CPC VRAI

Il n'y a pas grand chose de neuf ce mois-ci dans la rubrique fanzine, seulement 3 disquettes et encore, la première est plutôt une suite d'images et d'animations dont certaines sont réservées à un public averti.

Cette compilation d'images, parfois en overscan, présente une explication pour réaliser des écrans sans bordure avec les routi-

nes correspondantes.

Il y a aussi la création d'un club, Club & Co qui regroupe fanzines, routines, démos et autres.

Pour obtenir les conditions d'adhésion, envoyez un courrier avec une enveloppe timbrée et self-adressée à :

**Tanguy Barre - 28, rue de la Croix Verte - 95130 Franconville**

# CPC VRAI

Ce fanzine utilise rien moins que 2 disquettes pour vous apporter ses rubriques. de nombreux dessins tirés de jeux (c'est pas beau de s'appropriier ces écrans) agrémentés de musique du même tonneau (même remarque que pour précédemment).

C'est certain, il y a beaucoup de choses à lire, grâce aux deux disquettes mais on reste un peu sur sa faim à cause de la sécheresse de la présentation des textes : en mode 2, donc monochromes. Il faudrait revoir au moins l'agencement des textes pour mieux attirer l'oeil du lecteur entre 2 pages graphiques.

Enfin, c'est mon avis, on n'est pas obligé de s'y intéresser. Envoyez deux disques et 6,20 F en timbres (pour le port) à :

# NEW ARCADE

Le numéro 3 comprend de nombreuses digits plutôt bien réalisées, une interview du célèbre Fésesse, un concours (assez bizarre en fait, puisqu'il s'agit d'envoyer des programmes permettant de ré-utiliser les programmes sauves avec la Multiface, tiens, tiens,...).

Les menus sont très bien présentés et surtout faciles à manipuler : les flèches directionnelles déplacent un curseur devant les choix possibles. Sinon, c'est plein de couleurs, plein de musique et un peu court, mais ce dernier point est compréhensible : nous sommes maintenant habitués aux fanzines multi-disques.

Valable pour CPC 464 – 664 – 6128

Voici une nouvelle version d'un programme qui ne fonctionnait pas sur disquette et qui ne permettait pas de désassembler la mémoire. Satanus est un outil d'aide à la mise au point de programmes en langage machine.

Après avoir chargé le programme (voir les explications plus loin), vous devez avoir sous les yeux un menu vertical à droite de l'écran et une petite flèche pointée vers la gauche en face de la première option du menu. Le fond et le border doivent être noirs, le menu et la flèche doivent être dans la couleur d'écriture que vous aviez choisie. Si tel n'est pas le cas, vous vous êtes planté(e)s.

Pour pouvoir choisir une option du menu, il vous faut déplacer la petite flèche vers le haut avec la flèche haut du pavé curseur, ou vers le bas avec n'importe quelle autre touche sauf RETURN, ENTER, ou COPY. Lorsque la petite flèche pointe sur l'option que vous désirez, il vous suffit de valider par RETURN, ENTER? ou COPY.

Après validation, le Border devient de la couleur que vous aviez choisie pour symboliser une opération en cours et l'action a lieu. En général, sauf si c'est indiqué dans la description des options qui va suivre, les touches RETURN et Enter ne servent qu'à revenir au menu. En

aucun cas vous ne devez valider les paramètres qui vous sont demandés à l'aide d'une de ces touches, sauf pour les noms de fichiers, en effet la validation est automatique lorsque vous avez tapé le bon nombre de chiffres pour les adresses ou les octets. Pour chaque adresse saisie, vous devez obligatoirement taper quatre chiffres en hexadécimal (0->F), sans préfixe (&, \$, #, ...), et avec les chiffres même non significatifs. Pour les octets, il vous faut taper deux chiffres hexadécimaux. Si vous appuyez sur RETURN ou ENTER durant une saisie de chiffres, vous retournez au menu. Si vous appuyez sur RETURN ou ENTER durant une saisie de nom de fichier, ce nom de fichier est validé.

## Liste des options

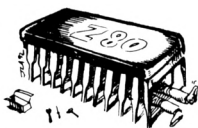

**Moniteur** : réalise un «dump» hexadécimal et ASCII de la mémoire à l'écran et à l'imprimante si vous le désirez. Chaque ligne représente treize octets. Le bit 7 des codes ASCII est mis à 0. A l'écran, les codes de contrôle (<32) sont

affichés mais ils sont remplacés par un point sur l'imprimante. RETURN ou ENTER ramènent au menu, n'importe quelle autre touche passe à la ligne suivante.

