is text only. From a personal point of view, the graphics added nothing to the overall playability of the game.

The Worm in Paradise understands a range of commands such as, "Get the Bench and Go East then Drop Bench". Also, "Examine all but the Tree, Gun and Worm then Go Down", far more advanced that the usual verb-noun input.

So what about the Adventure? Well, it takes place about a 100 years after the time of *Snowball* and *Eden*. Set in the futuristic world of Enoch, the planet is run by a right-wing political organisation. Your aim is to work your way into the 'party' by performing various actions. Hopefully by completing the various tasks in their correct order, you will become a party member, from there it's a uphill struggle all the way to the Seat of Power.

Pete Austin's fertile imagination has really been working overtime with some of the problems you are faced with. I never realised finding my way home was so difficult, until I encountered the genuinely frustrating Enoch Transport system.

I don't think a novice adventurer will get very far in this game. Even the more experienced player, who has a certain amount of knowledge about Level 9 games, will find it quite taxing but definitely rewarding. Congratulations, Level 9 on another imaginative hit.

Roger Garrett

Word's worth

Program *The Last Word* **Micro** Spectrum **Price** £15.50 **Supplier** Myrmidon Software, PO Box 2, Tadworth, Surrey KT20 7LU.

Suddenly there's a rush of word processors for the Spectrum, and if you have a good quality keyboard plus reliable method of storage it may provide an alternative to the Amstrad 8256, especially if you want it for other applications.

The Last Word is very traditional package, with not an icon in sight. Instead the information is called by single key strokes, with a variety of shift keys, often after accessing the *Command* mode, and it is displayed in a header. In practice this shouldn't interrupt your typing too much once you've learnt your way around the program because the most needed functions, such as cursor control, are most easily available.

Screen options for *Last Word* are very good, allowing for up to 80 columns and justifiable line lengths to a total of 132 characters, any words exceeding the line length appear on a line continuation below. This feature is also useful if you don't have an RGB interface, because at 80 columns the characters are very small and unfortunately, though you can change border and header colour, the only options for text are black on white and vice versa.

Myrmidon has not skimped on features such as word count, tabs, etc and there's a novel alarm that screeches out every 30 minutes (though it can be reset) to remind you to save your file. Efforts have also been made to include mail merge though this means accessing Basic and setting up strings before returning to the program – not the most elegant solution.

The 30 pages of instructions are written (seven files) with the package, but are not immediately clear, and even with hands on experience will take some getting used to. Familiarity will not breed contempt but at the start you'll find yourself stuck every so often.

Details of printer control codes are quite good but *Last Word's* main failing comes in being designed for use with Microdrives.

If you were starting from scratch I don't think I'd recommend this – it's certainly not the Last Word in processors. However if you're already committed to the Spectrum and want a traditional package, which can handle files from other systems, albeit with a little work, this is worth a look.

John Minson

Logic rules!

Software *LPA Micro-Prolog* **Micro** Commodore 64, (also BBC, Apple II, and others) **Price** £79.93 disc only **Supplier** Logic Programming Associates Ltd, Studio 4, The Royal Victoria Patriotic Building, London SW18 3SX.

Prolog (PROgramming in LOGic) is getting itself into the news at the moment because it is one of those languages designed to make computers work in a way which is more like a brain than a calculator.

Traditional computer languages, such as Basic or Fortran, are fine for solving technical problems but become very difficult to work with in many everyday situations.

Prolog is aimed at providing a computer language which more closely reflects the way that our brains handle logical problems. When presented with an everyday problem our brain seems to rely on our past experience of similar problems to give a first attempt at solving the new problem.

Past experiences can be expressed as a series of rules; red-hot coals give you pains in the fingers when touched, £10 notes are quite rare, and so on.

Micro-Prolog is, as the name so aptly implies, a version of Prolog designed for use on microcomputers. Micro-Prolog is a non-compiling version of the language, like Basic, and comes with a number of extensions to make the language easier for beginners to understand. Be warned though, Prolog is not the sort of thing which can be learned overnight. Logic Programming Associates has taken the unusual step of not only providing a full 190-page reference manual but also giving you a 100-page book as well, as a general introduction to Prolog.

Micro-prolog can give you a working insight into one of the most interesting languages around although you must accept that speed and storage capacity are limited.

PRINTER OFFERS

Look at these deals on centronics printers we believe that these prices offer the best value in the country. All prices include receipted delivery, despatch is within 48hrs of receipt of order provided goods are in stock. A printer lead is supplied to suit your micro free of charge, (please specify Amstrad, BBC, Oric, Dragon, Einstein, CBM64 or Memotech) for Spectrum or QL owners we will supply with an appropriate interface for an additional £20.00.

SMITH CORONA FASTEXT 80

Bulk purchase allows us to offer this **high quality, 80 column dot matrix printer** for an unheard of price. Buy a proper printer for the price of a thermal. Friction feed is standard and an optional tractor unit is available.

ONLY £129.95

Price includes lead to suit your micro.

Or to suit Spectrum with Kempston centronics "E" interface £149.95

SHINWA/MICRO P. CPA 80 +

NOW WITH NEAR LETTER QUALITY MODE

Improved specification makes this, the **latest version** of this popular model, the **outstanding printer buy** in it's class. As well as it's normal **superb print quality** at 100cps (better than the NLQ on many rival models) it now has an **NLQ mode** which offers even better print quality. This can be switched in either from a **front panel NLQ switch** or from software. Other features are friction and tractor feed, external dipswitches, graphics mode, square needle print head (gives less dotty look to print) and Epson compatibility. Take a look at these unretouched actual size print samples.

New NLQ PICA print style
Standard PICA text (100cps)
True descenders on jpg etc.
ELITE mode gives 96 columns
CONDENSED mode gives 142 columns
ENLARGED mode
SUBSCRIPTS and SUPERSCRIPTS
underlines nicely
Good italic character set

We are convinced that this printer offers the **best performance and value** in its class and at our unheard of price is a **BARGAIN**.

ONLY £189.95

Price includes Centronics lead to suit your micro.

Or to suit Spectrum with Kempston "E" interface £209.95.

MICRO P MP165

This printer is a **very high specification** at an **unbelievable price**. It boasts 165 cps in draft mode and 70 cps in **near letter quality** mode, which is switch or software selectable. It is friction and tractor feed as standard has a **2K buffer** and is EPSON compatible (it even uses an EPSON ribbon). It can print in standard PICA 80 column mode or a variety of others from enlarged 40 column mode to condensed at 132 column. Italics are available in all modes. Normally this printer would be expected to sell at £300 plus we are offering it at our **ultra keen price inclusive** of printer lead to suit BBC, Amstrad, CBM 64, Oric, Dragon, Einstein or Memotech.

