Concern grows over long software delays

CONCERN is growing among software companies, retailers and consumers abut the large number of computer releases being severely delayed, often after being heavily advertised in the press.

Well-known companies such as Ocean (with *Superbowl* – Spectrum – *Knight Rider*, *Street Hawk*, *Batman* and *V*), Melbourne House (*Asterix*, *Whitbread Yacht Race*), Firebird (*The Comet Game*), US Gold (two Ultimate titles and *Legend of the Amazon Women*) and Quicksilva (*Max Headroom*) are all behind schedule for long-awaited titles.

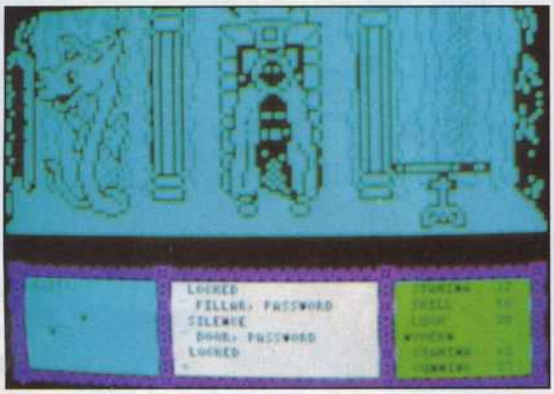
Ocean's five titles were all due to be released before Easter. As Ocean plans to release about 60 new products this year alone, a heavy backlog is being created.

"The problem is only partly because of the number of titles," said Ocean's managing director Jon Woods. "The Spectrum version of *Superbowl* is now out, but I have no news on *Knight Rider* or *Street Hawk* – they're not finished. *Batman* is completed, and will appear soon, *V* will be out this week."

All these titles have been promoted in advertisements by Ocean; *Knight Rider* since December 1985.

As for Melbourne House's *Asterix*: "We've postponed it

continued on page 4 ▶



HEAVY on the Magick, *the innovative new animated role playing adventure from Gargoyle Games is close to completion.*

The game is based on the well-known Dungeons and Dragons format, but each event in the game is illustrated graphically.

Gargoyle has created graphic techniques which have enabled it to incorporate 250 rooms and a variety of animated monsters.

In true D&D fashion, the player can invoke a wide range of spells throughout the play. Success is also partly determined by your skill/stamina rating. See this week's New Releases for a more detailed look.

Heavy on the Magick *will be released within the next three weeks at £9.95 on the Spectrum. Amstrad and Commodore versions will follow.*

THIS WEEK'S NEWS

- *Apple dismisses Amiga and ST threat as profits triple*
- *Amiga price reduced in US*
- *Spectrum 128 incompatibility – the numbers grow*

EDITORIAL

The problem of delayed software releases is hardly a new one. It's every bit as well-known and exasperating as that computing cliche, the delayed micro launch. What is worrying about the current spate of postponements and excuses is that everyone seems to agree that the delays are getting worse.

This Easter we reached a point where most of the country's top software companies were fighting a losing battle to release their products exactly one week before the Easter holidays. Most will end up not reaching the shops until some time after. In doing so, they have left the opportunity for sales open to products like Gremlin's *Way of the Tiger* and Hewson's *Uridium*, whose companies were sensible enough to give themselves a bit of leeway.

The companies concerned seem to be convinced that there is a glittering "Easter market" (say, a slightly poorer relation of the Christmas market), where a strongly advertised title will do wonders for company profits.

I remain doubtful, particularly when these products miss Easter by a good week, all appear together in a bunch, and compete together well after the scheduled time.

The other worrying point, and probably more important, is an ethical one. Many products are advertised well in advance of their release date.

Consumers become frustrated if a product, advertised as available, is nowhere in sight. It is surely reasonable to expect an advertised product, whether a computer game, record, microwave oven, or garden spade, to be available then, unless of course the advertisement says "available soon", or similar.

Of course, there are a large number of threads to pull together in the production of a software title: storyboarders, programmers, designers, artists, typesetters, blank tape manufacturers, duplicators, distributors . . . (the list is endless) all need to be co-ordinated. It would be asking the impossible for every release date to be made.

But one thing is certain, delays hurt everyone. The software companies lose money and credibility, the distributors likewise, the retailers lose money and gain angry customers and the consumers lose interest.

Commodore drops US Amiga price

COMMODORE has just begun a special promotional offer on the Amiga – in the US. Until May 31, the Amiga will retail at $1295 (about £900), for a package comprising the 256K, single disc computer and a colour monitor. This is $500 less than its previous price.

"Our intention is to rapidly build up the hardware base – there is now a lot of software available for the Amiga. As we build up the owner base, so more companies will write for the machine," said Paul Lazovick, of Commodore International

Lazovick estimated the Amiga's software base at over 100 titles, with 400 more being currently written.

He denied that the drop in price was in order to compete directly with Atari, whose 1040 STF sells for just under $1000 (about £700). "I can't say that the move is to compete – the Atari is not a strong competitor," he said.

It is possible that this offer may become permanent if it is successful. "I can't project what will happen," Lazovick continued. "At the moment it is scheduled to finish at the end of May."

Unfortunately, this move in the US will not help to reduce the introductory price of the UK's 512K Amiga at £1500.

Apple dismisses Amiga and ST threat

APPLE is alive and kicking – and unimpressed by any threat to the Mac posed by Amiga and Atari's ST.

Apple's chairman, John Sculley, in Cambridge for the first conference of the Apple University Consortium, delivered this confident message following the announcement of Apple's financial results in the three months to March 28.

Profits have more than tripled over the comparable period in 1985 to $32 million (about £21 million), a performance in the computer field matched only by Amstrad's excellent results announced in February.

The current picture contrasts sharply with the situation six months ago during the highly acrimonious departure of founder Steve Jobs.

Sculley dismissed competition from the ST and Amiga, saying that the future of mainstream personal computing lay in two architectures – the IBM PC and the Macintosh. He quoted software developers, including world leader Microsoft, as denying support to the new machines and said, "We know there's going to be very little development."

In fact, both Commodore and Atari themselves have lent support to this view, Commodore announcing an IBM emulator at the Amiga's launch, while Atari has introduced a CP/M emulator and announced an IBM emulator.

Oddly enough, Apple-watchers in the US are predicting an upgrade of the Apple II series as an answer to the Amiga/ST thrust. The *San Francisco Examiner* says the new machine will include a 16-bit processor and offer Apple II compatibility by including a IIc on a single chip. Pricing should be under $1,000 and a launch is expected in September.

Meanwhile, at Cambridge, attention was focused on Apple's moves in the education field. The three-day conference showed that Apple is serious about this market.

More than 200 delegates from universities in 37 countries attended to appraise the current role of the Macintosh as an educational machine. Hundreds of software packages are available, most developed by the universities and much of it comfortably up to commercial standard.

Software delays

◄ continued from page 1

until June," said Paula Byrne. But the Whitbread yachting simulation has been cancelled.

Firebird's *Comet Game*, due to coincide with the space probe Giotto encountering Halley's Comet, has also only just appeared. "We had problems with duplication," said Firebird's Phil Pratt. "Delays are a problem – I wish I knew the solution."

US Gold is encountering problems with its titles Ultimate, *Pentagram* and *Cyberun*. But the company's general manager, Tim Chaney, said this was not a delay, although the games were originally due to be released in February. "It's simply a question of when the market is right. We need to space our releases out. *Cyberun* should be out in the second week of April and *Pentagram* soon after that."

Delays have occurred, however, on *Legend of the Amazon Women*: "We had to send the Commodore version back for more work on it."

Max Headroom, from Quicksilva, is another casualty. "There were a couple of hold-ups, and a delay of one day at one end can mean a week at the other," said Quicksilva's Jane Smith. *Max* should be out this week.

However, distributors, who deliver the products to the shops, are extremely concerned, and say the problem is increasing.

Dave Cahill, buyer at Micro Dealer, commented, "It causes great problems: Instead of a steady progression of titles, you're getting the whole batch at once; this makes a limited market and everyone sells less. The situation has got much worse recently."

For the retailers, John Greengrass of Boots, said, "It's been a perpetual problem – software houses are very keen to get publicity and then they run into development problems."

Spectrum 128 incompatibility — more details

MAIL order software dealer Speedysoft has compiled a list of Spectrum titles it has tested (71 in all) for compatibility with the Spectrum 128.

So far, Speedysoft claims that the following programs, in their current form will not work on the Spectrum 128: *Alien 8* (Ultimate), *Elite* (Firebird), *Enigma Force* (Beyond), *Fairlight* (The Edge), *Four Adventures* (Global), *Hypersports* (Imagine), *Impossible Mission* (US Gold), *Knight Lore* (Ultimate), *Movie* (Imagine), *Laser Basic* (Ocean), *Laser Compiler* (Ocean), *Macadam Bumper* (PSS), *Nick Faldo's Open* (Mind Games), *Nightshade* (Ultimate), *Now Games, Now Games 2* (Virgin), *Steve Davis Snooker* (CDS), *Spitfire 40* (Mirrorsoft), *Swords and Sorcery* (PSS), *Their Finest Hour* (CCS), *They Sold a Million* (Hit Squad), *Think!* (Ariolasoft), *Tomahawk* (DI), *Waterloo* (Lothlorien), *Winter Games* (US Gold) and *Way of the Tiger* (Gremlin).

***Alien 8*– not 128 compatible**

Speedysoft stresses that it has not tested every Spectrum program ever released. The list refers to current versions; many software houses are working on 128 versions of previously non-compatible games.

Further information from Speedysoft, 37 Church Road, London SW13 (01-846 9353).

Amstrad show alteration

DATABASE Exhibitions has changed the date of the next Amstrad Computer Show in London. The show will now be held, still at the Novotel venue, on June 13, 14 and 15.

Database claims the alteration is due to "overwhelming demand" and that the show will now take up double the floor space previously allocated.

Off the Hook compilation out now

OFF the Hook, the charity compilation tape in aid of the Princes Trust, is now on sale for the Spectrum and Commodore machines at £6.99.

"By the end of the first week, I would expect to have shipped 20,000 units," said Rod Cousens, organiser of the *Off the Hook* appeal.

Unfortunately, Cousens was unable to get Pete Townshend, the former Who guitarist, to endorse the tape with an audio message, but he is still hoping he will participate in the appeal, to raise funds to help drug addict rehabilitation.

"Now I'm working on getting versions out for the Amstrad, Atari, BBC and C16 – I'm about 80% through the task," said Cousens.

Colossal title from Level 9

IN addition to its forthcoming *Price of Magik*, Level 9 will also launch its biggest adventure at the end of May.

Called *Colossal Trilogy*, it is a version of the original mainframe *Colossal Adventure*, with graphics added, extra text and a full sentence parser. Available on disc for the PCW 8256 and Atari ST, it will also be released on microdrive for the Sinclair QL.

Level 9 plans to bring out *Colossal Trilogy* at £19.95.

Melbourne's latest

MELBOURNE House's next release is scheduled for the end of April – a text and graphic adventure entitled *Red Hawk*.

The game features cartoon-style graphics in the form of a comic strip, and tells the story of Kevin, "a sort of Superman in reverse", according to Melbourne House's Paula Byrne.

The company plans to release *Red Hawk* simultaneously on Spectrum, Commodore 64 and Amstrad machines at £8.95.