**Désassemble** : désassemble la mémoire à l'écran (et à l'imprimante si vous le désirez). Les adresses sont préfixées avec un «#» comme pour l'assembleur DEVPAC de HISOFT. RETURN ou ENTER ramènent au menu, n'importe quelle autre touche passe à la ligne suivante.

**Poke** : permet de poker des octets en mémoire. L'adresse courante, son contenu en hexa et en ASCII, sont affichés et une nouvelle valeur est demandée. Lorsqu'un octet est saisi (2 chiffres) l'opération est répétée avec l'adresse suivante. RETURN ou ENTER ramènent au menu.

**Fill** : permet de remplir une grande zone de mémoire avec un octet constant. Le retour au menu est automatique après la fin de l'action. Attention : ne pas taper de longueur nulle.

**Transfère** : permet de transférer une zone de mémoire à un autre endroit. L'ancienne zone n'est pas effacée. le retour au menu est automatique après la fin de l'action. Attention : ne pas taper de longueur nulle.

**Saisit** : permet de saisir une suite d'octets qui a été saisie par l'option précédente. Lorsqu'une telle séquence est trouvée alors le message «Trouvé en #xxxx» s'affiche ou s'imprime. Lorsque le message «Rien trouvé» s'affiche, cela veut dire que la mémoire a été entièrement parcourue et que la suite d'octets que vous avez saisie, n'a plus été trouvée. A ce moment, n'importe quelle touche ramène au menu.

**Exécute** : permet d'exécuter un programme en langage machine dont vous connaissez l'adresse. Le retour au menu s'effectuera lors de la première instruction RET rencontrée dans le niveau supérieur du programme.

**Visualise** : permet également d'exécuter un programme en langage machine mais en y plaçant un point d'arrêt. Si celui-ci est valide, le programme est exécuté jusqu'à cette adresse, puis une sortie (écran ou imprimante) de TOUS les registres du Z80 est effectuée : le registre R est corrigé pour obtenir la bonne valeur. Après cette sortie n'importe quelle touche ramène au menu.

**f1** : simule l'instruction basic CAT. Sur K7, la touche ESC ramène au menu.

**Charge** : permet de charger à partir de la K7 ou la disquette, tout fichier dont l'adresse d'implantation est supérieure à &0FFF. Si tel n'est pas le cas, un message est affiché et le chargement n'a pas lieu. Sinon, le chargement a lieu et à la fin de celui-ci, l'adresse de départ, la longueur, et l'adresse d'entrée de ce fichier sont affichés dans la fenêtre du menu. Sur K7, la touche ESC interrompt le chargement si vous ne voulez pas qu'il aille à son terme.

**Sauve** : permet de sauver sur K7 ou disquette toute zone de mémoire sous la forme d'un fichier binaire dont vous devez préciser l'adresse de départ, la longueur et l'adresse d'entrée. Sur K7, ESC arrête la sauvegarde avant la fin.

**ATTENTION** : vous ne devez pas laisser la ROM inférieure commutée lorsque vous sortez de votre programme et que vous retournez sous BZZZZZ80.BIN. En effet, celui-ci étant placé tout en bas de la RAM, il risquerait d'y avoir un très sérieux problème.

Les programmes composant Satanus.

**SATANAS.BAS** : c'est le programme BASIC qui charge, place en mémoire à partir de l'adresse &40, et lance, le programme proprement dit. Tapez et sauvez ce programme sous le

nom qui vous plaira. Par la suite, vous lancerez le programme en tapant tout simplement RUN «nomfich.bas».

**SATANAS.DAT** : c'est le programme BASIC chargé de «poker» en mémoire les lignes de DATAs formant le programme BZZZZZ80.BIN, qui lui est programmé à 100% en assembleur, et de le sauver sur la K7 ou la disquette après vous avoir proposé quelques petites modifications selon vos préférences : choix de l'ordinateur que vous possédez, choix de la couleur d'écriture et de la couleur du border représentant une option en cours que vous désirerez lors de l'exécution de BZZZZZ80.BIN. La couleur du fond, ainsi que la couleur du border symbolisant l'accès au menu, seront de toutes façons noires. Une fois ces choix faits et le programme BZZZZZ80.BIN sauvegardé sur K7 ou disquette, le programme SATANAS.DAT devient inutile. Vous pouvez l'effacer ou le garder si vous voulez de nouveau changer les couleurs ou le transférer sur un autre modèle de CPC.