ONLY £249.00

Price includes Centronics lead to suit your micro.

Or to suit Spectrum with Kempston "E" interface £269.00

ERROR TRAP

by Nigel Mossman

As many Interface One owners will know, it is possible to define new Basic commands for the Spectrum.

The machine code given below defines a new command which will take the form of *Step Line n. Step* and *Line* can be found on the D and 3 keys respectively. This new command will carry out the following operation:

When the *Step Line* command is found the program stores the value *n*. In this case *n* should equal a valid Basic line number. If at a latter stage an error occurs or the Break key is pressed the program will not stop, but will jump to the line specified by *n*. Errors generated by Interface One operations cannot be trapped. This is because of the way in which the Interface generates and prints errors.

As it is likely that users may already have machine code operations attached to Basic programs I have designed the Basic Loader to place the Trap Code at a point specified in Ram. As the Spectrum shifts chunks of memory around during its various operations, it is vital that machine code is placed above Ram Top. The loader uses the clear command to set Ram Top one address below that specified. Any existing variables created by the user prior to the loader being run will, therefore, be destroyed.

As with all Extended Basic, the system variable Vector needs to be poked to the starting address of the Extended Basic. The Basic Loader will also take care of this. If you do not have any other machine code to work around, you can set the program to run at 65293. This will have the effect of preserving the UDG area.

The actual machine code comes in two main sections. The first part is the Extended Basic. This will in the first instance check the syntax of the line/command. The routine entitled *Stend* is a break off point hidden in Shadow Rom. If the computer is running a program then the program resumes at this point. If the syntax is being checked then no return is made. The computer will go on to check the next line or statement for syntax. Those who have studied the Spectrum in some detail will know that the bottom of the machine stack holds an address in Rom. This address is in fact the routine for the handling of errors. The action part of the Extended Basic (the part after the *Call Stend*) simply replaces the Rom address with that of the trap routine.

If at a latter stage there is some error or interuption of the Basic, the computer will enter the trap routine. This will cause the computer to resume running the program at the line specified by *Step Line*. In the process the machine stack is rebuilt.

As all Spectrum programmers know, each error report is accompanied by a number, or letter. These range from 0 (the OK report) to R for tape load error. The letter report codes are sorted as values from 10 for A (Invalid Argument) to 26 for report code R. However, for some odd reason, error codes stored at 23610 are always one less than their actual value, so report code 0 is in in fact stored as 255 and report code R is stored as 25 and 9 is stored as 8 and so on.

If you create a peeking routine, it is possible to determine the type of error that has occured. This will be useful if you need to determine the difference between a tape load error and the Break key being pressed. This means that you get your Basic programs to take a particular course of action if a certain error takes place (see sample program).

Basic Loader

```

AIRFOX

by Alan Brack

In this game for the unexpanded Vic-20, enemy helicopters attack – and you must destroy them before they destroy you!

You have three helicopters at your disposal – the enemy, as many as you can shoot down . . . but be careful, as your guns will self-destruct if you fire more than two bursts at a time.

Use keys as follows, Z-up, X-down, M-fire, or joystick.

The program loads in two parts, the first part holds the introduction page and instructions, the second part, the main code.

Program Notes

Line No	
20-38	Sets UDG's
40-59	Sets up main screen
60-95	Main program loop
300-355	Fire routines
400-515	Blow-up routines
700-750	End routine

```

ROCK'N WRESTLE

CLOCK

by Paul Leathley

When the program is run you will see a large clock, a mouse, a piece of cheese, a window for questions and answers and a fruit machine-type object with a lever: this the right/wrong machine.

Next, you see in the window the question *"What is the Time?"*. You will have noticed that the clock has acquired a pair of hands and using these as a guide you must answer the question. Numbers should be entered as figures rather than words; *Quarter, Half, Past* and *To* must be typed fully; *O'Clock* must be typed fully with an apostrophe (Shift 7) after the *'O'*; and there must be a space between each word or number. After an answer is entered, the lever on the right/wrong machine is pulled.

If the answer is right the face at the end of the lever smiles and mouse moves one pace towards the cheese, otherwise the exact opposite happens. When the cheese is reached, a score and assessment is given.

Program notes

80-130	Define characters.
170-200	Draw clock as 2 concentric circles.
220-230	Print numbers.
250-260	Print mouse and cheese.
290	Define Windows.
310-320	Draw right/wrong machine.
340-390	Select random time, draw hands.
410-460	Work out correct string for answer.
470-480	Asks time.
520-540	Activate machine.
560-620	Checks whether answer is correct.
640-660	Tune.
680-740	Prints score and assessment.
750-760	Error detected.

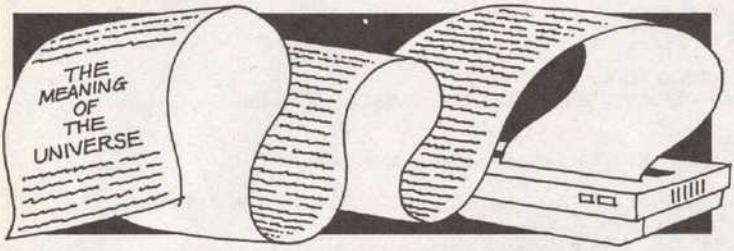
ROCK'N WRESTLE



KEYWORDS

by Mike Lloyd

SuperBasic contains around 150 keywords, each with its own particular syntax. This is a phenomenal amount for newcomers to the Sinclair QL to learn and even experienced users can be excused for forgetting the precise parameter requirements for, say, the *BEEP* command. This listing displays on the screen a potted User Guide to some of the QL's more difficult commands and concepts and should be far more convenient than delving into the pages of the manual.

To use the facility, type *'help'* and press *ENTER* and the computer will prompt you to enter a keyword which will then be displayed along with its syntax and other useful information in the listing window. Optional parameters are indicated by asterisks. If the keyword is not recognised, an error message is displayed in the command window, and a list of the keywords recognised by the routine can be obtained by entering *'all'*.

As well as giving information about SuperBasic commands the routine can also display keyboard values. Enter either *'KEYROW'* or *'ASCII'* and the appropriate values of any keys subsequently pressed will be displayed. These subroutines can be left by pressing the *ESC* key.

Listing 1 to 4 should be renumbered (after they have been entered) as follows: *RENUM 1 TO 500;24900,1*. This allows the routines to be merged with programs being developed so that the help facility is always available. The *DATA* statements should not be altered as their line numbers are crucial for the correct information to be displayed.

