

EDUCATION FOR THE 90's

"If there is one simple fact that we must face, it is that the 90's will be the decade when the computer becomes part and parcel of everybody's lifestyle; and most importantly, the computer will become an integral part of every child's education and future. Whether you own a CPC, PCW or PC you must improve your children's education by getting them software from PACTRONICS."

JUNIOR

"SCHOOL" SOFTWARE RANGE

- **PLAYSCHOOL (CPC)**

This is a suite of "Beginners" educational programs for pre-schoolers. Covers simple topics like number recognition and keyboard familiarization.

- **MAGIC MATHS (CPC DISC & TAPE, AND PC) (4-8)**

Introduction to addition/subtraction in entertaining game format.

- **MATHS MANIA (CPC DISC & TAPE, AND PC) (8-12)**

Multiplication/Division presented in an animated game.

FERNLEAF EDUCATION Vols 1,2 & 3 (CPC Disc & Tape)

(N. B. VOL 3, CPC DISC ONLY)

FERNLEAF is attractively presented educational software. It concentrates on re-enforcing logic, planning and predicting skills. Each volume consists of two separate programs.

FUNSCHOOL 2 (UNDER 6) (CPC Disc & Tape, AND PC)

Consists of 8 colourful and exciting programs including shape recognition; introduction to numbers; spotting colours; easy steps to word building; etc.

FUNSCHOOL 2 (6-8) CPC Disc & Tape, AND PC)

Includes enjoyable calculations; intro to co-ordinates; word building; practicing tables; etc.

FUNSCHOOL 2 (8+) (CPC Disc & Tape, AND PC)

Including anagrams; logical thought; mapping; binary arithmetic.

SENIOR

BIRDS 'N' BEES (PC)

Full sex education for your child (of any age!) including information on A.I.D.S.

"SCHOOL" SOFTWARE RANGE

- **BETTER MATHS (CPC DISC & TAPE, AND PC)**

Revisionary mathematics for 12-16 year olds.

- **BETTER SPELLING (CPC DISC & TAPE, AND PC)**

Revisionary package, covering grammar in all aspects of English.

- **MAXI MATHS (CPC DISC AND PC)**

Brilliantly presented geometry program, complete with graphics.

- **BIOLOGY (CPC DISC & TAPE, AND PC)**

The "human animal" explored, in a computerised revision course.

- **PHYSICS (CPC DISC & TAPE, AND PC)**

An introductory course to Physics, suitable for older children.

- **CHEMISTRY (CPC DISC & TAPE, AND PC)**

Revision course suitable for 12-16 year olds.

- **GEOGRAPHY (CPC DISC & TAPE, AND PC)**

The perfect "follow up" to school work, covers a broad range of topics.

- **PRIMARY MATHS (CPC DISC AND PC)**

Ideal for slow, medium or bright students studying on their own, or with adult supervision. The most comprehensive math course

using high quality graphics starting with the basics.

- **MICRO MATHS (CPC DISC & TAPE, AND PC)**

59 topics including polygons; algebra; sine and cosine; trigonometry; differential calculus; and much, much more.

- **MEGA MATHS (CPC DISC & TAPE, AND PC)**

105 topics in a highly advanced mathematics revision programme for 8 year olds to Adult; includes polynomials; 3-D geometry; binomials; trigonometry; Integral calculus; etc.

- **MICRO ENGLISH (CPC DISC & TAPE, AND PC)**

Comes complete with audio tape, revises structure, punctuation, spelling, vocabulary, irregular plurals, summaries and many other essential topics in the study of English.

ARRAKIS ADVANTAGE EDUCATION SERIES (PC)

Brilliant series of animated graphically presented educational software.

| | |
|--------------|--------|
| ALGEBRA | 5 VOLS |
| CHEMISTRY | 2 VOLS |
| BIOLOGY | 4 VOLS |
| PHYSICS | 2 VOLS |
| TRIGONOMETRY | 1 VOL |
| GEOMETRY | 2 VOLS |
| STATISTICS | 1 VOL |

and many more programs on PC for all ages.

Available from: Grace Bros, Myer, Harvey Norman, Computer Spot, InterLink (ACT), Computerbase (Syd), B & B (St. Mary's) or other retailers around Australia

THE AMSTRAD USER

Issue No. 61 - February 1990

Letters - your views advice and comments 2

Bargain Basement - prices are slashed on selected software in this once-only clearance... 5

News Break - what's news, the latest software and much more 6

Action tests on Amstrad games - reviews of FOUR more games:

Eliminator 8

Chessmaster 9

100% Dynamite 10

Stormlord 11

Calculating Interest - CPC type-in by Petr Lukes for calculating mortgage repayments .. 12

Artificial Intelligence - Paul Gerard continues to develop our Expert System 14

Serendipity - Joseph Elkhorne lifts the lid on Pandora and Keyword from Swift Software 20

LocoFile - looking for a database for your PCW? This could be it, says Mike Turner 24

From the Runes - John Barlow explains why he made the move away from LocoScript 28

Programming Competition - prizes totalling over \$2400, including a PC-20! 32

Computer Viruses - with more on these computer killers, here's Ralph Burger 34

Batch Bag #3 - PC wiz Bob Waixel is back with more on batching! 37

Adults Only! - PC software strictly for grown-ups. Don't say we didn't warn you! 40

Compatibles Corner - Chris Collins has a special surprise for WordPerfect 5.0 users 44

PC Public Domain - PC-SOFT #4 is here with a heap of great games to play 46

Hint Sheet - if this Hint Sheet for Jinxter is yours, please tell us so you can get the \$25! 47

Unknown Planet - Barrie Eaton's back with part two of his great CPC adventure type-in ... 48

Nationwide User Groups - get with the trend and join up today! 52

Classified Ads - just \$7.50 and over 8000 people throughout Australia every month 54

Public Domain Software - 30 discs full of PD software for CPC and PCW users 55

The Amstrad User Mail Order Service - EIGHT pages with over 1200 lines of Software, Peripherals, Ribbons, Discs and Books for the Amstrad range of computers 56

For tape subscribers, CPC programs appearing in this month's magazine can be found at the following positions:

Side 1: EXPERT - 7

Side 2: ENQUIRE - 7 INTREST1 - 37

All enquiries and contacts concerning this Publication should be made in the first instance by writing to The Amstrad User, 641 High Street Road, Mount Waverley, Victoria 3149, Australia. Urgent matters can be phoned through on (03) 233 9661.

The Amstrad User is normally published on the first working day of each month. Reprinting of articles published in The Amstrad User is strictly forbidden without written permission. Copyright 1990 by Strategy Publications. The single copy price of \$4.50 is the recommended retail price only.

From time to time, some articles appearing in The Amstrad User will be reproductions from UK publications Amstrad Action, 8000 Plus and CPC Computing (formerly Computing with the Amstrad). The first two are printed under an agreement between Strategy Publications and Future Publishing Ltd, Bath, and the latter under an agreement with Database Publications.

The subscription rate (for Australia) is \$45.00 for 12 issues of the magazine only, or \$80.00 for 12 issues of the magazine plus tape (for CPC range only) containing programs appearing in that issue. Postage is included in the above prices. For subscriptions to New Zealand, PNG, Solomon Islands or Vanuatu please add \$24 airmail. Other overseas prices available upon application.

Please note that whilst every effort is made to ensure the accuracy of all features and listings herein, we cannot accept any liability whatsoever for any mistakes or misprints. Contributions are welcome from readers or other interested parties. In most circumstances the following payments will apply to published material: Cartoons \$10.00 and a rate of \$15.00 per page for programs, articles etc. unless otherwise previously agreed.

Contributions will not be returned unless specifically requested coupled with a suitable stamped and return addressed padded bag (for tapes or discs).

The Amstrad User is an independent Australian magazine, in no way affiliated with Amstrad or their Australian distributors or any dealer in either software or hardware (The Amstrad User Shop excepted).

Letters to the Editor

A monthly selection of your comments, hints and tips, advice and news - all shared for the benefit of Australasian Amstrad users.

It never ceases to amaze the ladies in the mail order section what mail they get in the letterbox. Some people go to the trouble of carefully writing a polite and thorough letter detailing their name, address, product details etc. but some other people (usually younger readers) tend to be less wordy, as this note accompanying a money order illustrates. Thank goodness the customer's name and address were on the envelope!

TAITO'S COIN
OP HITS

I am the proud owner of the Amstrad PC 2086/30 and now write to you from a distance seeking some help regarding a small programme of accounting for a small Club which needs debit and credits - invoicing and the usual Assets and Liabilities. The other point is that I do not wish to have to pay too much for this.

Do you think that the 'Tait (Everyman)' as listed in the

Catalogue of the August issue on page 63 would be applicable? The Invoicing would be ideal if it could be dissected into other credit accounts.

Not sure whether you would have anything like this, but do you have any demonstration discs that could be sent over, or are there any outlets in New Zealand which may have some demonstration discs?

S. C. Hackwell, Christchurch, N.Z.

Tait Accounting is fine for producing invoices or credits on a PC, and keeping a note of your debtors. It does not however, produce a balance sheet (Assets, Liabilites). If you need this you will have to spend more on packages such as TBM (\$499) which may initially give you more than you need but you may also find that you will "grow" into the extra features. Desktop Accountant (\$450) also falls into the same category. We are not well placed to tell you about dealers in New Zealand who would be likely to be able to supply demonstration discs. You could ring Amstrad NZ and speak with Peter Blick, c/o Pengelly's in Auckland (09) 798 620.

I have been using SuperCalc 2 on my PCW8512 for more than two years and have found it both comprehensive in its facilities and easy to use. I always load it from an auto-boot disc and use

the DATTIM facility to set the system date and time. DATTIM responds by giving a message such as:

"Today is Thursday October 19 1989 at 21:15:00"

Recently, however, on booting up I received a message such as:

"Today is aa@,=?c Nov 29 1989 at 21:15:00"

By trying a series of dates, I discovered that for any date beyond 15 November 1989, DATIM responds with similar strange hieroglyphics in place of the weekday name. This doesn't affect any of the date functions within SuperCalc.

Can you or any of your readers offer an explanation?

P. G. Croft, Caringbah, NSW

I've only been getting The Amstrad User for a couple of months and I enjoy reading it. I was wondering if you or someone else could help me. I bought a new game (New Zealand Story), I have constantly played it but I can't seem to get past the whale. It says to "let the whale swallow you and then destroy it from the inside" but the whale won't swallow me. I'm getting frustrated with it. Could anyone help me with this problem, and any others that could arise. Also I missed out on getting the September issue of

Amstrad User and I need the first part of the type-in game (CPC Adventure type-in). Any help would be greatly appreciated.

Alison Conran, Mangerton, NSW

We can't help with your fishy problem but the editor notes that in King's Quest IV he can't get swallowed by the whale either!

 My name is Bernie Garland and I am an organizing member of a PCW Interest Group which is held monthly in Brisbane.

As regards to the article (Issue 51, April 1989, Page 8) titled PCW TO GO COLOUR. I wish if possible more information on the availability and capabilities of this software or hardware. In particular I would like to know how much this product will cost and where I can purchase it.

For persons interested, there is a PCW Interest Group that holds regular monthly meetings at

various locations in Brisbane. For further information write to : P. O. Box 500, Everton Park 4053. (Interested persons need not live in Brisbane).

B. E. Garland, Everton Pk, Qld.

KolorSoft's technical director was called Mr. Joki Sonyu. Say his name about twenty times quickly... Get the picture?

 I have been subscribing to your magazine since Feb '86 and have found it very interesting and informing, but I am sorry to say I will no longer be renewing my subscription because I am upgrading from a CPC464 to an Amiga 500. I will leave you with this little tip for Spindizzy. Pressing the keys F and X on the title screen will get you a neat little graphics routine called STIX. There are a few commands you can use to control the STIX-Joystick to move the STIX around,

T-Tail on/off, CLR/DEL - to clear the screen, Space- To halt the STIX movement and ESC- to quit STIX. I hope you have some fun with it, I did.

Shannon Neenan, Bayswater, Vic.

P.S. What happened to Cheat Mode???

What do you care now that you're downgrading to an Amiga???

 Not all stories finish with a happy ending. Over the past two years I have been seeking answers to two problems regarding my CPC 464. Diligent searching has paid off:

1. Transferring (ASCII) files to the PC (DOS format). Two contributors to ACU have referred to the public domain programs, 22NICE and 22DISK (P.D. CP/M transfer utilities available through FREEWARE in Sydney). Although I spent many hours trying to use

these programs the best I could get was a directory of my CPC disc on the PC, however the files were scrambled!!! A friend introduced me to PC ALIEN (available through FBN Software in Canberra) which supports over 150 CP/M to DOS formats and HALLELUJAH!, format No 12 reads 'CPC system' discs and format No 58 reads "CPC IBM' format.

2. Running 6128 specific software on the expanded CPC464 was always a problem. I was told that BANKMAN could be run on the expanded CPC464 and that I should have no problems running CP/M+ software. Both of these matters became the source of great frustration. I did know that STOP PRESS on the expanded CPC464 had a problem loading more than one item of 'clip art' before crashing.

A hardware project in an English magazine earlier this year started a quest that ended in purchasing the 'ROMBARD EXTRA' ROM board from Microstyle which has provision for the 6128 ROM. As a result my CPC464 is switchable to a CPC464/CPC464+ expansion memory/CPC6128 with built in cassette datacorder (which acts totally as a CPC6128) and all the above problems have vanished.

For those interested in converting CPC programs to GW-BASIC (and visa versa) the BASIC commands are very similar (short of

POKEs and PEEKs etc.). The major differences I have unearthed for converting CPC BASIC to GW-BASIC are [shown in the box below].

There are a number of GW-BASIC specific commands which do not have a CPC equivalent. For example: SHELL allows temporary access to DOS in order to do such things as displaying a DIRECTORY or changing directories.

Mike Perry, Oatley, NSW

I have had my CPC6128 for about three and a half years

now, so I know most of its functions.

But in the last Amstrad User you reviewed a game called NEBULUS, and your reviewist was pleading for a cheat for the game.

Well my friend (Craig) and I have known a cheat for that game for some time, and would like to share it with you, and the other readers.