## Chargement

Tapez et sauvegardez SATANAS.BAS, puis tapez et lancez SATANAS.DAT. Sauvez-le à tout hasard.

Lancez SATANAS.BAS si vous disposez sur la même disquette de SATANAS.BAS et de BZZZZZ80.BIN. Bidouillez bien.●

# SOLILUNA

Michel LA ROSA

Valable pour CPC 464 – 664 – 6128

Voici un bon moyen  
de se familiariser aux  
correspondances entre  
deux calendriers de  
conception différente.

L'un hérité des nomades des  
déserts d'Arabie, à qui importait  
surtout la connaissance des  
périodes lunaires pour organiser  
leurs longs voyages, l'autre hérité

des paysans romains sédentaires, à  
qui le cycle des saisons du soleil  
dictait le temps des semailles et des  
récoltes.

Ce petit programme permet :

- soit de trouver le jour du calendrier musulman correspondant à un jour donné du calendrier grégorien sur les deux feuillets d'un éphéméride, juxtaposés à l'écran.

- soit, en sens inverse, de retrouver dans le calendrier grégorien les correspondances de début et de fin de mois, pour les douzes mois

d'une année musulmane donnée.

L'utilisation en est simple et se  
passe d'autres commentaires. Il ne  
remonte pas au delà de l'an 1 de  
l'Hégire (16 juillet 622), ce qui signifie  
qu'il comporte en regard le  
calendrier julien jusqu'au 5 Octobre  
1582, puis le nouveau calendrier né  
de la réforme grégorienne.

Ne soyez pas surpris de ne pas  
trouver traces des 6-14 Octobre  
1582, ni des 29 Février 1700, 1800,  
1900 : ils n'ont jamais existé ! Car il  
fallait de temps en temps corriger  
notre calendrier pour l'adapter au  
mieux au cycle solaire.