The SecRet Diary of Robin of Sherlock aged 34 3/4

December 1985

25 Wednesday

Christmas Day

Well, there was no escaping it, Christmas Day had schnuck up on us. Despite my cranking the cat into song at 6am, Mom and Dad didn't look like getting up before lunch, so I decided to go check out my presents. When I got downstairs, I got one big shock. The whole joint was a wreck, with wrapping paper and discarded mince pie remnants everywhere. Our pad had been done over good, the curtains blowing round the open window showed the burglar's way out. I was devastated.
I thought maybe I'd better take a look-see before I called the fuzz, who knows, perhaps there were some clues lying around. after checking through all the wrapping paper, I was just about to throw in the towel when I noticed something sticking out from under the guard dog. Being careful not to wake him, I kicked him out of the way to discover one unopened present on the floor.
I quickly ripped off the paper and a deerstalker and magnifying glass fell to the floor. . .

26 Thursday

St Stephen Boxing Day

Watson and me were sitting in my armchair, surveying the scene of the crime. We had been using my new magnifying glass to search for fingerprints but so far we had only identified the milkman's and some smudges. The guard dog, who was wearing the deerstalker, looked up but didn't say anything. We had to come up with something, and fast. We headed out into the garden and scouted round the house 'till we located the open window. I looked around in the rose beds, but there was nothing except some stupid, foot-shaped impressions in the ground. Still, It's a good job we went outside, because just as we were giving up, Watson spotted a scrap of red cloth, hanging pitifully from a rose bush. But, before he could get to it, a shot rang out. He sank, sickeningly to the floor, mumbled something unimportant, and expired. He had obviously been shot. After I had taken his watch for safe-keeping, I went indoors to watch TV.

FIND FACILITY

by David Viner

A useful feature found on some computers is a *Find* facility. It searches through a Basic program for a specific string of characters, usually a variable, and then displays all the line numbers where the string was found.

This program is a no frills implementation of such a facility for the BBC micro. To make the routine quicker, part of it has been written in assembler.

The routine prints out the line number onto either the screen or, if *VDU2* is put before the *Rem* in Line 32020, to both the screen and printer.

The easiest way to use the routine is to **Spool* it to disc and then to merge it with the **Exec* command onto the program you want to scan.

Type *Goto32000* and enter your search string (eg, enter 'pass' which will then match with and list out Lines 32200, 32220 and 32600). Note that Basic commands or keywords will not be found as these are not held in memory as normal ASCII codes but are converted to one byte tokens (see page 483 of the user manual for the token values).

The listing has *Rems* to explain how the routine works.

It may be wise to change Line 32200 (Listing One) to *For pass= 0 to 3 Step 3* and put *Stop* at Line 32610 on the first *Run* as this will report any errors in the assembler routine due to typing mistakes etc.

Once you are sure the assembly section is running correctly change the two lines back to their original formats – otherwise it won't work.

All the routines have high line numbers so that they should not clash with your own programs.

Screen Dump on Spectrum by M C Ogier

This is a program for a ZX Spectrum, using the RS 232C connection of Interface 1 for a screen dump to an Epson LX 80 printer.

I have consistantly been unable to make the published machine code programs work with my LX 80, so I wrote this short routine in Basic to do the job. It takes 1 minute 45 seconds to dump the whole screen, but it does work!

```
 10 REM   CHARLIE OGIER
BASIC SCREEN DUMP (EPSON LX-80)
 20 LET a=4096: LET c=-2048
 30 LET e=224: LET h=-32
 40 LET i=1792: LET j=-256
 50 OPEN #3,"b"
 60 LPRINT CHR$ 27;CHR$ 51;CHR$
24;
 70 FOR s=20480 TO 20511
 80 LPRINT CHR$ 13;CHR$ 10;
 90 LPRINT CHR$ 27;CHR$ 75;CHR$
192;CHR$ 0;
100 FOR d=s TO s-a STEP c
110 FOR b=d+e TO d STEP h
120 FOR g=b+i TO b STEP j
130 LPRINT CHR$ (PEEK g);
140 NEXT g: NEXT b
145 NEXT d: NEXT s
150 LPRINT CHR$ 27;CHR$ 64
160 CLOSE #3
```

Disc Directory on Amstrad by J Dunnett

This is a short offering for owners of Amstrad 6128s and 664s – note that it will not run on a 464.

On running, it permits the Disc Directory command CAT to be output to a printer, without resorting to machine code.

```
1 MODE 2:WHILE INP(&F500) AND 64:LOCATE 25,13:PRINT CHR$(24);" THE PRI
NTER IS OFF-LINE ";CHR$(24):WEND:WIDTH 80:|DISC:FOR Y=0 TO 4:PRINT#8:N
EXT
2 LOCATE 34,2:PRINT"DISCPRINT":LOCATE 2,5:PRINT"Disc Title/Number/Date
:":PRINT:INPUT" ",DN$:PRINT#8,"DIRECTORY: ";DN$:PRINT#8:CLS:CAT:X=1:Y=
4
3 WHILE A$<>"f":LOCATE X,Y:A$=COPYCHR$(#0):PRINT#8,A$;:IF X=80 THEN X=
1:PRINT#8:Y=Y+1:GOTO 3 ELSE X=X+1
4 WEND:PRINT#8,"ree":FOR Y=0 TO 4:PRINT#8:NEXT:PRINT:PRINT:PRINT CHR$(
24);" TAB-NEXT DISC.  SPACE-EXIT ";CHR$(24)
5 G$=INKEY$:IF G$=""THEN 5 ELSE IF G$=CHR$(9) THEN CLS:GOTO 2 ELSE IF
G$=CHR$(32) THEN MODE 1:END ELSE 5
```

Word Wrap on QL by A Pritchard

This is a very simple procedure for the QL which ensures that words are not truncated at the end of a window. . .that is, it provides a word wrap.

It does this without needing to specify the window size or character size because it uses the "!" print delimiter.

```
8000 REMark FITWORD. A.Pritchard 1985
8010 REMark Procedure to word wrap
8020 REMark any length of text to any
8030 REMark window width in any mode.
8040 REMark Parameters : channel,text
8050 :
8060 DEFine PROCedure fitword(c,a$)
8070 LOCal i,ll,z,b$
8080 ll=LEN(a$)
8090 IF ll=0 THEN RETurn
8100 i=1
8110 REPeat fword
8120    z=" "INSTR a$(i TO ll)
8130    IF z=0 THEN
8140       b$=a$(i TO ll)
8150       z=ll-i
8160    ELSE
8170       b$=a$(i TO i+z-2)
8180    END IF
8190    i=i+z
8200    PRINT#c,!b$!
8210    IF i>=ll THEN
8220       EXIT fword
8230    END IF
8240 END REPeat fword
8250 END DEFine
```

A new year

To start the year off as we mean to go on here are a fistful of pokes and tips for top games starting with a collection from regular tipster Paul Miller. *Commando* from Elite is an excellent implementation of the popular arcade game, with some of the smoothest movement and slickest animation seen on the Spectrum. However it's not easy, so you may welcome the routine printed below for infinite lives and grenades.