Monitor interface for Commodore 128

CASCADE Games has come to the rescue of new Commodore 128 owners who also possess a Microvitec monitor.

Cascade has developed an interface, which can provide an 80 column RGB display for the C128, via the RGB TTL input used on most Microvitec models, including the 1431 dual model monitor. Users will be able to switch between using 40 columns on the Commodore 64 to both 40 and 80 columns on the 128.

The interface will cost £19.95. Details from Cascade at Suite 4, 1-3 Haywra Crescent, Harrogate, North Yorkshire (0423 504526).

Micro vacuum cleaner

IF your computer is looking a bit dusty, the Mini-Vac may be the answer.

Mini-Vac is a battery operated, hand-held vacuum cleaner, about the size of a hair dryer, with a small dust-

bag and two pipes and brushes.

Manufacturer Authenticity says the Mini-Vac is not just for micros, but also camera lenses, hi-fi systems and video equipment.

The Mini-Vac will cost £11.95. More details from PO Box 34E, Worcester Park, Surrey (01-337 3352).

PCW 8256 Chess

AMSTRAD's software department, Amsoft, will release *Cyrus II Chess* for the PCW 8256 and 8512 machines next week under its Amsoft Gold label.

Cyrus II Chess offers 12 playing levels, and it will also play against itself. You may play the game in either 2D or 3D, and can print out screens at any stage, or a complete record of a particular game.

Cyrus II Chess for the PCW machines will cost £13.95.

A vendetta?

I refer to Mr Hartley's letter, Vol 5 No 10, in which he states that your criticism of the BBC Master Series was unjustified.

In the same issue I noticed that the Peek & Poke column also contained derogatory references towards the Acorn Electron. It stated that "it offers little in the way of cheap upgrade potential" and there is no "vast software base" available.

This is complete and utter nonsense. If your writer took the time to fully investigate the software and expansion potential of the Electron, he would discover, four DFSs and Advanced Computer Products forthcoming APS interface, giving enhanced BBC compatibility, offering a User Port, 1 Mgz Bus and the Tube, allowing Acorn's 6502 and Z80 second processors to be attached. Rom expansion boards, a communications package, speech synthesiser, touch tablet, trackball, satellite comms and even a Winchester hard disc drive. These are just a few of the peripherals, readily available to the Electron user, all at prices equivalent to similar systems currently on the market.

As far as software and firmware is concerned, there is a multiplicity of serious applications firmware available and the majority of titles currently being released for the BBC also have an Electron counterpart. *Beach Head, Citadel, Repton 2* and *Karate Combat* are just some of the very latest titles to appear from quality software houses such as US Gold and Superior Software.

The Electron is very much alive and every month sees new life breathed into it. The scathing criticism applied to the Electron and the BBC Master Series leads me to believe that *Popular* is conducting some kind of petty vendetta against Acorn, which can only do irreparable damage to a company in the forefront of the British micro-computing industry.

CORRECTION

If you're thinking of ringing up the CCCBB (Calne Computer Club Bulletin Board) please note that the correct number is 0249 817077.

Joystick details

I have recently bought a Kempston type interface and joystick for my 48K Spectrum. While this works well on appropriate commercially available games, I have been unable to find any useful information on how to use this equipment in my own programs.

Could anybody please supply me with details of how to read and include the joystick inputs, instead of the *Inkey* commands for up, down, left, right and fire?

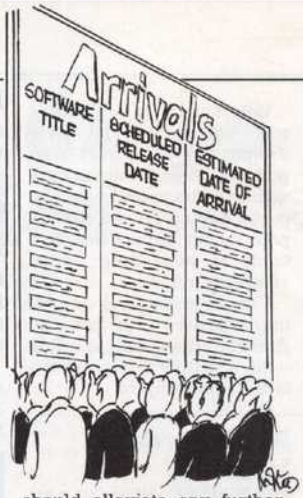
In business

Further to the letter which appeared in *Popular*, 5 March, in the Arcade Avenue section, I would like to take this opportunity to straighten the record.

The reader in question was looking for advice on how to complete *Chuckie Egg II* from A 'n' F Software. The reader appears to be of the opinion that A 'n' F Software have "gone out of business".

Indeed one of our telephone lines has been converted to a mail order and queries number and this



should alleviate any further difficulties. I would ask everyone to please note that A 'n' F Software are fully operational from their normal address at: Unit 8, Canalside Ind Estate, Woodbine Street East, Rochdale, Lancashire, and can be contacted at any time on: 0706 341111.

If your reader would therefore call us, we will do all we can to help.

A 'n' F Software

Not approved

I noticed with interest your hardware article in Vol 5, No 8. You state that Modem House's Voyager 7 is "not yet fully approved, a familiar story of red tape and backlogs".

I feel I should mention that the non-approval of the Voyager 7 has little to do with red tape and backlogs; in fact, Modem House has not even applied for approval of this modem.

I hope this will help paint a truer picture of the situation in respect of this modem.

Malcolm Clifton
Office of Telecommunications

The Gallup Charts take an Easter break this week.

Readers' Chart No 68

Winning Phrase No 68: "Andy'n'Fergie make it – oo!", from A Newby, of Harrogate, North Yorks, who wins £25. An honourable mention goes to M G Crawford, also of Harrogate, and with the same theme in mind (everyone wrote anagrams about That Couple this week), for, "Andy met Fergie – Koo calm".

Now voting on week 70 – £25 to win

Each week *Popular* is compiling its own special software top ten chart – compiled by YOU.

And each week we will send £25 to the person who sends in, with their chart votes, the most original (witty, neat or clever – but never rude) phrase or sentence made up from the letters (you don't have to use them all) in the titles of the top three programs in this week's Readers' Chart, published above.

You can still vote in the chart without making up a slogan – but you won't be in with a chance of winning the prize.

All you have to do is fill in the form below (or copy it out if you don't want to damage your magazine) and send it off to: Top 10, *Popular Computing Weekly*, 12-13 Little Newport Street, London WC2H 7PP.

Voting for Week 70 closes at 2pm on Wednesday April 9, 1986. Entries received after that time will not be eligible for inclusion in that week's voting. The judges decision is final. Only one entry per individual per week will be allowed.

The Commodore Collection

Watson's Workbooks

for the C128

Book 1: Starting Basic

Designed for the complete beginner, this book takes the reader step-by-step through the essential commands of Commodore 128 BASIC. The book has been written with an emphasis on structured programming, a technique which makes programs easier to write and understand.

Price: £5.95 ISBN 0 907792 72 3

Book 2: Advanced Programming

This book is intended for the reader who already knows the elements of BASIC and wants to make the Commodore 128 work for its living. Much can be accomplished on the C128 without knowledge of machine code, and this book fully stretches the abilities of the C128's superior BASIC.

Price: £5.95 ISBN 1 85181 034 X
(Publication date: May 1986)

3D Graphics Drawing Board

for the C64 and C128

This software package allows you to create, alter and combine 3D images on the screen. This easy-to-use program is a breakthrough in graphics software - the 3D perspective images can be easily manipulated using the zoom, rotate, scale, stretch and move options. Hidden line removal adds further realism and the finished designs can be saved permanently to disc or printer.

Prices: C64 – £14.95 (disc only)
ISBN 1 85181 028 5
C128 – £14.95 (disc only)
ISBN 1 85181 029 3

C128 Assembly Language Course

A complete course in 8502 assembly language programming for the beginner. The package include a complete assembler and tutorials (on tape or disc), plus a comprehensive course book.

Prices: £12.50 tape or £14.50 disc
ISBN 1 85181 027 7

DOCTOR WHO

DR. WHO PART TWO

THE STORY SO FAR . . .

Doctor Who has been despatched by the Time Lords to the Rijan mineworking complex to regain the plans to the TIRU (Time Instant Replay Unit) and thwart the Master's plans to control the Universe. Having materialised in the mine, visited the nearest Cryogenic Sleep Chamber, got the Pick-axe and programmed the Splinx to distract the Madrag, he has made good his escape towards the central lift system, avoiding the controllers and picking up one or two more objects 'en-route'.

To the right of the lift shaft lies the Reactor Area. Thinks.. "Could be useful to put the reactor out of action!" A quick inspection, however, discovers a rather active Controller. A sortie up and down in the lift reveals a vast complex above the surface containing the Factory, Construction, Greenhouse, Security, Escape Pod, Armoury and several un-mapped areas. Monorails go left and right. The Doctor cannot enter most of these areas as he has yet to obtain the Pass Card.

The Doctor reviews the list of objects he may find:— Packing Case, Pick, Detonator, Explosives, Memory Capsule, Hatch, Escape Pod Activator, Cloth, Crystal, Pass Card, Electronic Spanner, Stool, Heatonite Ore, Anti-gravity mat, Oxygen bottle. There could be others!

He decides to investigate the Factory Area which is un-protected. Conveyor Belts, ventilation shafts, inspection ladders. Two items of special interest . . an Electronic Spanner and a number of PCB's which spell START. Food for thought?

Chroma

Product *Chroma 1 Monitor* **Micro** Spectrum 128/QL (tested), Spectrum 48K (with converter: Amstrad, BBC, Atari, Commodore 128 **Price** £229.95 (introductory price) **Supplier** Chromagraphica, 135 Cliff Road, Hornsea, N. Humberside HU18 9SZ.

My first impression of this monitor was amazement. It's housed in a wooden case! A type of chipboard, to be precise, with a spray painted finish. Chromagraphica supplies the monitor in a number of colours to suit your micro: Sinclair black, Acorn yellow, or pale grey for Atari and Commodore 128.

Chromagraphica also plans to make a metal cased version (more expensive) for those wanting a shielded box.

The Chroma 1 has an on/off switch and brightness controls, plus, on my model, an eight hole plug suitable for the Spectrum or QL socket. Other versions come with relevant connections and there is promise of a 48K Spectrum model, with interface for £28.95.

Plugging in gives favourable results. Chroma 1 gives a markedly better image than the TV/monitor I normally use. The picture was crisp and clear but – and it's a big but – there is no sound. To enjoy the full capabilities of the new Spectrum, you'll need connections to a separate amplifier which are not satisfactorily explained in the 128 manual. Chromagraphica is, again, planning a version with sound output.

I'd advise careful thought before buying this version, even at the initially competitive price. Can you justify the cost and trouble of arranging external amplification just to have that quality of picture if your main interest is games? Probably not. However, if you use your micro for tasks where fine definition is imperative, then it could well suit you.

No price has yet been fixed for the more enhanced versions, but they may well be worth waiting for.

John Minson

Citizen 120D

Product *Citizen 120D dot-matrix printer* **Micro** Any with Centronics output; interfaces for RS232 and CBM serial also available **Price** £235 **Supplier** Citizen Europe Ltd, Wellington House, 4/10 Cowley Road, Uxbridge, Middlesex UB8 2XW, Tel 0895 72621

There are two fields in which a printer must appeal to the enthusiastic home user to become successful – facilities, economy and ease of use . . . *three* fields in which a printer must appeal – facilities, economy, ease of use and reliability . . . *four* fields . . . Oh well, suffice it to say that the newly-released Citizen 120D seems to have something to offer in every field.

Major manufacturers have recently realised the value of a budget printer designed to appeal to the mass market. In some cases this realisation leads to shortcuts in quality (thermal printing, lack of font options and so on), but with the 120D there seems to be no such limitation.