It is for Infinite Lives and it works. (Well it does on my computer anyway).

```

PC1512

Reflex Analytic Database

\$85.00

A powerful way to analyse records and quickly understand the meaning behind the information provided. You can enter formulas with any field for automatic calculation of values, search, sort, list, produce graphs, etc. The package includes a comprehensive manual and three disks - the program, the report and utilities disk and a help disk.

PCW DISK

Pocket WordStar

\$45.00

WordStar is probably the world's most widely used word processor. This version has all the features of the original WordStar and has been customised to use the PCW's full screen width and some of the keypad keys. Contains well structured documentation and a mailmerge facility.

Accounting One (PCW8512 only)

\$295.00

An ideal package for small, first-time users or companies needing a simple system to record sales, purchases, payments and receipts. For sales it records the order, creates the invoice, debits the customer and adjusts the stock automatically. For purchases it will record the details, update stock levels and outstanding balance due to the supplier. It will also produce credit notes, daily audit trails, bank deposit listings, statements, supplier listings, address labels, stock listings and activity listings. At the end of an accounting period it produces a trial balance, profit and loss statement and a balance sheet. This Australian developed package used to retail at \$695.00.

Sage Chit-Chat

\$85.00

Software to allow you to communicate with Viatel or other viewdata services. (Requires a CPS8256/RS232 interface.)

CamSoft Stock Control

\$45.00

Can accurately monitor stock positions and movements, recording issues and receipts as they occur, providing immediate control. Handles suppliers' orders, receipts, issues, stock

adjustments, group price updates. It also produces a wide variety of reports for selected items, such as Stock Valuations.

Poly Print

\$45.00

Lets you turn your in-house dot-matrix printer into a multi-tool capable of producing some 25 typefaces. Produces high quality characters on a 6 x 18 matrix (as opposed to the 6 x 8 in draft mode on a dot-matrix printer). It is menu driven and very easy to operate.

lankey - Two Fingers Typing

\$45.00

A useful typing tutor that specifically caters for people who can already get by on a keyboard with two fingers. Touch Typing techniques are gradually introduced so your speed doesn't drop while you learn.

CP/M

Catalogue (CPC or PCW)

\$25.00

Organises your discs and allows you to locate files rapidly by maintaining an index to your disk library. Runs under CP/M or CP/M Plus.

C-Basic Compiler (CPC6128 or PCW)

\$45.00

An enhanced CBASIC with important advantages for software professionals. It's a native code compiler that allows separate modules to be written, tested and then combined to create a complete program. Combines the speed of machine code with the ease of use of the Basic language. CPC6128 and PCW8256/8512 owners can also take advantage of the Graphic extension capabilities.

Pascal Compiler MT/+ (CPC6128 or PCW)

\$45.00

Is a full ISO standard Pascal compiler extended to provide a comprehensive programming environment. Translates to high speed object code. Supports relocatable object code. Has a linker, a run-time support library, a dis-assembler and a debugger.

CPC DISK

Purchase/Creditors Ledger

\$25.00

(Soft 1005)
An open item system allowing suppliers' invoices, credit notes,

payments to be posted with balances automatically updating the accounts and Day books. Also allows cash posting and reports including Transaction lists, Day book lists, Audit trails, Remittance Advices etc. Operates as a Stand-alone program or integrates with Soft 1006. Needs 2 disk drives.

Nominal/General Ledger

\$25.00

(Soft 1006)

A complete, comprehensive balance brought forward General Ledger system where Journal Entries are made via the keyboard to up to 400 analysis codes and 99 sub-analysis codes. Trial Balance, Profit and Loss and Balance Sheets can be printed. Can operate by itself or will integrate with Soft 1005. Needs 2 disk drives.

MicroGraph (Soft 1004)

\$25.00

A disc based graphics program producing graphs and charts from data entered through the keyboard, then printed out or saved to disk for a Slideshow.

CPC TAPE

Project Planner (Soft 916)

\$25.00

A program to manage your time and organise your effort with the best possible efficiency and teaches you to divide a project into meaningful components and establish a sequence of events. It handles up to 50 different activities showing when the jobs finish and which one cause problems.

Decision Maker (Soft 918)

\$25.00

There is a more scientific approach to taking decisions than tossing a coin. This program shows you how to minimise uncertainty and risk by using the decision tree system. It will help you explore all the possible outcomes of a decision and could save you money.

Home Budget (Soft 119)

\$25.00

Easy to use and very friendly. Expected monthly expenditure can be entered under 12 headings and the expected income over 6 headings. The results can be viewed by quarters as figures or 3-D bar charts.

BARGAIN BASEMENT

From time to time The Amstrad User mail order department has a fantastic first-come first-served software run-out sale, and that time of year is now! If you hurry you too can cash in on these fabulous once-only clearance prices. But you'll have to hurry. Ring

(03) 233 9661

today or you will miss out forever!

News Break

Our monthly update on the gossip, news, releases and the general Amstrad scene from both home and abroad.

AMSTRAD SLOWS DOWN

Amstrad plc (that's the UK parent company) has been one of the high flyers on the British Stock Exchange and a well documented success story over the last eight years or so. However, based upon their financial results for 1988/89, Amstrad's pre-tax profit has fallen from £160.5 million to £76.5 million - the first fall in their history.

The blame for the drop has been attributed to the 'professional' series of computers, in particular the PC2000 series. Apparently margins have been eroded caused by a high inventory, a shortage and price increase of DRAM chips, and hard disk controller design errors. The latter forced Amstrad to recall about 5000 PC2286 and PC2386 machines for the controller to be replaced with a Western Digital version.

A determined Alan Sugar, Chairman of Amstrad, told shareholders, "I am sure no one has failed to recognise that I personally have 43.7% of this company and I do not intend to see that investment deteriorate again to the levels it has recently." In money terms, he has seen his holding in the company drop from £458 million in August 1988 to £120 million.

SPEECH SYNTHESISER FOR PC and PCW

SM Engineering in East Sussex (UK) have announced the release of a Speech Synthesiser module in versions suitable for PCWs and PCs. The unit comes in a purpose made steel box with a power supply and speaker. It assembles combinations of 64 different phonemes (sounds distinguishing one word from another) in a 'dalek-style' voice.

The PCW version is linked to the computer via a Serial/Centronics interface. It is controlled with Mallard Basic, of which many examples are shown in the manual accompanying the unit.

The PC version plugs into the parallel printer port via a standard printer cable and is also controlled by Basic. If you are rich, you can ring SM Engineering on 001144 323 766262 in England. Otherwise you will have to wait for us to get a unit and report.

PCW BRIDGE PLAYER GALACTICA

Designed for players of all standards, Bridge Player Galactica 2150 from CP Software, gives literally millions of possible hands, simulating the game of Bridge with full realism. The program's bidding routines are comprehensive and versatile, using the ACOL system and the Stayman, Blackwood, Gerber, Grand Slam Force and Unusual No-Trump conventions.

It also contains a Bridge Tutor with 100 hands designed to instruct the intermediate player in a range of hands from straightforward to endplays and squeezes. The package including an 88 page manual costs \$69.95 + p&p.

PCW ADVENTURE PACK

Hot on the heels of their PCW Challenge Pack (a compilation of ACE, Sky War, Formula 1 and Strip Poker), Artronic have just released an adventure compilation. It contains Lost Legacy of Xim, A Simple Case of Espionage and Sir Lancelot.

Stocks will arrive some time in February (along with replenishment of the highly successful Challenge Pack) and will retail at \$39.95.

LOCOSCRIPT PC

Over a million copies of Locomotive's LocoScript PCW word processor have been sold since the release of the PCWs. Now, Locomotive Software have developed a version for PCs which is due for release shortly. If you have a PCW and a PC (or are thinking of moving into IBM-compatibles), you will be at home with it as it retains its distinctive style and even accepts PCW generated LocoScript files.

LocoScript PC will provide word processing with spell checking and a database with full mailmerging and reporting facilities. It is a networkable product and offers fully multi-lingual capabilities in any European language including Russian and Greek. We'll give you more details when they come to hand.

BASIC2 PLUS

Locomotive have also launched a new version of Basic2 for the Amstrad PC1512 and 1640. The original Basic2 works well under GEM but could not handle large programs. "We have made Basic2 Plus faster, more powerful with more features, particularly in its support for large programs" reports Richard Clayton, Locomotive's Technical Director. Apparently in benchmarked tests run-times were six times faster than Basic2.

Basic2 Plus will include, not only full compatibility with the previous version, but separately developed modules, enhanced structure and greater speed. It has full GEM3 compatibility including metafile support allowing graphics output to other GEM applications. It also features a new WIMP program editor and tighter syntax checking facilities which enable you to find those 'typos' before you run the program. Again, more details later when we have seen a copy.

HAPPY BIRTHDAY TO US (AND YOU)

From a humble monotone 30 page magazine which first hit about 300 unsuspecting Amstrad owners in February 1985, we celebrate our fifth birthday with a circulation in excess of 8,500 copies each month. In the early days we only had the CPC range (3 machines) to contend with, but now have the PCW series and the huge (and ever growing) PC range of portables, desktops, family units and so on. We have also seen our Mail Order service grow from just 6

titles on offer to over 1200 products - the largest choice in the southern hemisphere, and the opening of our retail shop in Mount Waverley, Victoria.

We estimate that we have published over 3250 pages of information (that's about 2.2 million words) over the last five years. And if all the magazines printed (that's over 425,000) were placed end to end they would stretch from Mount Waverley to

AND TO CELEBRATE...

To mark the milestone in the publication of Issue 61 of The Amstrad User, we are putting up an Amstrad PC20 (512k PC-XT compatible) computer as a prize in a programming competition (see centre pages for full details). And that's not all - a number of major suppliers have also agreed to sponsor the competition by adding some of their products to the "winner takes all" pool making it a

very valuable prize.

The competition is open to all readers and involves sending us an original 100 line program written by you in Basic for any Amstrad machine. That means Locomotive Basic for the CPCs, Mallard Basic for the PCWs, Basic2 for the PC1512/1640 or GW-Basic for the PC20 or PC2000 series. You've got about eight weeks to the close, so go for it!

MAKING LIFE DIFFICULT

Amstrad (Australia) really goofed. We ordered a supply of TV modulators in readiness for the low-price promotion in the December magazine. The response to that product was overwhelming. When we tried to get some more (knowing that they had good stocks), we were advised that Amstrad had sent the balance back to England! Just one phone call to us before they shipped them out would have avoided many disappointments around Australian homes at Christmas.

Many software publishers seem to spend a lot of time developing their software and creating eye-catching packaging, but fail to print the correct loading instructions inside. The favourite for CPC

disk software is printing RUN*DISC when in fact the loading should be RUN*DISK. If you have had trouble getting software to load from disk (disc), then try the following before returning it to the point of purchase.

```
RUN*DISC          RUN*DISK
RUN*MENU          |CPM
RUN*name of game
RUN*initials of game
```

Sometimes, if you type CAT, you will get an indication of what to type. If you get a read fail, it could be that you should type |CPM. The bar sign before CPM is obtained by pressing the shift key and the @ key together.

Games Arcade

*The Joystick Wizard loved Noosa so much he's gone back!
Not to worry, Shane Kelly and Vic Renfrew are doing a fab job.*

ELIMINATOR

"Oh what a feeling, dancing on the ceiling!"

CPC Disc - \$39.95

CPC Tape - \$29.95

The Eliminator is a machine encircled by death, that kills but cannot be killed, and it has emerged from the underground with the self-imposed task of destroying all life forms, travelling from planet to planet, destroying all in its path. It's into this scenario that you are plunged, guiding your spacecraft along a curving highway, shooting aliens, dodging obstacles and picking up weapons and ammo packs. Every so often, you are faced

with a wall of fire, but there is usually a convenient ramp nearby to launch you over it. If not, and you lose a life. There are some ramps, however, that are not near any barriers. Go over these and your spacecraft becomes inverted, flying on the ceiling. But the waves of aliens don't stop, and they will follow you to the ceiling so, be careful up there.

The screen display shows the highway in the center, with the weapon icons on the left and ammo level, shield level and number of lives on the right. You start off with a single shot laser, and by collecting a blue pyramid you can upgrade this to a dual fire laser, a side fire cannon, and more. If your ammo gets low you must pick up a red cube, which replenishes your ammo supply. You have to destroy the aliens that approach you, avoid the obstacles and, where necessary blast holes in some of the obstacles to ensure you can go farther. Collision with an alien,

an obstacle or the loss of your shield will result in the loss of a life, and you also lose the last weapon you picked up. Once you have completed a number of levels, you are given a pass word which, when typed on the introduction screen allows you access to the corresponding level (so once you've completed two levels you don't have to start at the beginning again). You earn bonus points for the amount of ammo, shields etc. that you have left at the end of the level, and an extra life is awarded for each 10,000 points.

The controls in Eliminator are simply left or right. You use up and down to cycle through your available weapons.

Back in the December issue of TAU, it said:

"One of the smash hits on the Amiga, the Eliminator now comes to the Amstrad CPC".

Well, that's true, Eliminator was a great big hit on the 16 bit machines, but, unfortunately on the CPC it just hasn't got what it takes to be a hit. The graphics for your spacecraft are fairly good, as are the aliens. The highway is reasonably well done, with the checkered pattern being effective enough to give an impression of forward speed. Sideways control of your spacecraft is best described as sluggish (it could be said that the ship handles like a cow, but that could be an insult to cows). The approach of the aliens and the obstacles is jerky, and at times unimpressive.

All in all, Eliminator on the CPC is not very impressive. The graphics are fair, and there is an impression of forward speed, but that's where it ends. Considering that Eliminator was written by John M Phillips, who also wrote such hits as Nebulus and Impossiball, the conversion of Eliminator is very disappointing. It may have been hot on the 16 bit machines, but on the CPC its more like an ice cube.

CHESSMASTER 2100

A quick look at some new titles

PC dual - \$69.95

When I first started playing chess there were only human opponents. First you had to find someone to play, then you either thrashed them or they thrashed you. Later, I joined a chess club and just got thrashed. When it became clear to me that I would never win the club championship, chess became more fun. But the problem of suitable opponents was one that still remained until the advent of the dedicated chess machines. The first one I bought was from Tandy, and within six months my play improved to the point where I could beat it on its highest level 99 times out of one hundred (and took forever to move on its highest level). About this time home computers were coming to the fore and chess programs began to appear but they were worse than the dedicated chess machines. However, I continued to practice and eventually I was able to enter tournaments without being disgraced - my best result was in a tournament in Scotland - 3.5 out of 5 points.

To this day I still play a reasonable game of chess and I still enjoy it. But now I have an opponent who will play me any time I wish, and what's more I can alter the opponent's playing strength to suit me, thrashing it if I want, or being thrashed should I feel masochistic. That opponent is the Fidelity Chessmaster 2100.

To give you some idea of its relative playing strength, I'll compare its play with another popular IBM chess game out at the moment. Battlechess I can beat on its level 5 with ease. It is horrendously slow on its levels above this and I have never been bothered to play a game right through above level five. Chessmaster 2100 beats me easily in its three ply search mode in approximately one fifth of my thinking time!

To describe all the features of this excellent program would take far more than my allotted space for this review, but I will describe what I think are its best features.

To start with, you can have three different views of the board. A 3-d view, which I find confusing, a 2-d view taking the whole screen with a move history on the far right side, or a "war room" view with several windows on the right hand side for move history and thinking and a captured piece display. You can move pieces with the keyboard, joystick or mouse. There is a tutorial on the basics for beginners that covers the

mechanical aspects of the game but not the strategy. Adequate help notes are available during play. You can save your games for analysis later, or you can analyze past classic games (several of which are provided). You can practice an opening, deviating from the book at any time (Chessmaster will tell you when you wander from the book) and there are several openings and variations of those openings provided. You can tailor the Chessmaster to play as you would like with adjustments for almost all the parameters. Alas, there is no lose on demand option!

There are clocks for tournament or timed play, a take back facility (but not in tournament mode), three levels of play where the program will randomly pick from the best moves available or always play the best move available or something called coffee-house mode whose purpose was a little obscure. Chessmaster will talk to you or beep at you or be silent.

You can switch board views at any time and even rotate the board so that the opponent's pieces are always at the top of the board.

I have just touched on the features I found to be the most interesting but there are quite a few that I have not mentioned. This program has so many

features and configurable options that the variety of them may be a little bewildering to the casual player, so there is an option to turn off a lot of the more advanced features so that the casual player is also well catered for without being overwhelmed.

I tested this program on my 12mhz AT clone with EGA graphics and hard disc. I found the response time (which is configurable) to be better than any other chess program I have tried.

So what is this? A rave review? Well, sort of. I had one niggle with it that I must report. Although the

menus allowed me to specify that I wanted every move printed, I kept getting a printer error that I could not fix. So no record of games for posterity. Ah well, they would have just been critical down at the chess club.

If you can play chess, or want to, then get yourself the best opponent to play with - Fidelity Chess-master 2100, (it's the best because when you are losing you can just hit CTRL-ALT-DEL - the electronic equivalent of throwing the board in the air!). Highly recommended even with the printer problems.

100% DYNAMITE

Four blockbusters in one pack from Ocean.

CPC Tape - \$39.95

Now here's a compilation that is bound to do well judging by the demand for the 'singles'. Two of them have also received a decent wrap in this magazine

last year. The compilation consists of four games.

Afterburner - is a faithfully recreated version of the original arcade game in which you engage in a virtual non-stop dogfight. Equipped with heat-seeking missiles and laser anti-aircraft fire you fight at a fast and furious pace across the sea and land. It's a sweat inducer.

WEC Le Mans - a very good racing simulation which requires some pretty good joystick work. It is based upon the Le Mans 24 hour endurance race, with tricky little corners and other mad drivers to keep you on your toes.

Last Ninja 2 - takes place in modern day Manhattan where the evil Shogun Kunitoki has established a new tyrannical empire.

Double Dragon - combat with the infamous Shadow Boss' street gang through the slums of the city, the factories and then the wooded outskirts. Here the final conflict takes place with the Shadow Boss himself. Double Dragon has been one of the more popular titles of this style of game.

THRILL TIME PLATINUM 1

Ten favourites from Elite.

CPC Disc - \$49.95

CPC Tape - \$39.95

Elite have produced some good compilations in the past and this new one is no exception. OK, some of the titles may be a few years old, but at about \$4 a game on tape or \$5 a game on disc it is extremely good value for money.

Thrill Time Platinum 1 contains five of the games appearing on Story So Far Vol 2, namely Space Harrier (air combat), Live 'n' Let Die (007 action), Overlander (car chase action), Beyond the Ice Palace (arcade adventure) and Hopping Mad (bouncing ball frustration). In addition it has Buggy Boy, Dragon's Lair, Thundercats, Great Gurianos and Ikari Warriors.

There's plenty of action to be had on your CPC screen with this lot. (The tape version is expected shortly.)

STORMLORD

Frantic fairy fun from Hewson.

CPC Disc - \$36.95

Remember the old saying, "There are no fairies at the bottom of the garden"? Well, as a kid I always wondered where these fairies had gone (I assumed they were at the bottom of the garden at some time past). Now, the secret has been revealed! I now know where the fairies have all gone! They've gone to Hewson, to star in their latest computer game!

Yes, that's right. Raffaello Cecco (the writer of Cybernoid 1 and 2 amongst others) and Nick Jones have combined to bring us this latest offering, which puts you in the role of the STORMLORD, tasked with releasing all those fairies previously mentioned so they can once again roam the world. The story goes like this...

In an effort to conquer the land that the Stormlord inhabits, the evil Queen has captured all the fairies and imprisoned them. In order to defeat the wicked monarch, Stormlord must wander the various levels of the world and free all the fairies. If he fails, the evil Queen will rule forever. Thus the Stormlord wanders the land, avoiding the dragons, pink worms, killer bees and dangerous eggs and endeavour to locate each of the fairies and release them.

There are a number of fairies located on each level (level one has five) and this increases as with each succeeding level reached. Scattered throughout each level are a number of items vital to the successful release of the fairies. There are keys, honey pots, umbrellas and shoes, and it is up to you to find when each of these items should be used. Use one in the wrong place and, Oh no, that's another life lost. Also scattered throughout each level are the Fair Land transportation devices - springboards. Land on one of these and it's off to the next area where you will either find a fairy or an object.

You commence the game with nine lives. You really need every one of these to complete each level in a given time limit. This is indicated at the bottom of the screen by a sun which, as time passes, reveals a moon. When all the moon is displayed, time is out.

Lives lost can be regained, during the end of a level sub-game. In this, Stormlord has to blow kisses at fairies that float above his head. If one of his kisses hits a fairy, she drops a tear for Stormlord to collect, and an extra life is awarded for every ten tear drops collected. Again, this is done to a tight time limit and it will probably require much practise before you can benefit from this life giving process.

Well, that's the background to the game, but how is it put together. The answer is very well. Graphically, this is a great product, with a lot of effort obviously being put into it. The sprite for the central character is well drawn and its animation is great. The background graphics are very well drawn (just look at the large fairy coming out of the jar that you

see on the first screen of the game). The animation and detail in the evil queens minions is also of the same high standard. Soundwise the game has a very well written title tune, and a pleasant jingle which marks the liberation of each fairy. Other sound effects consist of the explosions as your shots destroy aliens and the occasional background sound (such as the wolf whistle when you jump (over) the large fairy).

Stormlord is not purely a game of frantic alien bashing. There are some screens where that is required, but there are also others where thinking and timing are all that is used. For example, you need good timing to pass the small volcano, but no shooting. Add to this a time limit that is very tight and you are presented with a game that keeps you on the go and lets you exercise your brain as well as your trigger finger.

To sum it all up, Stormlord is great. It is a very well programmed product, which is well up to the same standard as the other games written by Raffaello Cecco. When you look at some of the other games that have been produced for the CPC recently, this stands out as a fine example of good quality games with great graphics which can be written for the CPC.

Calculating Interest

Petr Lukes provides us with a simple listing to prepare a mortgage repayment schedule.

Unless it is situated on top of an eroding cliff, real estate (land and its improvements) is a good security for borrowing money. Lenders are prepared to grant long term loans on it, at interest rates considerably lower than those demanded for vulnerable items such as cars.

First mortgage loans are made on the reducible rate terms, with interest being charged only on the actual outstanding amount in any one payment period. The principal and interest are repaid by equal instalments (unless the interest rates change) over the life of the loan. (Bridging and second mortgage loans may be a different matter).

The repayments early in the life of the loan cover little more than the interest on the outstanding debt. Many a borrower gets an unpleasant surprise when paying out the loan early: the reduction of the principal owing may be a little more than the cost of establishing the loan. The longer the term of the loan, the lesser the proportion of each instalment going towards reducing the debt.

The program prepares a repayment schedule for a given amount, interest rate, and length of the loan. It assumes a constant interest rate, no late payments, and no extra reductions of capital; not a very realistic assumption, but any variations can be handled by treating each variation as a separate loan. The schedule splits each instalment into the capital and interest components, shows the balance owing at the moment the payment is made, and keeps a running total of interest paid to date. The limited accuracy of 6/7 significant digits produces some discrepancy in the totals, but it should not be great for the normal range of loans (it cannot cope with a 99 year loan at 110%).

The most complicated part is formatting the display, quite important for any business-type program. With the exception of using a window to hold the column headings (not essential), the program is non-specific BASIC. The computations would benefit from double-precision arithmetic which is available in most versions of BASIC, but not on the CPCs. ■

```

MASTERFILE III

FOR THE AMSTRAD CPC6128
(ALSO CPC464/664 WITH DK'TRONICS 64K RAM)

FIRMLY ESTABLISHED...