Paul has also given us a cheat mode for the Spectrum version of *Elite*. Like the program we published for the Commodore a few weeks ago this works by doctoring the saved game files so you have to start by loading *Elite* and saving your commander straight away.

Now type in and run the following program

```
10 FOR f = 23296 TO 23329: READ y: POKE x, y: NEXT x
20 DATA 68, 255, 55 , 221, 33, 0, 128, 17, 102, 0, 205, 86, 5, 201, 205, 191, 2, 254, 49, 32, 249, 62, 255, 221, 33, 0, 128, 17, 102, 0, 205, 194, 4, 201
```

Now rewind your saved *Elite* commander and enter *Randomise Usr 23296* to load the data in. Press play on the tape.

You can then enter your pokes as follows:

Poke 32791, X – x tonnes of food
Poke 32792, X – x tonnes of textiles
Poke 32793, X – x tonnes of radio-actives
Poke 32794, X – x tonnes of slaves
Poke 32795, X – x tonnes of liquor
Poke 32796, X – x tonnes of luxuries
Poke 32797, X – x tonnes of narcotics
Poke 32798, X – x tonnes of computers
Poke 32799, X – x tonnes of machinery
Poke 32800, X – x tonnes of alloys
Poke 32801, X – x tonnes of firearms
Poke 32802, X – x tonnes of furs
Poke 32803, X – x tonnes of minerals
Poke 32804, X – x kilos of gold
Poke 32805, X – x kilos platinum
Poke 32806, X – x kilos gem-stones
Poke 32807, X – x tonnes of alien items
Poke 32820,255 – fuel scoops
Poke 32821,255 – escape pod
Poke 32822,255 – energy bomb
Poke 32823,255 – energy unit
Poke 32824,255 – docking comp.
Poke 32825,255 – galactic hyperdrive
Poke 32816,255 – large cargo bay
Poke 32817,255 – ECM system
Poke 32809, 3: *Poke* 32810, 3: *Poke* 32811, 3: *Poke* 32812, 3 *Give Front, Rear, Left and Right Military Lasers.*

To resave your commander enter *Randomise Usr 23310*.

More old friends of the column are that pair known as the Langley Hackers, writing this time with a routine to get infinite lives in Bubble Bus's *Starquake*.

Run this line of program:

```
10 FOR A=23300 TO 23313: READ B: POKE A, B: NEXT A: 55, 62, 255, 221, 33, 0, 64, 17, 0, 192, 205, 86, 5, 201
```

Next enter and run this:

```
10 CLEAR 24100: RANDOMISE USR 23300
```

Now bypass the first loader on your *Starquake* tape and press play. The game will load and then stop with a *nonsense in Basic* message. You can then enter your pokes.

Poke 50274, 0: infinte lives
Poke 52427, N: Number of joysticks
Poke 50279, 255: full pads after you die (?)

Finally type *Randomise Usr 24100* and the game will start.

Finally Andrew Postlewhite of Rotherham has sent in a badly needed cheat routine for Melbourne House's *Gyroscope*. Run the following and play the tape from the beginning:

```
CLEAR 24063
LOAD "code" CODE
POKE 53922,0          (infinite lives)
POKE 54270, 201       (no aliens)
POKE 52138, 201       (infinte time)
RANDOMISE USR 52930 TO START
```

Andrew also offers these quick tips for *Fairlight* which he has finished: "Use the small potion bottles for strengths or for removing the monks (in the tower with the cross on the lower level floor) by pushing it along the floor until it hits them."

Tony Kendle

Tony Bridge's Adventure Corner

Growth industry

One of the big growth industries for adventurers in 1985 was the adventure club. We needn't go into the reasons for this again, since we've discussed them often enough in the Corner; but I'm glad to see that most of them are doing well.

The two largest, Henry Mueller's Adventure Club Ltd (ACL) and Roger Garrett's Adventureline are broadly similar, but have rather different aims. Both run excellent mail order services, that of the ACL being rather more comprehensive, although both offer discounts and lots of special offers. Both also feature a Helpline (in fact, this is the reason for most adventure clubs starting up), though here the Adventureline offers rather more, with five different numbers, each with a very knowledgeable club member in attendance. ACL runs just one number but the help received from this is equally worthwhile and authoritative.

Both outfits run a magazine for members, and it is here that they differ rather sharply. ACL sends out a small-format book of, typically, 20 pages. The Keeper of the Scroll writes, it would appear, the bulk of the content and there's a wealth of information for the adventurer, from how to solve *Zork* (this one has been running for seven months now!), *Sherlock*, *Mordon's Quest* and others, to how to write your own adventure and how to win lots of cash.

There is quite a lot of help crammed into the magazine, of the numbered code variety as featured in Scott Adams's Hint Books and, once upon a time in (ahem) this very Corner. (As an aside, several adventurers have taken me to task for not supplying so much help nowadays: but why should I when clubs exist for this very purpose? That is not to say, of course, that we'll never feature it again.) The reviews in ACL's magazine are short but to the point and there is also a (rather somnambulent) letters page.

Adventureline's monthly (modestly called *The Guiding Light*) on the other hand, is larger though the number of pages is similar. The emphasis here is on in-depth reviews and lively discussion on the current state of adventuring by those who play them. Roger Garrett is the editor, but it is very much of a joint effort, with club members taking a very active role in the magazine's format.

Important part

If there is a successor to the late, lamented *Micro-Adventurer*, this will be it, even though it is at the moment, typewritten and monochrome. Help, though an important part of Adventureline's activities, doesn't play a major role in *The Guiding Light's* format. The readers write some very thought-provoking letters, though the level of the letters page occasionally sinks to the level of an Elf-bashing free-for-all, one correspondent recently, for example, wanting to know why the page had become the contact page for foreign pen-friends and had appeared to drop the hints and tips.

The obvious conclusion to be drawn from the popularity among adventurers of magazines such as these two would seem to be the answer to the first part of that question, and as for the second, well, a lot of *Popular* readers seem to be happy to correspond with *any* adventurer, no matter where they might happen to live, and exchange views, adventuring experiences and so on. Roger Garrett, incidentally, asks me to point out that he no longer has any connection with *The Adventurer's Guild*.