The 120D is certainly good enough for the home user wishing to produce program listings and fair quality correspondence, and may well be sufficient for a small business. In order to make it compatible with the wide range of micros this would involve, the 120D has a port in the righthand side which accepts an interface cartridge specific to the computer you own.

The 120D is compact – 386 × 240 × 90mm, lightweight, and seems well-made. A number of the design features make it ideal for the home user; it has a tractor-feed included, with continuous paper feed from the lower rear to save space.

Print speed is fair, at 120 cps in normal mode or 25 cps in near-letter quality mode. There is also a large number of font options; Pica or Elite, expanded, compressed, or both. The 9 × 9 dot matrix print head allows underlining, and full IBM or Commodore graphics printing.

The ribbon, which has a life expectancy of two million characters (we didn't test this!) is of the disposable cartridge variety and is easy to replace.

The front panel controls include on-line, form feed/sheet load, and line feed. LEDs indicate power on, paper out, and ready. There's a built-in 4K buffer.

The tractor feed clips easily over the platen, and the platen knob is on the right-hand side. In front of it is the all-important interface cartridge slot. Using a standard Centronics cartridge, you can of course use any micro equipped with a Centronics interface. The 120D will emulate an Epson FX printer (1, 2 or 3), according to how you set the DIP switches inside the interface cartridge.

Users of Commodore micros with the company's non-standard serial output will be aware of the problems in using non-Commodore printers. In the case of the 120D, you will need a serial interface cartridge which connects to the micro with the usual CBM serial leads. However, this cartridge will not be available for a couple of months, so unless you already own a Centronics interface for the 64/128 you will have to wait.

The manual for the 120D is a very complete, ring-bound affair, which goes into fair detail about maintenance, programming and options, though it is a little sketchy on Commodore Basic printer commands.

In all the 120D, at £235, seems to offer an excellent alternative to bulky, expensive business printers or inexpensive but limited models. When the Commodore serial interface is launched it will probably compete well with the forthcoming CBM MPS-1000.

Chris Jenkins

Foresight

Program *Fourmost Adventures* **Micro** Spectrum/*Amstrad* **Price** £7.95 **Supplier** Global Software, PO Box 67, London SW11.

Any compilation of Adventures compiled by Tony Bridge must be worth taking a look at. The games are an unusual collection but it's easy to see why the selections have a place in this compilation.

The three adventures and one role playing game are very good value for money. The first, *Out Of The Shadows* is a typical role player with the usual assorted monsters to overcome. You are able to decide, at the beginning, which of six quests to take part in, then off you go to explore the area. If you have never played this type of game before it is a good introduction to the game.

Galaxias is one of Fergus McNeil's earlier *Quilled* adventures (later games were *Bored Of The Rings* and *Robin Of Sherlock*), in this game the idea is to visit various planets in search of a Crystal. Apart from the stencil-type text which takes a bit of getting used to, the game, overall, is very enjoyable with good location descriptions and reasonable graphics.

The Mural by Nic Ford finds you wondering along Neasden High Street when you are approached by a couple of guys wearing suspenders. Strange you may think but this game is certainly different from others I have played. The object is to find an obscene mural and paint over it. I don't know if the author intended it but there is a certain *Zorkish* feeling to the game.

The last game, and one that I particularly wanted to look at, unfortunately would not load, entitled *Project X – Micro Man*. From what I know of it, the adventure is not unlike *The Incredible Shrinking Man*.

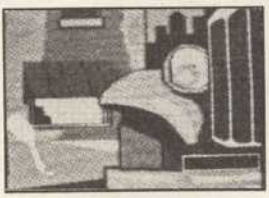
In conclusion then, for any adventurer who likes variety this is an excellent package and represents good value.

Roger Garrett

Da Boss

Program *Mugsy's Revenge* **Micro** CBM 64 **Price** £9.95 **Supplier** Melbourne House, 60 High Street, Hampton Wick, Kingston-upon-Thames, Surrey KT1 4DB.

Ok Mugsy dis is da lowdown on what's bin 'appening since yuv bin in da slammer, da Feds 'ave made booze illegal so dis is a great chance for us ta clean up by smuggling some moonshine in from Canada, whadda ya tink boss?



You may have guessed that this is the follow up to the successful *Mugsy*. Having just been released from jail it's up to you to regain your rightful position as the underworld king. This involves buying barrels of booze at the right price, opening nightclubs, putting out 'contracts' on gangsters and keeping the police 'sweet'.

One of your loyal hoods will keep you informed of when to buy booze, nightclubs, enlist men etc, but it's up to you what decisions are made and making the wrong ones can be disastrous.

The game combines strategy with an arcade sequence, in which you get a chance to blast away with your joystick. The game on first playing is entertaining enough, graphics are excellent, well defined and quickly drawn, the music reminds one of the roaring 20s era and tinkles along quite merrily. But, I don't think good graphics and jolly music will alter the fact that, after playing the game for a while, it does tend to get a bit stale. The management/strategy elements are fundamentally weak – as they were in *Mugsy*.

Granted, it's a great way of making the old *Kingdom* look good and I'm certain a lot of people will buy it on the strength of its graphics, my own feeling is that *Mugsy* should have been left in jail.

Roger Garrett

Knock out!

Program *King of the Ring* **Micro** Atari 8 bit **Price** £8.95 **Supplier** Gremlin Graphics, Alpha House, 10 Carver Street, Sheffield S1 4FS

I suppose this can best be described as boxing's version of *Football Manager*. There you are, with your budding protegé eager to break into the big time, all he needs is a few good wins under his belt and it's a shot at the world title. So it's up to you as his manager and coach to pick out the right fighters for your boy to go up against, know wot I mean Harry?

This is your big chance to prove that your're better than Mickey Duff when it comes to tactics and training (you get to choose various types) and then it's down to the fight itself. This takes the form of what looks like a couple of shadow boxers in outline, ducking and weaving and hitting, over eight rounds. All you can do is sit and watch whilst your boy either takes punishment or dishes it out. In between rounds you decide on whether to attack, defend or just play dirty, (which, I must admit was my best ploy). If you feel that the fight is going well, you can elect to go for a KO option which is a gamble and could backfire by getting *your* boxer KO'd.

Choosing an opponent is interesting as you get a complete case history of each one and it's from this record that you can pick out a likely fall guy. It's nice to see some quality 8 bit Atari software being released now and Gremlin have made a good job with this one, I'm over the moon Harry!

Andy Moss

Team spirit

Program *Team Mate* **Micro** CBM 64/Atari **Price** £34.95 **Supplier** Team Mate, Debden Green, Saffron Walden, Essex CB11 3LX.

This is a package from American software house Tri Micro and released here by Team Mate Software in Essex. It is a suite of four programs; Word Processor, Data Base, Graphic and Spreadsheet – integrated as a single system.

The Word Processor – has all the usual commands available – editing, variant margins, justifying, swapping or replacing blocks of text, etc., and the printer commands include centering, shadow or bold printing, super and subscript. The screen format is 80 column but, because your screen is only 40 columns wide, the program splits your text into two halves and by pressing F7 or F8 enables you to see the right and left halves respectively.

The Spreadsheet – consists of 50 rows and 17 columns giving you 850 cells to hold numbers of formulae; quite enough to work out budgets or taxation or even your mortgage repayments. Once again, screen size demands a splitting up of cells but a single key pressing scrolls neatly through the data.

The Graphics – include pie, bar and line charts which although provide clear and concise diagrams, tend to look a little inferior when compared to say a graphics only utility.

Lastly comes the **Database** which allows you to store all sorts of information from mailing lists to house inventories!

You can hold up to 999 records with a maximum of 17 lines or 'Fields' for each.

All of these programs can be used in conjunction with each other and printed out using the Word Processor/Printer set up. There are some nice error trapping routines and a choice of 15 colours to suit your mood.

Andy Moss

Mixed bag

Program *30 Games* **Micro** Spectrum 48K **Price** £9.95 **Supplier** Argus Press Software Ltd, Liberty House, 222 Regent Street, London W1R 7DB.

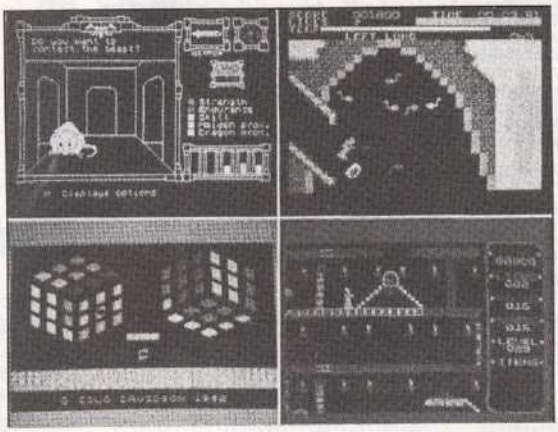
Games, games, lovely games! Gather round because have I got games for you. Not ten. Not 20! Thirty! Count 'em.

There have been compendiums before but few like this; an inevitably mixed bag of the good, the bad and the repulsive, games you thought you'd never see the likes of again; relics and remains from computing prehistory (ie, four years ago) like a tarted up *Battleships* game masquerading as a wargame, *Draughts* and a *Computer Cube*.

But while these are fillers, not thrillers, Argus have been able to draw on all the outposts of their surprisingly vast empire to produce some good stuff. Recent releases like *Strontium Dog – the Killing* may not have gathered much respect at full price, but at just over 30p you can't grumble. And at this price *Fantastic Voyage* and *Mighty Magus* are definite bargains. It's also interesting to see how well a title like CS dominate the wargame market and *Antics* has lasted and even *Space Invaders* can provide a welcome respite from the sophistication of today's icon driven wonders. I was also fascinated by *Dragonsbane*, a sort of predecessor to *Swords and Sorcery*.

30 Games provides a great selection of game types – a real lucky bag of style and quality. Unless you already save the best ones you won't go far wrong – a tape counter is vital though.

John Minson



Sea dog

Program *Devil's Crown* **Micro** Spectrum 48K **Price** £1.99 **Supplier** Mastertronic Ltd, 8-10 Paul St, London EC2.

Pin back yer lug'oles for a narrative of nautical nastiness . . . It seems there was this pirate ship which found the Devil's Crown itself. But when these bucaneers decided to relieve Old Nick of his dentistry (Devil's Crown – geddit?) he turned nasty and sent them to a wat'ry grave and eternal oblivion.

That is until some programmer made a computer game of it, so it's shiver me timbers – and not surprising with weather like this – and scrape the barnacles off me bottom, for what 'e' as created is a sort of cutprice *Sorcery* for the HMS Spectrum. It's a game of guiding your portly little diver around, shooting up fishes and piratical ghosts and collecting things.

Every time you replace a flashing object with its equivalent you get another gem from the Satanic titfer, and once they're replaced you're home and dry.

You'll need to collect the oxygen bottles unless you want to end up airless, and the pistols pack extra ammo so don't neglect them.

Well, it ain't the best graphics I've ever seen, with or without a telescope, and it didn't seem too difficult at first, though it gets more tricky later. But for the price of just two dubloons I reckons it be a jolly bargain, Rover.

John Minson

Mad house

Program *Asylum* **Micro** CBM64/ATARI **Price** £9.95 **Supplier** All American Adventures, Unit 10 Parkway Industrial Centre, B/Ham.

Well my friend, it's finally happened, too many late nights solving adventures has turned you into a nervous wreck. Found wondering down a dimly lit street muttering inane statements like "Light the lamp and Drop the Orc" you find yourself, on waking up, in the local Asylum.