MASTERFILE III is now firmly established as THE filing system for the CPC6128.

For the benefit of newcomers to the CPC machines: MASTERFILE III is a powerful and flexible data filing and retrieval system. All "database" systems require that your data is organised into fields and records. Unlike most, MASTERFILE does not commit you to field lengths or formats, since ALL data is variable-length and optional. Files are not preformatted, and only used bytes are saved to disc. Also, unlike the rest, MASTERFILE allows multiple user-defined ways of viewing/printing your data. And unique in its price range, MASTERFILE offers RELATIONAL FILE options, whereby common data can be entered just once and shared by many records. Maximum field size is 240, maximum fields per record is over 50, and maximum file size is 64K. Room for 1,000 full names and addresses, for example. Only one disc drive is required. It is menu driven throughout, and comes with detailed illustrated manual, and example files.

SO VERY VERSATILE...

Just about ANY kind of information can be handled by MASTERFILE. You can EXPORT the data to other systems (eg. PROTEXT/MERGE and TASWORD). You can even merge your own USER BASIC to MASTERFILE for customised file processing, or build new files from other computer sources. The speed of SEARCH of MASTERFILE is second to none. Records can be sorted ascending/descending, character or signed numeric, even embedded keys such as surnames. Other functions are field-to-field calculations, and several-across label printing. We simply don't have room to list all the features; give us a call if you are still in doubt of the power of MASTERFILE III.

ALL THIS POWER...

This is no toy thrown together in BASIC and half-tested, but real machine-coded computing power professionally constructed. We have had IBM and Apricot users beg us for a MASTERFILE for their machines - when they had seen the earlier CPC MASTERFILE.

MASTERCALC 128

THE MODERN CPC6128 SPREADSHEET SYSTEM

This is the sister program to the famous MASTERFILE III, and is a fast and friendly spread-sheet program with high capacity (over 7,000 cells) and impressive speed. Like MASTERFILE, it is entirely machine coded. Like MASTERFILE, it needs just one disc drive and does not use CP/M and it uses the same optimised RAM bank-switch code. "Another exceptional utility from Campbell" said Popular Computing Weekly of the original MASTERCALC. The "128" edition is more powerful.

All spread-sheet systems allow manipulation of any array of numeric data.

What sets MASTERCALC 128 apart from the rest are these features:

Full-screen or split screen windows; variable column display width; variable column formats, 0-7 decimal places; columns can be formatted individually; ultra high-precision floating point arithmetic; direct totals and sub-totals; up to 99 relocatable formulae (usually 10 is ample!); formulae up to 75 characters, and arithmetic expressions, plus conditions, relative cell references; instant highlight of computed data; store text anywhere;

pop-up help menu; 40/80 column mode; auto cursor-advance; text output to printer or to disc for word processing; fast hi-res histogram of any 3 rows; Epson screen dump; detailed manual with illustrated tutorial.

For the enthusiast, there is even USER BASIC access to the cell data, so that special operations can be performed. For example, it is possible to ship data to/from MASTERFILE III.

MASTERCALC 128 costs just \$99.00 and MASTERFILE III costs \$109.00 including postage and packing, and if you request air-mail within Australia, we'll do that at no extra charge too! (If you live outside Australia please add \$4.00 for air-mail cost. Bankcard, Mastercard or Visa accepted).

Send your order now to:

Tel: (03) 233 9661

Your Syllogism is showing!

With a lot of new listings for you to type in, as well as some practical points to ponder, here's Paul Gerard.

You may possibly have studied formal logic at school, and remember the old formula:

- All men are fallible
- Socrates is a man
- Therefore Socrates is fallible

We might express this in algorithmic form as:

- If class of entities "X" all possess attribute "Y"
- And entity "Z" belongs to class "X"
- Then entity "Z" possesses attribute "Y"

This is one type of syllogism, one of the basic building blocks of logic - although it may seem trite and obvious it does lie at the roots of a great deal of human thought, both straight and crooked. To put the basic argument into ordinary, non-mathematical language, we think of things in particular by relating them to a picture of things in general. Provided our original (general) assumptions are sound, and we can accurately determine what general kind or class of thing something belongs to, then we can draw valid conclusions about particular things, which we supplement and modify by particular observation. If the basic assumptions are imperfect the result may be prejudice, on the other hand without some kind of generalisation we cannot even begin to make sense of the world. One of the main functions of the little "expert system" we have been building up over the last three months is an application of this process. Actually we will extend it a little further to something like this:

- All entities belong to a set of increasingly general classes
- Each set possesses a series of attributes
- The sum of attributes possessed by an entity is its own particular attributes plus all the attributes of all classes to which it belongs.

If this seems dauntingly technical the basic idea was explained in the last article, in terms of the attributes of a cat. It has its own particular attributes (e.g. white fur) - the attributes of cats in general (e.g.

"hunts mice") - the attributes of mammals in general (e.g. "gives its young milk") - the attributes of vertebrate animals (e.g. a bony skeleton) and so on.

As promised, the rest of this article will be ruthlessly practical, and you should have something actually "up and running" by the end of it.

This first section of code consists of extensions and modifications to the program "EXPERT.BAS" that we built up last month. IT WILL NOT RUN BY ITSELF, because routines that remain unaltered have not been included. If you want a complete version of "EXPERT.BAS" and do not have the earlier, more tentative version of the program there is a complete running version on this month's tape, otherwise work through the earlier version and add, edit, or delete lines as necessary.

```
5 OPENOUT "dummy":MEMORY HIMEM-1:CLOSEOUT
10 ' Main program
20 GOSUB 1000 ' initialise
30 GOSUB 150 ' choose option
50 IF choice=4 THEN 1500
60 MID$(comquery$(1),18)="next "
80 CHAIN MERGE choice$(choice),3000,DELETE 3040-
90 GOSUB 960 ' re-initialise "expert" data
95 chosen=FALSE:GOTO 30 ' loop
```

This is the new "main program" - replace all lines up to 100 with this section - the most important changes are in the removal of the "choose option" section to its own subroutine, and in the deletion of all lines after 3040 in the CHAIN MERGE statement. As before, line 5 is not needed if you have a CPC664 or CPC6128 but is most important for a CPC464 with DDI. Note that this program will not work without a disc drive.

```
150 ' Choose option
160 chosen=FALSE
170 WHILE NOT chosen
175 GOSUB 1100
```

```

177 IF menu THEN GOSUB 2000
179 IF choice THEN chosen=TRUE
180 WEND
190 RETURN
    
```

This is the new "master" control over user choice in the command (gosub 1100) and menu (gosub 2000) routines. Make sure that the heading routine starting at line 100 has a RETURN statement between it and this at (say) line 120.

```

430 PRINT#2,TAB(FNcentre(entity$(1,entity),0))UPPER$(entity$(1,entity))
    
```

Change this line in the input/display screen routine (gosub 400), which otherwise remains unchanged. This prints the name of our entity (in this case, our animal) at the head of the screen.

```

920 DEF FNroom.to.print(st$,offset,wdw)=(LEN(st$)<(modewidth-offset-POS(#wdw)))
930 DEF FNstarts.with.vowel(strg$)=INSTR("AEIOU",UPPER$(LEFT$(strg$,1)))
950 RETURN
    
```

Two new functions are added to gosub 900. The first determines if a word will fit on a line, Locomotive BASIC already has something rather like this built in, as you probably realise, but specifying it as a user-defined function simplifies the display of attribute lists. The second function returns a value if a word begins with a vowel - this enables us to do neat things like printing "A crocodile" but "An echidna".

The new "RETURN" line divides this routine from the new one at 960.

```

960 ' re-initialise "expert" data
970 ERASE entity$,entity.point,attributes$,attribute.point,classes$,classif.point,linker$,linker.point
980 DIM entity$(1,1),entity.point(1,1),attributes$(1,1),attribute.point(1,1),classif$(1,1),classif.point(1,1),linker$(1,1),linker.point(1,1)
985 file.test$=file.iden$
987 MID$(menu$(17),21)=SPACE$(8)
988 MID$(menu$(18),21)=SPACE$(8)
989 MID$(menu$(21),6)=SPACE$(8)
990 RETURN
    
```

This new routine resets variables used to store the data that our "intelligent" routines manipulate, so memory is freed for a new set. This memory saving also helps the program step more quickly between the various sub-programs, by avoiding lengthy garbage collections.

```

1100 ' command input
1110 mde=1:GOSUB 600 'set mode
1120 head=comhead(menu.number):GOSUB 100 'print heading
1125 mistake=0
1130 choice=1:menu=FALSE
    
```

```

1135 CLS#1:PRINT#1,TAB(8)"Input a command (or HELP)"
1140 LOCATE 1,12:PRINT TAB(FNcentre(comquery$(menu.number),10))comquery$(menu.number);
1142 length=10:caps=TRUE:control=11:GOSUB 200:caps=FALSE
1145 IF long=0 THEN 1180

ity)))/2,12:PRINT"Confirm you mean "entity$(1,entity)" ? ":GOS
UB 500:IF NOT yes THEN entity.found=FALSE
2880 WEND
2890 RETURN

```

This is a simple little sequential search of our list of entities (in this case, animals). "Entity" is the number of the animal found - while "entity.found" returns TRUE (-1) if the animal is on the list. The matching process is if anything a little TOO flexible, so the routine can step through a number of possibilities if necessary.

These lines replace all lines after 13100 in the last version of the program. There are several new arrays, and a number of old ones have been changed or extended.

Finally, what follows is a new version of the sub-program "ENQUIRE.BAS". This completely replaces the little "stub" we originally typed in to test the CHAIN MERGE function. It has two of its main functions quite complete, and we can "CLASSIFY" and "DESCRIBE" any animal from our list. If you are using a CPC464 with DDI then this must be saved as an ASCII file so that it will merge, (it is in this form on the tape). You can save both disc space and "merging" time on a CPC664 or CPC6128 by saving it as an ordinary BASIC file.

That is quite a lot to type in at one go - but the results are quite fun! The next time we do some programming we will have a look at inputting data so that we can describe a few more animals, and add more "attributes" to the ones we have got. Eventually we will be able to make the computer into an expert on more or less any simple subject, with the "setup" subprogram. ■

- AUDIO EQUIPMENT \$45 p/hr.
- VIDEO EQUIPMENT \$80 p/hr.

Atlantis also service other brands of computer & audio visual equipment including:

**INSTRUMENTATION • COMMUNICATIONS
ROBOTICS • INDUSTRIAL ELECTRONICS**

ADDRESS: 6/585-587 Blackburn Road
Notting Hill, Vic. 3168

TEL: (03) 561 1133 • FAX: (03) 561 5572

If you use *Mini Office* or *LocoFile*, here's what you've been missing:

"FLIPPER is an invaluable tool, and really is like having an extra PCW."

Rob Ainsley, *New Computer Express*

"I am completely sold on it"

Paul Hendy, *Your Amstrad PCW*

"FLIPPER is one of the most impressive utilities I've seen for the PCW"

John Minson, *Computer Shopper*

FLIPPER could do some pretty surprising things. It could split you PCW in two, letting you run LocoScript 2 in one half and a CP/M program in the other. Or it could let you load two CP/M programs at once if you preferred, one in each half. It could flip you from one half to the

other in under three seconds, any time you wanted. And it wouldn't lose your place.

Unfortunately, there were a few things it couldn't do. In particular, it couldn't load either *Mini Office Professional* or *LocoFile*. Serious shortcomings indeed.

Now **FLIPPER 2** is here. It can do everything FLIPPER could, but it works with *Mini Office* and *LocoFile* too (it can even manage both at once if you want). What's more, we've added more options and made it easier to install. Oh, and you can FLIP in as little as 2 seconds now!

FLIPPER 2:
at \$89.95, it's essential.

Bankcard, Mastercard or Visa orders are welcome, written or telephoned, quoting the card expiry date. Send you orders to:

A peek into Pandora's Box

Joseph Elkhorne lifts the lid on Pandora, Swift Software's games programming utility. What does he discover?

Well, for a short month, we take a short break from the thorny subject of assembly language. Our esteemed Editor had two programs from Swift Software for review. Swift is a UK software house, one I hadn't heard of. Nice of them to provide material, so the least we can do is "give it a go!"

The first package is called KEYWORD, defining itself as The Dynamic Word Finder for home and business use. Inside the rather unusual cover is one disc and a user guide. The latter is printed on heavy stock, is short and to the point.

I installed the program, following the directions, and it performed as promised. KEYWORD is an RSX which can work with other programs. The user guide refers to the situation of installing the RSX and working with Protext in ROM. As this is not my working procedure, I could not try it. As their RSX

The process of working with Pandora is a lot like that of assembly language under CP/M, albeit easier.

takes up a great deal of space - and needs their "dictionary" disc (side two) in the A drive, it does seem somewhat limited for many users.

I tried loading Tasword after installing the RSX and, as suspected, was unsuccessful. Not a great deal of user memory is left after installing the utility. I did prove that the RSX installation, followed by loading a small BASIC program, still allowed "dictionary" access - so I assume the operation to be bug-free.

KEYWORD is essentially an electronic version of a thesaurus - like a computerised Roget's. As an aid in composition and writing, it would have a definite use. The user guide remarks that the program was written by a professional journalist for his own use.

Obviously, he uses Protext in ROM. With over

10,000 synonyms and antonyms in the dictionary - and over 1,000 subject headings - KEYWORD can be handy in roughing out a draft in the pencil-and-paper mode.

I did note a couple of spelling errors in the User Guide, so perhaps its use could be recommended to Swift...

They make a point of saying the program is not copy protected, and hope users will do the right thing. I think they deserve credit in this regard. A clever pirate can rip anything off, given time. All too often, software houses are paranoid about potential financial damage, and end up with products the legitimate user cannot use flexibly, if at all!

Now on to the real offering for the month. The second Swift package is called PANDORA. On opening the "envelope" containing the disc and user's guide, one notes the same packaging technique as for the other product: a heavy card stock with double, self-locking tabs, probably designed by an Origami enthusiast.

The contents are one disc and one manual, the latter a small offering in a stapled binding. A quick perusal of it leads to a "swift" conclusion that the software people ought to farm the writing out to a professional. Obviously, they are saving money on overheads. The cover ostensibly takes the place of the title page, and the table of contents springs out at you when you open the booklet. The first page of text, right hand side on turning the page, is page two. A minor quibble, but definitely not the way real publishing is done.

The major gripe is one that is all too common in high-tech books: no index. Thus, finding specific references is a case of flipping back and forth, back and forth.

What is Pandora? (That's their introduction phrase, by the way). They let you know it's "up to 200% faster than in Basic," speak of Sprite handling commands, and say that "all Pandora programs are semi-compiled before they are run." What they don't tell you precisely is what it is. They rabbit on about how it

works, differences from the BASIC you're accustomed to, and about how to drive it.

It's sort of a turbo mode in software. Wow, you say, will it let me write arcade style games in Basic that run as a challenge to do something more than a snail? Maybe.

On the disc, you'll find 14 files when you do a CAT. Some of these are for a demo program, and also there are two games - simple, but they exhibit the end result of Pandora's twice-as-fast BASIC.

Handing out software for evaluation by magazines is surely a good idea - but presentation is a major factor in the eyes of the reviewer. The manual refers to Pandora Version 1.00, whilst the review disc was Version 1.01. The differences? Well, this letter looked at the table of contents for any mention of the "editor" program on board the disc. None.

The manual says the Pandora system is just one program made up of two separate parts, the Compiler and the Supervisor. Well, there is a compiler file on the disc, according to CAT. And an editor file; no super. Guess it's really part of the main system. As an example of clear writing, the book leaves something to be desired. Ah, well.

Being one of those pessimistic souls, I loaded the "disc" program and listed it. Lo, it loads Pandora. CAT didn't see it, so I booted up CP/M and used the SDIR utility to inspect the directory for the real story. Two system files, EDITOR.BIN and PANDORA.BIN of 5K and 18K size respectively.

Next step was to run up the README program, which gave the difference between the manual instructions and the current operation. Incidentally, they remark that Version 2.00 is due out in November 1989. Let's hope the sale copies have an up-to-date book along with the disc!

The newer version will offer a sprite editor for all screen modes; a music designer and sequences, with envelope and sound effects creator, and other goodies. Upgrades are available at a modest cost. You'd be advised to use your word processor to format and print this text, for you'll surely need it. And you have to have a word processor, for this is the key to writing Pandora programs. The book says so. Later, however, they contradict themselves and tell you how you can use Pandora without a word processor. Aha, this is the purpose of COMPILE.BAS.