Ken Matthew's *Adventurer's Guild*, which in a way spawned many of the clubs now in existence, has been quiet for some time now, which is a shame; get well soon, O Bulbous One.

A magazine which is generally computerish and not particularly adventurish, though it does contain reviews of adventures is *Interface*: I mention it here largely because the editor, Lucian Randall, was good enough to say hallo to the Grand Elf at the recent ZX Microfair, but also because it is astounding value at just 20p. The reviews reflect what computer users *really* think of the games; the review of *Fairlight* in the latest issue pointed out that it was "the closest thing yet to Dungeons and Dragons", which is certainly the first time that I've seen *that* said. Although you can't blame them, software houses tend to be a little suspicious of any club/magazine with a circulation of less than 25,000, which *Interface* is some way from achieving! Apparently, games producers have been known to receive 100 requests *a week* from everyone and the next-door neighbour's goldfish, asking for free "review" copies of the latest software (there are lots of 12-year-old Derek Brewsters and Tony Bridges out there!), so it's a half-dozen cheers to Ocean and others for sending tapes to *Interface*.

A broad base

The reason I like these magazines is that they are run by enthusiasts and much of the discussion and information will never be seen in the larger-circulation publications, and it is for this reason that they should be supported. Adventure clubs got off to a bad start, but those I've mentioned, though not the only ones, are building a broad base of subscribers which should see them through to their first anniversary.

N.B. WE DO NOT CHARGE AN 'AVERAGE PRICE'

NO HIDDEN EXTRAS We don't give you a **between price** and let you guess the bill, we give you a 100% fixed price **NO** extras. We don't need to boast about our service, we have 1000's of customers from all over the world highly delighted with our service and help. Only 20 minutes from Manchester Centre. Commodore 16s, Commodore 64, Vic 20, also repaired call us for details. **Please note we never charge between prices.** Don't wait weeks for your repair, we turn around all computers in 24 hrs. All repairs carry a full 3 month guarantee, plus on every Spectrum we repair, we send you a free game worth **£5.95** for your enjoyment and pleasure.

- While you wait service by Professional Computer Engineers.
- 3 month written guarantee on all repairs.
- International Repair Company. We repair computers from all over the world.
- All computers sent by Mail Order turned around in 24 hrs.
- Most Spectrums repaired within 45 minutes.
- All Micros insured for return journey.
- Keyboard faults only **£8.95**
- School repairs undertaken - discount available.
- Free software with each Spectrum repaired.
- Over 8 years experience working with computers. All computers fully tested.

HOW TO SEND YOUR COMPUTER Just parcel your computer in suitable wrapping enclosing **£19.95** for Spectrum repairs, please do not send power supplies. Commodore computers, just send **£1.75** (U.K. Eire, I.O.M. C.I.) or **£6.50** (Europe/Scandinavia) with your address or phone number and we will contact you same day by phone or letter with quote, if you prefer, please call us and we will give you a quote over the phone, we aim to please. That's what made us the most reliable and No. 1 Service Centre in the U.K.

TRADE REPAIRS most welcome

SOFTWARE

WDSoftware

FOR THE QL:

JOSS — **base £13**
Forget that tedious, time-consuming syntax! Just move the cursor and press SPACE for all your file commands. Cursor keys or your joystick allow you to access microdrives (up to 8) and floppy discs (as many as our interface allows) with up to 150 files on each! Scroll and print directories, COPY, DELETE or PRINT any file, select TV or Monitor mode before LOADing or RUNning any prog'am. You only use the keyboard to set the DATE or label a device when FORMATting. Easy to use with Psion and other software. No silly icons to learn – JOBS will TELL you what it's going to do! Programmer's toolkit and mass copying/printing utilities also supplied. Specify microdrive-only, Microperipheral or CST-compatible disc versions.

Ref QL7 — **base £7**
1300 useful QL references with ARCHIVE 2 search/print program. Too long for just one cartridge, so if you have RefQL5 just pay 2 and extra media cost to update.

Mdv Extension Cable — **£5.50**
Eight inches long, allows addition of extra microdrives to your QL. Twist it to put their slots facing you.

FOR THE QL: SPECTRUM; BBC; ELECTRON

WD Morse Tutor — **base £4**
Written to teach amateurs, now used by professionals too! Absolute beginner, or stretching your speed to 18 wpm, you won't find anything with more helpful features. What else can offer 100 random sentences as well as all the basics? Disc version unsuitable for BBC B+.

FOR THE SPECTRUM:

WordFinder (Microdrive/disc only) — **base £8**
For CHEATING at crosswords. Finds m-ss-ng letters, solves anagrams. 13,000 word vocabulary, so too long to share a cartridge. 10-letter word ending in ATE? No problem.

Tradewind — **base £3**
Sailing/trading strategy game with graphic surprises.

Jersey Quest — **base £3**
Text adventure in time. Background of Jersey folklore from Stone Age to Bergerac.

For export:
QL hardware and software from many sources. Ask for list/quotation.

ORDERING ADD COST OF MEDIUM, POSTAGE £1 OUTSIDE EUROPE.
Mdv or 5.25" floppy = £2 3.5" floppy = £4 Cassette = £0

The 1st choice

EXPRESS SPECTRUM, BBC and COMMODORE REPAIRS!

2 GAMES (WORTH £10) WITH EVERY REPAIR*

WHY PAY HIGH 'FIXED' PRICES

Spectrum repairs between £9 and £20. BBC repairs between £14 and £45. Commodore repairs between £14 and £35.

*Spectrums only

(We do not charge you for our fancy premises by charging high 'fixed' prices!)

Reputations take time to build, we have been repairing ZX 81's, Spectrums, QL's, Apples and BBC's professionally, for 2½ years – who is coming second?

1st in all U.K. with While-u-Wait repairs! with INTERNATIONAL repair service!

1st to charge LOW PRICES for the smaller repairs! (e.g. £9 for keyboard faults)

1st FOR LOW PRICES – "My computer blew recently, I took it to MANCOMP, who fixed it in 8 minutes! and for less than £10! They are local, 'clued up', and blindingly efficient!" 4 HEATONS DIGEST.

1st FOR PROFESSIONALISM – "Of all the repair companies 'Sinclair User' spoke to, MANCOMP seemed the MOST PROFESSIONAL when it came to advice and a helpful attitude" AUG 85.

1st FOR HONESTY – We let you watch your computer being repaired and if there is nothing wrong with it, we will tell you!!