# FIRE LAND

Luc et Hervé GUILLAUME

Valable pour CPC 464 - 664 - 6128

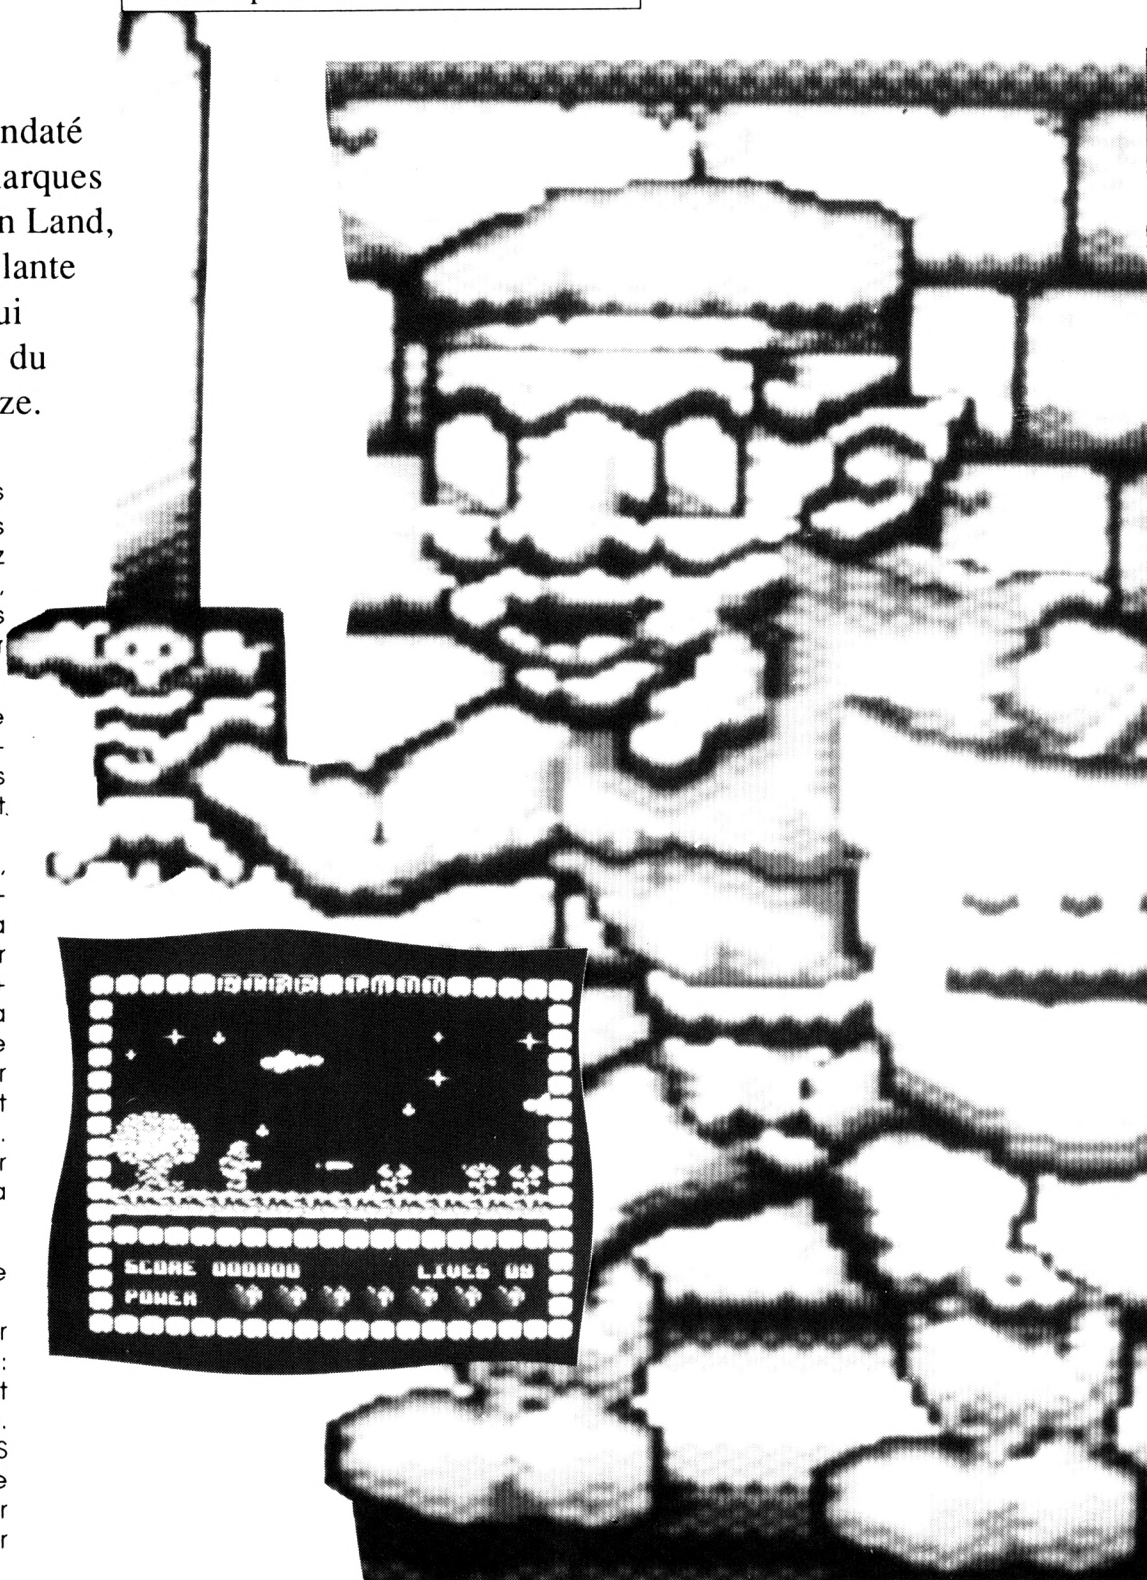

Ben Hedick, jeune aventurier, a été mandaté par les Grands Monarques des vallées de Green Land, pour éteindre la brûlante fièvre de pouvoir qui germe dans le cœur du vieux magicien Blaze.

Ce dernier règne sans partage sur Fireland et ses environs. Vous devrez affronter les chiens fous, vous méfier des plantes carnivores, vous protéger des pluies acides, etc...

Cette longue marche n'est que le début de votre quête, de nouvelles aventures vous attendent.

Après le chargement, l'utilisateur pour commencer la partie pourra sélectionner soit le clavier (touches directionnelles + barre) en appuyant sur la barre d'espace ou soit le joystick en appuyant sur le fire. La pause s'obtient en appuyant sur RETURN. L'abandon s'effectue par l'intermédiaire de la touche ESC.

Ce jeu est composé de trois fichiers :  
FIRELAND.BAS le Loader  
BASIC, FIRE1.BIN (début : &4E20, taille: &1DE7 ) et  
FIRE2.BIN (début : &24DA).  
Le fichier DATAS1.BAS crée le fichier  
FIRE1.BIN, le fichier  
DATAS2.BAS crée le fichier  
binaire FIRE2.BIN.