Essentially, this program pre-processes Pandora style BASIC statements, created as DATA statements. Somehow, I don't think I'll bother doing it that way. You may, however wish to inspect Appendix IV, which describes the technique.

The process of working with Pandora is a lot like that of assembly language under CP/M, albeit easier. You write a "source" file using the word processor. The first major difference that will strike you is the lack of line numbers. So, how do you do a GOTO, that command oft sneered at by so-called professional programmers? Simple, you use labels.

Now, not only do the source files have to be

straight ASCII format, they must not have any invisible word processing format commands within them, else the operation will give you error messages.

Using the Pandora variants of Locomotive Basic, as well as the additional commands for sprite handling and animation, you write a new style of BASIC file and save it to disc. You load Pandora, compile the source, and then you can run it. You'll agree that it

***...frequently you'll feel
like throwing the manual
against the wall.***

seems similar to CP/Ms ED, MAC and HEX approach.

Pandora programs can exist in stand-alone mode, or can be used from within conventional BASIC programs. You might be tempted to save an existing file with the .A option and handle the ASCII text in your word processor. It would probably be easier to start from "square one", in my estimation.

With all the variations from Locomotive BASIC, no line numbers AND new commands, adapting an old program would be time consuming, to say the least. The biggest limitation of working with this package is the opening message once Pandora is loaded:

System installed with 7822 bytes free.

Before trying to work with it, you'll probably run out of patience in trying to understand the manual, and load up a game, as I did. The demo, "birds", simply gives you a screen of bird-like sprite flapping around. Ho hum.

Well, how about the games? There's a "coke", a simple shoot-em-up and "game" (original, eh?) which is like a poor man's version of Asteroids. One wonders, whilst looking at the red and white can one is expected to shoot in the first little gem, if the soft drink manufacturers were consulted. "Game" is obviously included as a bad example ... it smells like every poor arcade game ever encountered, and even includes a few bugs, like the occasional inadvertent debris left on screen. But if you want to be a "sprite cowboy", then this is a good model of poor programming to work from.

Besides, Swift offer a free competition, mentioned in the README file, which could earn you a royalty on a good game! They intend to produce a compilation disc of user's games; if you want to "see your name in lights", give it your best shot.

The start address of any Pandora program is always &3000; yet the book states the first line of a user's BASIC program should be: 10 MEMORY &1FFF. If you think this is a misprint, think again. A perusal of the (obsolete) memory map in Appendix III says the compiled program resides in 2000-2FFF,

with the Supervisor above it.

In addition, other data like sprite descriptions and variables and arrays are stored in upper memory, also. All these overheads make it clear why there's little room for your BASIC program. Obviously, if your source is too big, it won't fit into the area provided by Pandora. Despite the Appendix with copious error

messages described, I could see no discussion of what happens if the compiled code grows too large. Surely, some indication of an impending diabolical situation must exist.

Shown above is a sample of "game.src" from the disc, just to let you know what you're in for. There, whata lotta fun!

The first thing I discovered about their .SRC files is that they have TAB characters embedded, which Tasword thinks are block markers. After some time in fumbling around with the manual, I decided to have a bash at one of my short old programs. I loaded the file and resaved it using the .A option. Then I proceeded to erase the line numbers and modify the text to the format Pandora wants.

Three times into Tasword to correct a minor mistake, then clear the machine and reload Pandora. I finally got tired of this and abandoned my attempts to be an instant games master.

The first lurk is that Pandora variables are single letter names from a to z. The values range from -32768 to 32767. Say, this isn't Forth, is it? [There's also a stack - two, in fact: data and return.] There can be up to 13 single-dimension arrays, a through m, and taking the form a#z. A maximum of 128 subscripts per array is allowed.

No string handling facilities exist, though one can print text to the screen with the TEXT command. Input is limited to numeric variables. There is, however, a GET command which can be made to accept ASCII values, and store them character by character in an array. Well, you don't need all the bells & whistles in an arcade game, do you?

Essentially, Pandora is an abbreviated form of BASIC, with minimum facilities. The sprite designer is convenient, and incorporates an animation capability. Thirty-two sprites can be created and manipulated. Sound generation has also been catered for,

and the 2.00 version will have a music editor.

If you want to design your own arcade games, Pandora is an adequate beginning. Be prepared to burn the midnight oil while you're writing your masterpiece, though. And frequently you'll feel like throwing the manual against the wall.

Don't say I didn't warn you!

LocoMail for LocoScript 2

Mr J Smith
24 Larches Rise
New Westering
Wessex

Use LocoMail to send letters to everyone on your mailing list. Use its many advanced features to do much more –

- Produce letters for each name or data record, or just for a selection
- Include special text depending on the data to be merged – each version of your text is correctly laid out, whatever special information you insert
- Edit the merged letter before printing
- Save the result to disc if required
- Use LocoScript data files or ASCII data files from a CP/M program
- Prompt for information to be typed at the keyboard
- Perform arithmetic within LocoScript documents
- Add paragraph numbers automatically
- Produce sophisticated LocoMail 'programs' for Invoicing, Credit Control, Enquiries etc.

LocoMail
Mail Merge for LocoScript 2

LocoMail now comes with a completely revised 288 page User Guide – available separately for users of the PCW9512 and earlier versions of LocoMail.

- An extended tutorial section
- Detailed descriptions of the advanced facilities
- Worked examples of "program units", loops and conditional operations
- Descriptions of typical uses of LocoMail – Club Membership, Invoicing, Enquiries, Labels
- A set of "building blocks" to include in your own LocoMail applications
- Full technical description of LocoMail
- Troubleshooting guide

All the examples described in the User Guide are supplied on the LocoMail master disc. In case you're just buying the new User Guide, they are also supplied on the LocoMail Examples Disc, available separately.

LocoFile: has it got guts?

Mike Turner decides if LocoFile, the pop-up database module for LocoScript users, has what it takes to make a winner.

Have you ever wondered why more commercial programs like spreadsheets and databases don't work within LocoScript? It seems that everything else has to be run from CP/M, rendering any transfer of information from these awkward if not impossible.

LocoScript is very different from other programs, and specially designed for those not familiar with computing. Hence it has developed into an operating system in its own right. This means writers wanting to create add-on spreadsheet or database

ucts and providing 'add-on' packages to make LocoScript even more useful. I am presently using LocoScript2 with LocoSpell, LocoMail and LocoFont. One wonders where it will all end. How many more add-ons can we tack onto our systems before they go totally 'Loco'?

Having said that though; Locomotive saw the potential for a LocoScript database add-on, and came up with LocoFile. This is a database system that runs completely from within LocoScript2. You never have to leave the document you are editing at the

the end of your document or suffering with some of the other slow features of the original LocoScript, I suggest you seriously consider upgrading.

THE PACKAGE

LocoFile comes in two versions; one for the 8000 series PCWs and the other for the PCW 9512. Remember this when you are ordering it so that you get the correct version. For the money you will get one CF2 disc containing the LocoFile software, some useful example files to be used in tutorial sessions and an upgrade installation program.

The 130 odd page manual is pure Locomotive and up to their usual high standard. It is chock-a-block with useful information all clearly laid out and a joy to use. (Other software manufacturers please note). My only criticism on the documentation side is the upgrade program notes that accompany the manual. These installation notes are quite detailed and I found overly fussy. The actual process is far more simple than the notes would lead you to believe.

The upgrade program converts your version of LocoScript2 to the latest one and then automatically installs the LocoFile software. All you have to do is answer a few simple questions and swap discs when asked. Once you have installed the software you will need to go through this process

LocoFile...makes no...arbitrary restrictions. At any time you can add or remove fields or make them bigger or smaller, re-position them and so on.

programs would find it very difficult to work with.

So, virtually all the software for the PCW uses CP/M, as a platform from which to work. Unfortunately LocoScript is such a nice cosy environment, that it discourages people from venturing into the depths of CP/M to run something like a database.

If you are a user of LocoScript, you will be well acquainted with this quite friendly and reasonably powerful word processor. The people at Locomotive Software are constantly upgrading their prod-

time to look up an address or some other useful piece of information. When using it, cards pop up onto the screen in front of the document being edited or the disc manager, and after use they disappear again to leave the original screen unaltered. If this sounds like the answer to your prayers, you may not be far wrong. Read on...

Before we go any further, I had better warn you that LocoFile only works with LocoScript2. So if you're growing cobwebs while waiting for LocoScript 1 to get to

again in the future should you ever need to add another package.

This system of using an upgrade program is now the standard method of software distribution for Locomotive. It serves two purposes. Firstly it is a quick and easy way to both install the new software and upgrade your existing packages to the latest version. Secondly it is an effective anti-piracy measure. The installation software cannot be copied and the LocoFile software itself is useless until installed by the previously mentioned software.

You will also need your original software distribution discs for the other Locomotive products you own handy during the installation process, as you will need to feed them into the drive at the appropriate time. What this software does is to make up a new Start-of-Day disc incorporating all upgrades and the new software. You will need a couple of spare discs for this process, so have them handy.

UP AND RUNNING

If you have ever run LocoSpell or LocoMail, you will know what to expect. There are no surprises here. Everything is in the familiar LocoScript style with drop down menus and lots of helpful prompts. Of course, you have the regular menu cum command sequence of inputting instructions available to you, with the typing of the appropriate letter selecting options from a menu as well as the use of cursor arrow keys, (e.g. A to Abandon Edit).

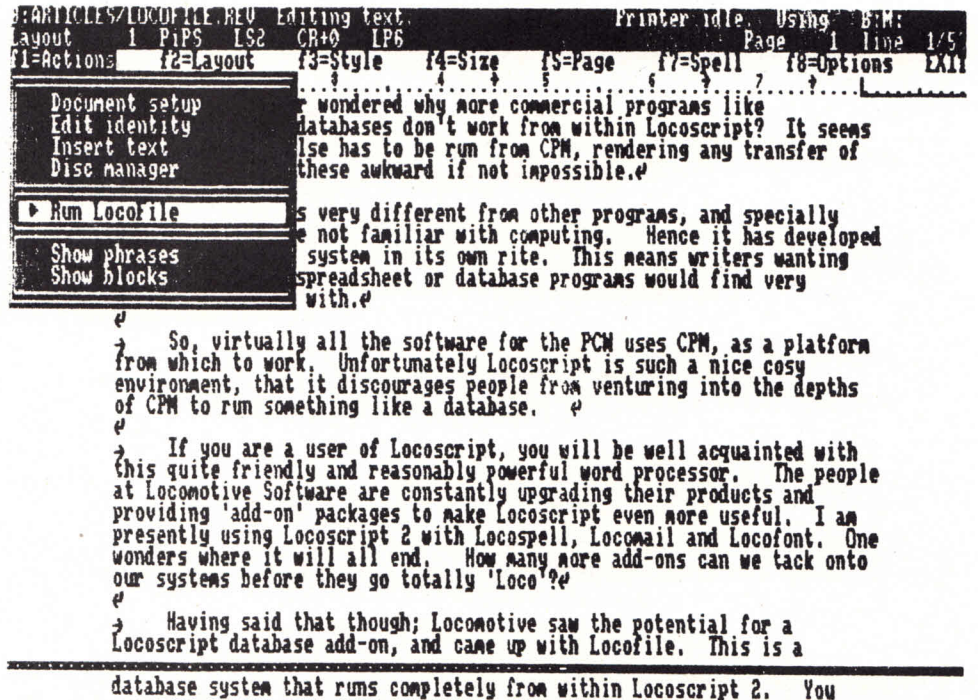

LocoFile databases are stored as data files ending in a .DAT suffix. Any of these files in Group 0 of a disc in any drive gets copied automatically into Group 0 of the M drive on start-up. This is handy if you do a lot of disc swapping during a work session. Your database is always there in memory regardless of what data disc is in the floppy drive. You may also store .DAT files elsewhere on specific data disc and not have them put into memory on start-up if you wish. This is

the way I operate and find it quite successful. The small loss of speed whilst accessing a floppy drive is negligible.

Suppose you are in the middle of typing up a letter and need to look up the address of a client.

Each card is treated as a page in a document; [PAGE] moves you to the next card or record.

[ALT][PAGE] to the - previous one and so on. [DOC] takes you to the last record and [ALT][DOC] takes you to the first.

Something new has appeared in the 'Actions' menu

You press [F1] 'Actions' and find that in addition to the usual options, there is a new one 'Run LocoFile'. On selecting this you are taken to the disc manager screen and asked which database you wish to use. Subsequent runs of LocoFile will assume the same database as used before and bring it up automatically. If you really wanted another one, fear not, as you are given the option to re-select another database if you wish.

You move the cursor over the file you want and press [ENTER]. Up pops a card on the screen from your database file, the last one you were looking at with the cursor in the same place as before. You can move the cursor around the card with the cursor arrow keys or the [ENTER] or [RELAY] keys. [ENTER] takes you to the next field and [RELAY] takes you to the previous one.

Probably, you want to use this name and address you have looked up in the actual letter you are typing. You can do this by either a cut and paste as normal or by use of the [F7] key to do an extract. You can set up the database so that when you ask for an extract it always provides you with the most commonly wanted information automatically. This information is put into a block for you and you may then paste it into the document later after exiting from the database. As there are ten blocks available, you can obtain ten different pieces of information from the database to paste into the document at the appropriate places.

INDEXING

Indexing of the records in the database allows you to determine the order in which they will appear or be listed. The indexing

are two way compatible; in that you can use data files from either directly in the other. Suppose for example, that you already have a LocoMail data file with a whole heap of names and addresses in it. LocoFile can read all the existing entries from the LocoMail file into a database file of its own. This is provided that you have set up the LocoFile data file with the same item names. Alternatively, LocoMail can utilise LocoFile data so you can do mailshots by specifying the field name from within the LocoFile records and have the details printed in letters automatically, (e.g. Dear (+Mail)name(-Mail) where 'name' is an item or field in the database file).

You can therefore use LocoMail to produce reports from your database. I use LocoMail to print out mailing labels two across the page or to produce Name and Telephone Number lists from my LocoFile data. LocoFile has no calculation ability, but once again you can use LocoMail to total figures and do selective mail shots based on say money owing. PCW9512 owners are fortunate here in that they have LocoMail already. In my case I had to go out and buy it for my 8512. That is an extra but necessary expense if one is to get the best out of LocoFile.

LocoFile is a very simple database and doesn't have some of the sophisticated functions of some of its CP/M counterparts of about the same price. It lacks the ability to select groups of records (e.g. just people who have fallen behind in their club subscriptions), or anything more than very crude printing facilities. You can only print out images of each card. For reports you really need to use LocoMail. You also need LocoMail to do selective printing, i.e. sending threatening letters to the above mentioned defaulters.

However, a neat feature of LocoFile is that you can tell it to print out only those records that have changed or been added since the last printout. This is handy for

keeping long lists updated.

THE BOTTOM LINE

All in all LocoFile is an excellent product. It is perhaps the simplest and most flexible database I have

works completely from within LocoScript. It is extremely easy to set up and use. The software is efficient and apparently well written. I have so far found no 'bugs' at all. The interchangeabil-

The screenshot shows the LocoScript interface. At the top, it displays 'LocoFile' and 'Printer file: Using A:B:M:'. Below this is a menu bar with options: 'Index: Authors', 'Unique', 'Item: None', 'Col: 1/60', 'Line: 1/15'. A toolbar contains icons for 'f1=Actions', 'f2=Index', 'f3=Item', 'f4=Print', 'f5=Goto', 'f6=Find', 'f7=Extract', 'f8=Options', and 'EXIT'. The main window shows a record with the following fields: 'Author(s)' (Graham Parsons Barratt), 'Title' (Browning's early works), 'Publication' (Literary Gazette), 'Pages' (9), 'Keywords' (Browning Early Writers). A 'To block' dialog box is open, showing a list of fields to be extracted: 'Author(s)', 'Author(s)2', 'Author(s)3', 'Author(s)4', 'Title', 'Publication', 'Pages', 'Date', 'Keywords', 'Keywords2', 'Keywords3', 'Keywords4'. Below the dialog, there are options to 'Extract items', 'Select all', and 'Select none'. The background text is partially obscured by the dialog box.

The 130 odd page manual is pure LocoMail high standard. It is chock-a-block with useful information all clearly laid out and a joy to use. (Other software manufacturers please note). My only criticism on the documentation side is the upgrade program

notes that accompany the manual. These installation notes are quite detailed and I found overly fussy. The actual process is far more simple than the notes would lead you to believe.

The upgrade program converts your version of Locoscript 2 to the

Extracting selected data from LocoFile for dropping into your LocoScript document

come across, and best of all it works from within LocoScript. Of course it won't replace specialist databases like Condor, Masterfile or dBASE, which have far more powerful data handling functions. To make the most out of LocoFile you really do need LocoMail as well.

However, for simple name and address applications that form the basis of 90% of home users' database work it is great. With some imagination it can be made to handle more complicated applications for things like family tree research and so on. It's difficult to imagine that there are any people out there who are dedicated LocoScript users who will not find this a useful addition to their system.

Although LocoFile does not have the same range of features as a fully fledged database management system like dBASE it does have many advantages. It

ity of LocoFile and LocoMail data makes life easy for those who already do lots of mail merging work.

On the down side, it lacks the ability to do calculations or generate reports, or to select only certain records based on conditional searches. To do all of these things you must use LocoMail. Unless you are a 9512 owner this means extra expense. You will also need to be reasonably switched on to write the various 'programs' LocoMail needs to perform these functions.

In coming months I will be looking at some practical examples of LocoFile and LocoMail and be providing you with some helpful hints picked up along the way.

LocoFile is available exclusively through The Amstrad User for \$110.00 (plus p.p.). Ring in your firm order on (03) 233 9661.

From the Runes

Before taking a close look at Protex next month, John Barlow explains why he made the big move away from LocoScript.

After having knocked about in some of the more remote parts of the world for the past twenty-odd years, I finally decided to settle down (for a while, at least) to write my version of the 'Great Australian Novel'.

I knew I had the material and having written a number of magazine articles over the years, felt I had the ability. All I needed was an understanding family and the machinery through which I could transfer my thoughts to paper. I was sure I had the first of these requirements; but I wasn't sure about the second. The old portable Olympia that had been with me during most of my travels was getting a bit long in the tooth.