1st FOR REPUTATION & HELPFULNESS – "I have come across a firm that will be more than willing to advise you as to how to remedy your problems. They are called MANCOMP and as well as repairing faulty computers, are also quite willing to discuss your problems with you and offer reasonably cheap and more importantly CORRECT CURES" Phil Rogers POPULAR COMPUTING WEEKLY JAN 85.

1st FOR SPEED – "One firm at least can effect any necessary repairs over the counter in 45 minutes. Based in Manchester, MANCOMP can offer what is arguably the FASTEST turnaround in the business to personal callers" CRASH Magazine JUNE 1985.

THIS IS WHY Spectrum users from London, Cornwall, Scotland, Birmingham, Liverpool, Coventry, Leicester, Glossop, I.O.M., etc. AUSTRALIA, AUSTRIA, BELGIUM, EGYPT, EIRE, GERMANY, HOLLAND, KUWAIT, NORWAY, PAKISTAN, PALPUA NEW GUINEA, SAUDI ARABIA, SWEDEN, SWITZERLAND and ZIMBABWE – send their Spectrums to MANCOMP for repair!

24 HR. TURNAROUND NO-QUIBBLE GUARANTEE NO HIDDEN COSTS.

Because we repair hundreds of computers every week, we are able to pass on our 'component-buying discount' to YOU in lower prices . . . ZI30A cpu £1.50, 4116 50p, Upgrade *fitted* £18.95 – we bring down the prices for repairs and components!

(We may refuse to revive computers suffering from attempted D.I.Y. repairs!)

Every parcel sent by Royal Mail Receipted Post and insured for return journey! (For next day delivery include £1.50 extra).

(Securicor by prior arrangement). On-site maintenance for Apples, I.B.M.'s and most makes of printers also available.

Guaranteed 4hr response!

WHY DELAY – OUR ESTIMATES ARE FREE AND WITHOUT OBLIGATION. IF YOU DO NOT LIKE OUR ESTIMATE WE WILL RETURN THE COMPUTER AND REFUND THE POSTAGE INCURRED

QL DEPROTECTION AND SUPER FAST BACK-UP CARTRIDGE

★Do you find it difficult to back-up microdrive? The "SUPER-CLONE U3.0" is entirely written in Machine Code language. It can read a program byte by byte and removes any protection. (Password, invisible file name, random number, on formatting and every other system of protection).

★Moreover the "SUPER CLONE U3.0" can be used as a very quick copy software. (5 times quicker than the Super Basic Copy command).

★Penetrate QL secrets. The program is written in English and is achieved with an English manual.

★Payment method: Send a cheque in the amount of £22 through International coupons (for quick despatching), do not send English cheques (or add £2.00 for bank expenses). To:

* * SPECIAL OFFER * *
from SUNSHINE BOOKS and PICTURESQUE

The CODE MACHINE consists of an Assembler and a separate Monitor (both relocatable) and provides all the requirements for rapid assembly language development, including many features not found elsewhere.

A 72 page manual, with plenty of examples, and a flexible command structure make it ideal for beginners, yet it offers all the sophistication and fine detail required by professionals.

Single Stepping your machine code is an essential aid to both learning and debugging and the CODE MACHINE's excellent Front Panel display gives you the most complete picture of what's happening at every step. You can really see what's going on.

Everything about the CODE MACHINE is designed for speed, simplicity, and information. It's received much praise from the industry and is the No. 1 choice of many leading games authors.

Supplied on cassette with a back-up option to disk, it is fully compatible with disks and with the 464/664/6128 machines.

Amstrad Machine Code THE EASY WAY

*** SAVE £4 ***

"Master Machine Code on your Amstrad" shows you how to make better use of your Amstrad by programming in machine code. This makes programs run much faster and opens the door to a host of new applications.

The book gives an overview of the hardware, and explains how the Firmware (ROM) routines are arranged, and how to access them. Details are given of the most useful of these and how you can use them in your own programs.

Many machine code listings are given, starting with a simple sorting routine which is developed to a full database program.

There are graphics routines to extend Basic with Circle and Fill commands, and a section explaining how easily you can write your own extensions to Basic using the 'BAR' commands.

Written with the beginner in mind, this book is the best introduction to machine code on the 464/664/6128 machines.

Sunshine Books and Picturesque are offering you the chance to buy two of the best machine code products at a massive saving of £4 off the normal combined price.

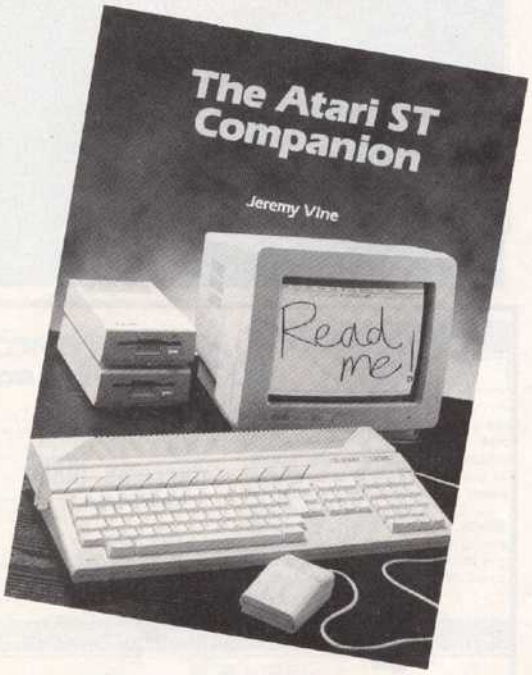
This offer will not last for ever so ORDER NOW.

How to order

The normal combined retail price of these two products is £26.90. You can save £4 (mail order ONLY) by sending your cheque/P.O. for £22.90, made payable to SUNSHINE BOOKS to: Theresa Lacy, Sunshine Books, 12-13 Little Newport Street, London, WC2H 7PP.

Access VISA AMERICAN EXPRESS 01-437 4343

Discover the Atari ST



Jeremy Vine's **Atari ST Companion** will tell you all you need to know if you're wondering whether to invest in the most talked-about new micro of 1985 — the Atari 520ST. Jack Tramiel's new wonder-machine offers you the "power without the price" — a 68000-based window, icon, mouse micro with the GEM graphics environment from Digital Research, all for £750.

The Atari ST Companion has been written with the benefit of full hands-on experience of the machine. Jeremy Vine begins with an overall look at the ST, followed by a detailed introduction to the GEM (Graphics Environment Manager) system. This offers facilities comparable with the much more expensive Apple Macintosh, including windows, pull-down menus and the facility to use a mouse to point to icons to replace typed commands.