It was certainly easy getting in, but how to get out? Well in my case, if I had played this game non-stop for 24 hours, I think I would still have been in there, or possibly in a real Asylum.

I must say that I found this 'adventure' to be totally boring. The object of the game is to escape back to reality, but this game is one vast maze where you simply wander around aimlessly, trying to open countless doors. To try and map the route is impossible, so you tend to find yourself going round in circles.

If you are one of those who love frustrating maze type games then this one is great, good graphics and plenty of walls to bang into, but me, well I'll stick to less frustrating adventures.

Roger Garrett

Well played

Program *Tasword 3* **Micro** Spectrum **Price** £16.50 **Supplier** Tasman, Springfield House, Uyde Terrace, Leeds LS2 9LN.

First thing first – three cheers to Tasman Software for having the courage to release this program on microdrive. I have always felt that Sinclair's controversial mass storage system, given decent support, would ultimately come up trumps (my drive and tapes have never let *me* down) and this release shows just what can be achieved with only one drive, let alone seven linked together.

A clear and concise manual comes with the package and is set out in such a way as to make finding a particular section simple; the key to a good word processor – simplicity of use. It's no good having to wade through pages and page of technical jargon to perform a fundamental exercise and *Tasword 3* has been designed to keep such hassles to a minimum. Word wrapping and justification are automatic (they can be turned off if required) and the movement of text left, right or centre is delightfully easy.

Blocks of text can be swapped, copied, inserted or deleted (as can single words) and all can be executed by at most two key presses. The program offers a main menu which is called up by pressing *Stop* and includes files for merging text, printing and tutoring. Any selection from this list will activate the microdrive and load in new data precisely like a standard disc drive operation. Tasman also offer a copy facility and recommend you keep your original and make a back-up which would become your master tape for normal use. This protects your *Tasword* program should a fault occur in your copy.

This package is the best WP release I've seen on the Spectrum and makes a mockery of the claim that the Spectrum is for games only.

AMSDOC

464/664/6128

SEVEN TOOLS TO UNLOCK THE LOGIC

NOW	**—the EASY way to understand new programs —the EASY way to write better programs —the EASY way to get good documentation without effort**
EXPLAIN	—a tool that builds an INFORMation file about the variables and routines in your programs, and that incorporates your information in well-formatted program listings.
ALTER	—a tool that regenerates your programs, letting you rename variables consistantly and reliably.
TRIM	—a tool that rewrites your programs, cutting out wasteful remarks, automatically regenerating variable names to be so short that you can save over 20% of memory space. It gives you a bigger machine.
FLOW LIST	— the first AUTOMATIC program for a home micro which : CHARTS THE FLOW of programs to show the way they really run CROSS-REFERENCES all variable names and routine entries FRAMEWORKS your overall program structure. DIAGRAMS the levels of subroutine and the links between parts of your program CHECKS on unused sections of coding.
COMPARE	— reports quickly and neatly on the differences between program versions.
PRINT SUPPORT	gives you multiple and selective backup copies of AMSDOC reports for group discussion.
WORKSHEET	helps you account for every variable you use.

Disc system £14.95 Cassette system £12.95

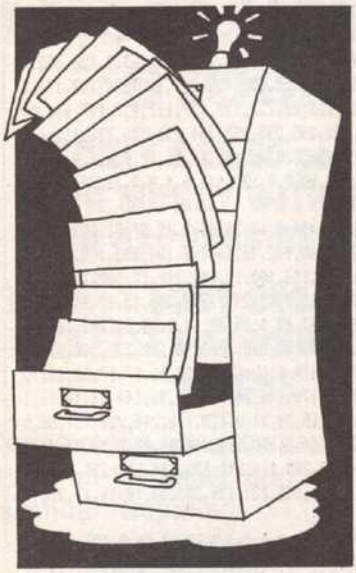
REWARDING OPPORTUNITIES WITH MIKRO-GEN

Following Mikro-Gen's move to new premises we now require additional staff. If you believe your programming ability meets our high standard, please contact us by telephone or letter to the address below.

We also require finished programmes. Top payment or royalties given to software of suitable quality.

Mikro-Gen, Unit 15, The Western Centre, Western Road, Bracknell, Berks. RG12 1RW. Telephone number (0344) 427317



TAROT

by David Muir

This week, the second and final part of the Tarot card listing. The program is fairly straightforward, apart from the graphics.

When a card is to be printed, a check is made if it is a suit card. If so, the character 255 is defined for the suit and printed where necessary on the face to make the number of 'pips' or once for a court card as a suit marker. If it is a court card then K,Q,N or P is also printed.

Trump and court card picture data starts in memory at 38000. There is a short (21-byte) machine code section at 39872. (The data for this is the last line of the program.) This simply uses LDIR to dump 72 bytes from the picture data area into the UDG area to fill out characters 246 to 254 (memory locations 37920 – 37991), prior to printing a string containing these characters (a8).

It is interesting that the screen can be filled with different card pictures while using only 10 user-defined graphic characters in a present string.

There is little agreement amongst Tarot card fortune tellers as to the card meanings. I have tried to synthesise ideas from a number of sources, with the prime objective always to keep the program as short as possible. Readers can easily substitute their own ideas and expand the meanings. Interpretative data begins at line 510. There are two pieces of data for each card starting at 'The Fool'. Generally these give 'Good' and 'Bad' meanings . . . but some cards tend to be totally good or totally bad.

Once again, if all the typing seems beyond your abilities (or patience), then I can supply tape copies of the program at £1.50 each. Write to me, David Muir, at 78 Peverell Park Road, Peverell, Plymouth PL3 4ND.

POOLSWINNER

THE ULTIMATE POOLS PREDICTION PROGRAM

- **MASSIVE DATABASE** Poolswinner is a sophisticated Pools prediction aid. It comes complete with the largest database available – 32000 matches over 10 years. The database updates automatically as results come in.
- **PREDICTS** Not just SCOREDRAWS, but AWAYS, HOMES and NO SCORES.
- **SUCCESSFUL** SELEC guarantee that Poolswinner performs significantly better than chance.
- **ADAPTABLE** Probabilities are given on every fixture – choose as many selections as you need for your bet. The precise prediction formula can be set by the user – you can develop and test your own unique method.
- **SIMPLE DATA ENTRY** All team names are in the program. Simply type in the reference numbers from the screen. Or use FIXGEN to produce fixture list automatically (see below).
- **DISC/MICRODRIVE COMPATIBLE** Tapes supplied with conversion instructions.
- **PRINTER SUPPORT** Full hard copy printout of data if you have a printer.

Bored, with detailed instruction booklet

AVAILABLE FOR Spectrum (48K), Commodore 64, VIC 20 (+ 16K), AMSTRAD, BBC B, Atari (48K), ZX81 (16K), Dragon, Apple II, ELECTRON

PRICE £15.00 (all inclusive)

All Programs Now Available on the UL & Amstrad PCW (add 3.00 for 3" disk)

FIXGEN 85/6 AT LAST: No more struggling for hours to get the fixture list into the computer. FIXGEN has been programmed with all English and Scottish fixtures for 1985/6. Simply type in the date, and the full fixture list is generated in seconds. Fully compatible with Poolswinner.

POOLSWINNER with FIXGEN £16.50 (all inclusive)

COURSEWINNER v3

THE PUNTERS COMPUTER PROGRAM

NOT JUST A TIPSTER PROGRAM, Coursewinner V3 can be used by experts and occasional punters alike. You can develop and test your own unique winning system by adjusting the analysis formula, or use the program in simple mode. Coursewinner V3 uses statistical analysis of major factors including past form, speed ratings, course statistics, prize money, weight, going, trainer and jockey form etc, etc. It outputs most likely winners, good long odds bets, forecasts, tricasts etc. The database includes vital course statistics for all British courses. You can update the database – never goes out of date.

AVAILABLE FOR Spectrum (48K), Commodore 64, BBC (B), AMSTRAD, Atari (48K), Apple II

PRICE £15.00 (all inclusive) (includes Flat AND National Hunt versions.

Computer Games is a volatile business. You've got to make the right decisions and work with the right people to be a success. At CRL we've been doing that longer than most Companies have been in business. If you've got a program, you'll want the worldwide distribution we take for granted and the Software Development back-up we pride ourselves in. If you're a designer, a programmer or both, get in touch.

CRL Group Plc, CRL House, 9 Kings Yard, Carpenters Road, London E15 2HD Tel: 01-533 2918

WILD CARD

by R K Lowry

The term 'wild card' has entered computer jargon from card games. In some of these, the wild card or joker may be used to represent any card in the pack. Similarly, the wild card in computing is a character in a string which means any character from the character set. For example, if the symbol '%' is taken as the wild card, the string 's%n' is equivalent to 'sin', 'sun', 'sen', 's&n' or any other 3-character string in which 's' is the first character and 'n' the 3rd.

The single character wild card, though useful in certain applications, is somewhat limited. A more powerful wild card character is one which is defined as 'one or more characters'. If the character '*' is defined in this manner, the string 's*n' is now equivalent to countless strings: 'soon', 'spleen' and 'spoon' are but three examples.

What use are wild cards? The main application in mainframe operating systems is for convenience of file management. They are particularly useful if the file naming convention makes use of filename extensions, eg, fred.for;5, fred.obj;2, fred.exe;2. On VAX machines, the command 'dele fred.*;*' would delete all three of these files which is a lot quicker than typing three separate commands.

At last we come to the QL. The Psion packages create files which have filename extensions. For example, if you save a document called 'fred' from Quill, the file generated is called 'fred_doc'. Consequently, a wild card facility has its uses for many QL owners. The program presented here is a wild card backup program. You type in a string containing wild card characters and the program copies all files which match from mdv1 to mdv2. For example, if you have a cartridge containing a mixture of Quill and Archive files, and wish to copy only the Quill files, the string '*_doc' will do the trick.

The program is a vehicle for the string matching function *wcard*. This is a logical function with two string arguments. The first is a string containing wild cards and the second a string to be matched. If the strings are equivalent within the wild card convention % = any character, * = one or more characters, the function returns '1'. Otherwise it returns zero.

The only limitation on the use of wild card characters is that if the character '*' is used, the wild card characters must be separated by at least one character which is not a wild card.

For example, '%', '*', 'a*', '%a' and '%%' are all valid but '**', 'a*%' and 'f*%d' are invalid.

C FOR YOURSELF

- **This book is an ideal companion either as a practical introduction to the C language or as an aid to the quick development of a wide range of applications.**
- The theme of the book is data-handling, and methods of programming data-handling routines in C. Topics covered include control routines and menus, interactive data entry and text editing, screen format and form generation, error handling, useful data structures, sorting (both in memory and on disk), indexing and retrieval. Full testing routines are included for all the programs in the book.

WILD WEST

by Andy Clarke

Use a joystick in Port One to play this Wild West Shootout. After the titles enter the number of players wishing to play. It helps if there are more than one as this game challenges player against player as each tries to beat the high score.

After all the name entering, you'll receive the message 'Git Ready' and the player's name.

The scene is set in the Wild West and you have to shoot as many Indians as you can in one minute – (change value in Line 58 for a longer session.)

Move up and down the screen to get the Indian. To fire you must face him by knocking the joystick left or right. Then press 'Fire'. Sometimes you'll have to fire more than once to kill an Indian.