OLYMPIA FALLS

It didn't take me long to discover the enormity of the task I had set for myself. Nor did it take long to discover that I had been right to be concerned about my old manual typewriter. It wouldn't go the distance — or, more to the point, I wouldn't go the distance with it. It became imperative that I find a replacement.

I had almost settled on a state-of-the-art electric typewriter when Amstrad released its PCW series computers. Here was the answer to my prayers. I had looked at a number of personal computers (including Amstrad's CPC series machines) during my earlier search but had found that they were either highly priced toys —

suiting more to games than to serious work — or were too expensive. Some, in fact were both.

Amstrad's 8000 series machines were different, however. They had good memories — even the 256k available in the smaller machine was much bigger than that of any of the electric typewriters I had looked at; and, unlike all the other computers on offer, there were no hidden extras. The PCW came as a complete package: computer, monitor and printer. Most importantly, it was reasonably priced.

Armed with prices, comparative specifications and a swag of persuasive arguments, I approached Madam, the Chancellor of the Exchequer, and demanded, (well forcefully begged, really) that she approve the purchase of what any one with half a mind could see was more a good investment than a mere item of capital equipment. After a week of haggling and grovelling, she agreed that, for once, I was possibly right and okayed the withdrawal of the necessary funds from the treasury.

With my hard-won dollars clutched tightly in my hairy claw, I rushed down to my nearest Amstrad dealer to talk a deal. Less than an hour later, I was back in the 'Bat Cave' (the name my daughters have affectionately given to my converted garage/office); had my new PCW 8256 hooked up and plugged into the power; and was engrossed in the Amstrad manuals.

Within a week I had worked out the basics of LocoScript and had copied the first few chapters of my book onto disc. What a dream. No longer would I have to type out a rough draft, edit it, re-type it, re-edit, then type out a clean copy of the final draft. Now I could simply type in my initial draft, make the necessary changes on the screen, save the altered document, then, at my leisure, print out a near letter quality copy of the finished product. In fact, the saving in time alone would well justify its purchase.

POUND OF FLESH

Among the promises extracted from me during my negotiations with the Madam Chancellor, however, was that the money for Joyce's purchase would be returned to the coffers with a year. It became necessary, therefore, to put the book aside for a while and go to work on a few magazine articles.

During her first year Joyce not only paid for herself, she turned a nice little profit. As a reward, I treated her to a memory upgrade and myself to a copy each of LocoSpell and LocoMail.

In the process of paying for Joyce, though, I had become a professional writer; something I hadn't envisaged — at least, not so soon. This put a different complexion on things. I had been looking forward to living the life of a garreteer for a while but it was not

to be. Now I was back on the treadmill — a different treadmill from the one I had been on previously, granted; but a treadmill, none-the-less. Whether I had planned it or not, I was in the writing business.

Now, my referring to writing as a business may sound strange to those who see writers as artists. But, artist's we're not. Painters are artists. Sculptors are artists. Writers are artisans; wordsmiths, if you like. The only common denominator between all three is the fact that we all use a measure of creativity to turn raw material into an end product.

No a writer, particularly a freelance writer, is a small-businessman. And, just like any other businessman, he must make a total commitment to his business. Markets must be found, product (in this case, stories and articles) must be researched, produced and promoted; covering letters and letters of enquiry must be written; records must be maintained; invoices and statements must be sent out; and books of account must be kept. Unless a writer is fortunate enough (and productive enough) to be able to afford an assistant, all these tasks fall on him, alone.

But many of these tasks are non-productive and use up valuable writing time. It is imperative, therefore, that the writer spends as little time as is possible carrying out administrative tasks and as much time as possible in profitable pursuits. This is where a writer who uses a full-blown computer has an advantage over one who chooses to use a typewriter, or even a purpose dedicated word processor.

Although I had originally purchased Joyce for her word processing ability, I soon found that she is equally at home with these other facets of the writing business. In fact, one of the main reasons behind my subjecting her to minor brain surgery was to enhance her ability to handle many of these jobs — much of the software for which is designed to run in the

memory drive, rather than the slower disc drive.

NO LOCOMOTION

As I started to look around for the software packages needed to meet these demands though, I encountered the problem that most PCW owners have had to face at one time or another: all the available accounting and database programs run in CP/M. LocoScript, however, operated in a world of its own. This, of course, means that the database containing research material can't be accessed while working on an article. Although I had been prepared to put up with LocoScript's other weaknesses — such as its lack of speed and its inability to return me to the point of exit after a 'Save & Continue' — this was the final straw. I had to find a word-processor that would run in CP/M.

It was a pity, really. I had come to enjoy working with LocoScript. It was a smooth and, when combined with LocoSpell and LocoMail, relatively powerful word-processor. But it was of no use if it had to be switched off and rebooted every time I wanted to check on information contained in a research file; then reverse the process to get back into LocoScript after having either written that information down, or printed it out.

About that time, Arnor released a word processor which looked to be the solution to my problem. From all reports, Protext PCW was the greatest thing since Superman donned his red, white and blue pyjamas. It was fast, it was powerful, it was able to access two files at the same time and, like the machine for which it was designed, it came as a complete package — including a spelling checker and mail merger. Most importantly, because it operated in CP/M, it would allow me to access my database files without losing working files held in memory.

Not being one to rush into things, however, I hesitated. LocoScript, in spite of its faults, was still better than the search and strike method I used on the

to Strategy
Publications

Apart from producing Australia's biggest selling magazine for Amstrad computers, Strategy Publications also uses its resources to provide a typesetting service to local industries.

We are now pleased to extend this service to readers of The Amstrad User in offering Personalised Stationery at competitive prices.

For just \$49.95 (including postage) we can supply for yourself or as a gift 100 sheets of Ivory coloured high quality A4 paper with nominated address and telephone number printed in one of the styles shown below. In addition, 50 envelopes of the same colour are provided.

Choose your style from these four:

| | |
|---|--|
| STYLE No. ONE 23 Meadowbank Road Primrose Hill Victoria 3150 03 - 123 4567 | NB. Text will be centred near top of sheet |
| STYLE No. TWO 23 Meadowbank Road Primrose Hill Victoria 3150 03 - 123 4567 | |
| STYLE No. THREE 23 MEADOWBANK ROAD PRIMROSE HILL VICTORIA 3150 03 - 123 4567 | STYLE No. FOUR 23 MEADOWBANK ROAD PRIMROSE HILL VICTORIA 3150 03 - 123 4567 |

The above styles are roughly half actual size

HOW TO ORDER

1. Write very clearly (or type) onto a blank piece of paper the address and telephone number you want to see on the new letterhead.
2. Select the style you want and indicate on the same piece of paper.
3. Attach the above details to written confirmation of your order which should include the delivery address, your credit card number (Bankcard, Mastercard or Visa) and expiry date. Alternatively, you can pay by cheque or money order.
4. Phone orders cannot be accepted.

If you are not sure about anything, please ring us before proceeding. We are happy to provide a sample sheet if required.

Send your order to:

 Vic. 3149 • (03) 233 9661

old Olympia. Could I justify outlaying \$270 odd (which was the price at that time) for a new word-processing program when I already had a perfectly adequate one? It

The old favourite.

was also rumoured that Locomotive were working on an updated version of LocoScript which would address most of the original version's shortcomings. But could I wait?

Finally, it was my doctor who made up my mind for me. He told me I'd have to cut down on my intake of coffee (which I was consuming in copious quantities during the interminable scrolling through long documents). That gave me the courage to approach Madam Chancellor and, once again, appeal to her loving and understanding nature. I think it was the line about the doctor telling me I'd probably die if I didn't get Protex that finally convinced her of its worth — she lives in fear of not having anyone around to obey her commands.

About a fortnight later, my new word-processing software arrived. I couldn't wait to take it for a spin.

I can only liken my first experience with Protex to that of getting out a Volkswagen and into a Porsche: although they will both get you from point A to point B, one does it a hell of a lot better

than the other.

But the change meant that I would have to learn to drive all over again. While it had only taken me a week to establish a working relationship with LocoScript, it took me at least that long to simply initialize Protex.

Oh, I had it installed and running in no time flat; but very few of the parameters conformed to those to which I had become accustomed. The type-size was wrong. The margins were wrong and many of the other default settings were wrong. They all had to be adjusted.

DEFAULTS AND PHRASES

During that week, I reconfigured most of the parameters to suit my requirements — but not without a few hiccups, I'm afraid. The manual was sadly lacking in some of the more involved areas and blatantly misleading in others. I had to rely heavily on hints and tips picked up from TAU and some of the overseas magazines. After much trial and error, though, I was able to alter the default print size from twelve point (pica) — which I found too big — to ten point (elite); alter the top, bottom and side margins to zero, four and ten, respectively; set the tabs and returns to on; and reset the page width to 75 to accommodate the smaller type size. No sweat! I was proud of myself.

But, as they are wont to say: "Pride comes before the fall." The problems started when I attempted to set up a standard phrases file. That was when I really began to appreciate the user friendliness of Locomotive's word processing program.

In LocoScript one simply builds a phrase, copies it, and stores it in a PHRASES.STD file (in group 0 on the Start of Day disc) and Bob's your uncle. Not so in Protex, however. One must construct a small program for each phrase.

To me one of the generation that is commonly referred to as 'computer illiterate', this was more frightening than delving into the mysterious world of the occult. I'm a writer, not a programmer. Once

again, I hesitated. Did I really need phrases? Couldn't I fake it? I know I could get away without the ubiquitous "Dear Sir's"; but I didn't use them for that, anyway — even in LocoScript.

What I did use them for, was to save on multiple-keystrokes. An example of one of these is the long dash used throughout this article — which I prefer to the double hyphen used by some writers. I also like to have it preceded and followed by a space. To be effective, however this method of punctuation must be of the non-break variety. Space/Dash/Space (—), therefore, would normally take up to 15 keystrokes — Alt-N/Space, Alt-X/L, Alt-N/Hyphen, Alt-X/L, Alt-N/Space.

I decided that I had to give it a try. Tentatively, I typed PROG after the >a prompt in command mode.

At the end of another week I was frustrated. I had tried everything I could think of but still couldn't get the damned thing to work. There was no problem with text: simply allocate a key and type the text inside inverted commas; QED. But printer control codes? No go! If it wasn't for the fact that I'd spent so much money on the thing — and the threat of having to explain my actions to Madam — I'd have discarded it. But I wasn't going to let it beat me. I do think, however, that if it hadn't been for the fact that I had to finish an article I'd already started in LocoScript, I'd have been carted away in one of those back-to-front wind-cheaters by the men in the long white coats.

By the time I had got back to Protex, I had calmed down enough to look at it a little more objectively. I wonder if the manual is wrong, I thought. It had been in other areas; why not here? Perhaps I was using the wrong escape character. Bingo!

With that hurdle overcome, Protex took on a completely different personality. It certainly was fast and it was better suited than LocoScript to longer documents such as magazine articles and book manuscripts — mainly

because it was doing all the work in memory and, unlike LocoScript, it didn't waste time formatting as it scrolled through a document. Of course, that meant I'd have to get used to formatting each document before it was saved to disc, but I figured that, even with my feeble brain, I could handle that small task — given time.

ONE LINERS

I had to admit that LocoScript had spoiled me, though. No longer did I have the multiple-line headers and footers I was accustomed to. It didn't seem to matter how many lines I allocated, Protext would only print a single line of header or footer text. Gone, too, was the instant access to the spelling checker that LocoScript provided for the checking of a single word; now I would have to wait until the end of an edit session before calling for a spell check.

It took me a month before I felt confident enough with Protext and its codes and commands to embark on my first writing project. Now I use it in preference to LocoScript when working on manuscripts. In fact, I've pretty well become bi-lingual. For some time I continued to use LocoScript for shorter documents, such as correspondence, but as I came to grips with Protext's mail merging facility, I noticed the situation

changing. More and more, I found myself automatically loading Protext; even when working on correspondence files. I guess I was enjoying the feeling of being in complete control.

POSTSCRIPT

Since purchasing Protext, Locomotive Software have released their LocoScript upgrade, which, according to usually reliable sources, has addressed many of the limitations of its predecessor. Among the newly released support packages available for LocoScript is LocoFile, a database which certainly adds to the system's appeal. Perhaps, if Locomotive had had that sort of package around at the time, I would have seriously considered its purchase instead of Protext. I doubt it, however. Protext is still a great deal faster than LocoScript2 — which still can't give me uninterrupted access to my CP/M files.

Nor can I take LocoScript with me if, at some time in the future, I decide to swap Joyce (heaven forbid) for one of the other computers in the Amstrad range. I can do that with Protext however.

Because Protext is available in most of the major operating formats, I am able to change over to an IBM compatible machine, for example, without having to become acquainted with a new word

processor. All I have to do is buy a copy of Protext PC.

Added to that, Arnor have recently released Protext Office, a combined database and invoice

The challenger!

generator that runs within Protext and allows data to be transferred directly from a database file to a word-processing document. Sounds great!

Now, how do I go about persuading Madam Chancellor that Protext Office is necessary to the well-being of the Barlow clan? Perhaps...? No, she'd never fall for that. But, maybe...? ■

KNOW LOCOSCRIPT, LOCOSPELL AND LOCOMAIL BACKWARDS!

LocoScript/LocoMail/LocoSpell: Assignments and Solutions

opens with a brief and clear introduction to the facilities offered by the LocoScript, LocoMail and LocoSpell software packages. This is followed by a series of assignments which:

- allow readers to work at their own pace, gaining practical experience in creating documents and using data files;
- give a good understanding of the editing, merging, spelling and arithmetic functions;
- have a strong business orientation, including invoices, mailshots, personnel records and customer orders.

Full solutions are given to all assignments. This text is suitable for use in colleges, offices and the home - wherever the Amstrad PCW is in use!

Computer Viruses part 2

Continuing this special three-part feature on Viruses, Ralph Burger this month gives some examples of a few real meanies.

A computer virus is a program which can insert executable copies of itself into other programs. Every infected program can in turn place additional copies of the virus in other programs.

Naturally, scientists are not satisfied with such a definition. But since really no official scientific work has been done on the subject of viruses (even Fred Cohen's book "Computer Viruses: Theory and Experiments" is disputed in some circles) we must be content with an attempt at a definition. We'll mention a publication of the University of Dortmund, West Germany, written by J. Kraus (1981). There the auto-reproduction of software, the basic virus principle was precisely defined:

Let π be a valid program in the machine language M.

If π has no inputs, and if π outputs its machine code (exactly) or copies it in main memory, then it is (strictly) self-reproducing.

This precise definition cannot be used for virus programs, because a virus doesn't have to reproduce itself (exactly). It needs only to reproduce certain parts of the program. In addition this definition defines only the reproduction of the actual program code and not binding it into other programs. Thus a definition might be worded as follows:

A program must be character-

ized as a virus program if it combines the following attributes:

- 1.) Modification of software not belonging to the virus program by binding its program structures into these other programs.
- 2.) Capability to execute the modification on a number of programs.
- 3.) Capability to recognize a modification performed on a program.
- 4.) The ability to prevent further modification of the same program upon such recognition.
- 5.) Modified software assumes attributes 1 to 4.

If a program lacks one or more of these properties, then in the strict sense it cannot be considered a virus program.

Now that we have explained how a virus operates and what a computer virus is, we should explain some types of programs which are often confused with viruses.

WORMS

The first is the classic worm program. This is a program which reproduces itself by creating copies of itself. The essential difference between this and a virus is that worms don't require a host program in order to reproduce. Worms "creep" through all levels of a computer system

without using a carrier program.

LOGICAL VIRUS

Another type of program which might arguably be called a virus is the logical virus. These programs not only modify their host's programs, they delete them entirely and take their place. This can be done through simple renaming, for example: If A is a virus and B is a user program, then renaming A to B makes B appear as a virus.

TROJAN HORSES

The third example is the Trojan horse. The basic idea of this type of program is at least as old as the original Trojan horse. The operation is as simple as it is dangerous. While the user is mesmerized by a fantastic graphics display, perhaps even accompanied by music from the system speaker, the program reformats the hard drive unnoticed.

DANGERS OF COMPUTER VIRUSES

Manipulations of data or programs are as old as electronic data processing itself. Why then are virus programs causing such a stir? Perhaps the new name for these programs plays a significant role here. In the times of much discussion about AIDS, the term "virus" coined by computer scientists was just what the press was looking for.

The fatal part of virulent program code is primarily that virus

programs develop a life of their own, upon which the developer of this program has only limited control once the reproduction has begun. It's similar to a chain reaction in an atomic reactor - once the process has started, it can only be stopped with great difficulty. But this brings us to another point. In earlier computer systems it had required detailed system knowledge or long-term access to the computer to bring about certain data manipulations, but now it is very easy to perform this task with virulent code.

AN EXAMPLE

A would like to cause harm to B by making all of the data on B's computer unusable. Naturally, this can be done without virulent code with a memory-resident program which has the task of erasing the stored data at a designated point in time (such "jokes" are most often found in software from dubious sources). But first is the danger that the memory-resident program will be discovered or will be removed when the computer is turned off, and second, even after the deed has been done it's not particularly difficult for B to restore the destroyed data from backup copies.

When a virus is involved, the danger of A being discovered becomes much smaller.

The virus reproduces itself and within a short time has infected all of the programs. The infected programs are still executable, however. The virus function is to encrypt all of B's data. Since all of B's programs which are infected with this virus possess this encryption algorithm and can put the data into a readable form before being processed, the computer can be used as usual. The condition prevails until all of B's backup data has been encrypted without his knowledge.

Now if B's already infected software is erased on a given date, then not only is all of the original data useless, but so are the backup copies, since the en-

rypted data can only be processed by the infected programs.

This is only one example of the dangers of virulent software. Since the programmer of viruses is subject only to the limitations of the computer system in question, all of the tasks which can be performed on the system can be included in a virus. But this condition alone does not make up the real danger of computer viruses. The greatest threat is the enormous propagation speed of the virus. This was demonstrated by the invasion of the ARPAnet computer system in 1988 by a non-violent virus. Another example is the Macintosh "peace" virus which appeared on over 350,000 Macintosh computers on March 2, 1988.