Also covered is the Atari Intelligent Keyboard Controller, the very sophisticated sound system of the ST (which includes the industry-standard MIDI interface), the TDS operating system and the graphics LINE "A" interface.

So, whether you are already the proud owner of a new ST, or just thinking of learning more about this revolutionary new micro, send off today for this great new Sunshine book.

WE NEED A PAIR OF ACES TO COMPLETE A FULL HOUSE.

We'd like to hear from two first class people who enjoy managing people – a pair of real pack leaders.

A good grounding in software development is essential and an appreciation of the functions and relationships of all members of a project is also important.

But most of all our project managers will need to provide empathy, encouragement and constant enthusiasm.

THE FIRST ACE will be responsible for the acquisition and development of original product, so an artistic appreciation would be necessary.

THE SECOND ACE, with a more technical background, will be responsible for specialised engineering projects such as converting the latest American software to UK specifications.

If you feel you've got what it takes and would like to be a part of the best home computer software outfit in the business contact Byron Turner, Activision, 15 Harley House, Marylebone Road, London NW1 5HE. Tel: 01-935 1428.

7	(–)	Lord of the Rings *(Spectrum)*	**Melbourne House**
8	(9)	Bored of the Rings *(Spectrum/Amstrad)*	**Delta 4/Silversoft**
9	(5)	Fairlight *(Spectum)*	**The Edge**
10	(–)	They Sold a Million *(C64)*	**US Gold**

Winnng Phrase No 56/7: "No petty mention! I want the dough!" from Philip Arkley of Accrington, Lancs, who wins £25. An honourable mention goes to Neil Talbott of Bromsgrove, Worcs, for: "The meaning of life is hype."

Now voting on week 58 – £25 to win

Each week *Popular* is compiling its own special software top ten chart – compiled by YOU.

And each week we will send £25 to the person who sends in, with their chart votes, the most original (witty, neat or clever – but never rude) phrase or sentence made up from the letters (you don't have to use them all) in the titles of the top three programs in this week's Readers' Chart, published above.

You can still vote in the chart without making up a slogan – but you won't be in with a chance of winning the prize.

All you have to do is fill in the form below (or copy it out if you don't want to damage your magazine) and send it off to: Top 10, *Popular Computing Weekly*, 12-13 Little Newport Street, London WC2H 7PP.

Voting for Week 58 closes at 2pm on Wednesday January 15, 1986. Entries received after that time will not be eligible for inclusion in that week's voting. The judges decision is final. Only one entry per individual per week will be allowed.

New Releases

FUTURISTIC

Nomad is another new game from Ocean which should have much appeal for lovers of the classic arcade formats ie, dodging things and killing things a lot. In your lone Nomad 471 battle wagon you move across the futuristic capital city, heading towards the secret inner sanctum of the evil Gross.

Getting your Nomad across the city involves much swerving and dodging a series of homing missiles, where suicidal robots and heat-seeking weapons lay into you. Combined with magnetic walls to slow you up and a fiendish series of locked gateways, this all makes for much feverish arcade excitement.

Nothing too original, of course, but nicely presented with smooth, largish graphics and a sense of pace to keep things interesting.

Program *Nomad*
Price *£7.95*

INTO BATTLE

The War Game is just that, a war game for the Spectrum. Now war games come in two sorts; purist where everything is represented by little squares, and arcade where you get hi-res battle sequences and little animated people.

The War Game is certainly in the former class, all squares and simple backgrounds. This is not automatically a bad thing, indeed ardent wargamers tend to frown on the glossy stuff, but it does mean that the average arcade gamer is unlikely to be impressed.

The battle is set in Europe in the days of horses and muskets. Success is all about the tactics adopted in moving your various divisions to positions that use their strengths and avoid their weaknesses, taking note of such natural problems as rivers and forests.

The other player or computer controls the enemy, each side is given field reports at various points which indicate morale and the result of battles. I must say that I found the game tedious in the extreme, with moves that consist merely of moving a large number of different blocks to different squares on the board. I also found it very easy to break into the program, which proves to be

Pick of the week

FIENDISHLY SLICK

Cosmic Wartoad from Ocean software is a) the latest game created by Denton Designs and b) one of the few games I can think of to feature a toad as hero. It has, by way of extras, some of the nicest and biggest cartoon graphics I've seen in a while and is beautifully presented.

In fact, *Cosmic Wartoad* is a series of games played individually as moves across a grid. The idea is that as hero you must pass across the King's lair, a matrix of zones wherein some death defying achievement unlocks the route to one of the adjoining zones.

You play, therefore, a number of games, some of which merely let you pass onward, while others give you useful objects like guns and, on certain squares, a car that will transport you across a number of squares at once. Whilst it is the usual three attempts format, using up your three lives doesn't completely reset the game, you retain whatever useful objects you have found.

It's played to a time limit represented by a chain saw slowly moving towards a helpless woman tied between two pillars (tasteless). The games, though simple, are very addictive and, to begin with, seemingly impossible. On the square I managed to complete, one game was a 'shoot - the - dropping - objects - but - don't - let them - fall - on - you' affair, another was 'shoot - the - stream - of - bees - buzzing - towards - you', and another, my favourite, involves getting hits on a central slug which is protected by smaller slugs which move towards you.

Simple ideas, but presented so well they retain some interest even after the 12th attempt.

Extremely entertaining, original in its way, graphically slick and fiendish. Need I say more?

largely in Basic.

However, true wargamers might argue that the fact that it's 'only' a matter of moving squares is the whole point since it's the thought and tactics which count. Probably worth a look for wargamers.

ELECTRONIC

Although Lucasfilm Games are probably best known for the (I thought) overrated *Raid on Fractalus*, to my mind it's *Ballblazer* that is that company's greatest achievement. It may be an astounding piece of programming, but what makes *Ballblazer* is that it is an original yet simple idea executed with imaginative flair.

For want of a comparison, it's a little like a stylised, electronic version of American Football played on a giant grid. You control a sort of hovermachine in which you chase after a large ball, capture it and try to blast it between moveable goal posts.

The screen is divided into two sections, your view and your opponent, thus you never actually see your own hovermachine only that of your opponent. You may, by deft handling, steal the ball belonging to your opponent by blasting it way from his grip. That's about all there is to the plot.

The game is beautifully presented and scrolls smoothly as you move across the vast grid-like playing field. Imaginative and incredibly addictive, particularly played against another, human, player.

MEDIEVAL

Knight Flight is probably the best arcade game I've seen on the QL, and whilst it doesn't really show evidence of working on a 68000, at least it compares with Spectrum games.

Knight Flight is *Joust* in thin disguise. It depicts a bizarre form of medieval combat where two brave warriors try to unseat each other not from haughty white stallions, but from ostriches, a lesser beast in some respects.