When shot the Indian will whoop and disappear, only to reappear on another part of the screen. If you go off the top or bottom of the screen a little routine at Lines 52-54 will make him reappear at the bottom or the top respectively.

You score 100 points per Indian and should be looking for a score of 1200.

PALETTE

by Nic Ford

This week, the instructions for using the Pallete facility installed by last week's code, plus a demo program showing off its major features – remember, the demo program won't run unless you have the code already installed.

As has been said, comments are accessed through the Print statement. In the following descriptions three dots (" . . .") represent any other part of the *Print* statement. This can be a string or number to be printed, a print specifier (;, or ') or even another palette command. The descriptions use *n,m,x,y* and *z* as variables. These can be straight numbers. Basic variables or complex mathematical expressions. *x* represents a pen number, and must hold a value between 0 and 15. *y* and *z* are colour numbers, and must lie between 0 and 7. The values of *n* and *m* may vary, and will be noted in the text.

Print . . . ; Paper x; . . . Sets the current paper to the colour from pen *x*.

Print . . . ; Ink x; . . . As above for ink.

Print . . . ; Ink x, y; . . . Sets pen *x* to hold colour *y*. Anything printed after this in *Ink x* or *Paper x* will have colour *y*. Anything on screen printed from pen *x* will change to colour *y*.

Print . . . ; Ink x, y, z; . . . Sets pen *x* to flash between colour *y* and colour *z*. The speed of this flash depends on the flash rate.

Print . . . ; Flash n, m; . . . Sets the flash rate. Any pen set up by *Print . . . ; Ink x, y, z; . . .* will spend *n* fiftieths of a second in colour *y* and then *m* fiftieths in colour *z*. (**Warning:** 0 is counted as 256. *Print . . . ; Flash 1, 1; . . .* is a very fast flash, which can be painful to the eyes and can slow program execution down appreciably.)

The palette can also work for graphics commands. Unfortunately these must also be accessed through the *Print* command. Care has been taken to use combinations of characters not normally used.

Print . . . ; "P̃", n, m; . . . Works the same way as *Plot n, m*

Print . . . ; "D̃", n, m; . . . Works the same way as *Draw n, m*

Print . . . ; "M̃", n, m; . . . A "Move" commands. As . . . ; "P̃", n, m; . . . but the screen is not marked in any way.

If *Attr (n, M)* is used in a program when using the palette it will give a number representing the logical colours on screen at position *n, m* at the current time. To find what pens were used to produce this colour a function must be defined thus: 1 *Def Fn p(n, m)= Peek (n*32+ m+ E3232)*.

This will give a value with the binary form PPPPIIII. PPPP is the number 0-15 of the *Paper* pen for that position. IIII is a similar number for the *Ink* pen.

The demo program is a quick demonstration of the palette's abilities. It make use of all of the new commands and shows their syntax in a practical way. It also uses two extra commands – *Print . . . ; CHR$); . . .* and *Print . . . ; Chr$ 1; . . . Chr$)* clears the screen and also updates the new attributes file, which *Cls* does not do. *Chr$ 1* scrolls and updates, and should be used in preference to the normal "scroll?" routine, as this can leave strange colour combinations on the screen.

If you feel you cannot type in all that hex, the author can provide a copy of the program. Send a cheque for £3 to: Nic Ford, 25 Canada Road, Cobham, Surrey, KT11 2BB.

Evesham Micros

PRINTER OFFERS

Look at these deals on centronics printers we believe that these prices offer the best value in the country. All prices include receipted delivery, despatch is within 48 hrs of receipt of order provided goods are in stock. A printer lead is supplied to suit your micro free of charge, (please specify Amstrad, BBC, Oric, Dragon, Einstein, CBM64 or Memotech) for Spectrum or QL owners we will supply with an appropriate interface for an additional £20.00.

TATUNG TP100

Bulk purchase allows us to offer this **highly popular, high specification** printer at an **unheard of price.** It is from the same manufacturer and of very similar specification to the Mannesman Tally MT80+ and Shinwa CPA80. This style of printer reputed to be the most popular in its class boasts many superb features. It uses square pins which avoids that "dotty" look and gives a nicely formed up **"near letter quality"** print at 100cps. Friction and tractor feed are standard. It has full graphics ability. Take a look at these unretouched, actual size print samples.

Standard PICA text (100cps)
PICA text emphasised
True descenders on jpg etc.
ELITE mode gives 96 columns
CONDENSED mode gives 142 columns
ENLARGED mode
SUBSCRIPTS and SUPERSCRIPTS
underlines nicely
Italics available in all modes

We are convinced that this printer offers the **best performance and value** in its class and at our unheard of price is a **BARGAIN.**

ONLY £179.95

Price includes Centronics lead to suit your micro.
Or to suit Spectrum with Kempston "E" interface £199.95

TAXAN KAGA KP810

Recently introduced into our range due to public demand this popular printer is essentially the same as the CANON PW1080A. It includes a very high specification and superb print quality. Features include 140cps draft mode, 65cps correspondence quality (emphasised) and 27cps in it's superb NLQ mode. It has a 3K buffer, three graphic modes, friction and tractor feed and is EPSON compatible. Take a look at the actual size, unretouched, print samples.

Near letter quality at 27cps
Correspondance quality at 65cps
Draft mode at 140cps
subscripts & superscripts
ENLARGED mode
ELITE mode gives 96 columns
Condensed mode lets you squeeze a lot into a line
Good underlining
Plus many, many more features

Normal selling price for these printers is around the £300 mark. At our price they represent superb value for money.

ONLY £219.95

Prices include centronics lead to suit your micro.
Or to suit Spectrum with Kempston "E" interface £239.95.

MICRO P. MP165

This printer is a **very high specification** at an **unbelievable price.** It boasts 165 cps in draft mode and 70 cps in **near letter quality** mode, which is switch or software selectable. It is friction and tractor feed as standard has a **2K buffer** and is EPSON compatible (it even uses an EPSON ribbon). It can print in standard PICA 80 column mode or a variety of others from enlarged 40 column mode to condensed at 132 column. Italics are available in all modes. Normally this printer would be expected to sell at £300 plus we are offering it at our **ultra keen** price **inclusive** of printer lead to suit BBC, Amstrad, CBM 64, Oric, Dragon, Einstein or Memotech.

ONLY £249.00

Price includes Centronics lead to suit your micro.
Or to suit Spectrum with Kempston "E" interface £269.00

RAINBOW

by Cy Noble

This week, the first part of the main program, plus the start of the detailed instructions. There are three basic modes of operation, the first of which is simply called Free Draw mode.

In this mode you move the special cursor around and if you hold down the fire button a line in the current colour will follow the cursor. (In all instructions that follow any reference to 'fire' refers to the CTRL key if using the cursor keys). At all times, the top two lines of the screen display the current option in the current colour and the X, Y coordinates, if the cursor keys are being used. If the current colour is Black then the top line will be in flashing White.

<A> selects the Alphabetic mode. This will print the standard printable characters at the screen cursor position, in whatever colour is current.

Shapes mode can only be entered from the Free Draw mode by hitting the letter corresponding to the shape required. Once in this mode it can only be exited by hitting <E>xit.

Shapes available are Line, Triangle, Rectangle and Circle, <L>, <T>, <R> and <C> respectively. Once a shape is selected you are asked if you want a *"Solid shape? (Y|N)"*. This means the shape will be completely coloured in the current colour if you hit <Y> or just in outline if you hit <N>. Once an option is selected the program stays on that option until <E> is hit, whereupon you will be back in Free Draw mode.

With each of the shape options you move the cursor to the position required and hit fire. At this point the cursor will be replaced by a flickering dot but as you move the joystick a flashing line will follow your movement. This line marks the position of the coloured line that will appear when you hit fire again, if you had selected <L> (line). The same procedure applies to <C>ircle except that the line will be the (invisible) diameter of the circle drawn with the mid point of the line being the centre. The line can be at any angle so you can place circles exactly where you want.

Filling blank areas – <TAB> will select the fill option from both the Free Draw and Shape modes. Hitting <TAB> refreshes the fill colour blocks on the bottom two lines of the screen. You move the cursor to the colour required and hit fire to capture it. In the bottom right will be the colour currently under the cursor and you can select another colour from anywhere on the screen where there is colour. In the interests of a speedy fill (and also because of memory requirements) this fill routine will not fill *all* of the more complex blank areas unless they are simple convex shapes. Bear in mind that the fill starts at the cursor, fills a line of pixels to the right (until it reaches a coloured spot) then similarly going left and then up a line and repeat until it hits a non-blank pixel above the cursor position. Then down in the same manner.

You may find it impossible to fill some very small areas which are only one or two pixels wide, but with such, it is possible to use the <L>ine or Free Draw option to finish it.

More next week, then. Meanwhile, for the faint at heart, I'm supplying the program on various formats – write to me at the address in the listing. Cassette (£10), 5¼" Disc (£11.50) or 3" Disc (£15).

ARE YOU THE BRIGHT SPARK WE ARE LOOKING FOR?

Electric Dreams Software is a publisher of original programs for Amstrad, Atari, Commodore and Sinclair home computers. We are interested in hearing from authors conversant in machine code on the Z80 series, 68000 series and 6502 processors who are involved in recreational software development. If you are seeking full international exposure and promotional support for your programs and wish to enjoy the rewards your efforts merit, please contact Paul Cooper for an informal discussion.

SOFTWARE HOUSES

Allow Electric Dreams Software to market and distribute your titles, leaving you to concentrate on product design and development. To take advantage of this opportunity and gain financial security, please do not hesitate to telephone Rod Cousens. All enquiries will be treated in strictest confidence.

Contact: Rod Cousens or Paul Cooper at Electric Dreams Software, 31 Carlton Crescent, Southampton SO1 2EW. Tel: Southampton (0703) 225682.

Early Viewdata

Computing networking is so frequently described as 'next year's big growth market', that it may surprise some of you to know that the first viewdata service was set up around ten years ago.

This week I'm going to step back from specialised areas, to take a more general look at the development of micro communications.

Viewdata was first considered as a possible information providing media in the early and mid 70s. Sam Fedida was the 'inventor' of Prestel, or Post Office Viewdata as it was known in the early days.

In a way Prestel was a mistake, being the result of a viewphone project, the aim of which was to enable television pictures to be sent over the phone lines, like some science-fiction films.

Fedida and his team discovered that the technology of the time was not advanced enough to send anything more than text and simple graphics. So it became Viewdata.

At that time the Post Office decided that the system was so cheap, and could provide so much information that every home would be able to have a viewdata receiver and it would be used regularly in place of a train time table, encyclopedia or just about any written information.

The Post Office was convinced enough to test the system using 'guinea pigs'. They supplied receivers to 50 people and ran a test of the system. Comparing today's Viewdata with the early Viewdata, is like comparing an Amiga with a ZX81, or an automatic rifle with a bow and arrow.

Early Viewdata was very limited, to keep the costs down; it was black and white, capital letters only and the display size was a limited 32 x 16. The data which could be sent consisted of the numbers one through to nine and zero, a hash and a phone.

Early Viewdata used a speed of 1200/75, and this is about the only thing which has survived 100% from early Viewdata.

The BBC and the IBA started to look into teletext (Ceefax and Oracle) at the same time as the Post Office looked into Viewdata. They produced this non-interactive (data may be sent only one way) system, and in some ways it was better than Fedida's Viewdata; it used colour, had a screen size of 40 x 24 and could handle lower case characters. Also Teletext was 'free' to use; if your television was equipped to pick up the teletext service, which many TVs now are, then you did not have to pay to use the service.