VIRTUALLY IMPOSSIBLE TO TRACE.

As we have already said, one of

the greatest dangers of virus programs is the relatively small risk involved to someone using viruses for criminal purposes. When virus programs are placed on networks or mainframes it is almost impossible to determine the origin of the program. But the problem does not just lie in the inaccessibility of network structures. The origin of virus programs can be completely hidden with a bit of care. This is not even considering the fact that a carrier program can be removed from the system after being started without breaking the infection chain.

If you continue to think along these lines, you quickly come to the conclusion that after a successful penetration and propagation, viruses must either destroy themselves or transform themselves into harmless, non-virulent programs in order to minimise the

risk of detection as much as possible. If you follow this direction a bit further, you come to a type of virus which is really not far removed from organic life: programs which do not infect their hosts continually, but which remove themselves from these programs after a few replications.

You can imagine how difficult it would be to trace this type of virus. There is almost no risk at all to the perpetrator, since he probably won't leave a copyright message in the program. If it's not possible to trace the source of the virus through technical means, then really the only way left is to deduce the perpetrator based on the goal which seems to be pursued by the virus.

If a virus program performs manipulations in favour of A, then it naturally follows that A intends to reap some financial benefit or that B is trying to throw suspicion on A. The chances of finding the perpetrator based on the type of manipulations shrink to a minimum when the manipulation is of a destructive nature (e.g. FORMAT:).

If B wishes to perform manipulations to his advantage, we must consider what sort of manipulations will be performed. But here again it comes down to the point of view, because a disadvantage for A can be quite advantageous for B, if A is a business competitor of B, for example.

But despite all this, no matter what type of manipulations have taken place on a system, it would be a mistake to destroy all data and programs. Upon discovering a virus this would rob you of the possibilities of tracing the virus based on its manipulation task.

As long as the purpose of a virus infection is to destroy all data and programs, it remains relatively safe for virus programmers to pursue dubious goals with such software. ■

THE GUIDES BY YOUR SIDE

The Abacus Beginner's Series is a set of books covering a wide variety of software applications. They're written for today's personal computer users who have limited time. The authors' goal is to make you more productive sooner. Each book is written in easy-to-understand language. These books remove the *computerese* that new readers find confusing. They present carefully chosen, practical examples and avoid lengthy theoretical explanations. Beginner's Series books show you how to use the important features of an application step-by-step. You'll be "up and running" quickly.

Bob's Batch Bag #3

Bob Waixel is back with more handy hints for those of us who have decided not to let DOS get the better of us.

This is the fourth in a never-ending set of articles for people who want to be lazy with DOS. In other words, getting DOS to do more work, and the user to do less repetitive typing!

GOTO AND LABELS

BACKGROUND

DOS's batch command language is not the most flexible or 'rich' in the world. Indeed it could politely be described as 'orrible'.

It does have conditional processing ('IF' statements to you), but only single lines are directly affected by each IF statement.

Does it have:

DO...WHILE, REPEAT...UNTIL, FOR...NEXT loops?

Not really, if you exclude the

FOR %%variable IN (set) do (command)

construct, which I haven't found a use for yet!

But you can simulate some of the above, to a limited extent, using IF and GOTO (label).

SYNTAX

GOTO will jump (pass control) to a label, when the label is in the form :LABELNAME

EXAMPLE DEMONSTRATION BATCH FILE (BOBTEST4.BAT)

```
ECHO OFF
rem
rem BOBTEST4.bat
rem
rem Batch file example to test whether a parameter
rem (e.g. a filename) has been entered as %1
rem
:TEST_FOR_PARAMETER_(DUMMY_LABEL)
IF "%1"==" "goto no-param
IF NOT"%1"==" "goto IS_PARAM
```

```
rem-else
rem-(shouldn't get here!)
goto END
:NO-PARAM
echo.
echo.You should have entered a parameter
echo.as well as the batch file name
echo.
GOTO:END
:IS_PARAM
echo.
echo.Parameter entered was %1%
echo.
GOTO END
:END
echo.
echo.-%0 batch file terminated-
echo.
```

COMMENTS

- All Labels MUST start with a colon (:) and be spelt the same as their corresponding GOTO statement. Upper, lower case or a mixture doesn't seem to matter.
- The GOTO statement may optionally have the colon prefix or not.
- Only the first 8 characters of the label are significant. Any more are disregarded, so that two labels which are the same for their first 8 characters are regarded as identical by DOS and only the first is jumped-to, every time!
- Labels can contain underscores (_) and hyphens (-).
- Spaces seem to be allowed, but I'm not sure whether DOS regards the lot as a label or only the bit up to the space. I would avoid spaces in a label, for safety's sake.
- I often use labels for documentation. That is provide a label which describes the chunk of code what follows, but which is never actually used as a jump-destination. It still needs its leading colon however, to prevent DOS spitting it

out as an error.

- DOS processes all labels by searching from the top of the file, so that very long batch files may take longer, particularly if they are searching for a label near the end.
- So instead of

```
goto :END
```

from various points to jump out of your mega-batch-file one tip to speed it up could be to create an END.BAT and stick it away somewhere in the PATH.

END.BAT would just be an empty file. Then: END in your batch file, would call END.BAT and since control doesn't pass back from another batch file, the effect would be the same, but faster.

- The disadvantage, is that two files are now needed, and there is an extra level of complexity to cope with if moving such files around.

ONE TIP

DONT put > or < in any text that you ECHO or REM in a batch file. DOS, being the smartie that it is, will think you're trying to redirect something, and react with an error message that you really can do without, and may well ignore anything subsequent on the same line, to add insult to injury.

THE SUBST COMMAND

SUBST stands for Substitute, and it allows you to

fool around with DOS and any other programs that need fooling, that one drive is called something else!

It has two main uses that I know of:

1. STRAIGHTFORWARD SUBSTITUTION

Perhaps a bit of software wants to always have its own disc in A:, and you have a hard disc called C: which you want to use instead for that purpose without keeping your A: drive as a waste-disc receptacle.

```
SUBST A: C:
```

where the FIRST drive (without any backslash please) is the 'artificial' name you want to pretend it has and the SECOND name (which must have a valid path - hence the backslash) is where you want the first name to point to.

You can find out if this has worked by typing SUBST. which will show a list of substituted drives in the form

```
SUBST
```

```
A:=>C:\
```

Almost any error will give the (un)helpful message 'invalid parameter'.

Note that you cannot use any letter you choose - that would be too easy! DOS - unless kicked into action - only recognises drive letters up to E. To get DOS to recognise more, put a statement in your CONFIG.SYS in the form

```
LASTDRIVE = Z
```

Now DOS will recognise drive letters up to and including Z:. It is but a short step to the second use of the SUBST command.

2. SUBSTITUTION OF A FULL PATH INCLUDING SUB-DIRECTORIES

For example:

```
SUBST W:C:\TEXT\WORD\1989\LETTERS
```

If you need to access this directory rapidly without a lot of cd\ typing, or don't want your path to be too long then SUBST is a way out.

TO REMOVE A SUBST DRIVE

```
SUBST W: /d
```

NOTES, TIPS AND TRAPS

SUBST (and its deletion) are woefully slow to execute.

You cannot backup a SUBST drive!!! **SO ALWAYS REMOVE ALL SUBSTITUTED DRIVES BEFORE DOING A BACKUP.**

I know of no way to test whether a drive has been substituted with a DOS batch file, although an attempt to SUBST a second identical drive will give the ever helpful 'invalid parameter' message, and then chunter gaily on.

Attempting to SUBST a floppy disc drive is, as far as DOS is concerned, an attempt to read that drive, and will fail unless there is a diskette there. ■

You will also find another reference to the mythical "<MO>and" appearing at the beginning of the third paragraph in NOTES.

It must be caused by some disagreement between the word processor in which these articles are written, and the production process by which all articles are transmuted into typesetting. Not to worry, it won't happen again.

MASTERFILE PC VERSION 3

Integrated Data filing, Document filing, Word-Processing, Mail-Merge

Every business has two kinds of filing requirement: data field-oriented which we call Data filing and free text which we call Document filing. The traditional approach was to have one program for each - a database (DB) and a word-processor (WP). MASTERFILE PC has already established its reputation as a high-power relational DB at a popular price, but now with the version 3 we have added a powerful WP function. And since both DB and WP functions are managed by the one program, only one system of menus and dialogue need be learned, and there is a natural data-merge function to combine data with text into a mail-merge operation.

MASTERFILE-DB

Address lists • Sales Ledger • Bought Ledger • Inventories • Stock Control • Patient files • Job progress • Price lists • Bank analysis • Shares Portfolio • Photographic index • Property Details • Invoices

There are two main kinds of DB system on the market; those that require time and programming skills to set up and those that have virtually instant usability. MASTERFILE with its totally menu-driven approach is of the latter variety; and yet it offers huge flexibility in data presentation and manipulation.

MASTERFILE Data Filing is unusual in that it offers variable-length records within a direct-access file with a capacity of up to 16Mb or 32,768 records. There can be up to 80 data fields per record, each variable-length up to 254 characters, and data can be character, numeric, or date. Up to 32 user-designed screen/print formats can be used, so that from one data file you can present data as a summary index, and index card, mailing label, whatever, and add such effects as heading, boxes, panels. The relational aspect means that any record being displayed can pick up data from up to four other data files on a key-match basis.

An essential ingredient of a DB system is to be able to search the file and pick out records which match a given set of criteria. MASTERFILE's search functions are impressive and it can search on multiple criteria on any data (not just key fields), with speed and ease.

Arithmetic operations can be defined to operate on and derive numeric data e.g. taxes, percentages, price mark-ups. You can

even perform date-arithmetic such as is required for ageing of accounts and subscription renewals. The logic can include IF/THEN/GOTO constructs for the sophisticated user.

Printing is buffered, so that up to 5 pages of printing can be stacked while you use the program to get on with other tasks. Printer controls can be set to control style and pagination.

We could also mention sorting, import, export, encryption, passwords, date-stamping, serialising, and host of other features - but we don't wish to bore you; if you wish to know more, just ask us!

MASTERFILE-WP

• Letters • Reports • Memos • Journal Extracts • Bibliographic references • Your Next Novel.

Just about every PC user already has some kind of WP system, but the chances are that yours is the kind where each document is a separate DOS file. With MASTERFILE, you can keep all your documents in one large DOS file (up to 16Mb), and manage all your letters, memos, journal extracts as individual documents on a private directory basis; except that our directory (we call it an Index) lets you have useful 30-character names and you can search on the basis of document name, date of last change, or on the text contents themselves. In effect MASTERFILE combines the searching power of DB with the free-format text handling of WP.

MASTERFILE WP Document file has its own selective back-up/restore system, and you can also import and export text files from and to other text systems.

MASTERFILE WP allows up to 6 documents to be open at a time, using the same window or different windows, any of which can be adjusted for size, position, style and colour. The basic WP functions are all there, and some novel ones too - such as 'spot' colour to highlight your text. You can tailor your own printer driver and expansion keys simply by editing two specially-named documents. Maximum document size is 64K, about 20 pages.

Printing options include multi-copy, partial print, pagination, headers and footers, left margin, system date/day/time stamps, serial

numbering. And you can arrange selective text insertion from a MASTERFILE DB file for a mail-merge and several-across label operations. Printing uses the same buffer system as DB, leaving you free to do other tasks while a document is being printed.

HELP AND LEARN

The detailed manual is augmented with tutorial and several demonstration files. And, for the new (or the forgetful) user, HELP can be summoned at the press of a key to augment whatever menu you are looking at. There is even a facility for customising your own HELP frames using the WP function. MASTERFILE can learn too! To program a function key, you just press the 'LEARN' key then use the system normally, then press the function key. Or, you can store the function key in the file for long-term use.

How can MASTERFILE combined DB and WP program run in only a 256K MS-DOS environment? The answer is because it is compact, being totally coded in Assembler - unlike most other commercial software. If you have 512K or more, then MASTERFILE will make even better use of the available RAM. And the minimum disc configuration? Just one floppy. But users with hard discs can take fullest advantage of the large capacity. And what about the monitor? Any type from monochrome to VGA, and yes of course you can customise your preferred colour scheme.

MASTERFILE PC will run any PC-compatible, including any Amstrad PC/PPC, and is available on 3.5" or 5.25" formats in two editions:

Standard: DB only, but with read-only/demonstration WP functions.

Full: DB + WP

You can start with Standard and upgrade to Full later. Campbell Systems in the U.K. also offer upgrades to registered users of MASTERFILE PC version 2 or earlier.

Prices, incl P&P are **\$199.00** (Standard) or **\$269.00** (Full). All mail order enquiries to:

The Amstrad User
1/641 High Street Road
Mount Waverley 3149

or in Melbourne call at The Amstrad User computer shop, also at the above address.

Adults Only!

As computer games become more liberated, Simon Anthony takes a peep at the seamier side of some selected PC software.

Readers born in the 'baby boomer' era would have grown up with a significant change in moral attitudes across a gamut of books, stage or screen productions, newspapers, magazines and so on. Of course, there could have been a slow change over the last hundred years, but I am not an authority (nor old enough!) to make any historical judgements.

What I can comment upon is the apparent accelerating acceptance these days of things which would have been considered risqué or worse a few years ago. It is inevitable therefore, that computer software has become 'liberalised' - witness the number of 'adults only' titles appearing on the market. Again, I don't propose to present you with my opinions or provide a judgement in the 'mine field' of moral issues - rather, I will leave it up to your adult minds to make the final analysis. All I will say is that my standards dictate that my children won't get to see them until they are much older.

BAR GAMES - 5.25" OR 3.5" - \$59.95

There are five "games" to play in this package, but I can't believe that they all take place in a typical American bar. First there's Liar's Dice in which you play against the barmaid. The idea is to guess the best possible hand that combines your dice with those of the barmaid and provokes a one-sided conversation from the opposition as she thinks about her next bid. Next comes Last Call where you are the bartender with the job of sliding beer mugs down a long three-tiered bar to thirsty patrons. There are one-hour shifts over four nights (ie. four levels) each getting progressively harder.

Then there's Wet 'n' Wild, a wet T-Shirt competition in which you have to dump as much water as

you can from a catwalk onto a contestant on the stage below. To keep things even, there are two females and two males to drench. It's pretty easy to start with, but as you move through the levels many obstructions appear to hinder your progress. Next is Air Hockey where you use a paddle to knock a puck into your opponents goal. There are four opponents, and each has to be beaten 2-1 to pass onto the next round.

Finally, there's Pick-up Artist - perhaps the real meaning of Bar Games. Three young ladies are sitting at the bar and by selecting a relevant question to one of them (a bit like Emmanuelle in some respects) you get a considered response. This could be the big brush-off, or could open up a conversation to discover which girl is wearing the flower in her hair. If you can satisfy her conversational desires on the first night (Thursday), you get to take her out on Friday to talk some more, then Saturday if successful again. Succeeding on all three nights gives you the big Weekend Reward - but I didn't get that far so I can't tell you what it is.

Bar Games: wet T-shirt competition.

Bar Games: Pick-up Artist's playground.

DR. RUTH'S GAME OF GOOD SEX - 5.25" - \$47.95

Dr. Ruth Westheimer is well known for her talk-back programmes to 60 cities across America. The 'Sex Clinics' have gained popularity through her unique brand of frank, down-to-earth and very often humorous responses to questions.

This computer game is for one to seven players, with an opportunity to answer up to eight questions per game covering love, sexuality, marital problems and other relationships. There are two types of questions. The true/false questions consists of four statements with just one being either true or false compared with the other three. A question from the

Sex Clinic files provides the second type of question - in this case the player must choose one of four answers he/she thinks Dr. Ruth would give to the question presented. This is a bonus question and is earned by scoring well in the first section. Scoring is based upon the time taken to answer each question.

With two or more players, there is a knock-out round where the two players with the highest scores are assigned four keys each on the keyboard. The first person to answer gets the points (or penalty).

This game is clearly for adults only as most of the questions would go straight over a youngster's head. Even so, many adults will be surprised by the frank nature of the questions and probably even more surprised by the correct answers.

EMMANUELLE - 5.25" - \$39.95

This is a game adapted from Emmanuelle Arsan's novel and takes place in the heart of Brazil. The idea is to track down the location of Emmanuelle and fly off with her to Paris. How you achieve this depends upon your luck (or experience?) in asking the right question in the right place. The game is peppered with attractive women (and an occasional male) who may be able to provide a clue to Emmanuelle's whereabouts, but they must be treated in the right way.

It's not a text adventure by any stretch of the imagination. All conversations are carried out by initially selecting from a list of questions you may like to ask. The kind of response will depend upon the question and character asked. It may cost money to get the character to reveal some information, and you will soon find yourself a bit short of cash. This can be replenished by gambling successfully at the casino. You may also run out of more energy if you choose to engage in carnal activity - represented somewhat modestly with shadows behind a venetian

Emmanuelle: steamy scenes in the heart of Brazil.

Challenge your knowledge of love, sexuality and relationships in Dr. Ruth's first computer game.

blind.

You may also get involved in smuggling. From a "topless" beach are anchored two boats. In one, a voluptuous woman is ready to whisk you away, but in another is a swarthy looking male who, if answered correctly, will give you some contraband to deliver to the town. Visiting the town without the illegal goods spells disaster.

Small gold statues can be earned by performing various feats or actions and if you can accumulate enough, provide extra skills.

Emmanuelle is an unusual game and requires quite a bit of playing before you are likely to get the hang of it.

LEISURE SUIT LARRY - DUAL - FROM \$59.95

This is a humorous 3-D graphic adventure series from Sierra, numbers one and two are already available with number three due shortly. They all star 'super-nerd' Larry Laffler, the kind of guy you are likely to meet in a seedy singles bar. He is usually dressed in a white leisure suit and an open necked shirt revealing a number of gold chains to make up for his lack of chest!

In Leisure Suit Larry 1 (In the land of the Lounge Lizards), the object is to help Larry overcome his jerkisms and

First with the Best!!