The game involves controlling the bird – left right and flap for height – and winning involves bumping the other bird at a greater height than it bumps you. Bumped birds lose their rider and lay an egg, catch the egg in mid-air for extra points.

You can play the game either as a two player game or against the computer; though fun, I'd have my doubts about two people simultaneously trying to stab away at the QL keyboard.

Unlike most QL games I've seen this, at least, has quite smooth and non-flickery graphics so it looks professional. It's fast and smooth with sprites wizzing about all over the place. That the game is ancient and was covered on every other machine years ago is perhaps something that's a bit churlish to mention.

If you are actively seeking arcade games for your QL this is a must, however. . .

ESSENTIAL

Mercenary was a superb 3D line perspective game for the Atari and now it is almost equally superb in a version for the Commodore 64.

Mercenary is special in lots of ways; not only does it feature very fast smooth 3D routines, but it uses those routines in a game of complete flexibility. You decide what happens at every point; indeed the first thing to discover is exactly what the point of it all is, anyway.

The end objective of the game is to escape from an alien planet. A battle rages between two empires, you must ally yourself with one of them, but there are no clues as to which.

You can undertake missions on behalf of either side, but always remember that in the end you're fighting for yourself.

There are both ground based an airborne elements to *Mercenary*, places to explore, things to find and vast spaceships to fly. The game features everything, from strategy to zooming through the sky and blasting things to bits.

High in the sky orbits a mothership, that obviously has something of a vital role to play in the game but what exactly. . ?

The graphics are superb, out eliting *Elite* in places and the mix of ground and space/air setting adds much to the appeal of the game. An essential purchase.

Premature death

On my desk is a computer magazine which is 18 months old. The articles and advertisements inside it belong to a much more primitive age. Machines there heralded as the latest in technological excellence are now regarded as obsolete. The software is positively out of the Stone Age. Looking for stability in this industry is like looking for last year's snow.

All technology products follow a similar pattern. They are introduced, they develop and become accepted, they then become superseded and then they die. Understanding of the market for micro-computers needs to be compared with the life cycle of such products more generally. The intention of those who find utility in the product should be to sustain the introduction and developmental elements for as long a period of time as possible. They must not do anything to curtail or divert it.

In the case of micros however, there is a very real danger that, unless manufacturers 'get their act together' immediately, then the whole product and its market will undergo a premature death. We are witnessing a flight from educational usage and the giving of micros as a seasonal present to the young has passed its peak.

Technological developments seldom keep in step with consumer demand. They are way ahead of it. We already have a surfeit of mind-boggling things which engineering has devised. Most of them mercifully remain in prototype. Coming up with the ideas is not the problem. Shifting the goods to where and when required is. Technology is too abundant and too soon for customer assimilation. By the time any new 'breakthrough' gets to the shops it is probably way out of date. Commodore's Amiga may reach the UK shops later this year, but already Commodore has developed its success.

There is a great deal of self-congratulation among technicians when new heights of speed, design or method are achieved. Whilst these are laudable, these ego-stroking innovations are seldom translated soon enough into customer benefits.

We have not learned historical lessons implicit in other complex products. One such is the motor car. The product had a slow and faltering start, with a proliferation of shapes and motive power until the 4-stroke engine and the saloon design eventually caught on. After the innovatory stage there were many developments in power, performance, comfort and ease of operation. In the maturity phase the product somehow lost its way. Genuine improvements were few but spurious ones abounded.

The motor car is ripe for sweeping change into something more radical – probably initially in its power unit, then later in its conceptual design of an isolated moving box.

What parallels do we see in the micro-computer? The start was most auspicious. Development was brisk and proceeded exponentially. We are now in the stage of false product changes, in cosmetic alterations in design and in the attempt to push technical features as if they were customer benefits. Take, for example, the superficial changes to many 64K micros – the Amstrad CPC 664 became the CPC 6128, the Commodore 64 has spawned the C128, and a 128K version of the Spectrum is expected this year. None of these are significant technological breakthroughs.

For the industry appears to be at war with itself. We see little evidence of the spirit of compatibility. At the retail level it is almost impossible to get repair or maintenance service for no networks of customer assistance have been systematically developed. How reliable was the last advice you received on the workings and operations of your computer? And the machines are still too expensive for mistakes in purchase to be easily rectified.

The main arena of computer makers and suppliers is still seen as entertainment. This is a notoriously fickle market and subject to fashion and whim. Moreover, the UK's market leader, the Spectrum, contains shortcomings in its graphics and sound capabilities which are more a hindrance to the entertainment software developers. It would be salutary if manufacturers really gave themselves true answers to the twin questions 'What business are we in' and 'What business ought we to be in' – for the answers might be very surprising.

For if we do not take avoiding action now, the whole industry will go the way of the hula-hoop and the skateboard.

Rod Dawson

A whole number

Puzzle No 190

At Greyfriars School, Parkin minor was considering his homework on whole number divisors. For example, he knew that the smallest number with exactly ten whole number divisors was 48. The divisors were 1,2,3,4,6,8,12,16,24, and 48. The task that he had was to find the smallest number with *one hundred* divisors, and this was proving a little bit more tricky! He knew that the number itself and one were to be included in the total but the answer escaped him.

45 □□□

The answer had been chalked on one of the blackboards, but three of the five digits had been erased. Can you fill in the blanks?

Solution to Puzzle No 185

I bought 19 stamps at 13 pence each, 35 stamps at 17 pence, and 46 at 23 pence each.

First, it is necessary to find all permutations of stamps which total 100 stamps in all and whose values come to an exact number of pounds. This reveals quite a number of possibilities, but the question also stated that the total number of pounds spent was the same as the number of red stamps bought.

```
10 CLS
20 FOR A=1 TO 98
30 FOR B=1 TO 99-A
40 FOR C=100-(A+B)
50 LET SUM=A*13+B*17+C*23
60 IF SUM/100=INT(SUM/100) AND A=SUM/100
   THEN PRINT A,B,C,SUM
70 NEXT B
80 NEXT A
```

In the program (A) is the number of 13 pence stamps, (B) is the number of 17 pence stamps, and the balance of the hundred stamps is (C), the 23 pence stamps. Line 50 evaluates the total bill, and line 60 tests this value to see if it is an exact number of pounds. However, line 60 also carries out a second check. The value in pounds must also equal the number of one of the values of stamps.

Winner of Puzzle 185

The winner is S Smith of Grimsby, South Humberside, who will be receiving £10.

Rules

The closing date of Puzzle 190 is Feb 5.