The Post Office, was not surprisingly, interested in teletext and discovered that it would be cheaper to make a Viewdata receiver to teletext specifications, so colour, etc, became a part of Prestel.

A teletext character set was decided upon, which would contain all of the characters available to both teletext and Viewdata receivers.

This is the same as the characters set on the BBC B micro in Mode seven (also called teletext mode!). This set developed to include double height, graphic and flashing characters.

Sam Fedida's team decided on GEC computers; GEC 4000s were the original computers, GEC 4082s are the present computers and there are plans to develop a system with a mixture of GEC 5065s, GEC 4190 (32 bit) and the extremely powerful GEC 6300 series of computers. In the present system, each computer has about 384K Ram with 8 x 70M (1000K) hard discs to hold information: 560,000K in all.

The purpose of all this was to enable the computers to handle many calls quickly and respond almost instantaneously: 200 calls at one time with a response time of a maximum of two seconds, from receiving the data to acting on it.

Computers and multiplexers were set up around the country to enable as many people as possible to receive Prestel at the cost of a local call.

Slow menu

Prestel has been a great success, but in many ways it is not as successful as it was first believed it would be. It was predicted that by the end of 1980 there would be 100,000 users, but now, six years later in 1986 there are only about two thirds of that number.

One of the reasons for this is that Prestel with Micronet 800 (home computer section) costs over £60 a year *plus* phone calls. Many home users cannot afford this. Also ex-users of Prestel do not like the slow menu system for finding a page. To find a page you have to go through a menu, which takes you to another menu, followed by yet another menu and so it goes on.

A key word searching system for Prestel is said to be in the development stages and should be ready by the end of this year at the latest.

Recently home micro users have written software for their micros so that they can run their own systems like Prestel. Running one of these is great fun; you get all the benefits of logging on without the cost of a phone call!

However, Bulletin Boards do cost a bit to set up – about £1000-£2000 – and consequently there are less than 200 in the UK.

The first BBs ran on Tandy TRS-80s, using TBBS software, and some on Ataris (FoReM boards in particular). Now just about any computer from a ZX Spectrum with microdrives, or a BBC B, to a TRS-80 with hard discs, can run a BB.

Static screen

Most BBs are not the same as Prestel and require the user to have different software. BBs are often monochrome and they transmit a line at a time on a scrolling screen, rather than a page at a time on a static screen, as with Prestel.

Now for this week's BB top 10.

	Name	Baud rate/format	Number
1	Mailbox-80	300/300	051-428-8924
2	Bluelips	300/300	0843-32637
3	Marctel	300/300 & 1200/75	01-346-7150
4	CABB	300/300 & 1200/75	01-631-3076
5	Metrotel	1200/75 Viewdata	01941-4285
6	MicroGnome	1200/75 Viewdata	01-888-8894
7	RSGB	1200/75 Viewdata	07077-57477
8	CBBS – SW	300/300, 1200/75 & 1200/75 Viewdata	0382-53116
9	Vulcan Board	300/300 & 1200/75	0268-86691
10	Dark Crystal	300/300 & 1200/75	01-954-9847

You may wonder why I've dropped the CCCBB (Calne Computer Club Bulletin Board) from the list. It's gone because it is now a 'ring back board' and I've been unsuccessful in contacting it recently.

If I manage to get through again then you can be sure it will return.

Two new FBBS format BBs have appeared recently: firstly, Torture Chamber (I don't know why, but many FBBS BBs have weird names: Torture Chamber, Compost Heap, etc). Torture Chamber runs 24 hours a day and dual baud rate.

It's number is 021-455-1219 and the Sysop's name is Gandalf Sorcerer (aren't they all?).

The second one is Malcomm Systems, again 24 hours a day, dual baud rate. It's number is 01-458-9704 and the Sysop's are Malcom Carter and Danny Zargel.

Why not give them a try? One thing about FBBS is that it runs on a BBC, so there is often lots of stuff for BBC owners to download, particularly lots of digitised photographs.

David Wallin

If you have any queries, tips or comments to make about any aspect of micro communications, David Wallin would love to hear from you.

Peek & Poke

Commodore Basic

Mark Thompson of Tullibody, in Scotland, wrties:

Q Like many others, I've found the Commodore 64's V2 Basic a bit awkward to use. I've now purchased Simons Basic, which has made programming much easier.

However, after receiving a Commodore 64 1520 printer plotter as a present, I have found that the two Simons Basic commands *Copy* and *Hardcopy* would not work with my printer, and not even the two sample programs in the user manual would work.

Also my printer does not work with *Mini Office* I keep getting an I/O error 35 in the word processor program. Can you help?

A The 1520 printer/plotter does not use the device number 4, which Simons Basic assumes you're using. To change the device number, look up page 37 of the *Commodore Programmers' Reference Guide* and all will be revealed.

As for *Mini Office*, I suggest you contact Database Publications itself: 68 Chester Road, Hazel Grove, Stockport (061 456 8383). Your program may be faulty.

Function keys

Mark Elliott, of Workington, in Cumbria, writes:

Q How do you program the function keys on the Commodore 64? In the user guide and the *Programmers' Reference Guide*, there is nothing on this subject.

A The Commodore function keys generate an Ascii code – that code can be looked up on the Ascii code table in the *Programmers' Reference Guide*. To include the function keys in a program, write a *Get A$* routine that looks for the code generated by the function keys.

Bad program

Alan Davies, of Llanelli, writes:

Q I have an Acorn Electron and I am having problems with *Bad Program* messages, when I try to recover a lot of programs, after pressing the *Break* key.

A You should not really use the *Break* key to interrupt a program; *Escape* is much better. *Break* actually causes a "partial system upset".

In order to recover a program after pressing *Break*, the command *Old* should be entered.

Loading problems

Troy Baines, of Blackpool, Lancs, writes:

Q I originally had a 16K Spectrum but expanded it with memory chips. Sometimes 48K programs load first time, but occasionally they only load second time.

Sometimes I have to put the cassette recorder down on a chair lower than the computer, or programs won't even load the second time around!

A It sounds to me as if you have cassette recorder problems. Have you tried a different recorder? It could well be that it is static from the recorder or TV that is causing the problem.

Try keeping your leads separate, if you can. Try, particularly, to keep the TV aerial lead away from the cassette recorder leads.

Spectrum version

M. Sleight, of Doncaster, in South Yorks, writes:

Q I can only speak for the Spectrum version of *The Quill*, but I have found no trouble at all in loading a complete adventure into the interpreter.

All one needs to do is load *The Quill* and then proceed as if loading a database. The bytes are loaded as if they were the database.

I know it states on Page 26 of the manual that this is not possible, but it is.

A I've also tried this on the Spectrum and it does work. So I guess it's worth a try.

The Rogue Program

A masterpiece

Without doubt one of the very best games to have hit the Commodore (and there is a lot of competition for the honour) is Novogen's 3D vector masterpiece *Mercenary*. I was therefore delighted to receive pages full of tips on the game from Christopher Hester of Stockport. Chris writes, "Even though I've solved the game there still remains a lot to do – it's the only game I know that offers a challenge after completion. Here are my tips on how to finish:

"Firstly buy the ship offered at the start and fly over to location 11:13 where you'll find the entrance to a hanger. Use the elevator to descend. Go through the top east door into a green room where you'll find the cheese. This is a most important object as it is a cleverly disguised ship and is also the fastest. Go south until you have picked up the useful armament then back into the hanger. Leave your own ship behind the drop the cheese, then board it. You will now need to fly to each of the hangers and explore them for objects hidden in the rooms below. The beauty of the cheese is that you can pick it up, unlike your old ship, and hence take it with you.

"The hangers are all connected underground but in some devious ways. You will need to know firstly that in the underground rooms below each hanger are a variety of doors. The normal door is a rectangle and can be opened by walking straight up to it. However, there are a variety of shaped doors such as a triangular door which can only be used if you have a key which is the exact shape of the door. There are seven different keys to collect. The doors with a triangle on them are always dark – use a photon emitter to see in them.

"The door with two diagonals is the door to a transmission room which is always seen as a black room with coloured lines. Upon entering you will hear an eerie sound and you have been transmitted to another place on the map. Stepping out of the room shows you where. These doors are immensely complex as usually they alternate between two rooms – step back in and you'll be back where you started – however, some rooms act as transmission points for several different rooms depending on where you've come from. It is a good idea to try and follow these doors as one of the hangers can only be reached (initially) by them.

"The doors with one diagonal across them serve also as transmission rooms, but they are one way only. The ones with a line from the top right corner to the bottom left are the entrances and work like the normal transmission rooms. However, they lead to doors the opposite way round and with a diagonal from top left. These are exits only and if entered they do nothing.

"The doors with a skull and crossbones are Risk doors – usually they are a trap, but one is the entrance to a hanger. Always save your position before attempting to enter one.

"The doors with an arrow pointing up or down are lifts and can only be found in the colony craft that orbits above the city at 65,000 feet. The ship you start with cannot reach the colony craft which is seen as a dot in the sky from the ground but the cheese can easily fly up to it.

"The colony craft must be visited so that you can make use of several objects that are there. Upon entering certain rooms you will be asked to drop a certain object if you are carrying it and you will gain credits. When you have enough credits you can buy a ship that enables you to escape from the planet which is the object of the game. This isn't the only way to complete the game, however – more on this later.

"In the colony craft you will find a five sided key – this is very useful as, if you have all the other keys, you will never need to fly up to the craft again. The key will give you access to a series of rooms below the city including several transmission rooms. One of these takes you straight to the colony craft, therefore saving you a lot of time and effort.

"The reverse facility is also provided. The door in the laboratory of the craft which has a skull and cross-bones on it leads back down to the city.

"The pass enables you to enter the hanger at 3:15 from above, but it is found next to the hanger so you have to use the transmission room first to get it.

"These are the hangers: Blue 3:00. Yellow 3:15 (need pass to enter). Brown 9:05. Red 9:06. Orange 11:13. Yellow 81:35. Grey **:**.

"The last two hangers are not misprints – their locations are *outside* the city in the wastelands. At first the last one is very difficult to reach as it is not even numbered – the location dial just shows asterisks. But don't worry, you can reach it from the other hanger underground.

"The intergalactic craft is the one for which the craft is needed. You can rent this craft, or just take it, but to make it work yourself you need the Novadrive. It is obvious from the list that the cheese is the best ship to use." We'll carry on with these tips next week.

Tony Kendle

Ship	Top Land Speed	Top Air Speed
8:08 Dominion Dart	1650	4950
3:00 Palyar Diamond	1650	1650
, Jet	825	7400
11,13 Cheese	3300	9900
9:05 Land Dart	3837	—
12:13 Car	825	—
3:15 Intergalactic craft	—	Escape velocity

Object name	Place to use or how to use
Poweramp	Boost speed of dominion craft
Catering provisions	Kitchens
Gold	Exchequer
Essential 12939 supply	Conference room
Mechanoid	Interview room
Medical supplies	Infirmary
Data bank	Control room
Winchester	Laboratory
Neutron fuel	Engine room
Antenna	Communications room
Energy crystal	Mechanoid power room
Large box	Stores
Photon emittor	This is a torch – use in dark rooms
Anti-time bomb	Stops you destroying buildings
Antigrav	Enables you to carry any object even ships that were previously too heavy
Sights	Give you sights
Metal detector	Shows which buildings belong to which race by colour and information panel. Blue = mechanoid. Green = Palyar. Red = free

Tony Bridge's Adventure Corner

Press reaction

It's been interesting to watch the reaction of the computer press to *Lord of The Rings* over the last few weeks – comments have ranged from the rather predictable "fan-mega-tastic, the greatest thing since *The Hobbit*" to total silence.