TEMPLE OF APSHAI TRILOGY

The three classic APSHAI arcade adventures now all in the one package. The realms of APSHAI are threefold. First, the **TEMPLE** - its power lashes out at those who dare to enter. To survive, your war-like spirit must be raised to a fever pitch. Second is **UPPER REACHES OF APSHAI** - which know tragedy and magic. It also knows the path of the spirit. The final chapter is **THE CURSE OF RA** - blinding sands and rooms of mazes which are the sanctuary of the Sphinx, the last mystery.

Requires CGA card.

PERSONAL NIGHTMARE

Why has your father, the dutiful local vicar, neglected his parish without any apparent reason?
Why has Jimmy Blandford suddenly taken to drinking heavily?
Why did your mother invite you to stay for the weekend, and then disappear without a trace?
What horrors await you behind the closed doors of the burnt out manor?
Are you ready to meet a vampire and to do battle with a crazed hound straight from HELL?
Are you ready to be terrified beyond your wildest dreams?
Are you ready for your own Personal Nightmare?

Requires CGA or EGA card.

BUFFALO BILLS RODEO GAMES

Dust off your duds and spit polish your spurs, Buffalo Bills Rodeo Show is coming to town. Compete in six unique events, Knife Throwing, Trick Shooting, Calf Roping, Steer Wrestling, Bronco Riding and the Stage Coach Rescue.

Requires CGA card.

LEGEND OF DJEL

As the son of a disgraced magician, it is now your duty to release the land of Djel from the grip of three fearful sorcerers. TEMPLE OF DJEL features breath taking graphics, stunning special effects and numerous locations and problems to keep you guessing for months.

Requires CGA, EGA or VGA cards.

ATLAS EXPLORER

Welcome to the world. ATLAS EXPLORER will take you on a round the world trip from the comfort of your computer desk. It contains facts and figures on literally hundreds of countries. It gives details such as currency, population, area, boundaries and more. There is even a quiz section to test your knowledge of the globe.

Requires CGA card.

NEWSROOM PRO

The NEWSROOM PRO is an advanced, more powerful version of the best selling NEWSROOM. It's easy to learn, fast to use and very efficient in operation. It's ideal for designing and printing out newsletters that combine text and graphics in any way you desire. The NEWSROOM PRO has a built in graphics section, so you can draw directly onto your newsletter, plus it is supplied complete with over 1200 pieces of CLIP ART, ready to import into your document. Further volumes of CLIP ARTs are available.

Requires CGA card.

SPRINGBOARD PUBLISHER

Hello Springboard Publisher, ...Goodbye Word Processing!
This is the most accessible DeskTop Publishing program ever published. Although it is extremely easy to use, it still has all of the features that are making the "big name" DTP programs look over their shoulders. SPRINGBOARD PUBLISHER does not concentrate on page layout as do most other DTP programs, it combines word processing, graphics creation and page layout into an elegantly designed, simple to use package. The results can be as simple as you need, or as complex as your business demands.

Requires '286 or '386 computer, Hercules, CGA, EGA or VGA card.

Available from: John Martins, Harris Scarfe, Harvey Norman, Grace Brothers, Computer Base (Castle Hill & Bankstown), Maxwells of Rockdale, Ettalong & Melbourne, Steve's (ACT) or other retailers around Australia.

For the nearest retailer in your state contact:

More wares to share...

Another month and another pile of PC Public Domain goodies as Chris Collins offers a special treat for WordPerfect 5.0 users.

Hello out there, and welcome once again to that funny little column that helps you get a bit more fun out of your PCs! This month we have some news, as well as a change of address, and also some new diskettes. Now that the Christmas period has passed us by, and the children will soon be starting back at school, it would appear that it may be time for us to get serious again.

First things first! I have had to move house, due to the owner of the last one selling it out from underneath me. So as of now, please address all correspondence and orders to the following address:

**MacroDisk
Unit 2, 47 Vernon Street,
South Kingsville. Vic 3015**

Any that had been addressed to the old address should have been filled by now, but if you did address an order to the old address and it hasn't been filled please let me know. I do have a question for most of you though. If I installed a fax machine so that you could fax your orders, as well as access to VISA, BANKCARD and MASTERCARD, how many of you would use it? Please let me know, and if the response is good enough, I will install these extra options for you. There would be a surcharge on the cost of diskettes for the people using this method, but most probably it would only

increase the cost of diskettes to \$8 per diskette. This would cover the cost of the banks charges for the use of the credit cards, and the extra for the fax machine.

I have had a new delivery of diskettes from the States within the last 3 weeks, and am slowly sorting them out. As I go through them and find all these little gems, I will bring them to your attention. Also, a lot of people have been asking for a catalogue, and I now have one of these available. It fits onto one diskette and comes with a program to let you read the file. All the diskettes are listed in alphabetical order, with a list of files on the diskette as well as a short run-down on what the program is, and what it does. I have tried also to include the author's name and the registration charge, if I could find this out. I hope that you like it. If anybody wants a copy, simply send an order for the CATALOGUE diskette at \$7.50 to the above address.

WORDPERFECT!

For all the WordPerfect freaks out there, I have a special for you this month. A couple of the new programs just out from the States are for WordPerfect v5.0 users. The first is a pair of diskettes called the WP5.0 Learning System.

WP5.0 LEARNING SYSTEM

This is a two diskette package from a company called ECC Learning Systems, and it has a

shareware registration charge of US\$79.95. It is a wonderful slide show, which when combined with the WordPerfect workbook, takes you by the hand and leads you from being a beginner to being an expert with WordPerfect v.5.0. You do receive a lot of additional extras when you register, including a commission on every copy of your program that is registered by your friends, as well as a free update, a new workbook and much much more. This makes it well worthwhile.

The WordPerfect v5.0 user that I asked to check out this program came back to me raving. He said and I quote "This thing really s___s all over the WordPerfect tutorial." Please excuse the French, but he is a little rough (even though his heart is in the right place).

The same company also has a copy of this program for WordPerfect v4.2 that I am waiting on to come from the States. However, the first release did have a bug in it, and it has been recalled to be fixed before general release.

WP5.0 MACROS

This is a diskette of over 90 macros ready to run with WordPerfect v5.0 or later. They are all drawn from the book 'WordPerfect v5.0 Macros and Templates' and are copyright to the author of the book, one 'Gordon McComb'. This book is published by Bantam Publishing. These macros do not

require a registration fee, they are yours to use as you see fit.

The macros that are on this disc are best listed in the file DISK.DIR. This is a WordPerfect file, that fully explains them. This diskette also includes a game, created entirely out of macros. It is a simple adventure game, but it does give you some idea of what can be done.

I believe that these diskettes are a must for all WordPerfect v5.0 fans!

SYDEX UTILITIES

This is another two diskette collection, and it includes a group of utilities from a company called Sydex. These are listed below, with a quick run-down and their registration fee; *22NICE124.ARC*:- A Z80/CP/M emulator that is very good, and very fast. Registration fee is US\$30.00 however, this does include a registered copy of *22DISK* as well.

22DISK124.ARC:- A program that lets you format and copy from around 100 different CP/M formats. Similar to PC Alien (an Australian product, probably the best of its type in the world). Registration fee is US\$15.00. *ANAD132*:- A complete diskette utility similar to MACE or the Norton Utilities. This is a program not for the faint hearted! Registration is US\$15.00.

CNFMT102.ARC:- This is probably the only program of its type available. A background diskette formatter. Format diskettes whilst running another program. Registration is US\$15.00.

COPYQ162.ARC:- This is a diskette copy service: copies, formats and verifies many diskettes from one master. Registration is US\$15.00.

FORMQ153.ARC:- This is a bulk diskette fast formatter. Will format a box of diskettes in nothing flat! Well that is an exaggeration, but it does format a lot faster than DOS. Registration is US\$10.00.

TELED105.ARC:- Copy a diskette to a file, and vice-versa. Do remote diskette copies. Handles any known kind of diskette. Registra-

tion is US\$25.00.

Please note that all of these registration fees are quite reasonable, and I suggest that if you use any of these programs continuously, you should register. Documentation on all of these products runs to quite a few pages, such as 5 pages only for *CNFMT102* and *FORMQ153* to 23 pages for *22DISK124*. None of the programs appear to be crippled in any way, but Sydex do offer you some incentives to register. To find out what they are, read the documentation.

UPDATES!

Some of the updates that have arrived in the last couple of weeks include the following:

Express Calc:- Now up to version 4.0. This is a major upgrade from the old v3.18. Still occupies only two diskettes, but the program has now been rewritten in 'C' so that only one executable file is required.

File Express:- Now up to version 4.27. The new revision has grown to 3 diskettes instead of the two that it was before. Yet again, *File Express* has been re-written in 'C', and for the same reasons as above (probably as they both come from the same company). The third diskette in the set has a lot of sample data-bases on it, including report formats, so that you will

have something to learn from.

Fastbucks:- Another upgrade past the version 4 mark. This one is now up to version 4.1. Now grown to two diskettes, *Fastbucks* is a wonderful financial management system for personal or business use. Although the file format for the data files has changed, the new program will automatically convert the data files as you install the new program.

Hard Disk Menu 3:- Has just been upgraded from *Hard Disk Menu 2*. As yet, I haven't had a good chance to have a look at this one, but it appears to be a major update. Still on one diskette.

Wampum:- This has been upgraded from version 3.2B to version 3.3S. It appears to fix the problem about dates in 1989 that v3.2B had, and now fully occupies one diskette so it has obviously been expanded.

Telix:- Talk is from one of my contacts that *Telix* has been upgraded to version 3.12. Apparently a bug fix with a few extras thrown in; I hope to have a copy within the next couple of days. Also available now are mouse menus to run *Telix*. I will be putting these on the original *Telix* diskettes as soon as I finish testing them.

Well, that about finishes my rambling for now! So until next month. Keep on COMPUTING! ■

Life on the ocean waves was never as much fun as these games!

PC-SOFT is a new series of disks containing games or utilities for the Amstrad range of PC computers.

The fourth disk to be released is PC-SOFT#4, in either 5.25" or 3.5" formats, and contains the following:

CRIB6.EXE

This is a full version of the popular card game for two players complete with cribbage board and score card. You can use the keyboard or the mouse to play the cards by simply pointing at them. For the uninitiated, each player takes a turn in playing a card to score points as they are laid. When all the cards have been played, they are scored individually and added to each player's accumulating score on the pegboard. The first player to 121 is the winner. There is a cheat mode whereby you can use the reveal option to show you your opponents cards.

GALACTIX.COM

Your crippled spacecraft, the USS Galactix, has crash landed on a planet after colliding with a meteorite. You were trying to get back to Earth at the time and unless you find five specific items to repair your ship, you are doomed. Naturally the planet is hostile being patrolled by robots and guards. You can 'get' objects, 'use', 'drop' or 'examine' them by using icons displayed on the right of the screen. Energy will be lost quickly if you come into contact with the inhabitants. Food and drink will replace lost energy. There are many puzzles and they must be completed in order to complete the game.

JASON.EXE

Trapped on an alien planet and surrounded by mutated plants and animals, you have to guide Jason around numerous obstacles to gather up the heart shaped crystals. Part of the screen gives way under his feet if he dawdles, so planning is essential. Four lives are provided and you lose one if you touch a flower or a hollow head.

RIMTRIX.COM

A real brain teaser, RIMTRIX involves a series of slideable tiles each bearing a pattern of tracks. Coloured balls are collected from the left of the screen and directed to their relevant coloured cups on the right of the screen by moving the tiles and creating a path for the ball. If the ball falls into an area without a tile, the ball is lost.

Tiles can only be moved if in a position to be moved (ie. next to a black space) and can be moved left, right, up or down and even rotated. Keys can be redefined if required, but the game defaults are the arrow keys and the space bar to rotate. You cannot rotate a tile with a ball in it.

SNAKE.COM

There are lots of 'Snake-style' games around, but this one is different. The aim is to gobble up all the yellow apples, which are replaced elsewhere on the screen with red apples. Eat the red apples and they are replaced with poisonous mushrooms which must not be touched or you're dead. They can, however, be destroyed by spitting venom at them. Steering is different in that the snake will always turn left or right in relation to the direction in which it is travelling. There are many levels.

WEASEL.COM

A demonstration of the power of natural selection with a given alphabetical phrase. The program takes a completely random set of letters and with each generation uses a pre-set probability to decide whether a given letter will mutate to a random one. If this is the case, and the new letter is in the target phrase, it is deemed to more closely suit its environment.

HAVE YOU UNEARTHED THESE TREASURES YET?

PC-Soft #1

19 Basic2 programs for the PC1512 and PC1640.

PC-Soft #2

8 games for all Amstrad PCs and other PC compatibles.

PC-Soft #3

24 utilities for all Amstrad PCs and other PC compatibles.

Note: PC-Soft #2 and #3 are also available in 3.5" format for \$15.00

5.25" format will be supplied unless 3.5" is requested

To get your copy of PC-SOFT#4, simply send \$12.50 (plus P&P), or \$15.00 (plus P&P) if ordering a 3.5" format, by cheque or money order (or quote your Bankcard, Mastercard or Visa number with expiry date) to:

THE AMSTRAD USER
1/641 High Street Road,
Mount Waverley, Victoria 3149.

Or ring (03) 233 9661 with credit card details.

5.25"
\$12.50
(plus P&P)
3.5"
\$15.00
(plus P&P)

Next month we release #5 on 5.25" and 3.5". More Utilities for all Amstrad PCs!

Hint Sheet

JINXTER

by - name not provided!

Bedroom:

Look in the wardrobe and the cello case. You will need the things you find here much later in the game.

Kitchen:

The tin opener could come in handy for opening a tin! You need to freeze something in the fridge. Drinking the milk will provide a handy container.

Conservatory:

You need something from here - something red!

Back garden:

Leave the secateurs - you don't need them.

Grassy field:

Did you find something red? Wave it at the bull, then drop it.

Xam's kitchen:

Don't expect to catch a mouse while you're standing there watching - come back later and the job will be done.

Airlock:

Close the hatch, press the left button, have a

look around then come back and press the right button. You won't drown if you're wearing the right equipment.

Bakery:

The baker won't be very impressed if the bread you bake is burnt - he might even throw it out and you with it.

Pub:

Put out the fire and take the ash - you need it later. Don't spend any money here.

Post Office:

You need to post something to the station - it's the only way to get it there, and it will cost you two fergs. It will take 9 moves to open the safe, starting and finishing with the top left handle. You should have 5 charms by now.

Platform:

If you have the right charms, you can change the weather. The rain weatherman can provide you with something useful.

Station:

Now you know what to do with the tap-dancing shoes, the hat, the harmonica and the one ferg coin! Don't forget to

collect the parcel you posted before you run after the train.

Dungeon:

Xam is not ignoring you - he's asleep! If you don't wake him up you'll never finish the game.

Jewel room:

You need to slide the blocks so that each row, horizontal, vertical and diagonal, adds up to 15. It will take 10 moves.

Hall:

The witch wouldn't like ash on her hearth, would she? Hide in the chimney, look into the crystal ball, and wait for the future to become clear.

Would the person who sent this hint sheet in please contact us or we won't be able to give you your \$25! Somewhere along the line we lost your vital statistics! Why not put pen to paper and earn yourself some extra pocket money by sending in your own hint sheet (don't give the whole game away) to:

*The Editor (Hint Sheets),
The Amstrad User,
641 High Street Road,
Mount Waverley, Victoria. 3149.*

Unknown Planet part 2

Hopefully you've completed typing in part one and you're ready to go on this, the second part of Barrie Eaton's latest thriller!

Just think, there's only one month to go and you'll have a brand new exciting adventure to play! So take a rest and ponder the meaning of life. Barrie will be back with part three next month.

Have you joined a

NATIONWIDE USER GROUPS

WESTERN AUSTRALIA

AMSTRAD USER GROUP (BUNBURY)

Chairman: Brian Ballard (097 217 199)
Secretary: John Cohen
Venue: 90 King Rd, Bunbury on the 3rd Saturday of every month at 3pm.
Mail: P.O. Box 77, Brunswick Jn, WA 6224.

AMSWEST (Perth)

President: Thelma Ardron (09 361 8975)
Vice Pres: Neil Firth (09 364 1360)
Secretary: John Miller (09 272 3994)
Asst. Sec.: David Ammon (09 448 5378)
Treasurer: Darryl Dunlop (09 448 6440)
Venue: 293 Bagot Road, Subiaco 6008 on the first and third Tuesdays of each month at 7.30.
Mail: 6 Weston St., Carlisle, WA. 6101.

VIC CHIPS USER GROUP (Amalgamated with Rockingham Quingana Group)

President: Des Nichols
Secretary: Val Hoeksema (09 527 7426)
Venue: Malibu Special School, Malibu Rd, Waikiki every Tuesday at 7.30pm.
Mail: PO Box 540, Rockingham WA 6168

SOUTHSIDE AMSTRAD USER CLUB

President: Brian Pursor (09 398 1168)
Secretary: Lynda Blissett (09 459 6448)
Treasurer: Eric Tytherleigh (09 390 8865)
Venue: Huntingdale Primary Sch., 85 Matilda St, Huntingdale every 2nd and 4th Wednesday of each month from 7.00 pm.
The Sec., Southside Amstrad Users Club, 25 Haflner Crt, Maddington, WA 6109.

AMSTRAD COMPUTER CLUB TOM PRICE

President: Colin Smith (091 89 2074)
Secretary: John Elliot (091 98 1735)
Treasurers: P. & C. Montgomery (091 89 2398)
Venue: Primary School every 2nd Wednesday night. Contact the above for more details.

SOUTH AUSTRALIA

AMSOUTH AMSTRAD USER'S GROUP

President: Drew Ames (085 371 0151)
Treasurer: Bob Bleachmore (085 56 2048)
Secretary: Will Vaughan after 6pm: (08 382 8312)
Venue: Christies Beach High School, Western Section, Beach Road, Christies Downs (adjacent to Staff Car Park off Mander Road) every 2nd Wednesday at 7.30.
Mail: PO Box 612, Noarlunga Centre, SA 5168.

AMSNORTH AMSTRAD USER'S GROUP

Organisers: J.T. Clarkin (08 262 6342)
R. Britton (08 258 7861)
Venue: Lacrosse Hall, Terama Street, Gepps Cross every Wednesday at 7.00 p.m.

AMSTRAD COMPUTER CLUB INC. (SA)

President: Ross Barker (08 374 0565)
Vice Pres: David Simpson (08 373 1693)
Vice Pres: Paul Beard
Treasurer: Les Jamieson (08 356 9612)
Secretary: Debra Dienelt (08 339 1314)
Venue: Torrensville Primary School, Torrensville every tuesday between 6.30 & 9.00pm.
Mail: PO Box 210, Parkholme, SA 5043.

NORTHERN COMPUTING SOCIETY INC.

President: Valerie Clarke (08 248 4031)
Vice Pres: Tony Mackereth (08 281 3968)
Sec./Treas: Graham Brewin (08 258 5320)
Venue: Drop-In Centre, Salisbury North Primary School, cnr. Bagster & Wood Yates Rds every Wednesday from 7.00.
Mail: PO Box 482, Salisbury, SA 5108.

SOUTH EAST AMSTRAD USER GROUP (SA)

Contact: Neil Taylor (087 25 8068)
Venue: Mount Gambier from 1.00p.m. to 4.00p.m. on the 3rd Sunday of each month. Ring above number for address.

VICTORIA

CENTRAL AMSTRAD USER SOCIETY

OVER 100 NEW PROGRAMS for Amstrad CPC's. Schoolwork, games, etc. High quality programs at low prices! Write now for free list to:-

Classified Ads Order Form

This section of the magazine offers you the chance to speak directly to the huge waiting world of Amstrad owners - or would-be owners.

You can place an ad of up to 30 words for just \$7.50. So you could use it to sell a printer, launch a user group or publicize a piece of software you have written.

One thing you can't advertise is the sale or swap of software you've purchased. Such ads can be misused by software pirates.

Just fill in the application form and send it to us together with payment. We'll then place the ad in the next available issue (published 3 to 7 weeks after we receive your order.)

Write your advertisement here, one word per box. If you want your phone number printed, it must be included in one of the boxes.

CONTRIBUTIONS

We accept unsolicited articles or program contributions from readers with a view to possible publication, but in the case of programs we must insist that the coding is submitted on either tape or disc. We just do not have the time to key them all in. The tape or disc will be returned if originally accompanied with a stamped and return addressed padded bag.

WANTED

CPC6128 2nd Disc Drive, spare plug to suit 34 pin. Ring Colin (02) 398 3659 (2pm - 10pm Mon. - Fri.)

USER GROUPS

W.A. PC Owners are invited to join the expanded "Southside Amstrad Users' Club" which caters for all PC and Amstrad CPC users. See "User Groups" for details. Mail members welcome.

CPC & PCW PUBLIC DOMAIN SOFTWARE

The following discs contain compilations of public domain programs put together by the Advantage Computer User Group (in England) and which have been tested under CP/M Plus.

Unless otherwise stated, programs will run on the PCW, 6128 and 464/664 with extra memory and CP/M Plus. Programs for the 464/664 are on the CP/M 2.2 Collection. The discs are supplied in Data

format and contain documentation files to help the user get started and provide instructions on running the programs plus useful sorted directory and MENU systems.

But remember, as Public Domain programs they are supplied on an as-is basis.

CP/M 2.2 COLLECTION

For 464/664 disc drive users with CP/M 2.2. Contains File Manager, Compare, Find, Disc sector editor, Key definer, Bad sector eliminator, Grep, Full Screen text editor, Easy lister, File transfer utility, Unerase erased files, erased files catalogue and many more.

CPC Ref: #430

FULL SCREEN TEXT EDITOR

This machine code editor offers full screen editing, full block operations, windowing, automatic horizontal scroll (line length up to 255 characters), macro functions, word-wrap and formatting, pagination, find/replace, undelete and many user options.

The editor, which is less than 10k in size, is fast because it edits a file entirely in memory. It produces ASCII text files and has enough features to be used as a word processor. A comprehensive on-disc manual is included together with keyboard configuration files for the CPC and PCW.

CPC Ref: #601 PCW Ref: #801

DATABASE

A small relational database suitable for storing simple data and producing reports and forms letters from the data. Offers free format query language with macros and commands plus on-line help. The disc also contains an Inventory Database. Whilst these databases provide a useful introduction and you can use them to set up a full operational database system they are not meant to replace commercial packages for professional or business use.

CPC Ref: #602 PCW Ref: #802

COMMUNICATIONS

Programs to allow data transfer between computers (local and remote), access databases and bulletin boards. UKModem7, New Kermit, MEX and various communications utilities. The disc also contains software for Prestel (Viatel) emulation (PCW only).

CPC Ref: #603 PCW Ref: #803

VIDEO CLERK

Keep track of your video collection. With four Sort options and Forms Management system for printing out the data in order of title number, video number, global alphabetic or unique. Includes extensive on-disc documentation.

CPC Ref: #604 PCW Ref: #804

FIXED ASSETS LOG

Allows you to keep a record of all your assets and their value. For example, at home, you may wish to keep a record of how much money you are spending on your computer or the value of a stamp

collection etc. In business you can use it to keep a record of how much money you have tied up in land, buildings, office equipment, cars etc. It can also be used as a stock-taking program.

CPC Ref: #605 PCW Ref: #805

COMPLETE UTILITIES

• *Newsweep* - one key erase, copy, rename and print, plus many other features. Ideal for sorting out your disc collection quickly and efficiently • *Superzap* - disc sector editor - edit by track/sector or filename. Fully menu-driven with cursor key SETKEYS file • *DiskitA* - multi-choice disc formatter, offers 178k data format for PCW discs and 5.25" second drive formatting • *Unerase* erased files • *Read/write* PCW discs on a CPC • *CP/M v2.2 emulator* • *Make* - allows you to copy files across user areas • *Cleanup* - useful for speedy file deletion • *Lookat* - speedily lists any file in Hex and ASCII • *Screen Dump* (CPC only) • *Password* • *Easy Lister* • *Password Protection* • *File* • *Scrambler* • *File Splitter* • *Directory check*

CPC Ref: #606 PCW Ref: #806

TEXT PROCESSING UTILITIES

• *Sideways* - prints text file sideways on an Epson-compatible printer. Ideal for those wide spreadsheets • *Sort* any ASCII list into alphabetical order • *Word count* - can be used on any ASCII file • *WSClean* - removes higher order bits from a text file and converts it to straight ASCII • *Calendar Generator* - prints out calendar for any year • *Simple Spell Checker* - with starter dictionary and dictionary editor • *Scoring card generator* • *Banner printers* • *Typewriter emulator*

CPC Ref: #607 PCW Ref: #807

DISC ORGANISATION

Catalogue your disc collection and produce a printed index. Useful for speedy location of files and for keeping your discs in order. Library utilities for archiving and saving disc space. File dating system. Squeeze and unsqueeze for saving up to 40% disc space. Menu system - allows menu-driven access to programs on a disc. Completely and easily user-definable.

CPC Ref: #608 PCW Ref: #808

Z80 PROGRAMMER

A complete Z80 Assembler which is capable of converting an ASCII assembler file into a fully executable machine code .COM program. Plus Z80 Disassembler, Z80 Debugger, Z80 Library, 8080 Disassembler, Z80 to 8080 Translator and associated utilities.

CPC Ref: #609 PCW Ref: #809

'C' PROGRAMMER

The Small 'C' Compiler by Mike Bernson. Includes source code and 25k of documentation. Produces executable .COM programs.

CPC Ref: #610 PCW Ref: #810

'C' TOOLBOX

A disc full of 'C' source code examples together with the corresponding executable .COM programs. Useful to those wishing to see some practical examples of 'C'. As a bonus, the programs are quite useful too. The 'C' source was written for a variety of compilers and may need modifying to compile on MIX or Small 'C'.

CPC Ref: #611 PCW Ref: #811

FORTH, STOIC AND 'C'

INTERPRETER

For experimenters interested in using these languages. Documentation is included on disc.

CPC Ref: #612 PCW Ref: #812

GAMES COMPENDIUM

A varied selection of the best machine code programs available for CP/M. Includes Pacman, Snake (PCW only), Chess, Othello, Mastermind, Spellit, Awari, Life, Golf, Polish Pong, Maze, Biorhythms, Word Search puzzle maker, TicTacTo.

CPC Ref: #613 PCW Ref: #813

ADVENTURES

• *Colossal Cave Adventure* which originated on main frame computers. With game save and re-load • *Bestiary* (written in Mallard Basic for either PCW or 6128 Mallard users. Standard CPC users see Adventurer's Attic March 1989) - you play the part of a young prince, your greatest love being to read the ancient bestiaries about strange and often legendary animals. Your task is to find a solution to the terrible blight which, one year, destroys both crops and animals in the kingdom. Includes game save and re-load • *Return from Arg* - a short but interesting new adventure written in 'C'.

CPC Ref: #614 PCW Ref: #814

PCW GRAPHICS (PCW only)

Simple user-designed graphics drawing program. Enables you to create, save, edit and print pictures on your PCW. Plot lines, points, boxes, four fill patterns, easy to use and wholly interactive • *PCW Screen Font designer* with several ready-to-run font sets • *Biomorph* - fascinating, graphic demonstration of natural selection - develop your own bugs! • *Readme* - program to display any ASCII text file in 45 character format on the 90 character screen - makes it easier to read.

PCW Ref: #815

How to order your discs

You may either order over the phone by credit card or by post. *It is very important that you get the reference number correct. CPC and PCW discs are different.* (Software contained on 3" discs only).

The cost per disc is \$17.50. • **BANKCARD, MASTERCARD & VISA accepted** •

• Price includes postage in Australia, overseas add A\$2.00 •

Unless stated otherwise, please add the following P and P charges to your remittance:

| | Australia | Overseas |
|-------------------------------|-----------|----------|
| Order value under \$20 | \$1.00 | \$2.50 |
| Order value from \$20 to \$50 | \$3.50 | \$6.00 |
| Order value over \$50 | \$5.50 | \$10.00 |

By Mail: Send a cheque, money order or quote your credit card number and expiry date (Mastercard, Bankcard or Visa) with your order to the address shown below.
By Phone: Have your credit card and expiry date ready and ring our Mail Order number (03) 233 9661.

The Amstrad User,
 641 High Street Road,
 Mount Waverley, Victoria 3149

MAIL ORDER: (03) 233 9661 - SHOP: (03) 233 9211
 (No Mail Order enquiries at Shop please)

Please Note:

1. Add up the total value of the items you are ordering, then add the postage and packing charge from the table shown at the bottom of each page. Don't forget that some hardware items carry a special freight charge.
2. When ordering by mail, if possible, always quote one or two alternatives. Otherwise call us first to check availability.
3. Most orders can be reserved for up to 7 days pending payment after which they will be released for others to buy.
4. This list is prepared over 4 weeks before publication and reflects the stock holding at that time and anticipated releases advised by producers. The latter are often optimistic.

Please allow 14 - 21 days for receipt of goods.

CPC PERIPHERALS

AMX MOUSE Mk III - with superior ball technology and high resolution movement this updated mouse from Database gives total control and flexibility, and compatibility with Stop Press. Comes with an interface for CPC owners 150.00

CPC CENTRONIX PRINTER CABLE (PL/1)

Suitable for linking a CPC to most printer with a centronix ports, eg. DMP2000, 3000, 3160 etc.
(Note: Pin 14 may need removing) 22.95

JOYSTICK SPLITTER - allows you to use two joysticks at the same time and take advantage of games which have two player options (eg. Gauntlet) 17.50

COMPUTER/TV MODULATOR CONVERTER - an Amstrad unit (MP3) allowing a CPC colour monitor (CTM644 only) to be used as a colour television - all you need to connect is a TV aerial to watch your favourite stations.

SPECIAL CHRISTMAS PRICE (while stock lasts) \$49.95
(Please add \$10.00 for certified post & packing)

MOUSE MATS - keeps Mouse clean 19.95

RS232 SERIAL INTERFACE - for CPC464, 664 or 6128 229.50

MEGADEATH 1 - a unit which attaches between your CPC and joystick to provide rapid or autofire feature. 19.95

64k MEMORY EXPANSION (464/664)

Converts the 464 into a 6128 (except for the ROMs) and gives 128k of memory. Is supplied with bank switching software in the form of RSXs to use the second 64k RAM as storage for screens, windows, arrays and variables. Allows the use of CP/M Plus as supplied on the 6128. Temp. O/S

256k MEMORY EXPANSION (464/664)

Converts the 464 into a 6128 (except for ROMs) and gives a total memory of 320k. Is supplied with bank switching software in the form of RSXs. The 256k can store 16 full 16k screens or four extra banks of 64k. Allows the use of CP/M Plus as supplied on the 6128. 289.00

256k SILICON DISC SYSTEM (464/664)

Provides 256k of RAM disc accessible many times faster than the conventional drive and with a greater disc capacity. It can be logged on as drive B or in a two drive system as drive C. Data can be transferred onto the silicon disc from a normal disc or from RAM, application programs can then work on the data at vastly increased speed. Will accept all normal disc commands such as LOAD, SAVE, CAT etc. 329.00

256k MEMORY EXPANSION (6128) 289.00

256k SILICON DISC SYSTEM (6128) 329.00

CPC UTILITIES

| | | |
|--|-------|-------|
| Model Universe - 3D rotating drawing | 54.95 | - |
| Rampak - nearly 50 m/code subroutines | 44.95 | - |
| System X - 40 new Basic commands | - | 19.95 |

JOYSTICKS

STAR CURSOR - very tough, all Australian designed and manufactured joystick with three year guarantee. Fully micro-switched, fire buttons on base and handle. Adjustable 4- or 8-way action. 54.95

BINDERS for magazines

BINDERS - in white vinyl with THE AMSTRAD USER logo in silver on front and spine. Protects twelve copies. 12.95

MISCELLANEOUS

MINI SUPER CLEANER - a small hand-held vacuum and/or glower to clean out difficult to reach areas such as a keyboard. Small brush and pipette attachments supplied. *Requires 2 x 1.5 volt batteries - not supplied* 27.95

GIFT VOUCHERS

Gift Vouchers are an ideal gift for birthdays (or any other occasion for that matter) which allows the recipient to make his or her own choice of computer merchandise.

Any value of voucher (over \$20) can be purchased, but must be used through The Amstrad User Mail Order service or The Amstrad User Computer Shop, our retail outlet in Mount Waverley.

To order by mail, send your cheque, money order or credit card number with expiry date, along with your name and address (this is to where the voucher will be posted) to our address shown below.

THE AMSTRAD USER

Completes the picture every month.

Why trudge to the newsagent every month when you can receive twelve monthly issues of Australia's largest selling Amstrad magazine for the price of ten? Get in touch. Get The Amstrad User.

Please send me 12 monthly issues of The Amstrad User. I own/intend to own a _____

I would like: the Magazine only _____ Magazine plus cassette of programs appearing in that issue at \$80.00
 at \$45.00 (tapes are not suitable for PCW or PC owners)

I wish my subscription to start with the current issue or Please start at Issue No

I enclose a cheque or please charge my Bankcard, Mastercard or Visa for \$ _____

The number is _____ The card expires on _____

Name _____ Phone number _____

Address _____

_____ State _____ Post Code _____

**Return this form to: THE AMSTRAD USER, 641 High Street Road, Mount Waverley, Victoria 3149
 or ring (03) 233 9661 for further information.**

For subscriptions to Papua New Guinea, New Zealand, Solomon Islands, Vanuatu or New Caledonia please add \$24 airmail. For Fiji, Brunei, French Polynesia, Indonesia, Kiribati, Malaysia, Nauru, Niue, Samoa, Singapore, Tokelau Islands or Tonga please add \$30 airmail.

MASTERFILE 8000

FOR ALL AMSTRAD PCW COMPUTERS

MASTERFILE 8000, the subject of so many enquiries, is now available through The Amstrad User from Campbell Systems in the UK.

MASTERFILE 8000 is a totally new database product. While drawing on the best features of the CPC versions, it has been designed specifically for the PCW range. The resulting combination of control and power is a delight to use.

Other products offer a choice between fast but limited capacity RAM files, and large capacity but cumbersome fixed-length, direct access disc files. MASTERFILE 8000 and the PCW RAM disc combine to offer high capacity with fast access to variable-length data. File capacity is limited only by the size of your RAM disc.

A MASTERFILE hallmark is the provision of multiple, user-designed display formats. This flexibility remains, but now it's even easier. With MASTERFILE 8000 you design your formats "live"; no more questionnaires, just move your format effects around the screen using the cursor keys!

Record updating is even easier than before - just steer your cursor to any field on the screen and then insert/erase/alter as required.

Special options are provided for handling dates and surnames, and column totals can be generated.

All screen work is done graphically - and hence we offer unique panel, box, and ruled line options. Choose the line spacing at pixel resolution - you will be amazed how much clearer 9-pixel lines are than the usual 8-pixels. (Study the picture.) And all this faster than CP/M normally lets you paint the screen! PCW printer functions, under menu control, are provided.

Any file can make RELATIONAL references to up to EIGHT read-only keyed files, the linkage being effected purely by the use of matching file and data names.

You can import/merge ASCII files (e.g. from MASTERFILE III), or export any data (e.g. to a word processor), and merge files. For keyed files this is a true merge, not just an append operation. By virtue of export and re-import you can make a copy of a file in another key sequence. New data fields can be added at any time.

File searches combine flexibility with speed. (MASTERFILE 8000 usually waits for you, not the other way around.) You can even assign subsets of a file into one or more of seven pigeon-holes for subsequent reference or further manipulation.

Keyed files are maintained automatically in key sequence, with never any need to sort. You can have unkeyed files too, where records can be inserted at any point in the file.

MASTERFILE 8000 is totally menu-driven, fully machine-coded, and comes with example files and a detailed manual. We claim (modestly) that you will not find another filing system with such power, flexibility, and friendliness.

MASTERFILE 8000 costs \$119.00 including postage and packing, and if you request air-mail within Australia, we'll do that at no extra charge too! (If you live outside Australia please add \$4.00 for air-mail cost.)

Bankcard, Mastercard or Visa orders are welcome, written or telephoned, quoting the card expiry date.