My initial reaction was "oh dear", and I'm afraid that nothing that I've seen since has changed my mind – however, it's interesting to see the opinions of other adventurers.

I mentioned Linda Wright's *GAC*'d adventure recently: I've enjoyed playing it and found an eye to detail and some puzzles to warm the old adventurer's heart. Linda tells me that she has forwarded it to Incentive, so I hope that we can see it commercially available soon – I believe Linda has a great future as an adventure writer. But she also has some comments about *Lord of The Rings*:

"I loaded it enthusiastically, waited for what seemed ages, only to have it crash within minutes of starting. For example, under the high hedge, without a source of light and trying to go west, provokes half a message and then the necessity to reload. However, I do like the atmosphere, though the length of 'thinking time' required is niggling . . . and the pictures do little other than annoy. Why can't Melbourne House bring out games like those from Level 9 – I've never had trouble with games from the latter, and it's a shame, as Melbourne Houses's ideas are so good . . ."

Alan Davis, a valued reader and critic of the Elf's witterings but best known to the world at large as the author of the fantastic *Runestone*, has several things to say:

"I was bowled over by this for the first few days of playing – the spirit of the book seems to have been captured so well, and it was so easy to identify with Frodo, Pippin, or whichever character was chosen. There's no doubting that this program (or programs) is a major achievement, and yet . . . slight doubts are creeping in.

"In one or two places in Part One, the game departs from the original, for example, on entering the barrow just east of Tom Bombadil's house, one finds oneself first in an underground shed and then in a room listening to "heavy orc music", neither of which makes sense even in the context of the game and certainly not even remotely in keeping with the spirit of the book.

"The same is true of the "watery tart" which appears in the lake when Merry goes for a swim.

"On the plus side, Part Two seems completely free of lapses of this sort and indeed there are moments when the player really seems to be "living" the book. The exhilarating ride across the ford and the frenzied skirmish with the tentacle outside the Gate of Moria are obvious examples.

"The combat sequences are splendid – there's a feeling of real desperation when trying to fend off the band of Orcs by Balin's tomb.

Sight-seeing tour

"There's a feeling of real tragedy to be had, too. Taking the blizzard-torn pass through the mountains of Lothlorien, you find yourself almost in tears as your faithful companions keel over one by one, because you didn't get the fire going quickly enough . . .

"Alas, Part Two is relatively easy to finish, and looking back, there does seem to be a dearth of actual things to do – it's really more of a sight-seeing tour. Somehow, I doubt that this is a game which can be played over and over again in the way that *The Hobbit* could. Maybe time will prove me wrong."

Other readers have mentioned *LOR* – Hugh Walker (scourge of critics and a scourge of a critic) has, as usual, some very perceptive remarks to make, for example: "The ride to the Ford: Glorfindel revealed (in retrospect) in all his glory as an Elf-Lord . . . where is it? Melbourne House couldn't find enough in the book and so has to add a monastery?" and more.

I have tried and tried over the past two or three months to get to grips with *Lord of The Rings*: believe me, I desperately want to see in the adventure what I have been told by others actually exists – I've been told, for example, that "the atmosphere of the book has been captured extremely well" and that "the puzzles are enormously difficult and intriguing" and so on.

Poetry and pathos

But to me, this is all totally unfounded. In my review in The Corner, I said that "*LOR* is better than many adventures" but as I have been able to see more of the programs, I believe that this is far too generous.

The *Lord of The Rings* trilogy is the greatest work of fantasy ever put to paper – the combination of scholarship, dedication to detail and sheer breadth of imagination is breathtaking.

No adventure game could ever hope to come near to matching the poetry and pathos of Tolkien's work, and we shouldn't expect miracles of Melbourne House – but this is no excuse for foisting on the public such a badly conceived, badly programmed piece of rubbish as *Lord of The Rings*.

Why should we have to put up with glacial response times, and such awful puns as "heavy Orc music" – very funny, yes, but couldn't the programmers show some restraint?

The programs are inconsistent: at the start of part two, try going south, then west. Through the stone door, you'll find the Mithril shirt – but you could also go S,S,S,S,S,S, etc, then west and achieve exactly the same result. This is atmosphere?

No atmosphere

I have to admit that I was seduced at first by the lengthy location descriptions, but these do not make for atmosphere. Why should we have to put up with the stupid loading arrangements, which lead half the reviewers and much of the public to complain of "corrupted tapes" – why does my program *New* itself when I *Quit*.

Why do Melbourne House and Philip Mitchell seem to be unable to learn from the lessons of modern adventure programming – why is there no Ramsave as in many of the better modern games . . . ?

Despite anything that I might say, the game immediately went to the top of the charts and will remain there for many months.

Of course, everybody will buy the thing, but the thought that gnaws away at the back of my mind is: "Never again will anyone, anywhere, have the chance of bringing Tolkien's beautifully-crafted work to the computer".

Perhaps Melbourne House should take a look at Fergus McNeil's *Bored of The Rings* if they would like to see how a true enthusiast and brilliant programmer approaches the task.

Adventure Helpline

Going bananas? If you are stuck in an Adventure with nowhere to turn do not despair – help is at hand.

Fill in the coupon, explaining your problem, send it to us, and a fellow adventurer may be able to help.

Remember – the system only works if those adventurers who have solved the puzzles get in touch. Every week is Save An Adventurer Today (SAAT) week!

SCREENMASTER is a family of advanced graphics programs that give full access to the code, so you can adapt them for your own special needs. Use them individually or together (eg on disc).
SM1 – Powerful character generator. Create single character blocks, 2x2 character blocks (sprites) and 8 × 8 blocks (pictels). Novel scrolling window design grid. Cartoon animate sprites. Paint coloured pictels. Pick up blocks from a screen file.
SM2 – Creative art & drawing. Rubber-banded line, circle, ellipse, polygon & arc drawing. Freehand draw & erase. User defined brushes & fill patterns. Multi-size text. Character, sprite & pictel handling. Alter, move, copy & paint areas of screen. Kill incorrect commands.
SM3 – Advanced graphics compiler. Store pictures in highly compressed form. Run-time routines to reconstruct pictures can be included in user programs. Edit & redraw at any time (we find this incredibly useful). Rubber-banded drawing as in SM2. Create macro commands. Available April.
Spectrum (48K & Plus) tape £4.50 each. **SPECIAL OFFER** 2 for £7.95 or 3 for £9.95.
DOCUMENTATION PACKAGES — detailed info, including expanded, commented listing. £1.95 per program.
CAR CURE – EXPERT SOFTWARE to help diagnose faults on your car. Covers 300 symptoms & 900 faults. Spectrum (48K & +) and Amstrad CPC464 tape £9.95. BBC disc £11.95. Amstrad 464/664/6128 disc £13.95.

**Spectrums only*

(We do not charge you for our fancy premises by charging high 'fixed' prices!)

Reputations take time to build, we have been repairing ZX 81's, Spectrums, QL's, Apples and BBC's professionally, for 2½ years – who is coming second?

1st in all U.K. with While-u-Wait repairs! with INTERNATIONAL repair service!

1st to charge LOW PRICES for the smaller repairs! (e.g. £9 for keyboard faults)

1st FOR LOW PRICES – "My computer blew recently. I took it to **MANCOMP**, who fixed it in 8 minutes! and for less than £10! They are local, 'clued up', and blindingly efficient!" 4 HEATONS DIGEST.

1st FOR PROFESSIONALISM – "Of all the repair companies 'Sinclair User' spoke to, **MANCOMP** seemed the MOST PROFESSIONAL when it came to advice and a helpful attitude." AUG 85.

1st FOR HONESTY – We let you watch your computer being repaired and if there is nothing wrong with it, we will tell you!!!

1st FOR REPUTATION & HELPFULNESS – "I have come across a firm that will be more than willing to advise you as to how to remedy your problems. They are called **MANCOMP** and as well as repairing faulty computers, are also quite willing to discuss your problems with you and offer reasonably cheap and more importantly CORRECT CURES" Phil Rogers POPULAR COMPUTING WEEKLY JAN 85.

1st FOR SPEED – "One firm at least can effect any necessary repairs over the counter in 45 minutes. Based in Manchester, **MANCOMP** can offer what is arguably the FASTEST turnaround in the business to personal callers" CRASH Magazine JUNE 1985.

THIS IS WHY Spectrum users from London, Cornwall, Scotland, Birmingham, Liverpool, Coventry, Leicester, Glossop, I.O.M., etc. AUSTRALIA, AUSTRIA, BELGIUM, EGYPT, EIRE, GERMANY, HOLLAND, KUWAIT, NORWAY, PAKISTAN, PAPUA NEW GUINEA, SAUDI ARABIA, SWEDEN, SWITZERLAND and ZIMBABWE – send their Spectrums to MANCOMP for repair!

24 HR. TURNAROUND NO-QUIBBLE GUARANTEE NO HIDDEN COSTS.

Because we repair hundreds of computers every week, we are able to pass on our 'component-buying discount' to YOU in lower prices . . . Z80A cpu £1.50, 4116 50p, Upgrade *fitted* £18.95 – we bring down the prices for repairs and components!

(We may refuse to revive computers suffering from attempted D.I.Y. repairs!)

Every parcel sent by Royal Mail Receipted Post and insured for return journey!
(For next day delivery include £1.50 extra).
(Securicor by prior arrangement).
On-site maintenance for Apples, I.B.M.'s and most makes of printers also available.
Guaranteed 4hr response!
WHY DELAY – OUR ESTIMATES ARE FREE AND WITHOUT OBLIGATION. IF YOU DO NOT LIKE OUR ESTIMATE WE WILL RETURN THE COMPUTER AND REFUND THE POSTAGE INCURRED

MANCOMP LTD (Dept. PCW13)

COMPUTER RATING METHODS.©

14 Langdale Place, Newton Aycliffe, Darlington, Co. Durham. DL5 7DX

HORSE RACING ANALYSIS

Your staking may not compare with the Professionals but your method of selecting winners can be equally as good providing you use the Computer Rating Method. This method eliminates those dodgy races that can be so costly to the unwary. It selects only the out-standing bet of the day, (Providing there is one) and it takes only minutes to analyse any selected race using the Professional Winning Statistics programmed into your computer, form reading fully explained, suitable for Flat & N/H. No records to keep or up-date. A truly Professional way to analyse and select Winners, Staking plan provided.
Cassettes for Spectrum 48, Commodore 64, Dragon 32, £10. Tandy TRS 80 Mod. 4 Disk £12.

EARN A FORTUNE!

Make Money From Used Micros is an incredible new manual which shows how you can earn you a fortune from buying and selling used home computers, accessories and software for amazing profits. You can make hundreds a week from this vastly under-exploited market with the hard-earned facts and figures contained in this information-packed 25,000 word guide.

Even if you do not own a computer this report will give you all the necessary facts. Contents include how to get stock, what to pay, what to charge, what to sell – and what to avoid, sales techniques, testing, profitable sidelines, computers, software, printers modems, disk drives, monitors and much more.

Whether home-based, mail order, or in a shop, Make Money From Micro will show you exactly how to run a part-time business or make a full-time living from this highly lucrative market. This must be the biggest money spinner yet so don't waste a second. Order a copy right now and start earning real cash – a single sale can recoup your outlay many times over!

Make Money From Used Micros – £8.95 inc. p&p. **Trade Enquiries Welcome**

RIGHT NOISES

Bonk . . . dit . . . bonk dit . . . bonk . . . dit bonk bonk bonk . . . Table tennis is like that – the noise of plastic against plywood can become hypnotic. *Ping Pong* from Imagine makes most of the right noises but I'm not sure it adds up to much of a game.

Ping Pong the computer game is an attempt to implement the classic 'duel between the Chinese and everybody else' on the home micro. I have some doubts about its effectiveness. The bat moves have been simplified to smash/backhand/forehand cut and drive, ie, the general position and height of the bat is controlled by the computer. Whilst this makes for an easier game in the earlier stages, it effectively limits the skill to guessing shot styles rather than quick positioning.

The graphics are fair, no actual players, which gives a better view of the table – each side is represented only by a ghostly hand and bat suspended in mid air. At the first level it is possible to beat the computer quite easily by mixed cut and slam shots. Each point is greeted by a burst of noise from the crowd that sounds like seagulls screeching – perhaps it's because the crowd, depicted on-screen, consists of monkeys (don't ask me why; this game is licensed from a Japanese software company).

One additional criticism: between points you have to wait an awfully long time before the point is registered and you are ready to play on. It gets very irritating.

Not dross by any means and of interest to those already hooked on the real thing but I don't think it has all that much lasting addictiveness.

FUMBLE

Superbowl . . . the glamour . . . the excitement . . . the NFL approval . . . the disappointment.

On loading, *Superbowl* offers one and two player options – and as the majority of owners spend most of the time playing one player, I tried that.

You then move to a 50/50 split screen, with a portion of

Pick of the week

HEAVY DUNGEON

Gargoyle Games may have cracked one of the most difficult markets of all with *Heavy on the Magick* – Dungeons and Dragons addicts. Whilst its popularity assumed that quite a few computer adventure games are derived from the D & D genre, in fact, none of them have really captured the scope, flexibility, imagination of the original format. Much less brought something new to it.

Heavy on the Magick is unlike any other computer game I've seen, though adventurers of every kind should have no problem becoming completely obsessed with it. Call it a graphically animated role-playing adventure.

This being a Gargoyle product things are not absolutely po-faced (thankfully). Indeed, the entire game is based around the premise that you, Axil, have committed one of the great magical faux pas of all time – telling dodgy stories about ace sorcerer Therion without realising he was listening.

You are banished to one of the most unpleasant dungeons ever – the stagnant pits beneath the tedious castle known as Collodon's Pile. You can bet your last pixie invocation that the dungeons are chock full of

some of the nastiest astral beings ever.

You are alloted, in true luck of the dice tradition, values for stamina, skill and luck. These values alter as you overcome obstacles, survive and do battle. The whole basis for the game is combat by spells – which come in various sorts, but where there is a visual result, eg, animating an inanimate object, it actually happens on screen.

Spells must be used with caution though. Get it wrong and you could find that you have produced some very nasty objects indeed.

Instructions are issued via single keypress commands or speaking directly to whomever or whatever you wish to question. Some

of the monsters are vaguely helpful and can offer advice. Early on in the game you'll meet the giant Apex who seems relatively harmless, unless, being large and clumsy, he happens to tread on your foot, at which point Axil leaps up and down in pain in one of the nicest sections of animation I've ever seen in any computer game.

The graphics are unusual, a sort of teletext level of resolution, but impressive nevertheless – the saving in memory achieved explains how Gargoyle have managed to get so many animated actions in such a large adventure (250 rooms).

Despite being trodden on by assorted monsters half a dozen times, *Magick* has me hooked. It has more genuinely original ideas than any game I've seen since *Knight Lore* and should sell by the lorry load. The game is released in mid April so start saving . . .

the playfield on the right, and a scoreboard/action replay command board on the left. The first thing that strikes you is that the playfield is very small indeed – with all 22 players represented as tiny pixels. Still . . .

The action is controlled via a series of neat menus, by which you can select authentic play options, both offensive and defensive, go through a play frame by frame, and select preferred receivers. And then the action starts – bang – what happened? Well, to get NFL approval, players have to move at realistic scale speeds – and when you're talking about a few pixels on screen, that's too fast. Still, you get used to that (almost) after a bit . . . and then you discover the problem. Tracking 22 players on screen is a time consuming business for a microprocessor. So it hasn't got time to be clever. So you can score from a rushing play about seven times out of ten – not so authentic.

An even jollier wheeze is to carry the ball around in circles, while the rest of the players run after you – again, not too realistic. The computer offense is easily beaten, when you've clocked up over one hundred, your score goes back to zero (I managed to lose, despite being 87 points ahead) – need I go on.

The two player game is acceptable, given strong reservations about the play area size and speed, but tell that to Spectrum and Amstrad owners with only one joystick port. For a game marketed with one *and* two player options, this is just not good enough.

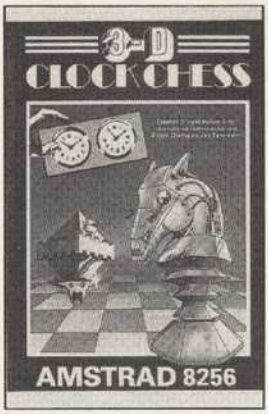
HIDDEN TALENT

The PCW 8256 is, of course, a lot more than a word processor. It runs CP/M programs of any kind and by using the Ram disc can often run them a lot faster than almost any other CP/M machine. The other point is that it has a surprisingly high screen resolution and can do pretty nifty black and white graphics.

Proof of the potential of the PCW 8256 arrives in the form of *3D Clock Chess*, a superb chess program which features an edge-on view on the board, *à la Psion Chess* for the QL. The playing pieces



are as large and detailed. The program actually goes beyond *Psion Chess* by also featuring on screen timing of moves, displayed both as digital and analogue information, ie, two clock faces drawn in perspective, which tick away the time taken by each side. Most impressive.

In the end chess programs come down to playing ability – a difficult thing to assess without many weeks spent battling with it. All I can say is that with the machine set to five second moves and we in the office taking as long as we liked, it won hands down.

The display also indicated certain technical information about what moves the computer is considering, how 'deep' it is looking in its tree of moves, and how the computer rates its own position. There are options to get the computer to suggest a move and review previous moves if you wish.

The only criticism I can make of *3D Clock Chess* is that you can't take back moves you immediately regret and you can't cancel move instructions you start to type in, but realise are wrong – you have to type a complete illegal move instead. These are niggles though. The program is generally excellent and may come as a big surprise to those who assumed that the PCW 8256 is only a dull business machine.

Computing in schools

During a visit to an open evening at a local Middle school last year, I took the opportunity to ask one of its' governors about the extent to which microcomputers were being used in the school. His reply was not totally unexpected.

The school possessed two microcomputers, but, in his opinion, members of staff were not sufficiently competent in their use, nor was it particularly feasible sharing two machines between more than 400 pupils, so their incorporation into lessons was rare.

A small number of children were given time on them, after hours, in the school computing club, but, as all parents know from the teachers' dispute, extra-curricular activities in most schools have been curtailed for the past year, so pupils have had little or no instruction on the machines.

This particular situation can hardly be isolated, I am sure that there have been similar occurrences elsewhere in the country.

Where schools do have machines available, some pupils are able to learn programming and problem-solving techniques, especially where Logo is employed, but, unfortunately, schools like this are in the minority.

My local First school has recently purchased two microcomputers and hopes to add a third. At least one teacher has had specialist training in their operation and the machines are used as much as possible.

The children, who are aged between five years and eight years, are now familiar with microcomputers and enjoy using them.

I agree that, in their eyes, they are only playing games, but at that age, the playing of games is part of the learning process. Used this way, the microcomputer is a genuine teaching aid and I applaud the school and others like it for placing such importance in their use in primary education.

Unfortunately, when children move on to Middle schools, the continuity is not always maintained; microcomputers are used haphazardly or not at all. Much of the good work started in the First school is undone.

Secondary schools do not help the situation either. Most of their microcomputers are concentrated in one area. Pupils rarely get the opportunity to use them until they are in the fourth year, and only then if they have been successful in obtaining a place on the appropriate CSE or GCE computing course.

If schoolchildren are to be kept well-informed, as they must be, then radical changes will have to take place in the educational system as we know it. A microcomputer should be as commonplace in the classroom as the blackboard is! I cannot think of any subject in the curriculum which would not benefit from it.

Learning about computers and their uses should be a continuous process from the First school onwards, so that, when they come to leave school, teenagers are as familiar with a microcomputer as they are with a pencil and paper.

Teenagers who have not had the opportunity to learn computing in class, have, up to now, been able to enrol at an ITEC centre upon leaving school. However, these centres have now had their funding reduced by the government, so, yet again, fewer places are available.

I feel that now is the time for industry to start sponsoring courses in Information Technology, up and down the country, both for their existing staff and for prospective employees. In this way, educational continuity will be maintained.

It is not enough for schools merely to have computers – they should be fully integrated into the school curriculum. The money must be found to train all teachers in their use – not just those in the computing department. To fail to find the money now will be the worst kind of waste for the future.

Keith Irving

Puzzle No 202

Portbury, Quenching, and Riddle are three villages connected by three perfectly straight roads, each road being an exact number of miles in length.

If I start at any of the three villages and travel to one of the others by the shortest route, the number of miles that I cover is a prime number. On the other hand, if I take the longer route – that is via the third village – the total mileage is just one mile *more* than a prime number. Furthermore, the total mileage of the round trip of all three villages is (perhaps not surprisingly) also prime!

Can you determine the smallest possible distances involved?

Solution to Puzzle No 197

The single gold sphere is 26 nubits in diameter. When recast, the four smaller spheres will measure 10, 14, 18, and 20 nubits in diameter.

As the ratio of the volumes of spheres is proportional to the cubes of their diameters, it is necessary to find sets of four integers, the sum of whose cubes is also a perfect cube.

```
10 FOR H=4 TO 24
20 FOR C=3 TO H-1
30 FOR B=2 TO C-1
40 FOR A=1 TO B-1
50 LET T=A*A*A+B*B*B+C*C*C+H*H*H
60 LET CR=T^(1/3)
70 IF ABS(CR-INT(CR))<1E-5 THEN PRINT A,B,C,H
80 NEXT A
90 NEXT B
100 NEXT C
110 LET H=H+1
120 GOTO 20
```

In the program *'H'* is the largest of the smaller spheres, and *'C'*, *'B'* and *'A'*, the other three. *'T'* represents their total volume, and if the cube root of this is integral, the results are printed.

There are a number of sets of values that are printed, but it is necessary to find four sets that all produce the same total. The smallest total found is shown to be 26 – which must be the diameter of the original sphere (and the king's age). This can be split into spheres of: (2, 10, 14, and 24), (3, 15, 17, and 21), (5, 11, 19, and 21), or (10, 14, 18, and 20) units diameter.

Winner of Puzzle No 197

The winner is Nigel Parsons of Orchard Place, Cardiff, who will be receiving £10.

Rules

The closing date for Puzzle 202 is April 29.
